In this issue: An outline of the plans for the State Farm Products Show at Harrisburg—The outlook for agriculture in 1926.

7 times more protection

Test for Yourself

Take your knife and shave off the coating of a piece of LEADCLAD wire. Note the unusual thickness of this coating. Note also that this coating is not hard and brittle like galvanizing; that it cuts off in long shavings. This is why you can bend and twist LEADCLAD wire without cracking off the protecting coat of lead. Write for samples of LEADCLAD wire.

Actual tests have proved that the pure lead coating of LEADCLAD fence is 7 times as heavy as the zinc coating on ordinary galvanized fence. That means 7 times the protection. It's the coating that gives life to a fence. When the coating wears off, rust eats your fence. That's why LEADCLAD fence outlasts ordinary galvanized three times over. When you buy fence again you will find it economy to get LEADCLAD. Saves you money; saves repairs. Let us send you samples of LEADCLAD wire, so that you can test for yourself the superior lasting qualities of LEADCLAD fence.

Lead gives 3 LIVES to your fence

Let Your Cows Pay for That New Silo

They'll do it, and thank you for the chance. Here's how. You can fill a Harder Silo with succulent silage for less than the cost of husking, hauling and stacking the dry fodder. And when you come to feed it, it will be worth twice as much, to say nothing of being easier to handle. At the end of the feeding season your cows will have paid for a handsome new Harder-Victor Front Silo.

Harder Easy-Payment Plan

Under this liberal new plan you can meet the payments out of the increase in your milk check and the saving in feed cost. You can't afford to go through another season without a silo when your cows will pay for the best silo ever put on a foundation.

Write for our free book, "Saving with Silos" and particulars of our easy-payment plan. Study the strong points of Harder construction. Learn how you can make bigger profits with a better silo.

No More Abortion

"Since using Aborno we have had no more trouble with Contagious Abortion," is the good word that comes from C. W. DeFreest & Sons of Warren, Vt. "We tried your Aborno treatment on our cattle with good results—all cured," writes L. P. Nebel, Sturgeon Bay, Wisconsin. "Would advise anyone who suspected abortion in their herd to use Aborno, as the saving of one calf will pay for treating several cows," declares T. C. Phillips, Orient, Ia.

Old Colonial Family Homesteads

No. 27—The McFarlane Farm

FEBRUARY 3, 1755, our great-great-grandfather, Patrick McFarlane, living near Newville, Cumberland County, Pennsylvania, obtained the patent from the government for the McFarlane farm situated two miles east of Reedsville, Mifflin County, Pennsylvania, for his son, James, who was then a child. The son grew to manhood and fought thru the Revolutionary War.

After the close of the war the young man, James McFarlane, came to settle on his farm and made the first improvement by building a log cabin.

In 1795 McFarlane and a soldier friend completed a stone house that stood and was occupied for 104 years. The stone building was replaced by the present one shown in the picture in 1899. The barn, also in the picture, was built in 1838.

The farm has never been sold but has been handed down from one generation to the next.

James left it to his son William, who left it to his son James, who in turn left it to his two children, W. J. and Lillie McFarlane, the present owners.

The McFarlane family has always lived on the farm.—Lillie McFarlane.

Premium Booklet

A THIRTY-TWO-PAGE booklet giving complete information on how over $5000 in cash prizes will be divided among the various classes and exhibits at the Tenth State Farm Products Show, Harrisburg, January 18-22, 1926, is now being distributed to all interested parties.

The new premium list reveals many new classes, the number in the poultry show having practically doubled since the exhibition two years ago. Special prizes, cups and ribbons have been added in most departments. The booklet carries the annoucement regarding reduced fares for visitors to the show.

Copies of the booklet can be obtained by writing the Department of Agriculture at Harrisburg.

The present home, built in 1899.

At the Beginning of the Year

AT THIS season of the year practically every business man in the country is taking, or has taken, the yearly inventory of his business. Such practice shows him just how much money he has tied up and tells him how much business he needs to do in order to make a satisfactory profit for the year. It also unearths any and all dead lines of goods and induces him to make a turnover on them. It leads to cleaning up useless things that clutter his shelves and gives him money to reinvest in newer and more profitable lines.

The inventory is the basis of all accounting in any business. More money on hand at the end of the year doesn't necessarily mean more profits nor does less money mean a loss. Without the inventory, with its definite statement of goods and equipment on hand, the profits or loss cannot be known.

Conditions Necessitate Records

In these days of rapidly changing conditions the accurate knowledge about the business side of farming is absolutely necessary to good work.

An inventory as applied to the farming business means a complete list of all property owned by the farmer, including what he owes to others and what others owe to him, with the quantity and value of each item.

It may be taken in any sort of blank book or on separate sheets. The state college and farm bureau agents, however, will be glad to secure for farmers special books for such a purpose, at cost. These books are specially designed for farmers' use, and permit additional inventories for five successive years. If properly kept such a book will show the farmer's net worth and his gain or loss above living expenses for any and all the years in question. It forms a valuable record for future reference.

Altho the average merchant lines up his year's activities on or near the new year, the farmer may well do it at any time during the dull season on the farm.

Advantages Derived from Inventory

On a poultry farm the first day of November is a good time, if used in computing income tax the first of January is better, but on the average farm any time until the first of March will do.

There are many advantages to be derived from taking an inventory. If a loan is desired to operate the farm on a larger scale the coming year it gives the banker a basis for judging the credit rating of the farm. In case of fire the value of a complete list of destroyed property cannot be overestimated, as an aid to prompt and satisfactory collection of insurance. In settling estates it is also of great assistance.

One of the lesser yet important values of inventory taking is the unearthing of the unused equipment that most farms acquire in the course of years. Machinery that once was used but will not be again can be overhauled and disposed of. It has good money tied up in it and is often in good repair and may be just what someone else wants. It can be sold at auction

Plans for State Farm Products Show

Condensed Outline of Meetings and Exhibits of Pennsylvania's Big Annual Event

THE Tenth Annual State Farm Products Show will be held at Harrisburg, January 18-23, with over 100,000 feet of floor space and twelve, halls for conventions and business meetings available. More space is being provided in practically all departments than a year ago.

The greatest expansion will probably be in the poultry, egg and pigeon department which will occupy one-half of the Chestnut Street Market House, the finest building for the purpose in the city. The pigeon section is new this year. Elaborate plans are being made for the poultry and egg exhibits and numerous attractive trophies in addition to cash prizes will be divided among the winners. Entries for poultry close January 6th.

Locations of Exhibits Announced

H. E. Klugh, show manager, announces the location of the various exhibits as follows:

Apples, Potatoes, Honey, Butter, Milk:—Emerson-Brantingham Building, 10th and Market Streets; Corn, Small Grains and Wool:—Vance Building, Fourth and Chestnut Streets; Dairy Cattle, Beef Cattle and Sheep:—Duco Company Building, 38 North Cameron Street; Poultry, Pigeon and Eggs:—Chestnut St. Market House; State Educational Exhibits:—Department of Agriculture, Pennsylvania State College, Department of Public Instruction, Department of Forests and Waters, Game Commission, Department of Health, Department of Welfare, Department of Labor and Industry, Department of Highways, State Parent-Teacher Association and Parents Congress:—Vance Building, Fourth and Chestnut Streets.

Meetings, exhibits and sales covering every phase of Pennsylvania's great livestock industry have been scheduled during the show. The feature exhibit will, no doubt, be the fifty-four head of baby beef cattle exhibited by the Adams County Baby Beef Club. The animals entered in the exhibit will be judged on their merit, Wednesday morning, January 20, and be sold at public auction Thursday morning.

The joint mass meeting of all associations will be held Tuesday evening at 7:30. Tuesday morning at 9:30 the Pennsylvania Livestock Breeders' Association will convene in the Senate Caucus room at the State Capitol. Tuesday has been designated as Swine and Sheep Day. The afternoon meeting will be a joint session with the Pennsylvania Sheep and Wool Growers' Association. The horse session will be Wednesday morning and the beef session Wednesday afternoon.

Plans are being made for the exhibit of 150 sheep and an exhibit of dairy cattle representing each of the dairy breeds. These exhibits will be housed in the Harrisburg Duco Company Building at 38 North Cameron Street.

Dairy Products Exhibit if Possible

Special effort is being made to secure an exhibit of dairy products—butter and milk,—that will be representative of the extensive dairy industry of the state. The dairy organizations at Pittsburgh and Philadelphia are both offering special prizes for exhibits of milk produced in their respective districts.

Commercial exhibits will be located in the various exhibit buildings so that the farmer may have the opportunity of seeing the latest developments in equipment for his dairy, home, orchard, barn, etc.

The wool show which a year ago exceeded anything of its kind in the East, will be even more extensive this year.

Horse Pulling Contest Cancelled

The state-wide horse pulling contest, announced as a feature of the show when preliminary plans were being made, has been cancelled because of the dangers involved in shipping horses long distances during the extreme winter months.

The Pennsylvania Dairymen's Association, an organization formed a year ago, will start its meeting Wednesday morning. The forenoon program is devoted largely to discussions of bovine tuberculosis eradication and bovine abortion. The afternoon program is made up of several talks on the economic problems confronting dairymen. Wednesday evening, a dairy banquet will be held in the Masonic Temple and all dairymen and dairy breed associations will take part.

All four of the dairy breeders' associations will hold annual business meetings during the week. The Pennsylvania Ayrshire Breeders' Association have scheduled their (to page 21)

The Outlook for Agriculture in 1926

Uncertain Factors Necessarily Play a Large Part in the Future of the Industry

WILL farmers make money in 1926? Will the coming twelve months be more prosperous agriculturally than the year just closed, or will four years of gradual improvement in the position of the farmer be interrupted by a year of setback?

It would be folly to make emphatic answers to such questions. The suggestions set down here are offered with a deep sense of the uncertainties of the future and of the failings of human judgment in trying to interpret the trend of economic events.

The weight of evidence appears to tip the beam in favor of, (1), a slight increase in farm income in the next year compared with 1925, and (2), an improvement in the economic position of agriculture as compared with other industries.

If the present period of industrial activity should be carried so far as to lead to inflation in commodity prices generally, and if crop yields are good, then farm returns might show a material increase over 1925. On the other hand, if the weather should be unfavorable and the present era of industrial prosperity should "go to pot," then agriculture probably would not fare as well as in 1925, altho it might still make gains as compared with other industries.

Period of Urban Prosperity

The present period of urban prosperity, which has resulted in broad demand for meat, dairy and poultry products, fruits and fresh vegetables, cotton and wool, has run on for a long time. It must be remembered that it is likely to be superseded by a period of industrial curtailment some time or other. Most business men and financiers are optimistic that it will continue thru 1926, and there are good reasons for that belief. However, such turning points sometimes are reached sooner than expected.

The Harvard Committee on Economic Research comments on the business situation and outlook as follows:

"Never before, perhaps, has there been a time when speculation in stocks and real estate have been carried so far without the appearance of a speculative spirit in business and the resultant building up of inflated inventories by manufacturers and merchants. The business outlook, while it presents important favorable features, also presents unfavorable features not present a year ago.

Speculative Elements Must Be Considered

"The conservative position of business and the known policy of the federal reserve system to supply ample credit facilities for the legitimate needs of business still seem, however, to be the preponderating factors, and their existence should ensure a good winter and spring trade in 1926. But, while business enters the new year with a momentum that should carry it thru the first six months, the unsatisfactory elements (mainly speculative) in the general situation cannot be left entirely out of account.

"In 1926, as in previous years, the prospect for business is intimately connected with the probable developments in the money market. Such developments will probably furnish the only reliable indicator of events. While there now appears little likelihood that high money rates will restrict business during the next six months, it must be evident that we are so far advanced in the present business cycle that conservatism should guide business policies."

A slightly different view is expressed by Mr. Moody, another business observer of long experience:

"The plethora of money and capital is still too great to admit of any reasonable probability of shortage; and, at the same time, this plethora itself is neither increasing nor decreasing sufficiently to constitute an important influence upon general trade." Also, "The tide often turns in March or April and there is no present warrant that the existing prosperity will continue beyond that date. One should suspend judgment pending further evidence."

Prospective foreign demand presents similar uncertainties. Industrial conditions in Great Britain have been improving recently, suggesting greater need of our cotton and better purchasing power for our wheat and hog products, but whether this trend will continue depends to a large extent upon conditions in this country. Inflation and rising commodity prices in the United States would stimulate British foreign trade, while depression here would restrict the British market.

French industries have a false kind of prosperity right now, due to unduly low taxes and to inflation of the currency. The French franc is fast going the way of the German paper mark. This procedure is stimulating to industry while it lasts, but it hampers buying from other countries, and it means a financial headache for the French nation eventually. Germany is gradually recovering her industrial strength. The coming year is considered an important test of the ability of Germany to fulfill the Dawes plan.

Production Costs About the Same

So far as production costs are concerned, no clear cut indication of important changes in the coming year can be seen. Taxes and interest will be much the same as in the past year. Labor and supply costs may be slightly higher or lower, depending largely on the outcome of the general business situation.

The hog business probably will continue unusually profitable during the year. The beef industry should make further progress toward a state of prosperity. Lamb prices may not be quite so high as in the past year, but larger marketings will tend to sustain income from flocks. Increased production may result in slightly lower prices for poultry, eggs and some (to page 19)

The Farm Home

BY GRACE E. FRYSINGER.

Molder of national destiny am I.
Lowly I sit, uncrowned,
Unheralded, amidst the
Glories of the open fields
Where growing leaves, and friendly beasts,
Soft sunrise hues, clear meadow brooks,
Rare vistas long, and blossoms sweet
All aid me in my mission to our race.

I raise and feed and clothe
And bring to man's estate
Five sons and daughters,
And teach them noble traits
Of right and wrong and Galilean Love!
Four keep I home to till the acres broad
And give unto the world that common need
Of all,—the nation's food supply for man
And beast. One send I forth unto the cities gates
To help in mart and trade, to build
Great towers, legislate,
And give virility to urban family life.

Thus has it ever been and more shall be.
I build the open road of country life
And also keep the city vigor great.
My sons and daughters must be just
And true, and noble in their purpose
They must wisely plan the future of
The nation of the free.
Thus shall it come to pass
That time will make it so.
The nation is dependent on my child!

I am the spirit of the rural home.
I mold the nation's future destiny.

To Get Together

THE farm organizations of New Jersey are planning to establish a central clearing house for all in the form of a headquarters at Trenton. In these days when cooperation is the key word in agricultural work there is no place needing the application of that principle more than in the farm organizations of the land. Today we have a jumbled, hetrogeneous mass of farm organizations with no common meeting place where the various interests may get together and form united action on important matters. New Jersey is making such plans and a meeting will be held during the week of the Products Show at Trenton to formulate such a cooperating movement. Federation is not proposed, but each organization will continue as at present and assist in supporting and using the new office as a common clearing house. This is a move in the right direction and if generally adopted would make it easy for officials and the public to know what farmers think and want.

To the Young People

A Message from President Coolidge

AS YOU are representative of the organizations of the boys and girls of America who live in or are interested in the open country, with which I come into an official relation, I want to extend to all of you a New Year greeting. It seems a very short time ago that I was a boy and in the midst of farm life myself, helping to do the chores at the barn, working in the corn and potato fields, getting in the hay, and in the springtime doing what most of you have never had an opportunity to see—making maple sugar.

I did not have any chance to profit by joining a Scout organization or a 4-H Club. That chance ought to be a great help to the boys and girls of the present day. It brings them into association with each other in a way where they learn to think not only of themselves, but of other people. It teaches them to be unselfish. It trains them to obedience and gives them self-control. A very wise man gave us this motto—"Do the duty that lies nearest you." It seems to me that this is the plan of all your organizations. We need never fear that we shall not be called on to do great things in the future, if we do small things well at present. It is the boys and girls who work hard at home that are sure to make the best record when they go away from home. It is the boys and girls who stand well up toward the head of the class at school that will be called on to hold the important places in political and business life when they go out in the world.

There is a time for play as well as a time for work. But even in play it is possible to cultivate the art of well-doing. Games are useful to train the eye, the hand, and the muscles, and bring the body more completely under the control of the mind. When this is done, instead of being a waste of time, play becomes a means of education.

It is in all these ways that boys and girls are learning to be men and women, to be respectful to their parents, to be patriotic to their country, and to be reverent to God. It is because of the great chance that American boys and girls have in all these directions that to them, more than to the youth of any other country, there should be a happy New Year.—Calvin Coolidge, Dec. 17, 1925.

Western Farmers Revolt

THERE are signs in the western horizon of a flare-up among the farmers of the Middle West over the administration's opposition to any legislation constructed along the lines of the McNary-Haugen Bill of last year. Recent meetings of farmers' organizations in that section plainly show that the idea of governmental handling of surplus products for export is firmly fixed in their minds and that nothing less than this will relieve farmers from the effects of low world prices.

President Coolidge addressed the annual meeting of the American Farm Bureau Federation at Chicago early in December and pledged the help of the administration to further develop cooperative marketing. the furnishing of financial advice, and the "active assistance of the government in meeting the problem of surplus production." Altho the President was received enthusiastically, the address was received with critical coldness and the results of the business sessions actually contravened many of the ideas of the President. Sam Thompson, of Illinois, said that the President had "dodged the real farm problem of the surplus-producing states," and he was elected president of the A. F. B. Federation while Bradfute, the former president, was defeated. Nor was this all. The resolutions passed by the body emphatically recommended many things which President Coolidge in his speech disavowed.

The American Council of Agriculture, another Mid-west organization, said to be composed of one million farmers, recently passed resolutions condemning the President's Chicago address and Secretary of Agriculture Jardine's agricultural relief bill, and called for some kind of export relief legislation. Several of the western farm papers have spoken strongly in opposition to the administration's plans and recommendations.

We present the above as news and without comment at this time. But we should not be surprised to see what was desired to be a peaceful, harmonious session of Congress become an arena for contending parties on agricultural matters before it ends. Eastern farmers are not vitally interested in the specific questions involved in the controversy, except that all agriculture is bound more or less closely together, and the eastern farmer is concerned whether legislation is fundamentally sound, or whether it is based on falacy.

Eastern Agriculture

THOSE who think that the eastern states are unimportant from an agricultural standpoint will revise their opinion when they read the figures put out by the Atlantic States Shippers Advisory Board. The data collected show that the states of New York, New Jersey, Pennsylvania, Delaware, Maryland and Virginia produce one-tenth of all the wheat, corn, oats, barley, rye, potatoes and hay grown in the entire United States. In some of these items the percentage is much higher, for instance, this territory produces twenty-four per cent of the potatoes and fourteen per cent of the hay produced in the country. If eastern people boasted of their agriculture as much as do some of the western states, city people could soon be disabused of the idea that agriculture in the East is a negligible industry.

Close Mails to Firearms

ONE of the inconsistencies of government is the expenditure of time and money to punish murders and hold-up men and at the same time make it easy for them to secure firearms by carrying them in the mails. The Present Congress should be flooded with requests for a law to make it illegal to send by mail any kind of firearm. At the same time papers and magazines which carry advertisements of such death-dealing implements should be called to account by their readers. In these days of unprecedented use of deadly arms it should not be difficult to arouse sufficient public sentiment on this subject. Write your senator and representatives at once, asking them to vote in favor of closing the mails to firearms. Such a bill is being prepared.

A Slump in Crop Values

THE estimates of the value of crops in the United States for the year 1925, as made by the Department of Agriculture, have been revised downward, as of December 1st. The wheat crop is estimated as being only seventy-seven per cent as much as last year's production. Oats is also below the previous year, and corn shows a loss over previous estimates of nearly 113,000,000 bushels. The estimated value of the four big crops—corn, wheat, hay and cotton—is less than a year ago by $921,000,000.

Washington Letter

FARM BILLS.—Before Congress adjourned for the holidays, Secretary Jardine's cooperative marketing measure was introduced in the House by Chairman Haugen of the Committe on Agriculture, and in the Senate by Senator McNary, of Oregon. It will be commonly known as the administration bill to distinguish it from the old McNary-Haugen export corporation bill which Senator McNary has reintroduced in the Senate.

The revised Dickinson bill, a modified McNary-Haugen bill, will be introduced January 4th. Chairman Haugen announces that the House Agricultural Committee will start hearings on these bills January 11th.

Prior to the introduction of the administration cooperative marketing bill, Secretary Jardine, Senator McNary and Representative Tincher, of Kansas, were called into consultation with the President. This new bill authorizes the Bureau of Agricultural Economics to do what it has been doing for some time. It recognizes the present cooperative marketing activities of the bureau as a division and appropriates $225,000 to the bureau funds that otherwise might be difficult to obtain.

The essential features of the administration bill were contained in the Tincher bill, which was drafted by Dr. T. C. Atkeson, Washington representative of the National Grange, and introduced in Congress in 1924.

Doctor Atkeson's plan provided for a division of cooperative marketing in the Department of Agriculture, and also for voluntary registering of cooperative marketing associations, with the privilege of having their accounts audited by department experts upon request. The administration bill makes no provision for registering cooperatives or auditing their books.

The Secretary of Agriculture now has authority to call in advisers to counsel with him with relation to problems of cooperative marketing. The administration bill provides that such advisers may receive $15 per day to cover expenses while in conference.

The administration bill has received the endorsement of thirty-one leading cooperative marketing officials and representatives. It will undoubtedly be put thru Congress with little opposition. But it will not satisfy the Middle West. This is a foregone conclusion. Leading conservatives in Congress from the agricultural districts are outspoken in saying that even the Dickinson bill does not go far enough in settling the question of disposal of the surplus farm products.

The new Dickinson bill would establish a Federal Farm Advisory Council and a Federal Farm Commission to aid in the development of cooperative marketing and in the disposition of the domestic surplus of agricultural commodities.

The Federal Farm Advisory Council is to consist of not to exceed five members from each of the twelve Federal Land Bank districts, and to serve without pay. This council is to meet twice a year.

The Federal Farm Commission is to be composed of seven commissioners appointed by the President from a list selected by the council. Each member of the commission is to receive a salary of $10,000 a year.

The commission is authorized to do practically everything that the division of marketing proposed in the adminstration bill, is required to do in promoting and advising cooperatives. In addition broad powers are given it in disposing of surplus farm products. It may designate commodity cooperatives or other agencies to buy, store, or sell under its direction in the domestic or foreign markets such quantities of basic agricultural commodities as it may determine are necessary to remove the surplus from the domestic market. Losses from the sale of such commodities are to be met by means of an equalization fund, which is provided by an equalization fee apportioned among all the producers of the commodity. This fund is to be collected thru the medium of the Federal Intermediate Credit banks.

Congressman Dickinson, who evidently voices the sentiment of a large group of Middle West farmers, refers to the adminstration cooperative marketing bill as a "sugar pill that may soothe for the moment and will do no harm. It will give a legal status to powers already granted to certain bureaus in the Department of Agriculture, and should be passed by unanimous consent. But why trifle with the farm problem in this manner?"

If the government must take a hand in the disposal of surplus farm products, Dr. T. C. Atkeson favors the old David Lubin export bounty plan. This would not require complex machinery in government boards or commissions. It would not affect fluctuations of prices, and farmers would get the full benefit of the bounty. The domestic price would be the world price plus the bounty. If you are going to help the farmer this is the better way, according to Doctor Atkeson; in fact, the only way to equalize the farmer's dollar.—E. E. Reynolds.

PLANNING SHORT PROGRAM.—With all legal formalities incident to summoning of a special session of the legislature complied with, there are indications that both the state administration and its opponents are planning a short program, but whether there will be a short session or not is another matter. Judging from the Pinchot proposals there will be about thirty bills, the original estimate, from the Governor which it is expected will be submitted as soon as the opening ceremonies are completed. They will open the flood gates and numerous measures will come from the floors of both houses. The politics of the session will develop right away, for the committees will either meet and begin consideration or the bills will be laid over until the following week until it is decided to hold hearings or otherwise dispose of them. Opponents of a long session are growing in number and the people against the state adminstration are urging that the program be made short and the length of the sitting be curtailed so as to avoid criticism. The session of 1906, a special meeting, is being carefully reviewed. It lasted a month and produced nineteen laws.

THE BORER FIGHT.—From what is being reported here farmers in northwestern counties have taken advantage of the comparatively open weather marking a good part of December to clear fields in corn of all stalks and refuse and to burn them to prevent spread of the corn borer. Here and there what seemed almost like community clean-ups were undertaken. Agents of the Bureau of Plant Industry have been providing information on the way to meet the borer in the sections within the quarantined area.

TESTS ON SPRAYS.—Much attention is being given by the chemists of the State Food Bureau to tests of the effect of sprays on apples and other fruit, to which reference was recently made. It has been found in some sales that skins of apples contained traces of arsenical spray but the quantities were so minute that it is doubtful whether there would be any danger. It is likely, as a result of the studies, that some regulations for the treatment of apples when packed may be discussed.

MANY MORE FARM CARS.—According to the figures compiled by the Bureau of Statistics in the Department of Agriculture eighty per cent of the farms in Pennsylvania have automobiles. This is a gain of two per cent over last year. In all, 160,774 farms are listed as having automobiles. This number is double the total of 1919 and some idea of the gain in ten years can be had from the statement that in 1915 only seven per cent of the farmers of Pennsylvania owned motor cars. Lancaster leads with 9509 cars on its farms, York being next with 6163 and Berks being third with 5190. Only eleven counties have less than a thousand on the farm. In Allegheny County ninety per cent of the farmers have automobiles, while in Delaware ninety-two per cent.

COUNTIES WON'T COOPERATE.—Over $1,900,000 will be redistributed among the counties of the state for fifty-fifty road construction because nineteen of the sixty-seven failed to take the steps necessary to secure their shares. This occurred in the face of the fact that several of the counties asked extension of time but failed to avail themselves of the opportunity when the time came. Two of the largest losers are Lancaster and Bucks. — Hamilton, Harrisburg.

New Jersey Letter

UNIFORM TRAFFIC LIGHTS.—Varying regulations in different municipalities concerning traffic lights have caused much confusion to farm autoists this season. So much complaint has been registered by farmers that the New Jersey State Grange at its recent annual meeting took action in favor of a state law which would make uniform rules and regulations thruout the state. The Grange expressed the opinion that aside from annoyance, the different regulations of cities, towns and municipalities were a menace to public safety.

HOOVER WILL SPEAK.—One of the drawing cars for Agricultural Week at Trenton in mid-January is Herbert Hoover, United States Secretary of Commerce. Mr. Hoover will speak on the afternoon of January 13 in the State Capitol, at which time the programs of other meetings will be dispensed with and the farmers united to give Secretary Hoover a large and representative audience.

LAND BOOM EFFECT.—Agricultural leaders are taking serious consideration of the effect upon production and agricultural values due to land booms in various parts of the state, notably in South Jersey along the line of the new bridge approaches. So much of an affect is resulting in some areas—particularly in South Jersey fruit districts—that new policies may be necessary in farm management. Several leading farmers as well as department and college officials are considering this matter in conjunction with the creation of a state-wide program for agriculture in New Jersey, a matter advanced a year and a half ago and now in the hands of various commodity and livestock committees.

BRIGHT COMMITTEE ON AGRICULTURE.—The State Department of Agriculture, College and Experiment Station are included in the recommendations of the Bright legislative investigating committee, which has been considering the consolidation of state departments generally and the elimination of overlapping activities. In this report the committee called attention to the duplicate lines of effort conducted by these three bodies, stating that this overlapping was due to lack of coordination among the institutions. The report of the committee has caused a slight stir among the personnel of the institutions mentioned. —B.

New York Letter

FARM FIRES.—Hazards from chimney fires are twice the usual number this winter, due to the use of wood and soft coal as fuel. Fire companies are urging the frequent burning of salt in stoves and furnaces to remove the dangerous accumulations of soot, or a commercial preparation in the nature of a "chimney sweep," which if used freely every third week will keep the soot reduced to a point of safety. Farmers are too frequently careless in keeping chimneys cleaned and in a tight, safe condition of repair, especially since the war. But the lack of fire-fighting apparatus on the farms makes the use of all sorts of preventives most essential. Each building should have its hand extinguisher. The thrifty housewife who saves her potato peelings for the livestock can do considerable towards preventing the burning out of chimneys by burning these peelings in her stoves.

WESTERN MILK A MENACE.—The purchase of the Sheffield Farms Company by the National Dairy Products Company and the erection of an assembling plant on the Erie railroad, where tank car shipments of milk from Ohio, Wisconsin and Iowa is alarming eastern dairymen who see in it a new need for cooperation. The contracts of the Dairymen's League are designed to make the purchase of such milk undesired by the dealers. So far these have furnished adequate protection.—M. G. Feint.

Working for You

In the past twenty-five years this Bureau has spent much of its time conducting actual trials, collecting data from Experiment Station demonstrations and elsewhere to learn the actual facts about the value of

NITRATE OF SODA

in fertilizing crops.

There is no guess work in the Bulletins we send out on this subject. Farmers throughout the Country who have read them and have followed our advice have added by their own testimony to the overwhelming evidence in favor of the use of Nitrate of Soda for profitable results.

There is a sure way of learning definitely just how profitably you can use Nitrate of Soda on your own land. Demonstrate it on one of your own crops.

Mark off two plots of one acre or half an acre each. On one of the plots, use Nitrate of Soda, 200 lbs. per acre for cultivated crops or 100 lbs. per acre for other crops. On the second plot use no Nitrate.

Harvest the plots separately and weigh or measure the results.

The cash value of the increased crop on the Nitrated plot over that on the check plot will show you just what profit comes from the use of the Nitrate.

If you want our Free Bulletins full of truths about Nitrate of Soda, send us your address, name your principal crops and for our information add the number 2320

The cost of plowing, planting and cultivating an acre is the same whether a good crop or a poor one results.

Aside from the effect of sunshine and rain, a good or bad crop depends largely on the fertilizer used.

If a dollar's worth of Nitrate of Soda will produce an increase of a dollar and a quarter or more in crop its use pays a big profit regardless of cost.

Take Apples for Instance.

Maine Agricultural Experiment Station's Bulletin reports:

"The use of twenty cents worth of Nitrate of Soda per tree resulted in an increased yield of more than 1 barrel of fruit per tree."

Missouri State Fruit Experiment Station, Fruit Notes No. 9, says:

"For immediate results there is probably nothing that will excel Nitrate of Soda in the sod orchard. The standard recommendation is five lbs. for a mature tree which can be increased or decreased to suit conditions.

"In many cases this chemical has shown itself to be the only one that is of direct assistance to the tree."

Arkansas Experiment Station Bulletin No. 181:

"The best results have been obtained by using about 2½ pounds of Nitrate of Soda per average tree for early application; and about the same amount for the June drop application."

New Hampshire College Experiment Station Technical Bulletin:

"It is also well known that nitrogenous fertilizers, especially the more readily available forms such as Nitrate of Soda, will bring about increased growth of the trees."

Maryland Experiment Station Bulletin:

"Of the three materials, Nitrate of Soda or some other quick acting nitrogenous material is most likely to give direct benefit."

Ohio Agricultural Experiment Station Bulletin:

"Quickly available nitrogen is clearly the determining element in successful orchard fertilization on thin, poor upland soils such as abound in the hilly regions of southern Ohio.

"The addition of 2½ pounds of Nitrate of Soda per tree to the regular applications of 2½ pounds Nitrate, 5 pounds Acid Phosphate and 2½ pounds Potash per tree gave a gain of 24 barrels of apples per acre per year."

Others bear the same testimony.

For Cotton growers Nitrate has become such an absolute necessity that the Legislature of South Carolina has appointed a Commission to arrange for the purchase of full ship cargoes of Nitrate in Chile and to import it for direct sale to South Carolina farmers.

During the war, the Congress of the United States appropriated $20,000,000 to import Nitrate of Soda from Chile and sell it direct to farmers at cost.

Tobacco experiments in Pennsylvania and Maryland have shown that 200 pounds of Nitrate of Soda per acre have produced an increase of more than 300 pounds of leaf Tobacco and also that without further fertilizer the Wheat, following Tobacco on the same ground, produced an increase of over six bushels of Wheat.

Tobacco experiments at the Virginia and Ohio Stations also show very large profits from using Nitrate.

Wheat, top-dressed in the Spring with 100 pounds of Nitrate, at the Ohio, Wisconsin and Virginia Stations has shown very profitable returns.

Hay increases of 33 per cent may be expected from an early Spring top-dressing of 100 pounds of Nitrate per acre and permanent pastures are tremendously improved by the same treatment.

Where an Editor Works and Thinks

I HAVE no desire to parade the fact that we have a first class, new radio in our home, but the remarks made in this column three weeks ago have brought so many letters of inquiry that it seems necessary to go a little more into detail. My experience as an editor indicates that when ten people write about a matter for further information, there are a thousand who are also interested but do not write. The questions which most of the correspondents asked were these: "What was the name of your first set? How much did it cost? What firm made your new one? How much did it cost? Why is it better than the first one? Where do you get the best programs from? Can I buy one which will give good service where I live since it is a long ways from a broadcasting station? How much cost and trouble is it to keep them in good working order? Would it be good policy for me to try it out with a cheap set? etc.

✦ ✦ ✦

WHILE I personally answered the inquiries and gave the names of the firms and sets, I cannot do so here, since we never mention particular firms or products in the reading columns of Pennsylvania Farmer. Both of the sets were made by well known firms and are nationally advertised. I paid eighty dollars for the first set two years ago. It had three tubes and used dry batteries only. It would give satisfactory service with a loud speaker as far as Pittsburgh, and many stations much farther away could be heard more or less distinctly. It was not finely "selective," that is, we could not "tune out" other stations as completely as we can with the new one. Even two years ago the making of radio receiving sets was in the experimental stage, but during the two years wonderful improvements have been made. Probably no other invention ever has made such strides in use and development in so short a time as has the radio.

✦ ✦ ✦

THE new machine, a five-tube set, sells, complete, for about one-hundred twenty-five dollars. It is far more powerful as well as more selective. As I said before, we heard Los Angeles clearly and distinctly across the room. "Log cards" enable one to turn on any station, once the readings are found, and get it again.

✦ ✦ ✦

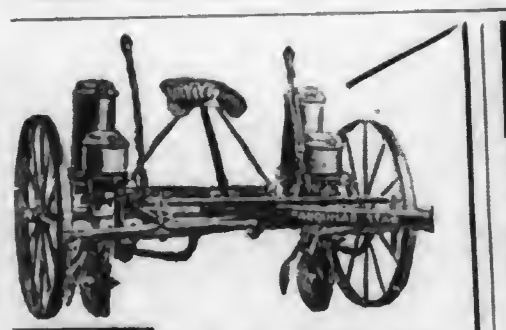
THE main costs incurred in the up-keep of a radio are for tubes and batteries. Their lifetime depends largely upon the use and kind of care they receive. The tubes cost from $1.50 to $2.50 each. Of course, no one can tell how long they will last, any more than one can tell how long a light bulb will last. But, like them, they have a potential life of so many light-hours, and in a radio the tubes should be good for a year or more with good care. By good care I mean not turning on more power than is necessary.

✦ ✦ ✦

THE new set has two forty-five-volt cells for its "B" battery. These cost from $2 to $2.50 and will give service for six months to a year. The "A" battery is a six-volt wet cell and costs ten to fifteen dollars. In our own case we took the battery out of our little truck (which we do not use in winter) and find it entirely satisfactory. The charge at a service station for recharging a wet battery is seventy-five cents at our place. One charging will run for about 100 hours of use.

✦ ✦ ✦

AS TO answers to the other questions: No, I do not advise buying a cheap, unreliable receiver, any more than I would advise buying a cheap, squawky phonograph. When one wants to enjoy music he wants it clear, distinct and in the natural tones. As to programs, there is no "best" station, altho there may be a "worst." Broadcasting is becoming a fine art as well as a big business. Every year it is better and better. When there is something especially good it has become the custom to hitch together from three to fifteen stations and broadcast the same program over all of them. There is no place so isolated that a good receiving set will not find something from several stations. There are now 600 broadcasting stations, many of which can be "picked up" easily by good sets over two thousand miles away. As I said before, the number of letters received is the excuse for this second set of notes on the radio.—R. P. K.



FARQUHAR "STAR" CORN PLANTER

Puts the kernels where you want them.—On Level Ground or on Steep Hillsides.—Each row has separate adjustment as to depth.

THE CHEERFUL PLOWMAN

My Books

SOME fellows have a scad of books piled up in reams in dusty nooks, digests on saints, and men, and crooks, things not for use but just for looks! My neighbor Guildford, good old scout, has books on Jerseys, Poles, and trout, on pleurisy, the hives, and gout, on Mars, and bearded wheat, no doubt; he has some books that deal with grain, with theories of joy and pain, with wilt in cabbage, cress, and grain, with timber cutting up in Maine; he has a scad that deal with bees, with eagles' nests and Redwood trees, with cause of ozone in the breeze, with treatments for enlarging knees; he has a dozen sets or so on forms of crystals found in snow, a set that tells how fishes grow, how trade winds, gusts, and twisters blow; he has some volumes in a case that rave about the realms of space, that deal with cussedness and grace,—these books are never out of place!

I have a Bible, sure enough, one kept for use and not for bluff, a dictionary in the rough, most good old writers' choicest stuff; I have some fiction on a stand where it is always close at hand, some books of poems, old and grand and other things good tastes demand; I have some doctor books, indeed, that deal with ointments, pills, and feed, and all the farming helps I need, like Peajohn's works on bulbs and seed,—some others, too, but just a few, some old, some middle-aged and new, none too abstract for me or you, none flecked with cobwebs, dust, or dew!—J. Edw. Tufft.

Safeguard the Udder

The udder and teats—a little thing to watch, yet so tremendously important in the effect on the milk flow.

For the hurts and troubles that are constantly arising, nothing affords such immediate, such thorough results as Bag Balm.

This wonderful ointment, so clean and pleasant to use starts healing at once—healthy, normal tissues are restored in no time. For Caked Bag, Bunches, Inflammation, Chaps, Cracked Teats, Injuries, Cuts or Bruises of any sort, Bag Balm brings quick healing.

The regular use of Bag Balm makes easy milking and a full milk-flow the rule. It cannot taint the milk.

The big 10-ounce can goes a long way—has scores of uses in curing any animal sore or skin trouble. 60c at feed dealers, general stores, druggists. If you should have the least trouble getting Bag Balm we will mail it, postpaid.

Ask for free booklet, "Dairy Wrinkles." Many useful dairy suggestions.

Chester County Show

THE mushroom exhibits, twenty-three standard three-pound baskets and eleven plates, placed the Fifth Annual Chester County Farm Products Show, December 16 to 19, in a class by itself and introduced a new interest overshadowing all other features. State Secretary of Agriculture Willits, who has been an extensive grower of the "edible fungi" for a great many years, and who helped judge the entries, said it was the largest competitive exhibit ever held in the United States and the quality was first class.

Winners in the mushroom classes were as follows: White medium, Walter Evans, Kelton; white large, L. R. Downing, Downingtown; cream medium, Maurice L. Darlington, Pomeroy; cream large, N. M. Thompson, Chatham.

The usual classes for corn, milk and apples were all filled with high quality exhibits and the competition was close. The Grange and Farmer's Club contest, always the center of keen rivalry, was won by the West Chester Farmer's Club with its thirty-ear exhibit. Grand champion award for the best ten ears in the show went to Clyde Jackson, a student at the Unionville Consolidated School. Jos. S. Webb, West Chester, won first for Lancaster County Sure Crop in a class of fifteen entries and Ira Copeland, Glen Rose, won first over thirteen others for Golden Dent.

Entries in the Market Milk Class

Seventy-three entries in the market milk class spoke well for the dairy interests and made the winners feel that the goal was worth striving for. C. Albert Cox, Pocopson, topped all the entries with his Jersey milk which scored 98.3 and gave him the silver cup for the best milk in the show and also the one offered by the Jersey Cattle Club for the best sample from that breed. The cup offered by the Holstein Association for the best sample from its breed went to James D. Bunting, Oxford, and Longwood Farms, Inc., Kennet Square, won the cup offered by the Guernsey Association.

The display of apples was unusually attractive with many winners in the different classes. A large decorated booth, standing out as the biggest thing in the show, was the headquarters of the Fruit Growers' Cooperative Association of West Chester. Many kinds of cooked apple products were on display under the direction of the manager, Herbert C. Barker, as one of the means to increase the local consumption of apples. Growers in Chester and Delaware Counties are finding the association a wonderful aid in the economical marketing of their crops.

Egg Exhibit Successful

The egg show was the best ever held in the county both as to numbers and quality. Seventy-five dozens were on display and the judges note a marked improvement each year in the care used in making up the exhibits. Wm. T. Cope, East Bradford, won for the best five dozen brown eggs, while Elizabeth Barnard, Barnard Station, won for the best dozen in the farmers' class and Paul Sellers, Unionville, won for the best plate in the commercial class.

The interest of the boys and girls was not forgotten and special classes were made for them. They entered seventy-one samples of corn, forty-three plates of potatoes, eighteen plates of eggs, thirteen of apples, six large squash and a sheaf of alfalfa hay which had almost the same color it had in the field. A great many attractive posters showing the advantages of good foods, especially milk and apples, had been entered in the poster class and were used to add a

1901 TWENTY-FIFTH • ANNIVERSARY 1926
A Quarter Century of Service to Farmers

"I use my Hart-Parr for threshing, corn husking, silo filling, plowing and road grading. I use it on a 28x46 thresher under all conditions to full capacity. During the year I have owned my Hart-Parr I have not spent one cent for repairs."
William Grubbs, Middleburg, Ohio

HART-PARR
POWER
will do more work for you

Every year scores of under-powered tractors are replaced by powerful Hart-Parrs, thus making it possible for farmers everywhere to do more work in less time than ever before. And not only is Hart-Parr the most powerful of all tractors, but it operates at the *lowest* cost for the *longest* time. Low operating costs are proved in testimonials from hundreds of owners, and through competitive demonstrations where Hart-Parr has consistently remained at the top among competing tractors of all makes. And the amazingly long life of Hart-Parr tractors is evidenced by the fact that the oldest operating tractors in the world—bar none—are Hart-Parrs, some of them still operating in their 24th year of service.

Garden and Truck Crops

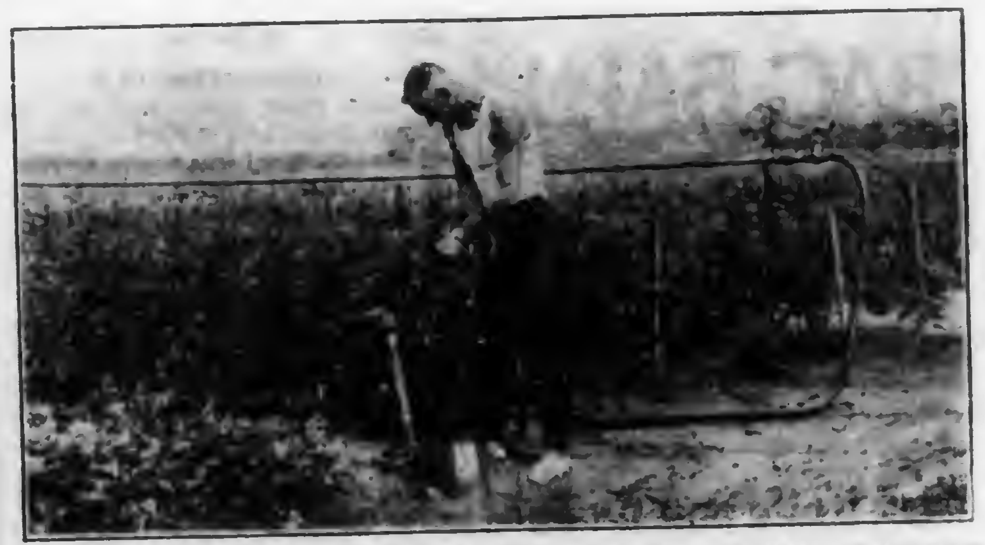
W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

Three Year's Experience with Irrigation

WHEN we take stock of three years' experience with irrigation of garden crops of our place, and study the advisability of adding more pipes or doing away with those we now have, we have to take the blame for two kinds of mistakes we have made in handling the water. The first of these mistakes is holding off too long in the hope of saving water.

No doubt a man who has his own pump and takes water from a pond or stream does not count the cost as closely as he who pays at so much a thousand gallons, and is more willing to start the water as soon as soil looks dry. We pay by meter, and confess that when there are signs of rain, even tho the land seems dry, we usually wait a day or two to see what those rain clouds will give us.

That waiting, on several occasions during the past three years, has been costly. There were periods of whole weeks when rain would threaten every day, but no rain actually fell. During such times the man with irrigation ought to turn on the water, and if rain comes right afterwards he can console himself that the rain will probably do more good than the irrigation, anyway. The rule ought to be, water when the crops need water, regardless of weather forecasts.



A portable irrigation line in staked tomatoes. The nozzle is supported by short lengths of pipe. In low-growing crops the line rests on blocks placed on the ground. There is a shut-off valve at the bottom of the wooden box.

It is a fact, of course, that often it is hard to tell whether or not young crops are being injured by drought. I am convinced that snap beans would have made a far larger and earlier crop last June if they had been watered, altho at no time did they show signs of wilting or even slow growth.

Early Cabbage Affected, Too

Early cabbage, too, was affected from the very first by dry weather, altho the plants did not once show serious need of water. They grew and headed, but the heads were very small.

Our second mistake has been lack of such planning as would have placed near each other all crops benefiting the most from irrigation. Altho our system is of a portable type, so that in theory the line is moved wherever and whenever it is needed, in practice the inconvenience and danger of moving the lines has lead us to take too many chances with promised rain. To move our lines without endangering the tightness of the patent unions would require about ten men, unless the lines were cut up into sections. Many unions have been strained or broken during the moving. Tramping thru soaked soil, moreover, is good for neither soil nor crops.

These difficulties in moving the lines, then, have not lead us to use the portable feature of our system as much as one would expect. In practice we would wish to make these lines semi-permanent for each season; set them up at least a few feet from the ground; and then plant near them all those crops from which we expect to get the most return from the use of water.

Results of Irrigation

In an emergency the lines could still be moved to any other part of the place where water was seriously needed. In 1925 we thought it worth while to irrigate staked tomatoes, altho as a rule we would not plan to provide irrigation for tomatoes.

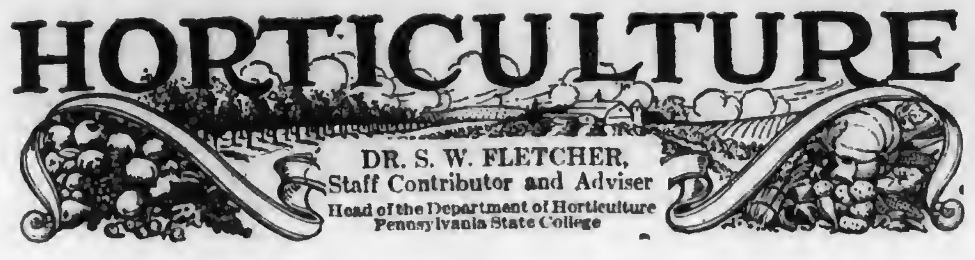
The past three years have all provided periods of drought when irrigation was very helpful in promoting rapid growth and early maturity. How far can we judge, on the basis of these three years, whether or not we can profitably increase irrigation equipment? The 1924 Yearbook of the Department of Agriculture has this to say about variations in rainfall from year to year:

"In general, there is less than the normal amount of rainfall in slightly more than half the years, with a well-recognized tendency for several successive years of comparatively heavy rainfall to be followed by another group of years with deficient amounts."

If, then, we have had several years of droughty summers, can we look for several years of wet summers? If the wet summers come, is irrigation a failure? If we are as good at taking chances as every farmer has to be, we shall be nearly as safe to increase irrigation for next year as we should have been three years ago.

It is a mistake to look at irrigation as a one year's investment, and to feel discouraged if that one year is not favorable for its use. During any period of ten years there are certain to be times when the water will pay big profits.

It is a mistake, too, to install irrigation for any single crop, unless, under some circumstances, for celery. Economic changes may make that crop unprofitable. Safe irrigation investment requires careful study not only of the home place,—its soil, crops suited to it, arrangement of fields and buildings,—but also of market demands as they now exist and as they are likely to be during the next ten years.—W. C. Pelton.



HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Horticulture Week at Penn State

(Continued from last week

IN NEW ENGLAND, where wayside markets have flourished for some years, the growers are beginning to experience opposition, and even boycott, from the city dealers, whose business has been seriously curtailed by these markets. This is a contingency that growers who sell thru retailers in nearby towns, and who also run a wayside market, will have to face in the near future.

The remedy, according to H. F. Hershey, of Hamburg, Berks County, who sells part of his fruit at a wayside market in Schuylkill County, twenty miles from the orchard, is to protect the dealer or huckster with a differential, charging him about fifty cents a bushel less than the retail selling price at the wayside market or at the farm packing house. The rapid improvement of our highways will make truck load sales to hucksters a very prominent feature of our marketing; these sales should be encouraged and protected by a price differential.

Discussion of Sunday Sales

Whenever the wayside market is under consideration, the discussion inevitably leads into Sunday sales, and a sharp division of opinion ensues. There are some who "take compassion" on the poor people who have driven perhaps forty miles for fruit, on the only day of the week when they are free, and who consider that it would be "an unchristian act" to send them away disappointed.

Others consider mainly the "waste" if the quickly perishable peaches are not disposed of promptly. They are fortified in this point of view by the minister, who told a conscience-pricked fruit grower, "The Lord grew this fruit, and if He did not want it to be sold on Sunday He would not let it ripen on Sunday." And there are many other equally plausible arguments and justifications. But there are some who think otherwise.

According to Porter R. Taylor, of the State Bureau of Markets, we are barely holding our own in Pennsylvania markets. It is not that New York and Washington apples are crowding Pennsylvania apples out of Pennsylvania markets—we are gaining a little, if anything, on these competitors—but that we are losing ground in competition with tropical fruits.

Pennsylvania Consumption Low

The consumption of apples per capita is considerably less than it was ten or fifteen years ago. Some months over 1000 cars of oranges come into Pennsylvania. Every orange eaten takes the place of an apple. The same is true of bananas. The southern and western cantaloupe is also an active competitor of Pennsylvania apples and peaches. The most rapid advance has been in grapes. We received 3600 cars of grapes in one month, mostly from California. Probably not all of these, however, were used for dessert purposes.

Pennsylvania is shipping several thousand cars of apples a year outside the state; many of these go to New York for export. At the same time we are receiving 7000 or more cars of apples a year from other states. This is poor business; we should aim to supply our own markets, and save freight.

Truck load sales of apples are increasing. Even Adams and Franklin Counties, which have heretofore been exclusively a carlot shipping district, are now trucking a considerable quantity of apples to towns within fifty or sixty miles. It is likely that the marketing radius of the truck will increase.

Most farm storages in Pennsylvania are bank cellars. L. M. Marble, of the Marble Laboratory, Canton, is now experimenting with a storage that is built entirely above ground. It is of frame construction and the insulation is granulated cork, not soil. Six inches of granulated cork are used to insulate the sides and ends, and four inches to insulate the ceiling. The storage has an earth floor.

Granulated cork costs about one cent a square foot an inch thick, as compared with seven cents for compressed cork. Since the granulated is one-half as efficient as the compressed, it costs less than one-third as much. The cost of insulating this storage seventy-five by twenty-eight feet with cork was only $100. It can be built for about sixty-five cents per bushel capacity, which is about the cost of a bank cellar.

Built to Keep Out the Mice

The cellar has a vestibule at each end and double doors, to keep out direct sunlight. The earth floor is covered with hardware cloth for a distance of ten feet from the walls, to keep mice from coming under them. It is also well to keep a cat. The fruit is stored on either side of the driveway which runs thru the building on a slatted floor twelve inches above the ground. The slatted crates of apples are piled eight feet high with two feet of air space above them, and six inches from the walls. Ventilation is continuous thru both end doors except in very cold weather when only a six-inch space under each door may be used.

When the outer doors stand open, inside doors covered with one-quarter-inch mesh hardware cloth keep out mice and men. This storage is assumed to be frost proof, but in order to take no chances a small room is cut off of one end, and a stove installed.

A building such as this, being of frame construction, can be erected with ordinary labor; it involves more carpentry work than the bank cellar, but the laborious excavation and concrete mixing are avoided. It is not, of course, as permanent as a bank cellar, but it may be more expedient for some locations.

Apples Have Kept Well

Thus, for this season, the apples have kept as well in the above-ground storage as in the bank cellar; the real test will come later in the winter. There has been little difference between the two in temperature and humidity. If the harvest season had not been so cool this year (forty to forty-five degrees instead of sixty to seventy degrees) the results might be different. Fruit growers will watch this experiment with much interest. The plans and specifications of the building may be obtained from Mr. Marble.

The discussion brought out the fact that apples intended for the farm storage need to be picked later

(Continued on page 11)

Burpee's Seeds Grow

"Wonderful beans!" You will say it, when you see them growing in your own garden. Burpee's Bush Lima Beans (Improved) are truly of enormous size, and as tender and sweet as they are large. Good, strong growers, too; particularly recommended for home gardens.

And here is one of the finest of the "Gladflower" family; Burpee's sturdy, early-blooming Fordhook Hybrid. Its sparkling, glistening lustre is impossible to describe in print. You surely will want some in your garden.

Burpee's Annual
The World's Greatest Garden Book

Burpee's Annual is a comprehensive catalog, kept constantly up to date, of the many varieties of vegetables and flowers grown and tested on the three great Burpee farms in Pennsylvania, New Jersey and California; together with the foreign species produced by our experienced growers in other parts of the world. It is a practical Guide to gardening.

Send for a copy of it now, and have it handy whenever you feel like planning for the growing things you will have next spring. Every kind of flower and vegetable you would like to see blooming in your garden is described in it.

Write for a Copy
and
Free Sample of Seeds

If we receive the coupon below with your request for the Annual this month, we will include with the catalog an order sheet entitling you to a Free Sample of Burpee's Seeds. Look through the book and choose any regular 10c packet you wish, of either vegetable or flower seeds.

Keeping Down the Rate of Poultry Mortality

ALL animals and birds are subject to a certain per cent of mortality which varies under different conditions. In a village of 1000 people somebody is always sick with some thing. The beginner with poultry is always ready to hire a brass band and march down the street advertising whenever the hens are making fine egg records and then is about ready to die of the blues if one of those fine laying hens is found dead under the roosts.

Poultrymen do not generally brag about losing a hen from sickness or any other cause. Those of us who have been in the business ten years or more usually find that there will be a certain per cent of mortality each year regardless of our best efforts and we plan operations to make a living and make the flocks profitable regardless of the unavoidable losses.

Major and Minor Troubles

There are two classes of poultry troubles. I call them the minor and major troubles. The hospital is useful in caring for cases that are worth the effort to cure. It is not right to use the hospital to prolong the suffering of birds for which there is no cure.

A sunny colony house makes a good place to isolate birds which need attention. It should have a roost, plenty of straw litter and small hoppers containing the same laying mash, grit, oyster shells and charcoal that are given in the bird's regular ration. Watch the flock at feeding time and snag any birds with the poultry crook that seem to be lacking in vigor. You might not find such a bird in a week and then the next day some hen will remain on the roost or stand around at feeding time without eating.

Careful Examination of Each Bird

Examine such a bird and it may be only a crop-bound condition in its first stages. Knead the crop and isolate the hen. The next day she may be all right. Occasionally a hen may show a watery eye. It may be a simple cold or may be the beginning of roup. Remove the mucus from the nostrils with tissue paper and inject permanganate of potassium or commercial disinfectant or roup cure with a medicine dropper. Isolate the bird in the hospital and she may improve in a couple of days.

A hen that breathes hard may have canker around the windpipe, bronchitis, nostrils plugged with mucus of the beginning of pneumonia. Inspect the bird and isolate it for further developments. This avoids the risk of ever leaving a bird out of condition in the flock to infect others.

Sometimes a pullet becomes egg-bound or parts of the oviduct may protrude. If left in the flock the other birds may peck at the sore parts and cause infection and loss of the bird. Isolate the bird in the hospital. Return the parts of the oviduct. Feed only grain as you wish the pullet to stap laying until the organs return to normal. In that way a bird may be saved which is later good for 200 eggs.

Some Losses Cannot Be Prevented

There are some losses which cannot be prevented and these help to make up the normal mortality rate on a well managed poultry farm. Due to the strain of laying a hen may rupture the oviduct and the egg making materials gather in a large lump in the abdomen. The bird will never lay again but may feed with the flock for a long time. By careful observation of the abdomen and a little handling of the birds at night such specimens can be located and removed from the flock.

Apoplexy Among Hens

Apoplexy is another result of the strain of laying. A bird may be found dead on the nest or under the roosts due to that cause. If the hens are fat and old there is more danger from liver trouble. This usually results from heavy feeding of corn and a lack of exercise. It seems more prevalent among the heavy breeds. It cannot be cured because the bird is very sick when the trouble is discovered.

Ot the beginning of the breeding season watch for pullets that have torn backs. This is due to the activity of the male birds and is caused by the toe nails and not by the spurs. Such a bird makes a good hospital case as recovery is practically sure if the bird is isolated but it may be a loss if left in the flock while wounded to be further torn and infected. Wash the wound with disinfectant and healing rapidly results and the hen can be returned to the flock. The bird is not sick but only injured and may continue to lay while in the hospital.

Poultry Hospitals

A lot of poultry hospitals do little good because the conditions in the hospital may be many times worse than the conditions in the laying house which have caused the trouble. A bird with a cold cannot be fastened in a small brood coop on the damp ground where the wind and snow give it a chilling and have much chance for recovery.

There is little use in trying to save birds which have been neglected until their heads are swollen tight with roup. Such birds must suffer intensely and it is merciful to put them out of the way. If they are half cured and returned to the flock in that condition they only help to infect other birds.

One great value of the hospital is the fact that it quickly teaches the beginner the value of keeping lots of birds in the laying houses but few in the hospital. The hospital brings the work while the laying houses bring both work and profit. Sanitation and proper feeding keep down the chicken population in the hospital and reduce the losses in the laying houses.

Balanced Laying Mash

Many farm flocks would suffer less mortality if they could have a balanced laying mash. Hens which have the mash composed of appetizing ground grains and meat scrap are not so apt to fill up on the straw litter, corn fodder and trash which may cause digestive disorders or make them crop bound.

Hens roosting over clean dropping boards breathe better air than hens over heaps of damp manure. Hens which do not feed red mites can save a lot of red blood to help resist disease. Hens which consume only clean water and plenty of clean feed develop a lot of resistance to disease and help to keep the chicken hospital empty.—R. G. Kirby.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

The Amount to Be Charged against a Crop

Should a farmer charge against a crop the full value of the fertilizer applied to it?

NOT all of the fertilizer used for the growing of any particular crop is used up within the same season. Some ingredients of commercial fertilizer are, for all intents and purposes, one-season fertilizers. Nitrate of soda, sulphate of ammonia, nitrate of ammonia, urea and other nitrogen salts do not increase the nitrogen content of the land except temporarily. To a limited extent, however, such fertilizers, by encouraging a better development of plant roots, would increase the nitrogen content of the soil. This effect is more evident on poor, sandy soils than it is on heavier soils. Altogether, however, an application of nitrate of soda or of sulphate of ammonia need not be expected to exert any considerable effect on the crops grown within the second season.

Relation Doesn't Always Hold

This relation does not hold in the case of phosphoric acid and of potash. When soluble phosphates and potash salts are mixed with the soil, they become, for the time being, insoluble. A large excess of these ingredients may be employed without danger of any appreciable loss from the soil. On the other hand, nitrates and ammonium salts would disappear if used in amounts beyond those which can be taken up by the crop within the growing season.

In using commercial fertilizers, we fertilize the crop in so far as nitrogen is concerned. We may fertilize both the crop and the soil in so far as phosphoric acid and potash are concerned. At the Rothamsted Experimental Station in England, there are plots where generous amounts of soluble phosphates and of potash salts have been used annually for more than eighty years. This has resulted in a very considerable accumulation of these ingredients in the soil. The chemists at the Rothamsted Station have been making more or less systematic studies and analyses of the soils on which these materials have been applied.

Excess Held in Insoluble Condition

They find that the excess of phosphates and potash salts not accounted for in the crops is still present in the top soil and, to some extent, in the subsoil, and that by chemical tests the phosphates and potash thus held in an insoluble condition in the soil are apparently able to supply abundant quantities of the ingredients in question during the growing season.

In other words, phosphates and potash salts applied in water-soluble form become insoluble, but may readily pass into the soil solution where the plant roots are constantly using up the dissolved potash or the dissolved phosphates. More of these compounds will thus go into solution to replace the amounts taken up by the crop.

In the Case of Nitrogen

From the above discussion, it is evident that, in the case of nitrogen, the farmer would be justified in charging against the crop practically all of the material supplied to it. On the other hand, in the case of phosphoric acid and potash, the amount charged against the crop will depend on the quantity of this ingredient used, on the size of the crop and somewhat on the texture of the soil.

To use a concrete example, suppose a farmer applied one ton per acre of a 5-8-5 fertilizer. Applications of this sort are not at all uncommon among potato growers in the northeastern states. There would be supplied to the soil in the fertilizer application in question 100 pounds of ammonia and of potash each and 160 pounds of available phosphoric acid.

Ammonia Most Expensive in Mixture

The ammonia is, of course, the most expensive ingredient of the mixture. For all intents and purposes, it is used up within the first season, and should be charged to the crop to the extent of eighty to 100 per cent of the initial cost. In the case of phosphoric acid, hardly more than a sixth or a fifth of the amount supplied will be used up whereas in the case of potash fifty to eighty per cent might be chargeable against the potato crop.

Where crops like potatoes are the money crop, it is not at all unusual to charge the entire cost of the fertilizer against the crop. Students of farm management feel, on the other hand, that the potato crop should not be charged with all of the fertilizer and that the charge against the following crops should be made in accordance with the benefit derived by these crops from the original application of fertilizer.

It is difficult to determine exactly what the charges should be. Indeed, it is hardly worth while to split hairs about it. For practical purposes, the money crop—whether it be cauliflower, potatoes, cabbage or tobacco—may be charged with fifty to seventy-five per cent of the cost of the fertilizer.—J. G. Lipman.

Horticulture Week

(Continued from page 9)

than if intended for thirty-two degree cold storage; unless the fruit hangs until mature, and is well blushed, it is likely to shrivel and keep poorly in common storage. Late picking has its disadvantages, however, as many growers can testify from this year's experience.

The week was by no means devoid of entertainment. Two of our most prominent horticulturists contributed to it, being unable to distinguish between Grimes and McIntosh, when blindfolded, by the senses of touch, smell and taste. Five-minute talks by several students, outlining the teaching and research work of the Department of Horticulture, introduced the visitors to the next generation of Pennsylvania fruit growers.

The "Horticultural Banquet,"—all products from the College Farm, cooked and served by Horticultural students—seemed to fill a considerable void. Last year Dean Watts was humiliated—unjustly so, he claims, in the Horticultural Spelling bee; he vindicated himself this year, being the proud survivor of an imposing array of talent. The visitors' apple judging contest was won again by J. E. Linde, of Allentown; the student judging contest was won by H. J. Fisher, of Erie County.—S. W. Fletcher.

"How the trees groan!" exclaimed the romantic maid as the wind swept thru the orchard.

"No wonder," chimed in the practical youth, "they're full of green apples, you know."

Isbell's Seeds DO Yield More

For forty-seven years our customers' successful money-making gardens and bumper crops have proved Isbell's Michigan grown seeds more hardy, better yielding and more dependable. Isbell's seeds yield more for the same reason that thoroughbred stock pays better—breeding tells in anything that grows.

For 47 Years

For nearly a half century Isbell's has been improving seeds—developing better strains, increasing hardiness, and yield and improving cleaning methods. Every ounce of Isbell's seed is grown under strict supervision, sorted and cleaned in our perfectly equipped plant and then tested for germination. Every precaution is taken to make certain that all the seed we ship is true to strain, dependable and of high germination.

Pure Bred Seed

Be sure of your seed. If you are to have big crops and make more from garden and field, seed must be pure bred. This year there is a shortage in several kinds of seeds. Order early. Beware of imported seed not adapted to your soil and climate. Do not take chances—be certain by planting only Isbell's Pure Bred Seed. Then you know you have the best seed that 47 years of selection, experimentation and development can produce.

Isbell's 1926 Seed Annual is Ready for You

This book—which has become the buying guide for more than 200,000 of America's most progressive farmers—is even more helpful this year. It tells you how to determine what crops are best for each purpose—what strains are best for your soil—how to prepare the soil—how to plant for best returns—how to care for the different varieties. It tells you how to select seed. And it quotes you money-saving, direct-from-grower prices, on Isbell's Pure Bred Seeds.

This Book Means More Money for You

Send for your copy today! It's Free! Over 400 true-to-nature illustrations—12 pages in natural colors. This book aids you to plan your crops. It means less money for seed and more profit from your farm and garden. It costs you nothing but may add many dollars to your income. Send the coupon now.

It takes only 8 weeks to get a big job

In the Auto, Tractor and Electrical Business

Read what these men are doing—here is your big chance to get "on easy street." Come to these great shops on the biggest SPECIAL offer ever made.

Big Firms Need Trained Men

The Auto and Tractor Business is on the boom. Thousands of trained men will be needed during the next few months. I get calls every day from Garages, Battery Stations, Auto Repair, and other successful concerns for McSweeny men. When the big fellows need high grade men they know where to come for them. They want McSweeny trained men.

George W. Smith runs a big Ford Agency and Repair Shop at West Alexandria, Ohio. He says, "I am clearing over $800 per month."

My Training Unusual

Scientific tool training—that's the secret. You do things here according to the latest engineering standards. Thousands of dollars have been spent in modern tools and equipment. You'll know a motor like a brother. That's why my men are at home with the biggest shops in the country. If you want to succeed the way Smith, Collins and the rest have—qualify by the same method.

I'll Pay Your Railroad Fare and Board You!

In order to fill the openings that now exist, I am making an offer no one has ever made before—FREE RAILROAD FARE, FREE BOARD. But even that is not all. I'll tell you about the rest in my letter.

Send for FREE BOOK

My big illustrated training book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and my short time offer NOW. It soon expires.

C. B. Gillispie has charge of a fleet of trucks and tractors with the State Highway Commission, due to McSweeny training.

McSweeny Auto Tractor and Electrical Shops, Dept. 287
9th and Walnut CINCINNATI, O. 517 S. Laflin CHICAGO, ILL. 1815 E. 24th St. CLEVELAND, O.

D. M. Collins, Williamsville, West Virginia, writes, "After finishing McSweeny training, I started in as manager of a garage at $300 per month."

McSweeny Auto, Tractor and Electrical Training Shops, Dept. 287 (Address shops nearest you.) Cincinnati, O., or Chicago, Ill., or Cleveland, O.
Without any obligation send me your big free book on Autos. Also information regarding special temporary offer.

Feeding Linseed Meal

A 100 Per Cent Investment

Yes, it's an *investment*—*not* just an *expense*—and one paying bigger and surer returns than most any you can make. We can prove it—by the statements of dairymen, feeders and breeders the country over.

The following are typical:

W. A. Bridge, Waterloo, Iowa, says:
"For each dollar expended in Linseed Meal, I should judge the return is two dollars."

J. J. Harridge, Mystic, Iowa, says:
"In my estimation, for every dollar invested in Linseed Meal in the ration, I have received two dollars in return."

Lawrence J. Todt, Morris, Ill., says:
"I figure every dollar invested in Linseed Meal to bring in a return of 100%."

The Wisconsin Experiment Station—
—found Linseed Meal to be worth about double its cost in certain hog rations.

All stock on the farm, including poultry, show a handsome profit in feeding Linseed Meal. The reason why lies in its *TRIPLE VALUE:* 1.—It puts stock in prime condition. 2.—It speeds up gains in meat and milk. 3.—It has high manurial value.

Let us tell you how—let us help you

Make this your best season yet. Send the coupon below. Get either or both of the books listed thereon and see how others have made good money on their investment in Linseed Meal. Study the rations given and adapt them to your needs, and write personally to our Secretary if you have any unusual feeding problems to solve.

Head of the Department of Dairy Husbandry, Pennsylvania State College

Testing Association Cow a New Jersey Champion

CADY'S JEWELL, 120524, owned by S. R. Matlack, Medford, New Jersey, won first honors in butterfat production in the cow testing associations of New Jersey for the month of October. Of the 4000 cows on test she was first in butterfat production with 78.3 pounds.

She was four years old February 2, 1925. With her first calf in class G. G. she made on official test 11,927.5 pounds of milk and 564.49 pounds of fat, making her the New Jersey State Champion in that class. She is now on test again with her third calf and has made since freshening last March to the last of October 510 pounds of fat and 11,187 pounds of milk, with last month her highest month. She is one of five daughters from Cady of Linwood, four of them full sisters.

Cady's Jewell, another champion.

Cady's Jewell is always hungry and the four pounds of grain, two pounds of beet pulp and a few cut beets and turnips that she gets three times daily, besides silage and mixed hay, never seem to satisfy her. One of her full sisters just finished a class G record of 414 pounds of fat as a two-year-old; milked two times a day for a good part of the year. Her dam, a ten-year-old cow, just finished a year record with 590 pounds of fat on official test. Jewell's sire is Langwater Pacemaker whose daughters are all doing so well.—E. J. P.

In Westmoreland County

THE best herd average in the Westmoreland County Cow Testing Association for the year ending September 1 was made by the St. Vincent Archabbey. This herd of thirty-four cows has an average production of 11,112 pounds of milk and 3833 pounds of butterfat.

Strict attention is paid to cleanliness and to each cow's health. Regularity in feeding and milking, and an excellent quality of roughage, are factors which have contributed to the high production in the herd. The good corn silage and mixed clover and alfalfa hay have gone a long way toward starting the cows on a liberal milk flow. Mr. Leonard Michlfried, the head herdsman, who is largely responsible for the year's excellent showing, has nothing but praise for the cow testing association.

Striving for a Purebred Herd.

Eventually the plan is to have a purebred herd at St. Vincent Archabbey, since purebreds are the standard for which all good dairymen and breeders are working. While the Archabbey has some grade animals of which Mr. Michlfried is very proud, and while these grades have fine records, yet he is gradually building on a purebred foundation.

The experience of this institution is in keeping with that of many successful dairymen who have found that the big factors in economical production are: (1) A well balanced ration, including leguminous hay and corn silage; (2) Individual records of the production of each cow, preferably secured from a cow testing association in order to get a basis for culling out unprofitable animals, and the raising of heifer calves from the best cows in the herd; (3) Better breeding—the use of a purebred sire backed by high producing dams and granddams, and the gradual building up of a purebred herd.—A. A. Borland.

To Save Delay

WHEN a new cow was brought to the farm, it was usually several weeks before she regained her former milk-flow. This delay was due to change of location, new feeding conditions, etc., and was costly. It wasted time and feed, and often caused a serious dispute between buyer and seller; so after much experimenting, I finally found a way to prevent it.

When a cow is purchased, I now make it a rule to go thru the stable and see where and how she was kept. I find out what the feeding rations were, and when she was fed. I question the former owner about his milking hours, and about the animal's temperament.

Make Gradual Changes

By doing this, I can introduce the cow gradually to her new surroundings; making changes slowly until she gets accustomed to my schedule. In this way I keep the milk-flow very nearly normal, and after finding her place, the cow has a better chance to prove her worth.

The plan helps in planning feeding rations for different cows. Often production increases when the former owner's method is improved upon; sometimes his proves better than my own. But in either case, it is good practice to know the former conditions. Minor details in handling cause a reaction when a new cow is bought, so before condemning the animal or her owner, be very sure to give the cow a chance to prove her value.—F. R. Cozzens.

Leader Three Years

THE Cumberland Cow Testing Association which has finished its sixth year's work has led the Keystone associations in the highest average production of milk for three successive years. The average production per cow for the year just completed was 9390 pounds of milk and 333.5 pounds of butterfat. This is an increase of 2065 pounds of milk and 88.9 pounds of butter over the first year's production.

Nineteen herds exceeded an average of 300 pounds of butterfat, the highest production going to the Holstein herd owned by Ivo V. Otto of Carlisle. Mr. Otto's herd has a five-year average of 12,640 pounds of milk and 419.2 pounds of butterfat.

The majority of the cows in this herd were sired by Lothian DeKol Korndyke, now owned by the Pennsylvania State College. The purchase of this bull by the college came as a result of the information gained thru the cow testing association records concerning the oustanding value of the bull for breeding purposes.—A. L. B.

RADIO DEPARTMENT

Conducted by
BRAINARD FOOTE

The Installation of a Radio Set

EVEN tho a radio receiving set is connected to an outside aerial of the highest efficiency, the good effects of the antenna may be entirely offset by poor installation. Factors which influence the erection of the antenna or aerial must be given similar consideration when wiring up the set in the house.

Most of us, if asked to choose between an installation that was unhandy but gave wonderful reception, and an installation wherein it was easy to get at batteries and tubes but was inferior in long distance, would certainly prefer the arrangement that brings in the stations. We know where the set will look pretty, where it will be easy of access and how it will fit in with the furniture and we go ahead and set it down at that point.

If we care only for reception from the really loud local stations, we may put in the set with scant thought to efficiency. But since most of us want just as much reception as the set is capable of delivering, we must think twice about it. Your attention has perhaps been drawn to the fact that an aerial lead-in wire should not run close to a building wall in approaching the window. This is done to avoid energy losses by "capacity." The wall and the wire form an electric "condenser" across which the radio energy is capable of jumping. We don't want this to happen, for we wish to pour all the radio energy possible right into the aerial binding post of our receiving set.

Before Wiring was Done Correctly

Inside the house the possibility of such "capacity" losses are even greater. I might cite a case in point—that of a man who prided himself upon the appearance of his living room. He had a certain location in mind for his radio. When he got it in that spot it went! Then he proceeded to run a length of white bell wire from the window at which the lead-in entered, over to the set.

It crossed first a window frame, and he tacked it very neatly all around the border so as to be completely concealed. Next he poked it atop the picture molding and thence across the archway between living room and dining room. Finally, it ran thru a small hole in the wall. Altogether, it is probable that he used up forty feet of wire.

Completed, he called his family to commend his work. But, turning on the set, reception was weak, except from the strongest New York stations—fifteen miles away. His anger at the radio salesman was unbounded, for it had performed so well at the store. "A fake!" he thought and turned to the telephone.

After Wiring was Done Correctly

The radio man arrived and kindly refrained from laughing, realizing that the job had been done in ignorance. He moved the set to the window, ran a five-foot wire to a binding post and the owner tuned in a dozen stations in a few moments. So that's an object lesson in radio installation.

Long and devious wiring in the aerial and ground system not only adds undesirable resistance to the current flow, raises the "natural" wave length of the aerial and thereby impedes short-wave reception (200 to 300 meters) but in addition permits a great deal of capacity losses to the walls. This last-named is especially bad if the walls have electric wiring, piping or metal lath near the aerial lead.

Therefore the aerial lead should be short and the set located where it need not require a wire longer than five or six feet to the lead-in tubing thru which the aerial wire comes. Never tack the aerial wire against the wall. Keep it away from the wall. The wire may be dropped beneath or in back of a table for concealment, of course. As to the ground wire, this may be fastened to the floor with staples and it need not be insulated wire. Capacity losses do not make any difference as far as the ground wire is concerned, for when the current has reached the ground wire it has passed the set.

Ground Connections

The ground connection may be made to a nearby water pipe or radiator. The very best system that can be devised is to ground it to the nearest radiator, if it is within fifteen feet, and also to run a wire from the ground post of the set to the water pipe entering the house.

It is usually most convenient to drill a small hole thru the floor for the direct ground wire. If only one ground is used, make it the direct ground, which runs in as short a line as possible to the street water pipe. If there is a water meter, connect to the street side of it, after filing the galvanized and dirt off well. Use a regular ground clamp and you'll have no need of solder.

Placing the set in such a position that it is in a direct line between the aerial lead-in and the ground connection and so that the wires to these points will be as short as may be, provides the loudest results and the most distance. If necessary to try a different arrangement of the furniture, try and persuade the obdurate members of the family that the sofa will be just as comfortable here as there and convince them that the parrot cage may not suffer from a change of scene.—B. F.

Radio Week

DON'T be surprised if you fail to tune in your favorite station any time after 10 P. M. during the week of January 24, and don't be too greatly surprised if, instead of tuning in your favorite station you should hear some faint talking in a foreign accent.

January 24 will mark the beginning of International Radio Week. During that week European stations will attempt to make themselves heard in America and vice versa. Out of courtesy to American listeners all American stations are to remain silent between the hours of 10 and 11 P. M in order that they may not interfere with the reception of European stations.

This hour will be an easy one for American folks, but it means that the British operators must either stay up very late or get up very early, for 10 P. M. Eastern Standard Time is 4 A. M. British time.

Get your radio sets working before the scheduled time and during the week set for the trials, try to tune in some of the British radio stations. Their programs will be of particular interest at this time.—F. A. M.

Judge—You are charged with being a deserter, having left your wife. Are all of the facts in the case true?"

Prisoner—No, Your Honor, I am not a deserter. Just a refugee.—Ex.

Run your skimmilk through a new De Laval

7 SIZES
Hand-Electric-Belt
$6.60 to $14.30 DOWN
Balance in 15 Easy Monthly Payments

Guaranteed to skim cleaner
The new De Laval has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is guaranteed to skim cleaner. It also runs easier with milk going through the bowl, and lasts longer.

YOUR old separator may be running all right and you may think it is doing good work, but is it? Here is an easy way to satisfy yourself. Ask your De Laval Agent to bring out a new De Laval and try this simple test:

After separating with your old separator, wash its bowl and tinware in the skim-milk. Hold the skim-milk at normal room temperature and run it through a new De Laval. Have the cream thus recovered weighed and tested. Then you can tell exactly if your old machine is wasting cream, and what a new De Laval will save.

Thousands have tried this plan and many have found a new De Laval would increase their cream money from $25 to $200 a year.

Send coupon below for name of your De Laval Agent and *free catalog.*

SEE and TRY the New De Laval

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

Wells & Richardson Co., Burlington, Vt.

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—In the past all boys and girls who contributed anything to the Forum have been considered members—with the beginning of the new year I'm going to make a change. From now on anyone who sends in a contribution for the page, a letter, drawing, picture or contest answer, becomes a Forum friend, but each week those who make especially good contributions will be awarded Forum membership pins to show that they are not only Forum friends but Forum members as well. A list of all cousins writing to the Forum will still appear on the page but members will receive the added distinction of an (X) after their names so that all will know who they are.

For a long time I have wanted to express in some special way my appreciation to those Forum friends who do the most for our page, who make it interesting and different for our many readers, and because with this issue we are beginning a new year, I decided it would be best to start now. Of course, the size of the pin won't express the size of my appreciation but with it I shall extend many thanks for your help in making the Young People's Forum a successful and worth while forum.

A good member will not stop with one contribution but will continue to do everything possible for the page. He will interest other boys and girls in the Forum—he will write entertaining letters himself, will send in pictures and drawings and will join the contests for the fun of it. From now on I'm going to keep a record of your contributions and in six months we'll see which county has the greatest number of active members.

Some of you may have wondered in the past why your pictures, drawings, or even letters, appeared on the page so long after you sent them in. Each week I read thru all the Forum mail and select from the pile the contributions which I want to use on the page. The pictures are then made into cuts, which takes a few days, and are filed away to be used when I can best fit them into the page.

When there are a lot of very good letters in one week it is impossible to print them all so I hold these hoping that later there will be space for them. All this may mean a delay of several weeks, so don't be surprised if your name has an (X) after it and you can't find your contribution on the same page. If at all possible it will appear sometime.

A Happy New Year to all. Let us make this year the best year our special page ever had.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I want to tell you about school entertainments. I go to a country school. We had a Hallowe'en party at our school. It was on October 23rd. We had pieces to say, then we had a dainty lunch. After that we played a trip to Jericho and we had an apple contest. We tied a piece of cord to an apple and fastened the cord to something about eight feet from the floor, then we adjusted the cord so the pupil could reach the apple with his mouth. If he could take a bite out of the apple he got a box of candy. This was great fun.

My sister goes to high school and they had a Hallowe'en party on the 22nd of October. They gave two prizes. One was for the funniest and the other for the prettiest boy or girl that was dressed up. The judges gave the prettiest girl a compact. After the contest was over they found that the prettiest girl was a boy! Then they blindfolded some of the pupils and had them walk over chairs, buckets of water, and I could not tell you what all. We are going to have a Thanksgiving party.—Edna Sinemus (12), Westmoreland County, Pa.

WAITING FOR A RIDE
Viola McCoy, Indiana County, Pa.

Dear Cousin Ruth:—I am sending a poem which I thought you might use.

Signs of Christmas

When mothers hide their sewing
If we come bouncing by,
When grown-ups stop their talking,
And say "sh-h-h" if we come nigh;
When the air is full of secrets,
'Tis a sign as sure as day,
That the long-expected Christmas
Isn't very far away.

When suddenly the children
Don't scold or pout or tease,
When they grow kind and thoughtful,
Say, "Excuse me," "Thank you," "Please,"
When they behave so sweetly
Folks fear they're going to die—
Then you may be quite certain
Christmas day is drawing nigh.

When fathers get real grouchy,
And assume a worried look,
When they say they've nothing left
But an empty pocketbook;
When, if we ask for pennies,
Our fathers get so hopping,
Then you may know the big folks
Are doing Christmas shopping!
—James Jewell (11), Warren County, Pa.

Dear Cousin Ruth:—My grandpa takes Pennsylvania Farmer. I go to school on a bus for about two and a half miles to Ramsey, N. J. We are having the ten weeks' test now so every morning I ride my bicycle because when we finish our morning test we get out and the same with the afternoon test. But after the tests are over I will go on the bus again.—Alan Johnstone (11), Bergen County, N. J.

Dear Cousin Ruth:—I wish to thank you for the fountain pen I received some time ago in the title contest. It is very useful and I am grateful for it. I mean to try the contest in this week's issue, too.

It would be nicer if we could have our letters written about different things as some one suggested. They are too much alike. Let us write about our Thanksgiving vacation or school entertainments. Again with many thanks.—Mary Eleanor McKernon, Wayne County, Pa.

Dear Cousin Ruth:—I live in the country on a big farm. We have two big horses and their names are Harry and Frank. We have lots of cows, pigs and chickens. I have three rabbits and five ducks, a big dog, Jack, and kitties, too. I have two brothers and two sisters. My mother is dead and my sister keeps house. I go to school and I like my home farm very much.

HERE'S MY DUCK
Kenneth O. Gottshall, Clinton County, Pa.

My brother has a five-tube radio. We all think it is the best radio that ever was. I like to read our page.

It is a very good place for hunting up here. We always board lots of gunners. I am sending a picture of myself and one of my ducks.—Kenneth Oscar Gottshall (12), Susquehanna County, Pa.

Dear Cousin Ruth:—Last year my father bought me two settings of eggs, fifteen in a setting. Twenty chicks hatched and some of these died. When time came to sell my chickens I received about $1.30 a chicken.

Do any of the Forum friends raise chickens.—John Ratkus, Allegheny County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a little sister, she is three years old and her name is Wanda. I live on a farm of 150 acres. We have a tractor, a threshing machine and two automobiles.

Oh! I'm so glad winter is here. My sister and I go sledding on the hills on our pasture. We have great big hills in our pasture. The snow bites your nose and stings your toes, what fun we have in winter time. Don't you, Cousin Ruth? I forgot to tell you my sister is learning to write, but not well; just a little bit.—Lillie Glembotski (8), Hunterdon County, N. J.

Jolly Old St. Nicholas

Jolly old St. Nicholas, lean your ear this way,
Don't you tell a single soul what I'm going to say.
Christmas eve is coming soon, now, you dear old man,
Whisper what you'll bring to me, tell me if you can.
When the clock is striking twelve, when I'm fast asleep,
Down the chimney broad and black with your pack you'll creep.
All the stockings you will find hanging in a row.
Mine will be the shortest one you will be sure to know.
Johnny wants a pair of skates, Susie wants a dollie,
Nellie wants a story book, she thinks dolls are folly.
As for me my little brain isn't very bright,
Choose for me, dear Santa Claus, what you think is right.
—Gladys Knarr (10), Clinton County, Pa.

Dear Cousin Ruth:—I go to the first year of high school. I like my school very well. I take piano lessons every other week.

Here is a candy recipe that Ruth Getz might like.

DIVINITY FUDGE

2 cups sugar (brown or white)
½ cup of boiling water
½ cup of cane syrup

Let boil until it forms a soft ball in water. Then stir into two well beaten egg whites. Flavor with any extract.—Helen B. Tickner (13), Tioga County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Some of us must have tried to ride on the wrong train, because here are the names of seven cities you all know very well. The trouble is that the names of the cities seem to have had an accident or something very disturbing happen to them, for you will notice that the first one seems to be all ready to say "Philadelphia" but makes a mistake and adds "more" to the "Phila." I think you will have no trouble in finding the first half of the name to which the "more" belongs. After you are once started the names will straighten themselves out without much difficulty. When you have arranged the seven names correctly, send them to me on a POSTCARD so that they reach me by January 9th. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the December 12 issue of Pennsylvania Farmer is: FRANK, ALICE, IRENE, RALPH, MABEL, DAVID.

The puzzle prize winners are: Webster Crowl, age 10, Rocks, Md.; Florence Deisher, age 10, Fleetwood, Pa.; Edna L. Fake, age 7, Elizabethtown, Pa.; Henry Graby, age 9, Lebanon, Pa.; Martha James, age 8, Pottsgrove, Pa.; Anna Kolodchak, age 11, Millville, N. J.; Celestina Rapp, age 8, Flinton, Pa.; Lewis Rishel, age 8, Pottsgrove, Pa.; Leon Steele, age 10, New Enterprise, Pa.; Charles Wooding, age 11, Princeton, N. J.

The Honor Prize winners are: Barbara Moyer, age 11, Schuylkill Haven, Pa.; Harold Weaver, age 9, Slatington, Pa.

Cake That Is Really Cake

The How of Mixing and Baking for Best Results

EACH year at fair time there is rivalry among the best cooks of the community. Everyone has a profound respect for the cake maker who wins first prize. While I am cutting and scoring the cakes I am asked all sorts of questions by women who have cake-making difficulties.

There are many ingredients and methods to choose from. Time and temperature greatly affect the cake. Here is a standard recipe for everyday cake which, perfectly made, is good enough for any occasion:

STANDARD CAKE RULE

⅓ cup butter
1 cup sugar
2 eggs
1 teaspoon vanilla
½ cup milk
1¾ cups pastry flour
½ teaspoon salt
2½ teaspoons baking powder

Butter is the best shortening for flavor and texture. Sour rich cream is also excellent, allowing ½ teaspoon soda to ½ cup cream. Chicken fat gives good texture. Drippings and lard are for spice cakes only.

Coarse sugar makes a coarse grained cake with a hard crust. Powdered sugar makes a close grained cake and is not generally as desirable as granulated sugar sifted once. Brown sugar or molasses gives a characteristic flavor to spice cakes and requires soda,—one teaspoon to the cup.

Other Liquids Than Milk

The cake rule as given calls for sweet milk. Other liquids that may be used are fruit juices, coffee, water or sour milk. For this type of cake use more butter if you increase the eggs. The whites folded in last make the cake lighter, also slightly drier.

Flavoring is added to the stiff eggs and beaten a moment, to insure its being mixed into the cake. Use a good grade of vanilla, almond or lemon extract, or flavor with chocolate, cocoanut, hickory nuts or burnt sugar syrup.

High grade cake flour, with a high proportion of starch and low gluten content gives best results. If you use bread flour, take two tablespoons out of each cupful after measuring and substitute two tablespoons of cornstarch. All recipes call for flour sifted once before measuring.

If unsalted fat is used, add one level teaspoon of salt for each cup, in addition to the salt called for in the recipe. Use high grade standard make baking powder that is fresh and has been kept in a tight can.

Mixing and Baking

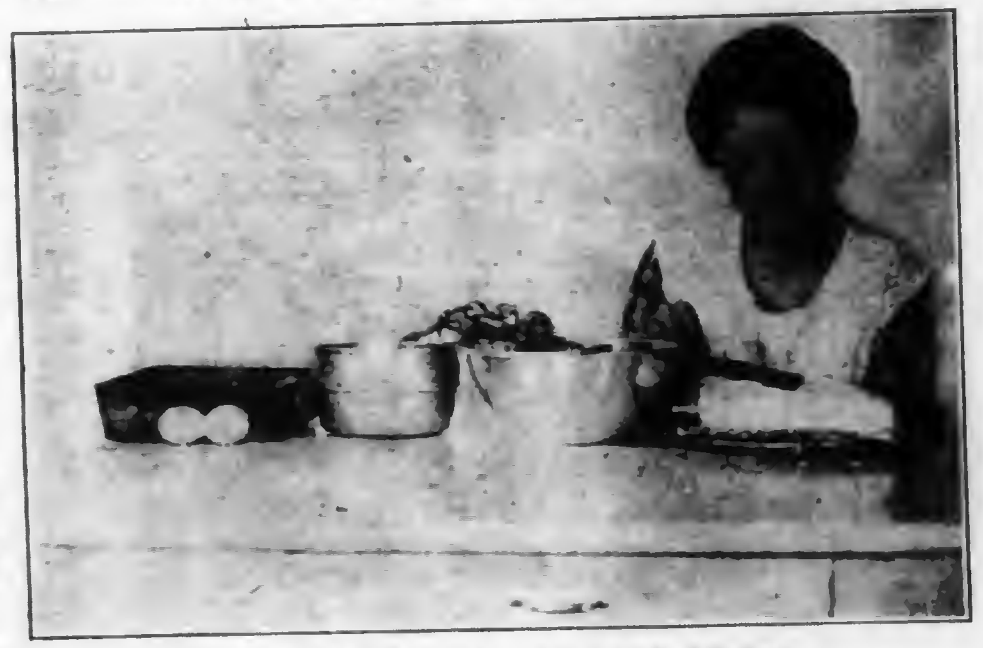
Unless you use a cake mixer, you will have the best results thru the following method of mixing: Cream the butter thoroly (it may be kept in a warm room for an hour, but should never be melted) with a wooden apron. Add the sugar a bit at a time, never letting the mixture become dry and granular. Beat the egg yolks into the butter mixture, then add alternately the milk and flour (which, with the other dry ingredients has been sifted three times), preserving the smooth texture. Lastly fold in the beaten whites with an over and over motion, and do not beat after the egg whites are in.

Fill pans two-thirds full, pushing the batter well into the corners. The pans have been lightly oiled with a pastry brush dipped into tasteless cooking oil, and have been dusted with a little flour.

Many a cake is ruined in the baking. Too slow an oven will cause the cake to run over the sides and be coarse in texture, while too hot an oven will cause a crust to form on top with a hump, out of which the uncooked batter will run.

Time and Temperature

The recipe should be baked in a loaf pan forty to sixty minutes at 350 degrees. Or it may be poured into twelve muffin pans and baked fifteen minutes at 357 degrees. A tube pan bakes cake more quickly than a loaf pan and permits a slightly higher temperature.



And at last the icing, creamy and delicious.

Test your cake with a metal cake tester or a new toothpick inserted obliquely. They should come out clean, not sticky.

Let the cake stand five minutes, loosen edges carefully with a spatula and turn on a wire cake cooler protected from draughts. When almost cool spread with cooked icing, or when entirely cold with powdered sugar icing.—Mrs. D. McC.

Up to the Parents

IF PARENTS would spend as much time and energy trying to build up a little group of boys and girls where worthy mates could be found, as they do in looking after their livestock, there would be fewer low grade homes in our land.

For some years past, without saying much on the subject, except among ourselves, a group of parents has been working to build up a strong friendship among worthy children and to eliminate any boys and girls of low ideals.

In the school everybody played together, and at social occasions there was apparently no distinction, but by degrees the separation was made. The Sunday school class made the first distinction for many of the children simply would not attend, but went each Sunday on fishing or other excursions with their careless parents. Then it became easy to have little class parties with the careless element left out and there were no hard feelings.

It was not long before our boys and girls were getting enough common sense of their own to know that some boys and girls would be as unhappy as a fish out of water in a group where music, good books, picture taking and healthful games predominated. Occasionally some new boy drifted in with the gang, and if he was of their sort they were glad to have him, but if he cheated in the games and made fun of the music as sissy they put him out, or he went of his own accord.

The girls followed about the same line and some of the best members of their group were the newcomers. The others faded away after a few meetings where embroidery or canning or preparation for county fair work was in progress and betook themselves to more congenial employment or idleness.

Now we have arrived at the high school age and we feel sure that we have as fine and clean a bunch of young folks as you would wish to see.

They can take a big old sled and coast down hill as happily as if it were the finest toboggan, and they can troop into somebody's house for baked beans and sandwiches as if they were seated in the finest ice cream parlor in the land, or they can roast wieners over a big fire and pull hot potatoes out of the fire and count it a party while others are paying two dollars and fifty cents each for the privilege of dancing in an overheated hall.

Many of the boys are in the high school band and the girls in the orchestra, or else they play the piano. They are interested in athletics and are beginning to be interested in each other tho there is little pairing off as yet.

Let Them Think They Did It

And the best part of it all is they think they did it all themselves. They boast of "Our Crowd," as if they had hand-picked every member, and we let them think they did. We think it pardonable selfishness that they would scrutinize very closely anyone who acts as if he would like to be taken into the fun.

Most of them are planning for college tho it means helping themselves pretty largely to get thru. There isn't a girl that any of us would object to for a daughter-in-law, or a boy, we think, would make an unworthy mate for any of our girls. And, best of all, we never talk to them about choosing this or that girl or boy for a life companion. We act as if everything was merely good comradeship and marriage far in the future. We are not specially anxious that they shall marry within the group, but rather that they will apply the power of sensible selection to their later friends.—A Country Mother.

A Word of Gratitude

NO ONE regrets more than I the loss of our dear Mrs. Harrington's leadership on our Home Page. Hers was a mission of loving wisdom among home-builders and home-keepers. The Home Page has become a text book for women in every home the Pennsylvania Farmer enters, and some men like it, too.

Can we farm folk show our depth of appreciation in any way more befitting, than by striving to continue the great work for which Mrs. Harrington has laid such a firm foundation? Let us aim to keep before us the very highest ideals of Life and Living. You will be glad, I am sure, to join with me in this mutual word of gratitude, and to unite in extending to Mrs. Harrington every good wish in that splendid new field of service which she is entering.

To the many readers, friends, and contributors who enjoy this page, I send greetings hearty and sincere for the New Year.—Gertrude S. Stewart.

Where Is Yours?

THAT beautiful tree so much admired by your family and your friends! Where is it now? Is it tossed upon the wood pile, or has it found a happier place out in your yard where the children will be so happy to join in merry outdoor games around it?

These wintry days the tree may still be a Gift Tree if the boys and girls each day tie a bit of suet on the boughs for bird visitors.—G.S.S.

Buy Your Salt Carefully

IN CURING meats the aim is to prevent spoilage and also preserve the original tenderness and natural color. The kind of salt used is most important since immediate and thoro action is necessary in the curing process.

Be cautious at this season of work with meats, and provide yourselves with a quick-dissolving salt whose particles are soft, porous, and flaky. Readers desiring reliable recipes for sugar-cured bacon and ham, may send requests to the Household Editor with stamped envelope for reply.—G. S. S.

Novel Clothes Closet

FOR those who use the old fashioned wooden bed with a high headboard, a make-shift closet is easy. Screw small strong screw hooks along the top on the back of the headboard to hang dresses and skirts. Lower down place hooks to hang shoe bags, etc. Over all have a cloth curtain hung on picture wire. This keeps the dust from the clothes and makes the "closet" look well. If the headboard is set across a corner of Mrs. E. M. C.

Reducing the Meat Bills

Substitutes That Stick to the Ribs of Hungry Men

"I'M lost without meat," declares the hard working man. "Vegetables don't stick to the ribs when a fellow works hard."

It is up to us women to give the family meat, but also to demonstrate that other kinds of food do stick to the ribs as well. In other words, the meat flavor may be provided even if the amount of meat is decreased. If the economy is tactfully accomplished, it will then be safe to say, "You are in just as good health and your physical strength has not been diminished altho the meat bill has been reduced." Many women follow the line of least resistance because meat always was popular, easy to cook and the backbone of the meal from pioneer times even to this very day.

But take chicken for example. A thick chicken soup with the meat all shredded in it, and rice and macaroni to thicken it will satisfy the hungry diners and yet not allow them to fill up on meat alone. A meat pie made with bits of meat, vegetables and gravy and then spread with an appetizing cover of mashed potato browned in the oven will satisfy the hungriest mortal, but it will contain only half what that mortal would demand fried or roasted.

Some Substantial Foods

Meat with noodles, meat loaf with plenty of crackers and milk in it, thick stew of beef with potatoes and dumplings, these all are ways of getting around the difficulty now that meat is expensive. When you serve sausage curl it on top of the pan of baked beans and allow it to brown in the oven. It will take half as much as if fried and served separately.

Thick bean soups and beef soups with vegetables are good. A fifteen-cent soup bone furnished the foundation for a delicious dinner for us last week, but the soup was thick with celery, onion, potato and peas. The meat was removed from the bone, cut into small pieces and served right with the soup. On a plate by itself it would have looked poverty-stricken, but nobody was hungry after dinner till the evening meal was served.

Meat on toast for supper gives the meat eaters the flavor without their getting too much. Minced dried beef or minced ham in cream sauce, left over chicken with gravy, all provide the desired meat, yet balance with other foods.

Whole Wheat Is Good, Too

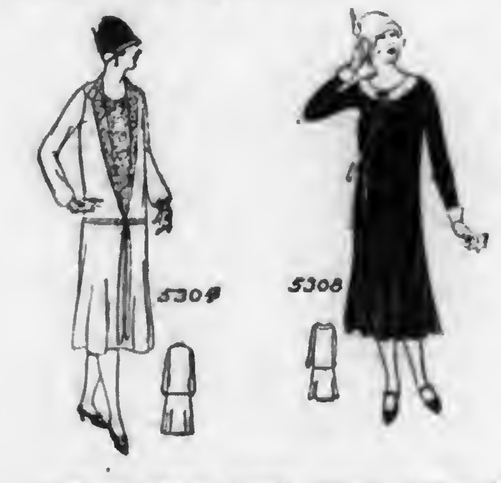
Another thing that economizes on meat is to serve whole wheat gems with syrup and butter, or whole wheat griddle cakes. There is something about whole wheat that sticks to the ribs better than white bread. Warm biscuits with honey will make everbody turn from the meat ration and so will hot waffles. Of course, eggs are always a handy substitute but served too often the family tires of them. By reducing the meat to leave room for other foods, health will improve and nobody will starve to death.

Many people who are on a low meat diet are doing their work quite as well as those who think they must have meat three times a day. As a nation we have "specialized" too much on flesh foods, so it is well to study ways and means of balancing our ration as carefully for ourselves as for our stock.—Hilda Richmond.

New Clothes for the New Year

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

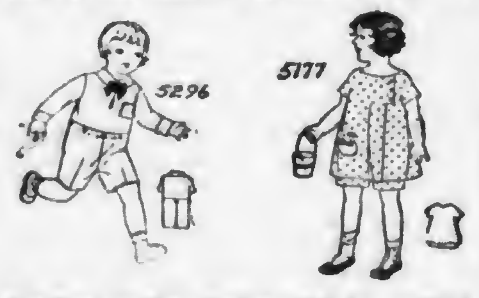
5304.—A Stylish Dress.—Kasha, satin or broadcloth with trimming of braid, braiding or figured silk, would be an attractive development for this style. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3¾ yards of 40-inch plain material and ½ yard of contrasting material for facing, revers, collar, cuffs and vestee. Pattern, 10 cents.



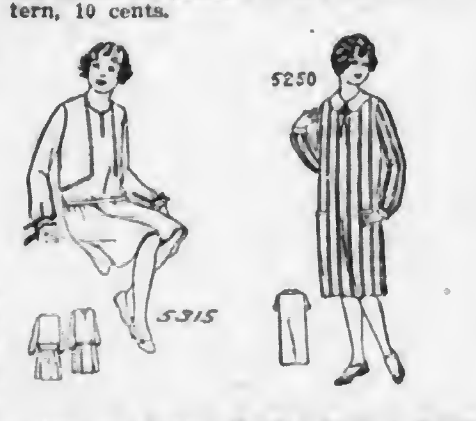
5308.—A Smart Frock.—Black satin and white crepe are here combined. This style would look well in velvet or kasha. It is also attractive in jersey or wool rep. Three sizes: 16, 18 and 20 years. To make the model for an 18-year size will require 3⅝ yards of 40-inch material. Width of skirt at lower edge is 2¼ yards. Pattern, 10 cents.

5296.—For the Small Boy.—Flannel, jersey or serge as well as wash materials may be used for this design. Three sizes: 2, 4, and 6 years. A 4-year size requires 1¾ yard of 44-inch material. Pattern, 10 cents.

5177.—A Popular Style.—This attractive little play dress has the bloomers with straight lower edges, and a smart toy pocket on the front of the dress. Gingham, percale, crepe or linen could be used for this model. Four sizes: 2, 3, 4 and 5 years. A 3-year size requires 2¼ yards of 36-inch material. If pocket is made of contrasting material, it will require ¼ yard 9 inches wide. Pattern, 10 cents.



5315.—For the Growing Girl.—Crepe, fine serge or jersey would be appropriate for this design. The bolero and ruffle beading on the sleeves may be omitted. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¾ yards of 40-inch material if made as illustrated. Without the bolero 2¼ yards will be required. Pattern, 10 cents.



5250.—A School Frock.—Striped flannel was used in this instance. One could have wash materials, or tub silk, or wool rep. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅝ yards of 32-inch material with ¼ yard of contrasting material for collar, cuffs and pocket facings, if made with long sleeves. With short sleeves 2⅝ yards will be required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1925-1926 Book of Fashions.

Read All Evening Without Eye Strain

HERE'S the lamp that assures you *plenty* of the *right* kind of light when you sit down to enjoy your evening reading. It's a Coleman Quick-Lite—famous for its pure-white brilliance—brighter than 20 old-style oil lamps.

Under the Quick-Lite's soft, restful radiance you can read the whole evening through without eye strain. This good light protects your eyes—and eyesight is priceless! Lights with ordinary matches. Makes and burns own gas from common motor gasoline. Price in U. S. A., $9.00;

Sold by 30,000 Hardware and General Stores. See your Dealer for Free demonstration. If he cannot supply you, write our nearest office, Dept. P.A.-71

NEW INVENTION SAVES MILLIONS

A Lamp that Burns 94% Air.

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

VIOLIN GIVEN

Handsome, clear toned, large sized Violin with pegs, finger board, tail piece, full set strings, bow, box resin and self-instruction book. Send us your name and address and GIVE AWAY FREE 28 Fine Art Pictures with 28 pkgs. Bluine which you sell at 10 cts. a pkg. BLUINE MFG. CO., S-85 Mill St., Concord Jct., Mass.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

The Story Thus Far

TOM WOODSON has just passed his sixteenth birthday when our story opens, and Uncle Mason Long, his mother's brother, has given him $200 to use as he pleases. The gift makes the boy realize that the time has come when he must decide his future. Tom's mother, with a vision unlike that of her Peace Valley neighbors, urges schooling and persuades him to talk with Principal Morton of the Blanton High School "Outside." Mary Long had come into the valley from that "Outside," with its different customs of dress and manners of speech, when she became the wife of Sam Woodson, keenest of the valley's trapper clan.

Mr. Morton tells Tom of John Roberts the school's new agricultural teacher. Farming has no appeal for Tom but his curiosity is aroused and when he talks it over with his parents it is settled that he at least begin the school term.

Marvin Manning rooms with Tom in the home of the Lanes. The boys become friends but Tom is not welcomed at the school—for a long time there had been a feud between the boys of the hill country and those of the town.

Tom joins practice, first football and later basketball, and in both "Bull" Durham unfairly injures him. Two factions quickly form, the Grubs, followers of Tom, and the Wasps, followers of "Bull."

John Roberts arranges for corn projects in the vocational agriculture work. One Saturday, visiting Tom, Roberts tours Peace Valley and unexpectedly finds loam, real corn land.

While representing Blanton High on a corn judging team at Cardwell U., Roberts introduces Tom to Mr. Sheldon, the world's champion corn grower of the year before. Sheldon promises to send Tom a bushel of seed corn for the five acres in Peace Valley which Roberts had rented for Tom's project work. The station master tells everyone about the corn when it arrives in Blanton. "Bull," indignant, collects his gang, enters Tom's room at night and steals the corn. Tom is awakened. He phones his father and before long Sam Woodson, Lame Bill Kidd and a lop-eared dog, Old Trail, drive over from Peace Valley to help rescue the stolen seed. The dog follows the trail and when the seed is found hidden back of the old mill, Sam Woodson takes it to Peace Valley for safe keeping.

(Continued from last week)

SOMETHING had happened, of that John Roberts felt assured. Young Durham went about with an air of smug satisfaction; stung by the silence of Tom and Marvin his pals tried many a guarded jibe but never a "rise" they got. So far as the chums were concerned the happenings of a certain dark night might never have occurred. That is, in public. But Roberts caught them alone one day, laughing as only boys can over the mystification of an enemy. "Spill it, fellows," he commanded as gently but firmly he caught each by a coat collar. "There's some mystery here that I'd like to know about. Of course if it's a personal matter you don't have to tell, but if it affects the school I must know." Frankly Tom told of the night's happenings and when the story ended the teacher was consumed with mixed anger and amusement. "Of course you couldn't prove anything," he said, "except that the flashlight and handkerchief provide circumstantial evidence. But a boy who will stoop to a thing like that has no business in school. Think I'll take it up with the directors and ask that Durham be expelled. But it would be a mighty good joke to keep it all quiet and beat him in the corn growing game as well as outwitting him with Lame Bill and Old Trail. That was a clever thing to do," and Roberts laughed heartily as Pepper pictured the hunt thru the silent streets.

"Please don't say anything about it, professor," Tom requested earnestly. "It would only make trouble in the school and as you say we can't prove anything. Besides the fight is against me, not against the school and I can take care of myself. 'Bull' is a mighty good football and basketball player and we need him for that. We have the corn and no harm has been done. And remember that 'Bull' has a chance to win for the school, too. Let's just forget about what happened the other night."

"GOOD for you, Tom," replied Roberts as he shook the lad's hand in a warm clasp. "I'm proud of you for thinking of the school instead of yourself and we've had trouble enough with Bob's dad. We'll just let things run along. But if that young man tries any tricks in school," and the teacher's lips set in grim lines, "something is going to happen that won't be pleasant for him. Promise me that if anything else comes up you will come to me at once. No, it isn't 'tattling'," he concluded as Pepper Manning started to protest. "This is for the welfare of Blanton High. I honor the boy who won't betray a confidence but sometimes there is mistaken honor in withholding things a teacher should know. You can trust me, fellows," and John Roberts smiled the winning smile which won abiding friendship. So the boys promised and in the coming days it was evident "Bull" and his followers had discovered the broken platform and believed the priceless seed was irretrievably lost. Up to the class room young Durham brought the fine ears that his father had purchased and he and his friends chuckled in high glee when Roberts announced as they crowded 'round, "Fine seed, fellows, but not nearly so good in type or quality as the bushel Mr. Sheldon sent Tom. Remember I told you that is 'one bushel in a thousand' and seedsmen don't sell that kind of corn. They keep it to plant themselves. What's the joke, Robert?" he concluded sharply as "Bull" laughed aloud. But Durham only muttered something not understandable as he studied the impassive face of a lad nearby. But the eyes of Marvin Manning were blazing, and under his breath he hissed so that only "Bull" could hear, "you dirty dog, we'll get you yet." Complacent and highly elated because of the impression made Durham took the seed back home. Tyler, the station agent, had told him that no other express package had come for Tom Woodson and had grinned knowingly when Durham had remarked that it would be worth his while if he passed on a quiet tip should any come. Befriending the son of the richest man in the community might pay large dividends.

In their room that night Tom listened to the excited comment and dire threats of his friend with the same impassive countenance which had met the unholy mirth of his enemy. But when he spoke there was the grim certainty of a man who has willed to put forth the last ounce of strength and courage to win for himself and the friends who have faith in him. "Forget it, Pep," Tom replied, "and go to sleep. We are not going to do one thing which would tip them off to the fact that we know about their stealing the corn or that we got it back. They think that I haven't any chance. By thunder, I'll show 'em whether a 'Hill Billy' can win or not," and in the darkness it seemed as if Tom's eyes glowed with a slumbrous fire. Long after his chum was asleep Tom lay thinking of the events of the past few days. Try to run him out of school, would they? Try to steal his corn and ruin his chance to win? He'd show 'em. In the days to come when stream and forest called and the gods of all outdoors were pleading that he leave unfinished tasks Tom Woodson was to remember that night and the solemn vow he'd registered. Not for himself alone but for the school and for Peace Valley as well as for the friends who had trusted him. Like a warm mantle the friendship of John Roberts seemed to enfold him as he fell into dreamless sleep.

With no knowledge of corn values the folks of Peace Valley yet could not help but realize that the great ears which Sam Woodson exhibited in his cabin home were an omen of success in Tom's new venture. The elder Woodson had made a brief explanation of the hurried midnight trip to a few trusted friends and the wrath of the clannish mountain folks knew no bounds. Only the fact that Sam Woodson was a tried and trusted leader restrained them from rallying hill forces and descending on Blanton to "have it out" with those who had "done dirt" to one of their blood. But respecting Tom's wishes his father counselled patience and no tale bearing. "Long as it is jest kids," he said, "we uns are goin' to keep hands off so far as any fightin' goes. My boy kin look out fer himself." And Sam Woodson's eyes shone with pride. But by any possibility could a lad of Peace Valley win in farming against those "Outside?" It was the simple faith of Tom's mother which finally quieted the storm. "I know that my boy will win," she said, "and it will be all the better to let him fight things out for himself. Didn't he get this corn by winning over other boys who thought he had no chance?" True it was and Tom's kinsmen began to feel that the coming season might witness a miracle. So with the promise that if more "dirt" was done they would be apprised of it the men from hill and valley went off home.

LAME BILL KIDD had spread the news that Tom was to farm the clover field and had good seed. "Gosh A'mighty," commented Grandfather Martin as on one of Tom's visits home he inspected the bushel lot. "Endurin' all the years I never seed such corn. But it caint grow here, Tommy. Didn't I grow corn on my patch for fifty year and it got worse all the time?" It was difficult for the folks of Peace Valley to believe the man who had produced such great ears had grown more than 600 bushels on a plot no larger than Uncle Abel Parsons' clover field. But such was true and each week as he delved deeper into the mysteries of agriculture revealed by John Robert's skillful teaching Tom Woodson felt growing confidence that he might do almost as well. Again and again had the instructor emphasized that there is no secret alchemy of soil, no hidden thing which the true seeker after knowledge might not find. "Mother Earth," he said one day, "has no favorite sons. Her bosom is the storehouse which feeds mankind. But many the man who follows agriculture and knows not its possibilities. I said there are no secrets but there is a magic key which unlocks the storehouse and enables one to gather full store of food where before he found but scant supply. That key is the key of knowledge. And some of you will carry the magic key when you leave school while others still will be groping to find it in the dark." As he had looked down into the eager face of his young friend Roberts had flashed a message of comradeship. To Peace Valley Tom felt he would bear the key of knowledge, praying to Mother Earth that she would befriend her son.

CAME the days of spring when school work was almost ended and a boy's thoughts strayed from desk and books. Afield the class in vocational agriculture was discovering new wonders as Teacher Roberts pointed out the difference in soils and explained why certain boys could hope for profitable yields of sorghum crops but would fail utterly if they grew corn. Nor was there lack of object lesson on many farms where dwarfed stalks betrayed the fact that King Corn had been provided scanty food. "Ever stop to think, fellows," asked Roberts as they stood on a hill which had yielded "'bout fifteen bushels an acre" according to the owner, "that a plant feeds just as you do? If you do not have the proper food elements you can not become strong, healthy men. Just so with this stalk," and he pointed to a scrawny specimen. "It did well to put forth leaves and then with what little plant food it could gather it produced the nubbin which is a disgrace to old King Corn. And note how the rain has washed and gullied the field. This land never should be cultivated, its jobs is to grow hay and pasture crops. Mother Earth plays no favorites, what you take from her you must pay back. Jack here," and he turned to a boy at his side, "says that his dad has been reading the books he took home from school and asking him questions regarding what he's learned about soil. What's he going to do with this field, Jack?"

Quick came the answer. "Put it in soy beans this year, professor. Next year he hopes to get a stand of clover. Dad says he's thru being a soil robber and that the things you teach us show good sense."

"Bully for Mr. Wood," observed John Roberts, "tell him I'll be out to help him inoculate that soy bean seed. Right now he's beginning to pay Mother Nature back for the things she's done for him. Now we'll go down and have a look at Bob's field," and with the class at his heels Roberts led the way to the Durham farm. Second bottom was the land and the available plant food was to be reinforced with commercial fertilizer. The "Wasps" buzzed loudly as they heard the teacher's compliments. Surely here would be the chance to even honors with the "Grubs" for no local follower of Tom Woodson had soil that would compare. Long before they had decided that Tom was only bluffing in his pretence of interest in the corn growing contests for no seed ever had come except that which they believed destroyed and they knew that even if fertile soil existed in the valley with such seed as could be found at home no boy had a chance to win. "Fine land, Robert," announced the teacher, "the nearest approach to real corn land I have seen around here. Now it's up to you to put John Sheldon's 'brains and sweat' into it. There may be more typical corn land in the county but I haven't seen it around Blanton." There was the hint of a quizzical smile on his lips and Marvin Manning found himself wondering if that casual remark meant anything. Not even to his chum had the close-mouthed Tom Woodson reported the "find" in Peace Valley. That was a secret, more precious because it was shared only with his teacher friend. And not one of the Valley folks who knew aught of the real value of the treasure locked fast in the breast of Mother Earth. But as he had studied soils and observed the difference in the rich loam of his contest plot and that of the Durham field, the best yet all the students had seen. Tom had come to the realization that here for him was real opportunity. His smile answered that of the teacher and again Marvin Manning wondered what it all might mean.

TWICE had John Roberts visited Peace Valley and supervised the breaking of Tom's land. A kindly farmer from "Outside," interested in the teacher's story of the attempt to teach the hill folks thru one of their number, had lent teams and plow and Tom handled the plowing like a veteran. Deep went the furrows and upturned to the sun the rich black loam was a sight to gladden the heart of a soil lover. As the soil flowed back like a black billow Tom checked the team and with his teacher stood in wordless admiration. "Old man," said Roberts as the plow bit in again, "I'm not much on sermonizing but it seems to me that God has been mighty good to give you a chance like this. Not that you haven't earned it but there's many a deserving boy who has a treasure on his own farm yet never finds the key to unlock the secret chest. We have a lot to be thankful for." There was the hint of a sob in Tom's throat as he replied softly, "I do thank Him," then ashamed as men are of strong emotion the friends took up the march again.

When planting time came the land had been disced and harrowed until the seedbed was near perfect. Tom had followed instructions to the letter and not even John Sheldon could have criticised the work done. But all this work didn't appeal to the Valley dwellers. "Plumb foolish," said Grandfather Martin disapprovingly. "Now in seventy year of corn growin' I never done nothin' but list it in the ground and let it grow. Pretty smart feller this Roberts, but I reckon I know more after seventy year of corn growin' than any young whiffet who ain't ever even bin in the hill kentry." Nor was Grandfather Martin without following. Even to Tom the repeated harrowings seemed unnecessary but he stuck grimly to his task, feeling that failure to comply with every instruction would be a betrayal of confidence. But even now the gods of spring were calling and he knew that bass lurked in pools which only he and his father shared knowledge of. "Hard work, this farmin'," Sam Woodson had observed one night as his son came in tired and grimy, "reckon as how you'll want to keep it up?" For a moment Tom did not reply, then, "I don't know, dad," was the answer, "but this isn't just farming, it's a fight that I've got to win."

Sam Woodson struck the table a mighty blow. "Right you air, son," he exclaimed, "and if it took it to beat them dirty skunks I'd be willin' to see you dig up that ground with your bare hands. I reckon as how that young Roberts knows this corn growin' business, leastwise he shore knows how to grow wheat." With that recurrent memory the big huntsman as ever chuckled in appreciation of a real fighting man. But now there was no thrill of war-time serving, no blood call to back men in the front line. Only the plod, plod of following footsteps as the team pulled harrow or disc. Many the time when Tom might have yielded to the call of unleashed stream as it sang merrily in the distance had it not been that even in time of temptation he could close his eyes and feel the warm pressure of a friendly hand on his shoulder, the inspiration of eyes that had looked deep into his. Great the responsibility of men who influence young life, fortunate the man who has such opportunity for the building of citizenship. Whatever the future might hold Tom Woodson would see this thing thru. Never again did his father give hint that toil did not have its compensations and the choice pools where played gamy fish waited the day when the son might find opportunity to visit them. One in heart and purpose was the clan of Woodson.

"The season is favorable for early planting," John Roberts announced one day, "and putting in your contest plots will be a part of your school work. Thruout the season I expect to help every boy but it is only fair to the school that I pay special attention to the work of those boys who have a chance to win. Remember that we are after that $100 library. Every boy, I am sure, is going to do his level best on this crop project, but two members of the class have soil of outstanding quality. They are Robert Durham and Tom Woodson. One or both of these boys has a chance not only to break all local records but to win in the state wide competition as well. We'll all go down and watch Robert plant his field tomorrow." Roberts turned to the work of the day but Tom could see the amazed and questioning glances of Durham and his "Wasp" adherents. Nor were his own followers who knew nothing of the stolen seed less curious. When recess came Tom was plied with eager questions while in the background the Durham crowd with pricked ears listened for information. But even to Marvin Manning Tom was uncommunicative. The most they could get out of him was that he had land that "looked well" and with which he would do his best. When reminded that twenty-five bushels an acre was said to be the yield record for Peace Valley Tom answered that the Valley folks hadn't had John Roberts to tell them how to grow corn. In his heart Tom was not sure but that Grandfather Martin's oft repeated assurance that the land wouldn't grow corn might prove true. He'd wait and see.

In their room Tom provided some guarded information which made Pepper Manning dance and shout. "Mum's the word, Tom," he assured, "and you can trust me not to say anything. But if the 'prof' has told you that you have real corn land like he used to farm at home and that land has been in clover 'Bull's' going to take your dust. By golly, this fall I'm goin' to a 'Wasp' funeral," and the excited pepper-pot turned a few handsprings to let off steam. "Better wait, old man, before you do any celebrating," Tom advised him. "The corn isn't even in the ground yet and a lot can happen before gathering time." But as ever with optimists Marvin counted the victory as good as won. Nor did his confidence fail to inspire his friend with greater determination to do his best. The real fight would be on.

(To be continued next week)

Activities of Al Acres:—*Al Least Al Knows Where the Blankets Were* : : : : *By Leet*

BR-R-R! WHERE ARE ALL THE BLANKETS!
3 o'clock IN THE MORNING AND 15 BELOW ZERO

Turkey Marketing

TURKEY marketing has taken a new turn in Kent County. Dorchester's County Cooperative Marketing Plan was so successful in obtaining prices that Kent has followed. All turkeys brought to Secretary William G. Smyth, of the Farm Bureau, will be graded by Mr. Rice of the State Extension Service, and packed and shipped by Mr. Smyth to a selected market. This is open to members and non-members of the Farm Bureau.—Marylander.

Not Welcomed by Farmers

The Yearly Swarm of Thoughtless Hunters

SURELY the farmers at this time of year need to have the patience of Job. Otherwise the mob of hunters that overrun us each fall would receive drastic treatment. Sunday is our worst day. From the first streak of dawn until dark the woods are ringing with guns, dogs and men.

They will tell you to post your land. Of what use is this? The very ones we would like to get rid of will hunt on posted land the same as if it was unposted. They care nothing for tame rabbits or turkeys that stray. A good fowl answers as well as a rabbit. If you want the nuts growing on your own farm, they must be constantly watched until gathered.

Don't Give Farmers a Chance

During the season the farmers who must work without ceasing to earn the bare necessities of life, raise the grain and vegetables upon which the game grows and fattens. In the fall, while the farmer is busy digging potatoes and getting in the last of the harvest, hunters swarm out from the city and clean up the game. By the time the farmer gets a little leisure in which to hunt the city men have all the game bagged.

City dogs are turned loose, often three and four at a time and frequently they are just as keen for domestic animals and fowls as for those which are wild. Recently we saw three hounds chase a neighbor's sheep clear across a big hill pasture before the owners came over the hill and called them back.

A friend had sheep killed by a city hound. We lost fifteen full-grown fowls at Thanksgiving time, a hound chased them into the deep snow and killed them. We found two hunters and two dogs with some of our black and white rabbits, cornered in the sluice below the barn. When we told them the rabbits were tame, they were angry and swore.

Farm Stock Killed by Carelessness

A neighbor had his gate left open and two cows went thru the gate. They crossed another farm and were killed by the cars. Because they did not go directly from his farm to the railroad track, he could not get pay for them.

Two farm women were frightened by a shot near them while they were picking grapes in a hedge. One hunter asked the other what he shot at and his reply was "I don't know whether it was an owl or a rabbit" plainly showed that it was as dangerous a place as a battlefield. The women were on their own farm.

We send the children to school and often there are hunters both sides of the road. We are constantly worried until they get home and often take them because we dare not let them walk.

Several who hunt in our vicinity have bad reputations and such characters are given free access to every part of our farm. Their cars are conveniently parked. Is it any wonder that we dislike to leave the farm alone to visit or market?

How long would such conditions exist in a city home? The overburdened farmers have furnished sport and eats for the city people long enough. That which grows on our farms should belong to us alone. —Mrs. E. M. C.

Did you ever hear this one?—

Steward—I thought I'd just bring you a little something to eat up here on deck, sir, and save you the trouble."

Passenger—Thanks, steward; save me a little more trouble and throw it over the rail."

"Do you think young people should be trained for marriage?" asked Jones.

"Certainly! I always have been opposed to sending raw troops into battle," snapped Mr. Grouch.

Jack—Have you change for a dollar bill?"

Pete—Yep.

Jack—Fine. Would you mind letting me have the loan of a quarter?

"Is there any particular sport you are fond of, Miss Effie?"

"No—but—er—I like you very much Mr. Snaggs."—Scribner's Magazine.

Hobbs—I saw the doctor stop at your house yesterday; anything serious?

Dobbs—I'll say it was! He came to collect his bill.—Hygeia.

Ole Amos done died las' night; missus wanter know whut doctuh did he had, but he didn' had no doctuh—he jes' died his-self!

"Don't kid me," said the breed association's new stenographer. "A 14,000-pound cow would be as big as an elephant!"

Agricultural Outlook

(Continued from page 3)

dairy products, with little change in total income. Altogether, it should be a good year for the livestock farmer and dairyman.

Wheat prices seem likely to average as high or higher in the first half of 1926 as they were in 1925, while corn and other grains are likely to be lower. After the middle of the year, weather conditions and prospective yields of the new crops will have a decided influence on price levels.

The high price of potatoes this year is a certain barometer of a large acreage in 1926. Weather will determine the ultimate size of the crop, but potatoes are unlikely to yield such generous returns to those who were fortunate enough to harvest in time as they did this year.

Any summary of the prospect for agriculture would be incomplete without mention of the tide of population which is pulling slowly but constantly in favor of the farmer. Since January 1, 1920, when the last census was taken, our population has increased by over a million persons. All of these are in cities and towns. The farm population has actually decreased.

Increase in Consuming Market

These newcomers are customers, not competitors of the folks now on the land. There has been an increase of fourteen or fifteen per cent in the domestic consuming market, a gain of more than one and one-half persons to be supplied with food by every farm in the United States.

With this steady force at work, expanding the farmer's market, and with gains in production limited largely to those brought about by improved seed and better tillage methods, the distant future of agriculture is assured.—Gilbert Gusler.

Markets

Editors' Note.—Owing to the holiday interruptions of the season the markets were, as usual, very much out of the ordinary and it is impossible to secure quotations on all lines. For this reason we ask our readers to excuse the abbreviated market report which appears this week.

PITTSBURGH MARKETS

December 28, 1925.

PRODUCE

Vegetables (wholesale prices)—ARTICHOKES, Cal, box, $6.50@7.50. BEETS, Texas, new stock, bu bskt, $2.50. CARROTS, Texas, new stock, bu bskt, $3. LETTUCE, Ohio, hot house, 3-lb bskt, 40@45c; 10-lb bskt, $1.15@1.25; Calif, Iceberg, crate, $4. PARSLEY, La, bbl, curly and plain, $10. PEPPERS, Fla, crate, fancy, $5; choice, $4. SHALLOTS, La, bbl, $7@8. SWEET POTATOES, La, bu bskt, yams, best, 75c@$1; poor stock low as 25c. TOMATOES, Ohio, hot house, 10-lb bskt, medium, $3.25@3.50; large, $3; small, $2@2.25. PEAS, Calif, 42-lb box, $6@6.50.

LIVESTOCK

Cattle—Receipts, 50; market slow and steady.

Hogs—Receipts, 600. Market active and higher. Heavy, $11.90@12; medium and light, $12.40@12.50; light lights, $12.50@13; pigs, $12.75@13; packing sows, $9@9.75; stags, $5@6.

Sheep and Lambs—Receipts, 200. Market active. Sheep, 10; lambs, $16.75.

Calves—Receipts, 100. Market active and higher; choice natives, $14.50.

Note:—No reports issued Friday or Saturday on account of the Christmas holidays.

PHILADELPHIA MARKETS

December 28, 1925.

LIVESTOCK

Beef Cattle—Steers, good to choice, $9.50@10.75; fair to good, $8.50@9.50; cows, good to choice, $6@7; fair to good, $5@6; bologna cows, as to quality, $2@3; bulls, good to choice, $6.25@7.25; fair to good, $5@6.25; calves, choice, 15.50@16; fair to good, $13@15; common, $10@12; Tennessee, choice, $13@14; fair to good, $9@11; common, $5@6.50.

Sheep and Lambs—Sheep quiet and unchanged. The better grades of lambs well cleaned up and firmer.

Hogs—Firm under light offerings, moderate demand. Western beef, $13@13.50; nearby, handy weights, $12.25@12.50.

HAY AND GRAIN

Baled Hay and Straw—Hay, timothy, No 1, nominal; No 2, $24@25; No 3, $21@23; light clover-mixed, No 1, $23@24; No 2, $21@22. Straw, straight rye, $16.50@17; wheat straw, $15.50@16; oat straw, $15@15.50.

Wheat—No 2 red winter, in export elevator, as to location, $1.75@1.80 bid; No 2 red winter, garlicky, $1.73@1.80; lower grades are selling at the usual market differences.

Corn—Car lots for local trade: No 3 yellow, new, kiln dried, 85½@86½c.

Oats—Car lots, as to location: No 2 white, 53@53½c; No 3 white, 52@52½c.

DAIRY MARKET

Butter—Solid-packed creamery, in tubs extra, 92 score, 50c; higher scoring goods, 51@54c; the latter for small lots; 91 score, 49c; 90 score, 47c; 89 score, 45½c; 88 score, 44c; 87 score, 43½c; 86 score, 43c; best prints, 92@94 score, 52@54c; cartons, 53@55c; good prints, 88@91 score 47@51c; cartons, 47@52c; ordinary farmers' prints, 44@46c.

Cheese quiet but steady. New York, whole milk, flats, fresh, 26@26½c; longhorns, round lots, 25½@26c; jobbing, small lots, 27½@28c; single daisies, 25½@26c; fancy cured cheese commands a premium of 1@6c more than above quotations.

LANCASTER MARKETS

December 28, 1925.

PRODUCE

Butter and Eggs—Country butter, 60@65c; creamery butter, 62@70c; fresh eggs, 55@60c dozen.

Dressed Poultry—Chickens, 75c@$2.50; turkeys, 75@80c; ducks, $2@2.50; geese, 45c; guineas, $1.25@1.50; squab, 30@35c.

Vegetables—Beans, green, 25@35c qt; red beets, 5@8c bch; cabbage, 10@20c hd; carrots, 5c bch; cauliflower, 35@50c hd; celery, 15@20c stalk; carrots, 5c bch; Brussels sprouts, 30c qt; eggplant, 25c ea; lettuce, 15@25c hd; mushrooms, 30c qt; onions, 10c qt; parsley, 10c bch; peas, 25c qt; peppers, 5c ea; potatoes, white, 30@40c ½ pk; sweet potatoes, 15@25c ½ pk; salsify, 10c bch; spinach, 18@20c ¼ pk; tomatoes, 25c pt; turnips, 13@15c ¼ pk.

Fruits—Apples, 15@25c ¼ pk; cranberries, 18@20c qt; grapes, Malagas, 25c lb; Tokay, 13c lb.

Grains (prices paid to farmers)—Milling wheat, $1.35 bu; corn, 75c; hay, baled, timothy, $17@18; straw, $11@12.

Feeds (selling prices)—Bran, $38@39; shorts, $38@39; hominy, $41.50@42.50; middlings, $43.50@44.50; linseed, $38.50@39.50; gluten, $50@51; ground oats, $40.50@41.50; alfalfa, regular, $42@43; alfalfa meal, fine, $46@47; cottonseed, 41 per cent protein, $47@48; dairy feeds, 16 per cent, $37.50@38.50; 18 per cent, $42@43; 20 per cent, $44@45; 34 per cent, $49.50@50.50; 25 per cent, $52@53; horse feed, 85 per cent, 44@45.

YORK PRODUCE

Eggs—46@50c; storage, 44c.

Poultry—Hens, 15@18c; dressed, $1.15@1.50 ea; springers, 65c@$1.25 ea.

Butter—Country, 55c lb; separator, 50@60c lb.

Vegetables—Potatoes, 25@35c ½ pk; cabbage, 5@10c hd; lettuce, 15@25c hd; celery, 5@12c stalk; carrots, 5@8c bch; horseradish, 5@10c bch; onions, 10@15c box; soup beans, 10@15c pt; peppers, stuffed, 5c ea; spinach, 15@18c ¼ pk.

Fruits—Apples, 15@25c ¼ pk, $1.25@2.25 bu; pears, 15@25c ¼ pk.

Retail Grain Market—Wheat, $1.50; corn, $1; rye, $1.15; oats, 60c; bran, $2 cwt; middlings, $2.15 cwt.

Wholesale Grain Market—Wheat, $1.34; corn, 90c; rye, 92c; oats, 50c; bran, $34 ton; middlings, $41 ton.

NEW YORK MARKETS

December 28, 1925.

PRODUCE

Butter—Firm; receipts, 8104 tubs; creamery, higher than extras, 50@50½c; do, extras, 92 score, 49½c; do, firsts, 88@91 score, 45@49c.

Eggs—Receipts, 14,070 cases. Extras, 47@48½c; extra firsts, 45@46c; firsts, 43@44c; seconds, 40@42c; mediums, 37c; dirties, No 1, 36c; No 2 and poorer, 33@35c; checks, No 2 to 1, 33@35c; refrigerators, firsts to extra firsts, storage paid to expiring dates, 34@37½; seconds and poorer, 32@33½c; Pacific Coast whites, best brands, 40@41c; western whites, 35@38c; nearby whites, finest selected, 40@41c; firsts to extra firsts, 35@38c; Jersey and other nearby hennery whites, closely selected, extras, 53@54c; nearby and western hennery whites, average extras, 51@52c; nearby and western hennery whites, average extras, 51@52c; nearby and western hennery whites, extra firsts, 48@50c; nearby and western hennery whites, firsts, 47@47½c; nearby gathered whites, firsts to extra firsts, 47@50c; nearby whites, undergrades, 45@46c; nearby whites, mediums, 40@41 pounds net, 45@46c; nearby whites, pullets, No 1, 43@44c; Pacific Coast whites, firsts to extras, 42¾@52c; mediums, 43¾@45c; other western and southern gathered whites, 43@48c; Jersey and other nearby and western hennery browns, extras, 49@52c; freight, 25@28c.

Live Poultry—Fowls, by freight, 27@30c; do, by express, 24@30c; turkeys, by freight, 35@40c. Dressed, firm; prices unchanged.

HAY AND GRAIN

Feed—Quotations were as follows (all prompt shipments): City bran, $35; middlings, $35, in 100-lb sacks; red dog, $46 nominal, in 100-lb sacks; western spring bran, $31.10@34.60; standard middling, $34.10; flour middling, $40.10; red dog, spot, $44.25@44.60, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $36; all in 100-lb sacks; cottonseed meal, 36 per cent protein, $40.50; prompt shipment linseed oil meal, $53.50, in 100-lb sack.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $29; No 2, $26@28; No 3, $24@25; sample, $14@17. Straw, rye, large bales, $19@20.

WOOL MARKET

Boston, December 26, 1925.

Domestic—Ohio and Penna fleeces—Delaine unwashed, 52c; ½-blood combing, 51@52c; ⅜-blood combing, 53@54c; fine unwashed, 48c. Michigan and New York fleeces—Delaine unwashed, 50c; ½-blood combing, 50@51c; ⅜-blood combing, 53c; ¼-blood combing, 53c; fine unwashed, 46@47c. Wisconsin, Missouri and average New England—½-blood, 49c; ⅜-blood, 49@50c; ¼-blood, 50c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, December 26, 1925.

Cloverseed, cash, domestic, $18.75; cash and December, $14.30; January, $14.40; February, $14.50; March, $14.65. Alsike, December, $16; March, $16.25. Timothy seed, cash and December, 3.72½; March, $3.82½.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, December 28. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.00@35.50
Spring bran	34.00@34.50
Soft winter wheat bran	36.50@37.20
Hard winter wheat bran	35.50
Standard middlings	33.50@34.00
Soft winter wheat middlings	36.50@39.50
Flour middlings	36.00@39.00
Red dog flour	44.50@48.00
White hominy	35.50
Yellow hominy	34.50
Gluten feed	45.00@45.60
36 per cent cottonseed meal	39.50@40.00
41 per cent cottonseed meal	41.50@42.50
43 per cent cottonseed meal	43.50@44.25
34 per cent linseed meal	53.25@53.70

Mill feed market firm under light production.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .49½	$ .47½	$ .51	$ .44½
Eggs, fresh gathered extra firsts (N. Y.)	.45½	.46	.65½	.60
Chickens, live, by express (New York)	...	.26	.30	.36
Potatoes, 150-lb sacks (Philadelphia)	...	6.62½	6.00	...
Steers, good to choice (Lancaster)	...	9.87½	10.75	9.25
Hay, Number 2 timothy, baled (Phila.)	24.50	24.50	25.00	19.50
Wheat, No. 2 red winter (Philadelphia	1.77½	1.70	1.61	1.91
Corn, Number 3 yellow (Philadelphia)	.85¾	.50½	.49	.70½
Oats, Number 2 white (Philadelphia)	.53½	.51½	.50	.72¾

Philadelphia Markets

THE first arrivals of Texas spinach were reported on the market December 22 and the demand was fairly active. Apples were in light supply and the market dull with prices a little lower. Celery met a fairly active demand at somewhat lower figures. Christmas greens have been very slow. Holly and laurel sold very slowly, while Christmas trees were in demand and brought high prices.

Onions were very dull and slow and cauliflower held steady. Potatoes moved slowly and all but fancy stock was lower. Pennsylvania round whites sold at $6.25@6.50 per 150-pound sack. Upper Lehigh County shipping points report light haulings with growers receiving $2.25 per bushel for bulk stock at the car.

Pennsylvania mushrooms were more active December 24, due largely to the holiday demand. The second shipment of Florida strawberries arrived this morning and sold at a record price of $3.50 per quart. Celery was steady under a moderate demand. Cranberries met a limited demand under moderate offerings.

The lettuce market was slightly stronger. Virginia and Texas spinach was more plentiful and weaker. Beets, carrots and turnips moved slowly. The potato market was steady but the movement was slow. Pennsylvania stock sold mostly at $6 per 150-pound sack.

Egg Market Weak

The Philadelphia egg market was weak today with extra firsts selling at 48c per dozen and firsts in second-hand cases at 46c. Egg receipts in Philadelphia on Tuesday totaled 1319 cases. Pennsylvania furnished 241 cases; Virginia, 119, and Delaware, 166.—W. R. W.

Butter Markets

BUTTER trading December 24 on the Philadelphia market was much heavier than dealers anticipated. Demand was especially good for 90 score and above, probably due in part to many of the houses being closed on Saturday.

CHEESE.—There was practically no trading Thursday with only a few small sales being reported all of which were in line with prices named.

EGGS.—Market weak. On the produce exchange Thursday morning there was one sale of firsts, second-hand cases, at 44c.

Boston Market

BUTTER.—Supplies of butter were not burdensome Thursday and with a steady demand from jobbing channels dealers were encouraged to raise prices fractionally on most scores in effort to realign prices with those of other markets. Local wholesale buyers were restricting operations but a fair demand from out of town was reported. Centralized cars more firmly held in some quarters but lack of confidence in market still in evidence.

CHEESE.—There was practically no business of a wholesale nature reported today and on small lots business dealers were obtaining unchanged prices. Trading mostly on held cheese.

New York Market

BUTTER.—Most buyers had anticipated their needs and trading Thursday was generally quiet. Supplies of fancy butter still light but dealers generally were adopting a free selling policy. Market closed steady with prices well sustained. Fancy storage quiet and steady. Buyers showed little interest in centralized cars and market ruled steady at unchanged prices.

CHEESE.—Trading was quiet with majority business in small lots. Market in firm position on all styles with sales Thursday of fresh young Americas one-quarter cent higher. State flats held of fancy quality show movement at 28@28½c with small lots Thursday selling at outside listing.

EGGS.—Market easier on fresh, refrigerators about steady. On the Mercantile Exchange Thursday morning there was one sale of extra firsts at 45c; one sale of firsts at 42½c, three sales at 43c. Extra firsts offered at 46@47c, bid 43@45c; firsts 43@45c, bid, 42@42½c.

Chicago Market

BUTTER.—Market ruled firm with prices on top grades one-quarter cent higher. Supplies of all scores were very light and with trade active dealers were able to obtain slight premiums in some quarters. Centralized car market with 90 score cars a quarter cent higher. Supplies limited, especially on 89 score cars which were held for premiums. More inquiry on storage centralized prices but buyers were at variance and, therefore, prices are not shown.

CHEESE.—Market showed no change in price Thursday and tone continued steady. Trade was very quiet with buyers showing very little interest beyond their immediate requirements.

EGGS.—Market weak. On the Mercantile Exchange Thursday morning there was one sale of fresh gathered firsts at 41½c, two sales at 42c, offered 42@45½c, bid 40c.

British Apple Markets

THERE was a good demand for bright red apples and for Yellow Newtowns in British markets during the week ending December 12, according to a cable from Edwin Smith, the department's fruit specialist in London. The demand for cooking varieties, however, was slow. Ample supplies of boxed varieties from the Pacific Coast are now being unloaded from the Royal Star liner, the Narenta, which arrived via the Panama Canal during the week.

Liberal supplies of Washington Winesaps and Oregon Spitzenburgs and Yellow Newtowns are being unloaded, but the demand is good. Arrivals are in generally good condition. Sizes 163 to 175's in extra fancy Washington Winesaps are bringing from $3.65 to $3.75 per case; extra fancy Oregon Spitzenburgs, $3.40 to $3.65 per case, and extra fancy Oregon Newtowns, $3.88 to $4.13 per case.

World Potatoes

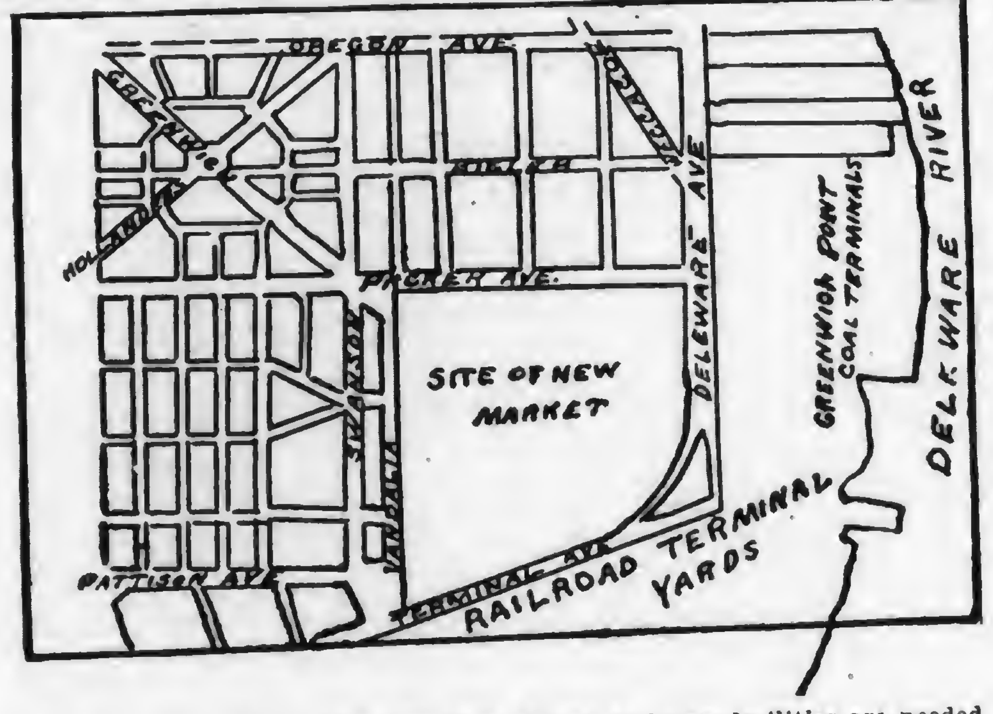
THE 1925 total production of potatoes for twenty-four countries, including all of the important potato-growing areas, is 12.2 per cent above the 1924 production. The estimate of production in France, just received, indicates a decrease of 4.6 per cent compared with a year ago, but is 2.2 above the average production in the same territory in the pre-war period 1909-1913.

Revised estimates for November for Canada, England and Wales, Austria and Luxemburg, indicate increases over estimates made earlier in the season, while the latest Netherlands estimate is slightly decreased.

Plans for New Produce Yards

THE growth of the fruit and vegetable industry during the past ten years has been spectacular and the handling of the immense supplies of produce in the cities has become a knotty problem. In Philadelphia last year over 42,000 cars of fruits and vegetables were unloaded and altho figures for 1925 are not complete, statistics indicate a substantial increase. Some idea of the growth of this traffic can be gained by the fact that in 1917, unloads of ten principal commodities in Philadelphia totaled 15,292 cars, compared with 21,795 in 1924.

It is estimated that over one-half of the receipts are unloaded at the Market House, located at 31st and Market Streets. This was built between thirty and thirty-five years ago and there has been practically nothing done since then to increase its size. The main reason for this is that there is not sufficient room for expansion. The growth of the fruit and vegetable industry, along with several other factors, has resulted in a very congested condition.



In former years the majority of the potatoes coming into the market were shipped in bulk and there was only a light proportion of sacked stock. At present the practice of shipping in sacks is increasing and practically all of this stock is unloaded at the Market House and stacked on the platforms. This is also true with onions, which up to about ten years ago were practically all shipped loose.

Located in South Philadelphia

A new produce yard in South Philadelphia, with two storage sheds, each 100 feet wide and 650 feet long is planned by the Pennsylvania Railroad Company as the solution to the problem. This will cause the abandonment of the Market House and also the yards at 31st and Chestnut Streets. The new yard will give Philadelphia the most modern and efficient, as well as one of the largest yards in the country devoted exclusively to the fruit and vegetable trade. The trackage at the platforms will accommodate the simultaneous unloading of one mile of freight cars and an ample holding and delivery yard will be provided.

Each of the sheds will have a heated section, extending half of its length, for the handling of products susceptible to freezing. Space is planned for an auction for those who wish to dispose of their consignments by this method. A cold storage warehouse with a storage area of 75,000 square feet is contemplated, but it is not likely that this will be built until the need becomes apparent.

The company has purchased a forty-one-acre tract in the southern part of the city as the site of this new development. Quick and economical trucking to all points in the city will be afforded by its proximity to Broad Street, the principal north and south thorofare, and Delaware Avenue, the city's waterfront highway.

The Department of Wharfs, Docks and Ferries is making extensive improvements in this section. A new Municipal Pier, No. 84 South, has been completed at Porter Street and after the first of the year will open bids for Pier No. 80, which will be a little north of Porter Street. One million and a half dollars are available for this work. Director Sproul, of the department, is urging the widening and paving of Delaware Avenue and also the extension of the elevated tracks, or other transportation facilities.

The new produce yard as planned will represent an investment of $3,000,000. This may be increased as the fruit and vegetable industry grows and new facilities are needed. The company states that they intend to start work on this project in the near future and that completion is expected in 1926.—William R. Whitacre.

Prices and Prospects

THE potato market made a spurt during the past week with most cities reporting advances of 5@30c per hundred pounds. The Philadelphia market on Pennsylvania stock gained about 75c on 150-pound sacks. Round whites sold at $6.75 per 150-pound sack on December 19th. Pre-holiday dullness prevailed during the early part of the week ending December 26, but prices held about steady. Latest reports from Upper Lehigh shipping points state that haulings are fair with growers receiving $2.25 per bushel for bulk stock at the car.

The latest potato crop estimate released December 22, shows a decrease of 23,260,000 bushels from the November estimate. A total of 323,243,000 bushels is forecast compared with 346,503,000 in November. The chief decreases were in New York, Pennsylvania, North Dakota and Michigan. Small decreases were noted in Oregon and California. Maine showed an increase of 3,194,000 bushels and Colorado a gain of 1,580,000 bushels, but this was more than offset by the decline in New York and Michigan.

Wheat Market Firm

Wheat prices fluctuated sharply during the week ending December 18, but closed a little higher than the week before. Receipts of corn were heavier and consisted mostly of the lower grades. This, together with expectations of a heavier movement early in 1926, forced corn prices lower. Rye fluctuated with wheat but closed at about the same levels as a week ago.

Pre-holiday dulness affected the demand for hay at most markets and the moderate receipts were fully ample for trade requirements. Stormy weather cut down the arrivals in the Southwest and resulted in a firm market. Recently lowered prices of timothy at New York helped to reduce the arrivals and the accumulation there was nearly cleaned up and quotations advanced. The Pittsburgh market was dull with unchanged prices.

Fancy Turkeys High

Fancy live turkeys for the Christmas trade were scarce on the Philadelphia market and the demand was active. Supplies were practically cleaned up by Wednesday afternoon and fancy stock closed at 49@52c per pound. No. 1's sold at 47@52c and No. 2's at 40@46c. Prices were about eight cents per pound higher than at Thanksgiving and about the same as at the corresponding period last year.

The best dressed turkeys were firm and sold as high as 58c per pound. Lower grades weakened and met a limited demand. No. 1's sold at 51@54c on Wednesday and No. 2's at 45@50c.—W. R. W.

State Products Show

(Continued from page 3)

meeting for Thursday morning. C. T. Conklin, secretary of the National Ayrshire Breeders' Association and M. H. Fohrman, extension dairy husbandman, United States Department of Agriculture, will make addresses. The Pennsylvania Jersey Cattle Club will hold a luncheon and business meeting at noon, Tuesday, and an address will be made by L. W. Morley, director of extension work, American Jersey Cattle Club. The Pennsylvania Federation of Holstein Friesian Clubs will convene Thursday morning at 10 o'clock. The Pennsylvania Guernsey Breeders' Association will hold their annual meeting on Thursday. The Pennsylvania Hereford Cattle Breeders' Association is the only one of the beef breeders that has so far scheduled a meeting. This meeting will be held Thursday morning at 9:30.

Swine breeders have planned sales as well as meetings during the Farm Products Show. Sales starting Tuesday afternoon at 1:30 will be held in the Vance Building at 4th and Chestnut Streets.

The Pennsylvania Chester White Breeders' Association will have a luncheon and business meeting Thursday noon; the Pennsylvania Berkshire Breeders' Association a luncheon and business meeting Wednesday afternoon at 5:30; the Pennsylvania Poland China Breeders' Association a luncheon and business meeting Wednesday noon and the Pennsylvania Duroc Jersey Breeders' Association will lunch and talk business at 5:30 Tuesday afternoon.

Fruit, potato, corn and wheat exhibits promise real competition because of the high quality of these crops in most sections of the state and the wide interest taken in showing this year. Reports to the superintendents of the various departments from many counties indicate that a large number of the winners at local farm products shows will enter their prize-winning products for state-wide honors.

The Bureau of Vocational Education, Department of Public Instruction, is planning to hold a Vocational Day on Wednesday, January 20 for vocational boys and girls who wish to visit the Farm Products Show. An opportunity will be given to see the show in the morning and a program of entertainment will be arranged for the afternoon. One of the features of this program will be the presentation of the gold and silver medals to the winners in the junior and senior project contest. This group of boys and girls will also be given the opportunity to meet Governor Gifford Pinchot and Dr. Francis B. Haas, State Superintendent of Public Instruction.

Vocational Work to Be Featured

The vocational work that is being done in the 135 rural centers of the state will be featured again this year in the form of an exhibit. Products from the school laboratories, shops, home projects, garments, and canned goods from the home economics departments will be displayed. A number of demonstrations, charts and photographs will illustrate the methods of teaching vocational agriculture and home making in rural districts. This exhibit will be displayed with the other educational exhibits in the Vance Building at 4th and Chestnut Streets.

Members of farm organizations desiring to take advantage of the reduced railroad fare to Harrisburg meetings during Show Week, are advised to procure certificates from their county agent or their organization secretary at once.

County News and Comment

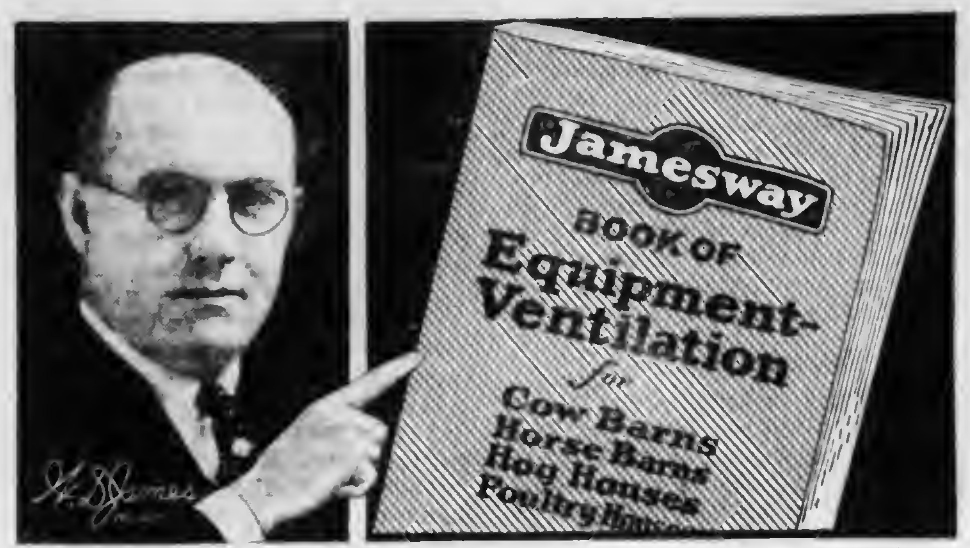
Cameron County, Pa.—Winter setting in. Snowing hard and blowing today. It will take quite a bit of snow to make sleighing on the township roads as they are rutted so badly. The country around here was overrun with hunters and quite a lot of game killed this year. Deer and bear are getting quite plentiful in the lower end of this county. State roads that were being graded were left in bad condition this fall, and in some places it is nearly impossible to travel them. Feed prices at mill: cracked corn, 100 lbs., $2; corn meal, cwt, $1.90; oats, cwt., $1.87; flour, 50 lbs., $2.60; straw, bale, $1.50; timothy hay, cwt., $1.35. Eggs and butter high and scarce.—Q. E. T., Dec. 17.

Fayette County, Pa.—Have had fine weather so far in December. Most of corn husked and in the crib and showing a fine crop. Still plenty of fat hogs to kill and bring a very good price. Cattle very slow on the market. Hay bringing about $28 per ton but going very slow. More of the public works started the first of December and that may help the sale of farm products. Most of the wheat that was sown last fall is looking very good. Very little fall plowing done so far. Most of the corn fodder in fair shape and being fed up very rapidly. Most of the farmers are only tending to their stock and planning next year's crops as most of the fall work is finished.—E. H. V., Dec. 21.

Lebanon County, Pa.—Araminthia Smith's exhibit of potatoes attracted most attention at our county show. She won first prize and was the winner of the boys' and girls' acre plots with a yield of almost 450 bushels. Judges who travel this circuit said the pigeon and poultry show was the largest in the state. Tobacco cured and ready to strip. One week of rain brought the last of the wheat out after all. Our Fish and Game Protective Association received a coop of rabbits from Kansas and one of wild turkeys from Maryland for restocking purposes. Game Warden Ibach found a colony of beavers in the northern part lately. Seibert's woods, a famous landmark and about the last old white oak tract here, is being turned into lumber. The waste wood is being eagerly bought up for firewood. Prosperous new year to all readers and friends.—R. I. W., Dec. 21.

Susquehanna County, Pa.—The ground is well soaked and no danger of a water famine. Roads are almost impassable. Very little plowing done. Most farmers busy doing chores and cutting wood as it is impossible to get coal. A few have their line home for the spring. Hunters have captured nearly all the birds, squirrels and rabbits or made them so wild that they keep out of sight. Farmers were too busy to hunt when the season opened. Very little snow yet. Potatoes scarce. Few turkeys and geese but chickens are plentiful. Meadows with no snow and frozen so hard it is likely to kill the roots and ruin new seedings. Eggs getting plentiful and selling for 65c; butter, 55c; dressed pork, 18c; chickens, 35c.—J. A. G., Dec. 15.

Warren County, N. J.—More warm weather and more rain during December than during October and less snow. Corn all husked. Wheat and rye making a great growth. Pork nearly all in the barrel, and a number of farmers slaughtering cows for own use. Pork, 21c; beef, 12c for front quarter and 14c for hind quarters. Surplus turkeys, ducks, geese and chickens are now marketed. Turkeys, 50c; ducks, 28c; geese, 24c; chickens, 26c. Some potatoes still to be marketed and selling at $2.50 bu.; apples, $1.75. Farmers are finishing the threshing. Wheat, $1.50; rye, $1.10; oats, 45c; egg production still slow but eggs have dropped to 50c doz. Milk still holds at the same old price but as the potato, corn and oats crop were all good, the farmers have enjoyed the most prosperous season in years.—A. S. P., Dec. 22.



SEND For This Valuable Book

If you are thinking of building, remodeling, ventilating or buying anything in the line of equipment for your cow or horse barn, hog or poultry houses, then be sure to send for this free book. This free book tells all about the Jamesway service—how we help you plan your buildings—how we save you money by cutting down material and construction costs. Tells also about the Jamesway line of Equipment and Ventilation for cow and horse barns, hog and poultry houses—tells how we have helped thousands of farmers work out their building and equipping problems.

Labor-saving dairy barns

At the International Livestock Exposition

(Continued from last week)

A NUMBER of breeders' associations and other livestock organizations held meetings during the week.

E. B. White, of Leesburg, Virginia, was re-elected president of the Percheron Society for the thirteenth time. W. H. Butler, Columbus, Ohio, was elected vice president; C. H. Stanton, Chicago, treasurer, and Ellis McFarland, Chicago, secretary.

The following officers were elected for the Belgian Association. President, Fred Holbert, Iowa. Directors, S. H. Bell, Wooster, Ohio, and Everett King, Chicago; secretary, J. D. Conner, Jr., Wabash, Indiana.

At the meeting of the American Shorthorn Breeders' Association the following officers were elected: President, H. E. Tener, Washingtonville, New York; vice president, F. E. Jackson, Hurley, South Dakota; general executive, F. N. Harding, Chicago, secretary; P. K. Groves, Chicago, and treasurer, C. D. Bellows, Marysville, Missouri.

Judge S. C. Fullerton, Miami, Oklahoma was re-elected president of the Aberdeen Angus Association. J. M. Tudor, Iowa City, Iowa, vice president; W. H. Tomhave, Chicago, Illinois, secretary; John Mills, Jr., Kirksville, Missouri, treasurer.

Election of Officers

Sheep and swine records associations elected officers as follows:

Poland China—President, Burlie Dobson, of Wisconsin; secretary, George W. Davis, Chicago, Illinois; treasurer, P. A. Blackford, Hillsboro, Iowa.

Duroc Jersey—President, W. J. Fitts, Gallatin, Tennessee; vice president, John W. Telling, Danville, Illinois; secretary, R. J. Evans, Chicago; treasurer, Ira Jackson, Tippecanoe City, Ohio.

Chester White—President, Holland Scott, Nelson, Missouri; directors, Chas. Richert, Lamville, Illinois; Arthur Tomson, Wabash, Indiana, and Frank Shever, Joy, Illinois.

Hampshire Sheep Association—President, Mrs. Minnie Miller, Wendall, Idaho; secretary - treasurer, Comfort Taylor, Detroit, Michigan.

Shropshire — President, W. S. Guilford, California; vice president, J. H. Skinner, Lafayette, Indiana; directors, L. B. Palmer, Ohio, and Neal Gibson, Ontario, Canada.

More than 100 steers were exhibited by boys and girls in the junior feeding contest. These entries came from Indiana, Illinois, Iowa, Nebraska and Kansas. The champion calf of the show was an Aberdeen Angus yearling exhibited by Pauline Brown, of Aledo, Illinois. The steer was sold at auction to Eitel Incorporated, Chicago, for twenty-seven cents per pound.

Students' Judging Contest

Twenty-two colleges from the United States and Canada entered a team in the students' judging contest. The team representing the Oklahoma Agricultural College won the contest with a score of 4459 out of a possible 5000. The Pennsylvania team rated eighteenth.

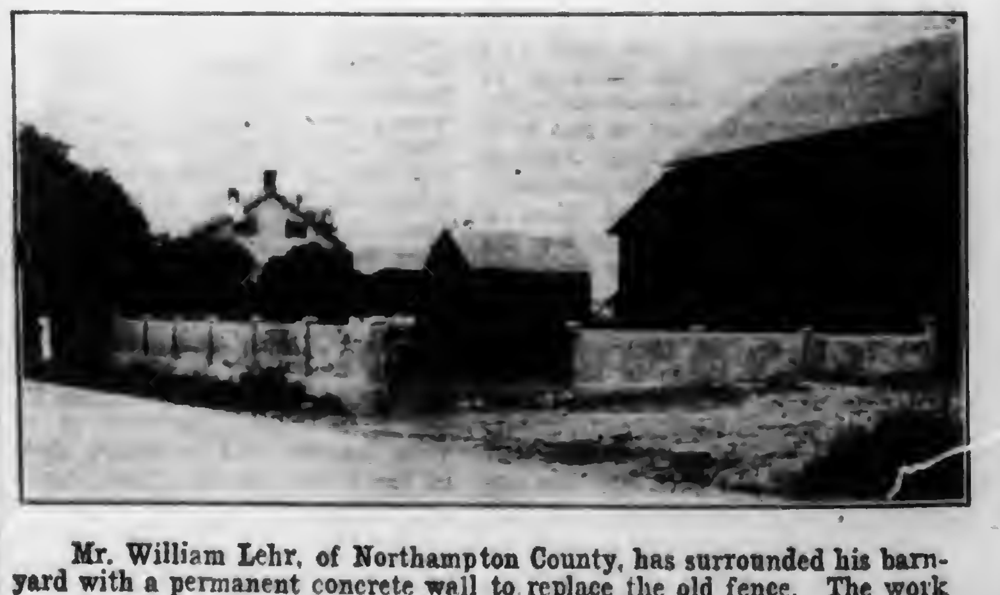
The team from the state of Oklahoma also won the non-collegiate contest with a score of 1586 out of a possible 1800, Pennsylvania taking seventeenth place with a score of 1307.—W. H. Tomhave.

What Is Gluten Feed?

I am a dairy farmer and grow a considerable acreage of corn in excess of what I feed my cows. Because of this, and because corn is very generally grown on Pennsylvania farms, I am inclined to favor the purchase of gluten as a concentrate to balance my dairy rations, providing I can get as good value and results for the money spent. Will you please give me information on this subject? Also, what is the difference between gluten feed and gluten meal?—E. S. J., Chester County, Pa.

Corn gluten in either form is a by-product of corn starch factories. The gluten is separated from the starch, ground and sold as "gluten feed" or "gluten meal." Larson and Putney's book on Dairy Cattle Feeding says: "Both are good, and usually they can be purchased in almost any locality and at a price that makes them a satisfactory feed to include in a ration."

Gluten feed contains about twice as much digestible crude protein as wheat bran, and in addition contains more total digestible nutrients. It is well liked by dairy cows and other animals and may be fed without the risk that attends the feeding of large amounts of some other high concentrates. One other feature in connection with gluten is that it adds color to cream and butterfat. Henry and Morrison say that gluten may also be fed satisfactorily to beef cattle and sheep as a supplement to rations low in protein.—Ed.



Mr. William Lehr, of Northampton County, has surrounded his barnyard with a permanent concrete wall to replace the old fence. The work was done without outside help.—G.

POULTRY

Baby Chicks Barred Rocks from State Accredited flocks which means free from White Diarrhea. Bred for size and egg production. The kind that make big broilers. Send for prices.
Koster Poultry Farm,

HAMPSHIRE SHEEP Yearling Rams, Yearling Ewes, old Ewes.
C. P. & M. W. BIGHAM, Gettysburg, Pa.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

OBSTRUCTION IN TEAT.—I have a cow that had a sudden stoppage of the milk flow, while milking, in one teat. Was only able to press out a tiny stream or just drops and it has continued for twenty-four hours. Had to remove the milk with a milk tube. The quarter seems to be all right except for the stricture which seems to be just at the end or near the end of the teat. Kindly advise.—H. T., Montgomery County, Pa. The difficulty you describe could be caused by bruising of the teat or udder. The stoppage would occur suddenly, by small clots of casein becoming lodged in the duct. Bathe with hot water and massage the teat gently between the fingers before each milking. Don't use the milk tube if possible to get the milk without it. If found necessary, be sure to boil it each time before using.

DECREASING MILK PRODUCTION.—I have a Guernsey heifer carrying her second calf that will freshen about March 15 and is still giving seven pounds, ten ounces of butter per week. When she was fresh she made ten pounds twelve ounces per week. I am afraid she will not go dry as its only about three months' time until she freshens. I am asking your advice as to feeding to dry her so as not to ruin her. At present I am feeding mixed hay and a commercial dairy feed. If I stop feeding dairy feed it might ruin the cow's health, and yet they tell me if she does not go dry before calving it will also ruin her, so perhaps you can help me out.—C. P. S., York, Pa. In order to dry up this cow before calving you must cut down on the feed. Timothy hay may be fed for ten days and the cow milked every other day gradually increasing the time between milkings until no more milk is produced. The commercial feed should be omitted from the diet for the period. As soon as the milk flow ceases the diet should be increased in order to build the cow up before calving.

INTESTINAL PARASITES.—I have a dog that is almost two years old. He takes spells in which he bites himself in the flank. Then he starts to yelp and runs in a circle as if he were mad. If the spell is very bad he leaves home for a while. Sometimes he is all right for a month. Can you tell me what is wrong or give a remedy?—O. H., Clinton County, Pa. Withhold feed for twelve hours, then give four grains santonin in one ounce castor oil. Add santonin to oil, warm the oil by placing the bottle in warm water and shake thoroly. Repeat the dose in three weeks, and a third time if necessary.

Chester County Show

(Continued from page 7)

touch of color to the otherwise white sides of the display tables.

In the commercial exhibits it was interesting to note that four milking machines were represented with equipment on the floor and the factory representatives with them reported a lively interest. The Farm Bureau, distinct from the Extension Association, had a booth where it was showing nearly fifty lines of goods used on the farm which it is prepared to handle cooperatively.

At the annual meeting of the Extension Association the present officers were re-elected for 1926 and the financial reports showed a balance on the right side. Steps are to be taken next year to ask the county commissioners for the full $3500 which they are allowed under the law to appropriate for agricultural work. At present the commissioners pay the association $3000 a year.

Morris T. Phillips, the noted Guernsey breeder at Pomeroy, gave a caustic denunciation, based on evidence he had collected, of one H. C. Short, said to be president of the Northern Ohio Dairymans' Protective Association. Mr. Short is holding meetings over the county opposing the tuberculin testing work.—Thomas H. Wittkorn.

At the Beginning of the Year

(Continued from page 2)

with a neighbor's sale, or at a community sale, or advertised in a local or farm paper. Many dollar's worth of such stuff can be dug up on nearly every farm.

Disposing of such property is an advantage in many ways. The money it represents can be reinvested. The space it occupies can be cleaned out and used to far better advantage. The work usually leads to a general cleaning up and sale of other superfluous articles, such as old iron, bags, tires, papers, magazines and other waste. This leaves the premises in a more sanitary, shipshape condition.

An experienced bookkeeper once made the statement that few men were capable of making an inventory that would come within twenty-five per cent of the actual value of the property listed. His theory was that most people would set too high values on the various items.

Use Conservative Values

In a farm inventory the writer believes it safest to use very conservative values, if the true financial standing is desired. A fair basis would be what the various items would bring at auction in that community, it would seem. Yet even this varies so with the season, the circumstances, etc., that one must still make conservative estimates to be safe.

As the work is done it is also well to set out all the things in need of repair. Making these needed repairs will furnish practical work thru the dull season. The inventory should be taken at the same season every year, then comparisons can be made to see whether the business is prospering or not, and the next year's work can be planned so as to overcome the weak spots in the year just past.

Returns may Come in Later

Many a young farmer becomes needlessly discouraged sometimes. At the end of the year he finds little money on hand to show for the year's work. An inventory may show him better off than he thought, with money invested in worth-while things that will bring returns later on. Or perhaps there is extra cash on hand that does not mean profits. It may have come from the sale of livestock that was not replaced.

Maybe, as in the case of the writer's farm, money was placed out in various enterprises of a cooperative nature. This means a shortage now, perhaps, but it is a good investment for the future of the business. A good bit was donated towards the building of a macadam road past the farm, more was put into stock for building a local milk shipping station, and some was put into stock of a cooperative concern to buy necessary farm supplies, sound investments all, and ones that will not have to be repeated next year. Yet if one did not take these things into consideration when summing up the year's work he might be tempted to give up the struggle.—R. H. F.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 95,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department.
Minimum, Ten Words.

Neighborliness is the foundation for team work between town and country and without it there can be no progress. Page three.

For More Than Fifty Years a Guarantee of Extra-Good Wear

IN the old pioneer days when almost every farmer had considerable clearing to do on his land—when he worked during wet weather and fair—he bought the kind of rubber footwear that he knew would give him good wear under rough working conditions. He found that Goodyear "Gold Seal" goods served his every purpose best. Snags, such as broken roots and thorny undergrowth, would not easily tear or puncture the rubber.

It is for this same reason today, that thousands of outdoor workers all over the country always insist on being supplied with "Gold Seal" rubber footwear. This trademark has been a guarantee of *extra-good wear* for over fifty years. Demand goods that are so branded—and that give this kind of service. "Gold Seal" overshoes, boots and rubbers are made for the entire family.

Old Colonial Family Homesteads

No. 28—The Price Farm

THE following is the history of the Price Homestead, situated in Lower Salford Township, Montgomery County, near Vernfield, Pa., which contains about 120 acres of land. On the farm is situated the Price Cemetery, where markers dating from 1720 can be found.

The first deed recorded is dated 1763, from which time on to the present time the farm has been transferred twelve times, each transfer being made from father to son or son-in-law.

Mrs. Susan S. Price, owner of the farm.

The present owner is a widow of the last owner, the late Abraham M. Price.

The writer is the youngest daughter of the present owner. I am not a subscriber to Pennsylvania Farmer, but I am living in the family of my father-in-law, who is a subscriber, namely, John B. Koffel, Telford, Pa.—Bertha Price Koffel.

No. 29—Spring Brook Farm

SITUATED in a very pretty part of Lycoming County ten miles east of Williamsport and three-fourths of a mile north of the Susquehanna trail is Spring Brook Farm, so named because of its many good springs.

The farm was bought in 1820 by Henry Ritter, my great-grandfather, and has been in the hands of the family ever since and is now owned by my mother, Mrs. R. S. Rigney.

There is now about 138 acres of farming land and twenty-two of woodland, this at first was nearly all woods but was cleared away and the farming soil is very good.

As to the buildings, there is a big farm house and barn, also a tenant house and most of the necessary outbuildings. Of course, these are not the same ones that were here when first bought for the old ones were of logs.

There is also a variety of fruit trees on the place, if properly cared for it would be nearly like a fruit farm.

One other thing connected with the farm that is of interest are the two pieces of furniture, a desk with a top cupboard and a grandfather's clock. These were made in 1820 by Henry Ritter with the use of only wooden pins. These pieces have been kept and handed down with the farm. There are also a few other antiques that have been kept, as spinning wheels, tables, etc.—Rachel Rigney.

Potter County Farmers

EARLY in December the Potter County Farm Bureau held its ninth annual meeting in the Court House at Coudersport.

The president spoke on the functions and activities of extension work in the county and emphasized the fact that extension work must be done with groups rather than with individuals.

The county agent gave an outline of the problems confronting farmers and recommended methods and policies which would prove helpful in solving them. Mr. Moffitt, extension specialist in farm management, from State College, held the interest of his audience as he urged farmers to analyze their business and find and strengthen the weak places.

At this meeting it was decided to change the name of the Potter County Farm Bureau to the Potter County Extension Association, because several commercial and legislative organizations combined are known as the Farm Bureau. This change was made because it has always been a rule that the extension service be free from politics and legislative interference.—M. C. S.

Play Safe When Buying Seed

THE most stringent and beneficial laws passed by the various states to regulate the seed trade, and the most earnest and conscientious efforts of the individual seed houses cannot require the farmer to buy pure seed of the highest quality. He may buy the foulest seed that ever was harvested if he wants to do so, and the law neither forbids his doing so nor shields him from his folly nor protects his neighbors from the weeds he may introduce into the community.

But common sense and good judgment dictate, as the Vermont State Experiment Station puts it in one of its farm bulletins:

1. That the farmer, when buying seeds, take advantage of the protection afforded by the law.

2. That he note and be guided by the purity statement on the package.

3. That he note and be guided by the weed seed statement on the package.

4. That he insist on a guaranty in case a dealer attempts to sell him seed without the statement required by law.

5. That he study the annual seed inspection bulletins and compare wholesalers' promises and performances.

6. That he buy the better grades, which usually are likely to be the least costly, not only in pure seed purchased, but in the exclusion of weed seeds.

The ideals of the state experiment station workers and of the big seed houses are the same and their advice is practically identical. Wildcat seed firms offering marvelous alleged bargains in cheap seeds have fallen under the ban of the federal trade commission, which has issued "cease and desist" orders against some of them, forbidding further operations.

The buyer can always secure tested seeds from reliable firms of established reputation, the only ones worthy of patronage. The main thing the buyer is offered in tested seeds is a ready means of determining whether it is true to name, its origin, its degree of purity, its degree of viability or germinating power and its freedom from fungous disease.

Big seed houses are prepared thru their testing laboratories to furnish this information. All the farmer need do to secure it is to ask for it.

The Building of a Better Community

Neighborliness Is the Foundation for Team Work Between Town and Country

By JOHN FRANCIS CASE
Editor, Missouri Ruralist

WHOEVER coined the slogan, "Get Acquainted with Your Neighbor, You Might Like Him," rendered a real service to humanity. Put into practice first in Grundy County, Missouri, where it originated, the Trenton Chamber of Commerce outgrew its boundaries and numbered more farmers in its membership than town men. Tom Witten, a hardware dealer, became an apostle of neighborliness. Mr. Witten's recipe for all community ills was community council. He preached the gospel of better understanding. Trenton wiped out the invisible boundary line which separates country and town.

I am a strong believer in rural community organization. Whether it be the Grange, the Farm Bureau, the Farmers' Union, the farm club or whatever type of farm fellowship farmers with their wives and children should work together for their mutual betterment. But farmers can not live to themselves alone. It is vitally essential that there should be cooperation between town and country. A good town may add millions of dollars to farm property valuation. Contented and prosperous farmers in a town's trade territory means the difference between a town that progresses, stands still or ultimately dies. Whether they pull together or not the interests of farmers and town men are inseparably linked.

Mutual Interests

Looking back over the number of years spent in rural community work, I know positively that the strongest link between town and country is some type of agricultural exhibit. I do not mean the local or county fair which is a fine thing for any community but some organized effort which cements interests and stirs community pride. It may center in the activities of the class in vocational agriculture or the work of the boys or girls club. It may be the outgrowth of an agricultural products show promoted by some enterprising merchant. But whatever it is that brings exhibitors and visitors together to compete and admire it's worth while. A community of interest is there.

I believe that the most nearly ideal community exhibit is a combined corn and poultry show. Corn is grown everywhere, poultry abounds on farms and back lots. The chief exhibitors in the corn classes are men and boys, and girls and women always outrank among poultry exhibitors. The poultry show provides opportunity for town residents to take active part and often interest among fanciers can be roused when if only a farm products exhibit is put on they may contribute cash but little else. And cash contributions always can be obtained more easily than personal service.

Experience being the best teacher, a leaf from the book of my own community effort provides the best suggestion I can make for the building of a community show. Several years ago when I was editor of a weekly newspaper in Whitesville, Missouri, a town of 300 and inland at that, we of the community felt the need for something that would bring town and country into closer fellowship. As postmaster I knew that more money was being sent away for goods than seemed fair to my merchant patrons, as a former farm resident I realized that unless the town thrived farm values would depreciate. We had no community meeting place except the churches and a lodge room. There was none too much fellowship, even among the churches. An annual picnic was the only community activity—and it was just a picnic. For two years I had urged the building of a town hall with no result. Apathy met every attempt. But one night two of us from the town and two from the farms met and decided without consulting anyone else to hold a corn and poultry show. We canvassed the business men for donations and met liberal response. Then we fixed up a premium list.

Well, when our corn was placed in the lodge room and our poultry in a vacant building we had a display "fearful and wonderful." Corn of all sizes and colors, chickens that apparently never had known purebred ancestry. But so thoroly had we aroused the interest of the community that before the show had closed $5000 had been pledged to build a community hall for the housing of an annual exhibit. Few indeed there were who did not contribute. Putting money into this building had a distinct influence upon the quality of corn and poultry produced to be shown therein. Investors became exhibitors and they must enter something for show that would reflect credit upon the organization and the new show room. Quality of the exhibit improved 500 per cent in one year. Lecturers came and gave demonstrations, there was marked change in the attention given agricultural bulletins and farm papers. The second show was a real show.

Farm Folks Became Specialists

As the years passed farm folks became seed corn and poultry specialists. Mixed corn and mongrel fowls disappeared. Thru sales of seed corn and breeding stock farmers had more money to spend and it was spent in the home town for the entire community was as one family. Most local activities centered around "the show." Band concerts and home talent plays were put on to add to the premium fund. When one show closed the community began work on the next a year away. In time the corn show grew to be the largest of its kind in America, putting up as high as $1000 cash for the champion ten ears. The poultry show reached 1000 birds. Local exhibitors were able to win in state and national competition.

Leadership, of course, made possible the things I have told you about. In time some of the leaders moved away, others tired and the work lagged. But today, twenty years after this fellowship foundation was first laid, very tangible results are apparent. The spirit of neighborliness still exists, the churches are on friendly footing. A community chautauqua, direct outgrowth of the organization, has been carried on for a dozen years. Altho the show was finally abandoned it still is easy to "put over" cooperative work. Farmers took rapidly to state organization activities. Interest in a better agriculture caused many young men to attend the state agricultural college. Corn growers who won national prestige received their inspiration and training. Due to the farmers institutes and demonstrations conducted over a period of years a marked change in the entire surrounding territory was brought about. Poultry flocks still are purebred instead of mixed. Increased income from higher yields of corn, sale of seed corn, better egg production and sale of eggs for hatching and breeding stock has added hundreds of thousands of dollars to the community wealth.

Getting Together

The thing that sticks in my mind is the social intercourse that our organization brought about, as have others to which I have belonged and now belong. That is the biggest and best of all. At Whitesville we had an annual banquet—really an old-fashioned feed—where we began eating at 11 A. M. and finished at 4 P. M., relay fashion. We fed a thousand one year and it was all free. Every visitor was entertained in a town or farm home without charge. That's hospitality.

If all I have described meant so much to the community why was the work abandoned? I chose to tell this story because while mainly one of success it also has an element of failure which you can profit by. The community became too ambitious. The show attracted such wide attention that it was thought best to enlarge it into an interstate affair. The organization became burdened with debt, exhibitors from other states who specialized in growing corn for exhibition purposes "skinned" our farmers and won most of the cash, interest lagged and the big show died. But its influence still lives. The moral is that you should be content and let well enough alone once success is assured. It is a good time right now to start a corn and poultry show and to begin with a few dollars in cash and some merchandise premiums which can be obtained in any town is ample. Let the show grow slowly and its progress will be sure and sound. And remember, that all the things I have told you about came as the result of a meeting of four men.

Had we had vision enough to include four women the organization probably would be going strong after twenty years.

Standard Farm Paper Editorial Service

THIS is one of a series of special articles written under the direction of the Standard Farm Paper Editorial Board. The members of this board are chosen from the editorial staffs of the various farm publications which make up the group known as the Standard Farm Paper Unit. Each editor has written, or will write, a special article dealing with some phase of agricultural work in which he has been engaged and in which he is considered expert. The editorial board is composed of the following:

D. A. Wallace	The Farmer, St. Paul, Minn.
C. V. Gregory	Prairie Farmer, Chicago, Ill.
H. A. Wallace	Wallace Farmer, Des Moines, Iowa
Tait Butler	The Progressive Farmer, Memphis, Tenn.
Clarence Poe	The Progressive Farmer, Raleigh, N. C.
John Pichett	Pacific Rural Press, San Francisco, Cal.
E. R. Eastman	American Agriculturist, New York City
T. A. Leadley	Nebraska Farmer, Lincoln, Nebr.
John Cunningham	Wisconsin Agriculturist, Racine, Wis.
A. J. Glover	Hoard's Dairyman, Fort Atkinson, Wis.
DeWitt C. Wing	Breeder's Gazette, Chicago, Ill.
Floyd Nichols	Kansas Farmer, Topeka, Kansas
John F. Case	Missouri Ruralist, St. Louis, Mo.
Walter Lloyd	Ohio Farmer, Cleveland, Ohio.
Bert Wermuth	Michigan Farmer, Detroit, Mich.
R. P. Kester	Pennsylvania Farmer, Philadelphia, Pa.

John F. Case, editor of The Missouri Ruralist, gives in this article the results of his experience in the upbuilding of one community, but this is supplemented by his work in several other communities and his close observation of the work in practically every county in Missouri where progressive organization efforts have been made. Mr. Case's work and experience covers many years, and since farm folks are much alike in many respects which bear upon success or failure in community organization, the fundamentals discussed have practically nation-wide application.

How much a Wagonload?

You can drive to town to get a load of coal, and carry back enough to last you for some time. But you cannot load electric power onto a wagon and bring it home.

Electric power costs little at the station where it is generated. But power at the station does you no good. When you press the button you want a flood of light; when you throw the switch you want to hear the motor hum. *Service*, full and instantaneous—that is what the electric-power consumer wants. *And service he must have!*

But electric service for the farmer, in addition to generating stations, requires long transmission lines—sub-stations and transformers, poles and power lines, to be set up and kept in good repair; and, always, day and night, a sufficient reserve of power to meet all needs and reach the most distant consumer on the line. All this represents an investment of money for which wages must be paid whether the current is in use or not.

You cannot get electric service by the truckload. If electric service is to come to you, it must be sold in such a quantity and at such a price as will pay the cost of its delivery, as well as the cost of producing it.

How electric service can be sold in such quantity and at such a price as will be mutually beneficial to farmers and electric light and power companies is one of the problems now being studied by fifteen state committees working with the national committee. The Committee on the Relation of Electricity to Agriculture is composed of economists and engineers representing the United States Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Farm Lighting Manufacturing Association and the National Electric Light Association.

If you are interested in this work, write for a booklet describing it.

Made in All Styles, Breechingless, Side Backer, Express, etc.

Walsh No-Buckle Harness
NO BUCKLES TO TEAR
NO RINGS TO WEAR

$5 AFTER 30 DAYS FREE TRIAL

Post Yourself on this new way of making harness, which is three times stronger than buckle harness. Before you buy harness, let me send you a set of Walsh No-Buckle Harness on 30 days' Free Trial, to show you why this harness is three times stronger without buckles, better looking and handier in every way. If not convinced, send it back at my expense. The Walsh is a proven success on thousands of farms for over 10 years.

Three Times Stronger Than Buckle Harness
Buckles weaken and tear straps. Walsh 1½-inch breeching strap holds over 1100 lbs. The same strap with buckles will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles. Easy to see why Walsh is three times stronger than ordinary harness. Packer's Northern Steer Hide Leather—best that can be tanned.

COSTS LESS — LASTS TWICE AS LONG
The Walsh Harness costs less because it saves many a dollar in repairs. Users show average repair cost of only 9 cents per year. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Greatest advance in harness making. Easily adjusted to fit any horse. Write today for new reduced prices.

$5 AFTER THIRTY DAYS' FREE TRIAL
Balance easy payments, or cash after trial if you wish. Write today for free book, prices, easy payments and thirty days' trial offer, also how to make money showing Walsh Harness to your neighbors.

The Neshaminy Gardens
(OUR FARM)
Where an Editor Works and Thinks

I HAVE just received from the Pennsylvania Department of Agriculture bulletin No. 408, entitled "The Vegetable Industry in Pennsylvania." It was written by C. R. Mason, of State College, and is one of the most concise, yet complete books of information for the practical gardener that I have seen. While it contains but 142 pages almost every phase of vegetable growing is treated in an interesting and helpful manner. The author discusses the influence of soil types, elevation, exposure and climatic conditions as well as the crops and methods suitable for the different conditions.

✣ ✣ ✣

ONE of the interesting features of the booklet mentioned above is the facts presented concerning the great variety of seasonal and climatic conditions prevailing in Pennsylvania. The state extends over 150 miles of latitude, and varies in elevation from 100 feet to over 2000 feet above sea level. Because of these differences the length of the frost-free season varies from 118 days in the high interior regions to 213 days in the vicinity of Philadelphia, thus giving the latter locality nearly 100 days more in which to grow crops. But I do not have space to give an adequate review of this bulletin and would suggest that those interested in vegetable growing write to the Department at Harrisburg and ask for a copy.

✣ ✣ ✣

I KNOW from actual experience the difference existing between the results obtainable in the higher and those in the lower altitudes. I spent most of my life in the hills west of the Allegheny Mountains. Our farm was about seventy-five miles farther north and had an elevation nearly fifteen hundred feet above that of Neshaminy Gardens. Many times the frost came late in spring and early in fall, so that fruit and vegetable growing was always a gamble. We never thought it safe to set out tomato plants until sometime in June. Tradition said, "after the full moon in June." Just how much the moon had to do with it is not certain, but the experience of the ages established the rule.

IT MUST not be considered by those living in the more favored localities that successful farming and trucking cannot be done in the regions of short seasons. While it is a handicap to be limited in this way, yet if one will learn what are the limitations, plant accordingly and force his crops by proper fertilization and cultivation almost every line of farming may be done successfully in every part of the state. The business of fruit growing is a little more difficult because one can have but little influence upon the time of blossoming.

✣ ✣ ✣

I RECALL only too vividly some disappointments occasioned by Jack Frost. One year we had a perfect bloom of fruit trees. The weather had been warm and beautiful. The hillsides presented a picture which artists could not duplicate. It seemed as if the weather had settled for good. The ground was warm, ready for planting corn. We were already seeing in imagination the much needed returns from a good crop of apples. A thunder shower came up during the afternoon of May 9th. Suddenly the wind became cooler and a few hail stones fell. A strong wind from the north cleared off the storm and the thermometer began to fall. About dark we became uneasy, but could do nothing but go to bed and wait. The next morning it was still, clear and cold—the thermometer registering twenty-eight degrees! Our hoped-for apple crop was gone. The people of the hill country will recognize this picture only too well.

✣ ✣ ✣

AT ANOTHER time we thought to hurry things up and get vegetables for the market earlier than usual. The weather favored us and we had early potatoes and tomato plants knee high and in bloom by the tenth of June. (They had been set out long before the full of the moon.) On the night of the ninth the temperature dropped to thirty degrees and all tender crops turned black when the sun came up. We bought new tomato plants, and the potatoes came on again. We had stuff for the market about the usual time. I am mentioning these things as a suggestion that it does not pay to disregard the facts which experience has shown to be well established if one expects to succeed. The over-stimulation of fruit trees, the planting of tender vegetables before frost-free dates, and many other practices which jeopardize success do not pay in the long run.—R. P. K.

THE CHEERFUL PLOWMAN
My Papers and Magazines

I TAKE the local "Bugle-Blow" that comes out once a week or so and tells when neighbors come and go,—I have to have that sheet, you know. It's part and parcel of my life, it tells about my neighbor's wife, it chronicles our daily strife, I need it as my fork and knife! I take a daily paper, too, and tho I never read it thru, I scan it carefully, I do, and seek to know who now is who. Without my daily, I am sure, I'd die of jaundice Simon pure, I'd have the blues without a cure, my hopes would be both few and fewer!

I take two journals of my church, they give my lagging soul a lurch, they point out to me stain and smirch, they put me on a higher perch; it's good, I think, for careless men to get a lecture now and then, it puts them on their guard again, it multiplies their powers by ten! I take three worthy magazines, that deal in kings as well as queens, with stars in firmaments and screens, with humble folk and men of means! I think it's well to get the gist, condensed from out the daily grist, to read the more selected list of people's deeds with mind and fist!

I take three journals on my job they tell of corn upon the cob, of hoe, and rake, of pung, and bob, of bees that give, and bugs that rob; they tell me how the other guy, who has a problem such as I, goes forth to seed, to sell and buy, goes forth to rear his plums and rye! The local paper? Yes, indeed! The daily paper? That I need! Church papers, magazines? Agreed! Farm journals also? Those I read!—J. Edw. Tufft.

5-Room ALADDIN $478 NOT PORTABLE
WE PAY THE FREIGHT
You can buy all of the materials for a complete home direct from the manufacturer and save four profits, on the lumber, millwork, hardware and labor.

6-Room ALADDIN $618
Living room, dining room, 2 bedrooms, kitchen, bath. 3 other plans in Catalog. Very high grade lumber throughout.

7-Room ALADDIN $765
Living room, dining room, kitchen, 3 bedrooms, and bathroom. All materials readi-cut, saving 18 per cent on cost.

Story and Half ALADDIN $789
Story and a half semi-bungalow, with second floor available for 2 bedrooms. Two floor plan arrangements. Any handy man can erect these houses.

7-Room ALADDIN $956
Large living room with circle-tread open stairway, diningroom, kitchen. Three bedrooms, each with clothes closet. Bath on second floor.

Price includes all lumber cut to fit; highest grade interior woodwork, siding, flooring, windows, doors, glass, paint, hardware, nails, lath, roofing, with complete instructions and drawings. **Freight paid** to your station. Permanent Homes—NOT PORTABLE. Many styles of year'round dwellings, summer cottages and garages to choose from. **Write nearest mill today for FREE Money-Saving Catalog No. 1270**

Somerset Boy Honored

FOR the past four years the Baltimore and Ohio Railroad has stimulated clubwork in its territory by making awards to the best club member in the seventeen counties traversed by the road. The award is based upon the number of years in club work and the quality of the work done.

This year Oscar Keim, seventeen year-old 4-H club boy of Boswell, Pa., has been declared the winner of the $100 award for 1925. As winner he has the option of using the money for educational purposes or to defray the expenses of a trip to the Boys' and Girls' Club Congress at Chicago. He has already decided to attend the Pennsylvania State College so will use his prize for his education.

Oscar Keim became a club member in 1921. He has been in both baby beef and pig feeding clubs. Last year he fed a litter of nine purebred Duroc Jerseys to weigh 2004 pounds in six months; thus winning a gold medal and membership in the famous Keystone Ton Litter Club. This year he is president of his local club.

Oscar Keim, chosen the best club member in seventeen counties.

Always eager to know the best practices in his livestock work, Keim has been a frequent visitor at the office of County Agent C. C. McDowell in Somerset, and has even made several trips to State College to secure first-hand information from the college specialists. He keenly appreciates the value of proper feeding as demonstrated in the records of his projects always conscientiously kept.

Silo Population

ACCORDING to estimates, based upon county reports, made by the State Department of Agriculture, the silo population of Pennsylvania continues to increase rapidly. A year ago it was estimated that 55,143 farms, or about twenty-seven per cent, were equipped with one or more silos. On December 1, 1925, the estimates indicated an increase to 60,618 or about thirty per cent of all the farms.

Majority Now Have Silos

The silo is so generally used today that the large dairymen or cattle feeder who does not have at least one, is the exception. They are using the silo more and more in an effort to reduce feed bills and make the most of home-grown products. Not many years ago, the farmer who put up a silo and started canning corn was the main topic of conversation in the village store. Dire results were predicted.

Time has changed this attitude and today the increasing popularity of the silo is just one evidence of the greater efficiency of agricultural production in Pennsylvania.

What Molly Did

The Record Of A Great Grade Holstein

This wonderful cow was bred and fed by Paul Moritz of West Bend, Wis. In our big herd at the recent National Dairy Show she won the championship for grade Holsteins and first prize for cow over four years.

Molly's record for 322 days was 12,904 pounds of milk and 571.9 pounds butterfat. The cost of her feed was only $93.57 and after paying for the feed Mr. Moritz had a profit of $172.01.

After the show this cow was sold for $325.00, a record price for a grade cow. Her milk and butter record and also the price she brought show that she was well bred and wisely fed.

This cow and the 96 others in our herd were all fed on a ration balanced with Corn Gluten Feed. Their records prove that the largest profits in the milk business are due to good breeding and Corn Gluten Feed.

Feed Corn Gluten Feed with your home grown rations—for dairy cows—for beef cattle—for hogs. Tell us what materials you are feeding and we will suggest a good ration for you.

If you prefer to feed a ready mixed feed be sure to buy from a manufacturer who uses Corn Gluten Feed as an ingredient.

Write for Bulletin No. 3. *It tells all the facts about The Champion Herd of Grade Cows and gives the record of each one of them.*

BUSINESS THE E-B LINE FOUNDED 1852

New Standards of Plow Satisfaction!

Whatever you require in a plow you'll find it in the E-B Line. The E-B Plow family is complete—walking plows, sulky and gang plows, disc plows, heavy tractor plows and a special Fordson plow. E-B plow bottoms include both steel and chilled in wide variety to handle any soil.

Every E-B plow combines the highest standards of plow satisfaction—ease of handling, light draft and durability. The riding and tractor plows are equipped with E-B Quick Detachable Shares, which can be put on or taken off in 5 seconds without tools.

The illustration shows our famous E-B Foot Lift Sulky Plow. It is light draft and easy to handle. Patented foot lift enables driver to raise or lower bottom with one foot. Built in 12, 14 and 16 inch sizes.

During the last 5 years, 27 new and improved machines have been added to the E-B Quality Line. They are all designed to maintain E-B leadership and to make farming more profitable. Mail coupon today for full information.

Farmers Buy Automobiles

IN 1915 only seven per cent of the farmers in Pennsylvania owned automobiles. So rapidly has the number increased that the figures for 1925, as shown by the State Department of Agriculture, indicate 160,774 farmers have cars. This is eighty per cent of the farms in the state. But the automobile is only one of the improvements by which farmers have modernized their lives and business. Those who are given to criticising farmers for being slow to adopt new ways and new ideas would find, if they would take the trouble to investigate, that no business has undergone greater changes, nor has kept abreast of the times to a greater degree, than has agriculture. When it is realized that this has been done in spite of unequal opportunity it is all the more remarkable.

Butler Dismissed

THE governmental affairs of a great city, while of local importance only in most cases, sometimes become of national interest. This is especially true of political and civic matters which are demanding the attention of people elsewhere. Because of the general condition of lawlessness existing in Philadelphia when Mayor Kendrick took his office two years ago, he, in spite of the fact that he was an adherent of the political organization charged with being friendly with crooks and lawbreakers, appointed General Smedley Butler, of the Marine Corps, as Director of Public Safety for one year. Mayor Kendrick went to Washington when the year was up and prevailed upon President Coolidge to extend the leave of absence for General Butler. The President consented, but for one year only, his leave expiring January 1, 1926.

During all this time the local politicians and the leaders of the underworld did all possible to hamper the Director in his work and kept up a continual pressure to have him removed. Every sign of a split between him and the Mayor was hailed with delight by this class. But every time the breach was closed and Mayor Kendrick made a new public gesture of official backing. General Butler declares, however, that the backing was not real and that he did not have the support promised. The Mayor's hesitancy in cooperating in the enforcement of the law against big men and popular places so incensed General Butler that he abruptly resigned his commission in the Marines and told the Mayor he would stay. The Mayor promptly told him he did not want him and discharged him officially. His only expressed reason was that he did not want a resigned officer. People may draw their own conclusions, and in doing so will realize why law enforcement is difficult everywhere.

What Shall I Feed?

FARMERS are almost universally aware that animals of all kinds require what is called a balanced ration if they are to grow and produce to a maximum degree. The study of what is a balanced ration began a comparatively short time ago, and while it is not yet a completed subject enough has been learned to make possible the feeding of all kinds of livestock in a satisfactory and profitable manner—providing the feeder knows what has been found out about feeding and has the materials to use.

The two classes of farm animals requiring the greatest degree of knowledge and skill to get best results are dairy cows and poultry. This is because they have been bred and developed a greater distance away from their primitive condition and natural habits. They have been induced to produce by-products in amounts many times those produced by their primitive ancestors. This development has come about thru selection in breeding, better care and the feeding of a minimum of roughage and a maximum of concentrates. Here is just where the average man's uncertainty begins and makes him ask the question, "What shall I feed?"

Of course, no answer can be given which will fit all cases. So much depends upon what the individual raises in the way of grain and roughage. Sometimes this class is great and varied enough so that the purchase of one or more concentrates in the form of by-products makes economical feeding an easy problem. On the other hand, there are many who must depend entirely upon purchased materials for the greater part of their home-mixed rations. In such cases the problem becomes more difficult of solution, and this is especially true of those not well up on the subject of balanced rations. Because of this, many herds and flocks are not producing satisfactorily nor economically. There are many poultry keepers and many dairymen who would do much better to purchase good, reliable brands of ready mixed feeds than to go on losing money because they do not have just the materials their flocks and herds need for best results.

The Place of Lime

A FEW years ago the question of how, when, and what to lime was the most popular subject in farmers' institutes and farm papers. Of late the question seems to be lagging, yet the importance of applying lime intelligently is just as great today as it ever was. On the older farm soils, and on the DeKalb soils at all times, the lack of lime is as much a limiting factor as the lack of fertility. Careful experiments have proven this beyond question. Years ago burned lump lime was cheap and farmers applied it lavishly. Men of the older generation remembering this are inclined to feel that the cost of liming today is too great. If they will use the latest information as to economical amounts to use, and also compare manufacturing costs then and now and the price of farm products today with those of twenty years ago they will find that liming judiciously is not more expensive than it was twenty years ago, as liming was done then. All plant life needs more or less lime, but its greatest use is in producing the right chemical and physical soil conditions.

The Rift Widens

OPPOSITION to the adminstration plans for agricultural legislation continues to grow. The number of leading farmers and farm organizations of the West and Middle West demanding more drastic action than President Coolidge proposes has increased daily since the President delivered his Chicago address. Last week the bankers of Iowa in a conference of farmers and bankers joined in passing resolutions in direct opposition to the policy of the government. With the Administration's program so widely at variance with what the farmers are demanding it is difficult to see how party harmony can be maintained unless one side or the other backs down from its present position.

The Dearth of Doctors

THE matter of the decreasing number of medical doctors in rural communities is attracting the attention of many people just now, including some of the leaders of that profession. It is found that large areas are without adequate medical service and plans are being suggested to remedy the condition. One of the reasons given for the scarcity of physicians is that the medical colleges have made their entrance requirements so difficult and and the courses so long that the average young man who has no backing and little money cannot take up the study of medicine. On this latter subject a well-known farmers' organization recently passed resolutions demanding that the requirements be lessened and the courses be shortened so that more young people would be induced to enter the medical profession.

We are of the opinion that this recommendation is not a wise one. The subject of treating disease is so vital to human welfare that every one beginning the practice of medicine should have all the knowledge that it is possible to attain. No comparison between old-time and present standards is possible because the greater part of modern medical science has been developed during the last half century. Instead of lessening the requirements to bring the study within the reach of more people, it would be wiser to subsidize medical colleges at public expense somewhat after the plan used for educating teachers. A system of scholarships might be devised by which the likely, worthy young men and women who show their adaptability in high school and college could be sent on to schools of medicine and surgery, with the provision that it was to apply to those seeking to become all-around physicians and not city specialists.

The number of miles served by a physician is naturally much greater now than before the days of good roads, automobiles and telephones. The nearest doctor at ten miles away today is not farther away in point of time than one two miles away twenty years ago. Of course, the density of population is the only limiting factor and there should be enough skilled physicians to care for the needs of everyone. It is a matter of first importance and is deserving of public discussion and action, providing it leads to helpful results.

Washington Letter

THE FARM SURPLUS.—Powerful pressure from the Middle West, it appears, has convinced the administration that the disposal of the farm surplus is really a serious problem. Following a conference with President Coolidge, Secretary of Agriculture Jardine has issued a statement in which he gives much encouragement to the export commission idea. It is now definitely announced that the adminstration is prepared to indorse conservative legislation designed to aid the disposal of surplus farm products in the export trade by means of a government agency. But the administration still insists that it will not go to the extent of putting the government into the business of buying and selling and fixing farm prices.

It is now proposed by Secretary Jardine to secure legislation creating a commission under the Department of Agriculture with power to assist the farmers, preferably thru their cooperative organizations, with the aid of private capital and the banks, to handle a surplus so that the prices of farm products may not be forced below cost of production and a reasonable profit to the producer.

Whenever a surplus of a staple farm product is apparent, the commission would immediately set to work among farmers and with the banks to work out plans for handling the surplus by proper financing so as not to bring about a drop in prices of that particular commodity.

A series of conferences with agricultural editors and other farm leaders is planned by Secretary Jardine. It is hoped that with the aid of these leaders a bill may be drafted which will be satisfactory to the administration and also to the farm bloc and representatives of the Middle West farm organizations. How far the President is willing to go in reversing his former attitude toward the old McNary-Haugen plan of surplus disposal, will not be known until the bill proposed by Secretary Jardine is ready for Congress.

OUR EXPORTS.—With a shrinking demand for American farm products in European countries, food exports declining, and vast increases of agricultural production in the newer agricultural regions, it is indicated that the job of increasing our exports of wheat and other staple food products by a commission or otherwise is going to be an extremely difficult task. The Department of Agriculture reports indicate that our net food exports for the crop year 1925-26 may fall below the annual average for the five years immediately preceding the war, and may even approach the low mark of 1913-14 when this country imported almost as much in the way of foodstuffs as it exported.

ATTITUDE TOWARD WORLD COURT.—Sentiment in Washington, especially on Capitol Hill, indicates that the World Court would have a large majority in Congress, if permitted to come to a vote. But there will be long discussions with attempts by its opponents to defeat it by debate, amendments and reservations.

TARIFF SITUATION.—Interesting side lights on the tariff situation were presented at the two days' conference on the tariff held in Washington under the auspices of the People's Reconstruction League December 28-29th.

The tariff on wheat does not function 100 per cent, but it is of considerable benefit to the American wheat grower, according to Rollin E. Smith, chief of the Grain Futures Administration. The distance from western Canada to the Atlantic seaboard is so great that an all-rail haul is prohibitive, and this fact, taken in connection with the closing of navigation on the Great Lakes from December 12 to May 1, brings about a situation that automatically makes the tariff of benefit to the American wheat grower.—E. E. Reynolds.

Harrisburg Letter

LITTLE WHEAT HELD.—Price conditions and activity of buyers have left considerably less than the amount of wheat usually held at the beginning of a year in the hands of the growers in the dozen or more big grain raising counties of Pennsylvania. State statisticians, who have been conducting some inquiries into wheat, rye and corn in sections where they are extensively cultivated, say they have been surprised to find out how generally the grain has been brought up. People at the State Capitol are inclined to be somewhat skeptical regarding reports that the rotation of crops was disregarded in some portions of Berks and other counties in favor of the western method of specializing. For years there have been stories coming here of rotation being given up owing to price conditions, but the grounds for such reports have usually been found to be rather slight. When all is said and done the belief here is there will be about the usual amount of wheat and rye acreage for 1926.

CATTLE IN GOOD CONDITION.—Altho eastern counties did not have the advantage of a good snowfall before the recent severely cold weather came along the prevalence of the low temperature does not appear to have caused much trouble and livestock is generally reported entering the hard months in fair condition. Open December weather has permitted much farm work to be done and the statements made by visitors to the State Capitol indicate very favorable conditions in many parts of the central and southeastern counties.

SESSION MAY BE SHORT.—In spite of much rather free discussion of the subjects in the call for the special session of the legislature this month and of the possibilities of the gathering of the lawmakers in a special session which many of them frankly oppose, it is becoming apparent suggestions for stringing out the sitting are not going to prevail and that the program will be given serious consideration, selections made of what proposals should be worked out and passed and the remainder either killed in committee or on the floor. The special session of 1906 disposed of its variety of subjects and found time to conduct a couple of investigations in just one month. While it is possible Governor Pinchot may supplement his call by adding some recommendations for legislation dealing with departments there will be nothing likely to produce controversy in the list. Leaders of the opposition to the Governor do not want to give him any more opportunity than necessary and realize the shorter the session the less the danger of trouble.

STATUS OF STATIONS.—An unusual number of complaints will be heard by the Public Service Commission this winter on protests against changing status of stations on railroads. In several instances the companies propose to establish non-agency stations. Some of the stations to be changed were raised in grade during the war and it is claimed the revenue does not warrant continuance. Each case is being decided upon its merits.

INQUIRY INTO CHARTERS.—Every application for a charter for an electric company is being carefully looked over by the experts of the State Giant Power Board before being sent along to the Governor and thus far only a few which may be classed as strictly rural propositions, and not apt to be links in some big concern, have been passed. From what is heard the idea is to hold franchises as much as possible for the mutual rural companies which it is hoped the special session of the legislature will authorize.—Hamilton, Harrisburg.

HAVE YOU SOME LITTLE STRIKE BREAKERS ON YOUR FARM?
LEET

How to settle the coal strike.

New Jersey Letter

ORGANIZE AGAINST THIEVES.—Poultry farmers in the vicinity of Elmer in Salem County intend to organize a protective association, which will guard their flocks against chicken thieves who have preyed seriously upon farmers in the last two or three years. At a recent meeting of farmers and poultrymen, tentative steps were taken to this end. A prominent detective agency will be employed to police the district. Membership fees will be based upon a charge of one cent per bird with a minimum of $5 per year. Of this amount $3 will be paid to the detective agency, which will furnish detectives to apprehend the thieves in case any of the members are robbed to an amount of $10 a day.

"SWEETS" KEEPING FINE.—Mid-December found sweet potato growers in the southern part of the state moving large quantities of "sweets" from storage. In the vicinity of Swedesboro potatoes were bringing $3 to $3.25 per hamper at the warehouse. This averages a little better than $11 a barrel. Growers report less shrinkage in storage than usual, very little rot and general high quality of the storage stocks this season.

GLOUCESTER POULTRY SHOW.—Over 500 fowls were entered in the annual Gloucester County Poultry Show held recently at Woodbury. Interest in the exhibit was so keen this season that a number of exhibitors who came late were unable to find accommodations for their birds. The exhibit of the heavy breeds such as Brahmas, Wyandottes and Rhode Island Reds were numerous, while in the capon class the Jersey Black Giant and Barred Rocks made up a notable exhibit.

BEETLE WAR CONTINUES.—In mapping out plans for activities against the Japanese beetle in New Jersey next year, the state department may find it necessary to include early peaches and apples among the lists of restricted commodities. In the season just past, these two fruits were found to carry the beetle, particularly in late July. The new quarantine line for 1926 in New Jersey will be slightly north of the 1925 line, probably following the northern boundary of Middlesex County and joining the previous quarantine line at a point west of Somerville.

TO DISTRIBUTE SEEDLINGS.——The State Department of Conservation and Development, thru its Forestry Division, will make a special drive this coming spring to induce forest plantings on idle or unproductive land. Arrangements have been made thru reliable nurserymen to furnish tree seedlings of desirable species next spring at very reasonable prices, which are at actual cost to the department. Orders will be filled in the order received. The species available are red pine, Scotch pine, Norway spruce and Douglas fir. Prices range from $4 to $6 per 1000, depending on the species. The department has reserved one million trees for this purpose and will not accept orders for less than 1000 trees of any one species.—B.

New York Letter

OPTIMISM IN FARMING.—As the year comes to a close it is recognized as one of greater optimism in farming than any since the period of depression began. This is based on somewhat better prices for farm crops, and on the better outlook for dairying. Other factors include the more hopeful feeling that prevails after accepting as inevitable the readjustments made necessary by the post-war conditions. The exodus from the farms has continued. Considerable areas of poorer land are already out of cultivation, with a movement towards reforesting these areas. Crop yields have been average, with little over production along any lines in this state. General industrial conditions have been favorable to a good demand for farm produce. Western frost damage to cabbage has made a favorable price here. Last week cabbage was being shipped here at $25 a ton.

STATE POLICE MAKE RECORD. Troop "C" of the State Constabulary, stationed at Sidney barracks, have made a fine record. In the past year they made 5527 arrests, and secured 4999 convictions. The violations were against federal, state, city, town, and village laws and ordinances.

MORE HOLSTEIN CLASSES ASKED.—More classes for practical farmers in Holsteins are asked of the state fair commission by breeders of the Onondaga County association. Exhibits from other states are recognized as important, but the western plan of stimulating state exhibits is recommended. The association voted $50 for prizes to calf club exhibits. A big banquet of dairymen of the four leading breeds will be held in Syracuse this week when the four organizations hold their annual conventions.—M. G. Feint.

MAULE'S SEEDS
ONCE GROWN-ALWAYS GROWN

Winner of the Wilder Medal the Cortland Apple

Green's Nursery founded in 1878. 48 years of high standing.

The highest award given new fruits by the American Pomological Society. Combines the good qualities of its parents, McIntosh and Ben Davis. Fruit hangs well to the vigorous, productive trees, and stands handling. A good keeper. Crisp, tender, juicy, even richer in taste than McIntosh. Both delicious and profitable.

Caco Grape A new wine-red grape of Catawba and Concord parentage. Ripens early and so rich in sugar can be eaten two weeks before fully ripe. Large grapes on good size bunches. Healthy and prolific vines.

Bosc Pear Very large, gourd shaped pear of beautiful golden-russet color. Juicy, melting, and deliciously flavored. A treat at home. Commands top market prices, selling for 10 cents each at fancy fruit stores.

Peaches, Plums, Cherries —in many varieties as well as apples and pears. Shade and ornamental trees, perennials, dwarf fruit trees and bush fruits galore.

Flowering Shrubs and Vines —roses, hedges, dwarf trees, evergreens, all are included in the more than 300 varieties.

Direct from Nursery to You —at a definite saving and only one handling.

Low Prices, and Cash Discounts Transportation Charges Paid

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

Spinach in Frames

Is it worth while to use nitrate of soda on spinach growing in cold frames during the winter, with the object of hurrying the growth of the crop? Our spinach was well manured in the fall, and fertilizer was used on it also, but now it doesn't seem to grow very well and we are thinking of using nitrate of soda.—J. K. W., Camden County, N. J.

The growth of spinach in late fall and winter is more likely to be limited by lack of sunshine and by low temperature than by shortage of plant food. Since both manure and fertilizer were used on this spinach in the early fall, there is almost no chance that the use of nitrate of soda would be helpful now. On light soils not protected with glass, soluble nitrogen applied in early fall might be washed downward by heavy rains before January 1, but since this crop of spinach is under glass such loss is not to be expected.

It is worth remembering that crops in greenhouses, as well as cold frames, often make their slowest growth in December, since that is the darkest month of the year, not only because the days are shortest but because there is more cloudy weather. When the sunshine becomes warmer and the days longer in February and March, this spinach ought to begin to grow, if the temperature is not so low as to keep the ground frozen all the time.—W. C. Pelton.

Celery Competition

In a recent number you state that altho irrigation may become unprofitable for some crops because those crops themselves may become unprofitable, owing to competition from other parts of the country, celery is likely to remain on the safe list. Is there not just as much competition with eastern celery?—C. W. L., Salem County, N. J.

There is plenty of competition facing eastern celery growers, but it is to a certain extent competition in quantity and season and not in quality. That is, we can buy celery here at any time of year, even if local supplies fail entirely, and yet the bought stock in certain respects cannot approach in table quality that which we can grow ourselves. This is less true, I think, of most other common vegetables.

Heavy soils in the East produce a tender, nutty celery that you never find in crates of imported stock. The varieties used make part of the difference, and the rough handling in shipping make up another part. I am convinced, however, that the chief difference in quality is due to soil and climatic factors that are very poorly understood. I have never seen as high a grade of celery, judged from table standards, grown on muck land or very light sand as may be grown by a skillful cultivator on heavy soil.

Trade Appreciates Regular Supply

The celery trade, of course, appreciates the regularity of supply that characterizes imported celery, particularly in late fall and winter. Celery varieties that must be blanched in storage produce the highest quality when they are well blanched, but the uncertainties attending the storage season make the crop irregular in quantity from year to year. Irrigation together with improved facilities for winter celery storage make a combination hard to beat for profit.—W. C. Pelton.

Raspberry Mosaic

MOSAIC has proved to be one of the most troublesome pests of the red raspberry, and many growers have virtually abandoned the crop due to the ravages of the disease. Dr. W. H. Rankin, plant disease specialist at the New York Experiment Station, who has made a special study of mosaic, has advocated the use of disease-free planting stock and the careful inspection of plantings the first and second years, with the removal of all affected plants as soon as they are discovered. This practice was put in operation in Monroe County, New York, on a rather large scale and very material reduction in the amount of disease secured.

Which Variety Shall It Be?

BY JANUARY 15 most of the seed catalogs for 1926 will be in the mails.

Mr. W. B. Nissley, vegetable gardening extension specialist of the Pennsylvania State College, advises commercial vegetable growers to get catalogs from several reliable seedsmen and those maintaining home gardens to have at least one. After you receive your copy, sit down and make out your seed order, keeping in mind the likes and dislikes of the family, but being careful that the variety is not too limited. You should have at least twenty-five kinds of vegetables, and thirty or more would be better.

What varieties should be chosen? This is often a very difficult question for as a grower once remarked, "There are four kinds of seed to choose from a catalog: Novelties, specialties, standards, and humbugs."

Novelties for Experimental Use

The novelties are usually found described on the front pages. They are new varieties of untested merit. They may be the result of a cross between two varieties or a natural sport or variation that occurs in nature. Some may develop into very good varieties while many fall by the wayside.

Your main crop should not be planted from the novelty list. The novelties should be used experimentally.

Specialties also often are emphasized on the catalog cover or described in the first part of the book. They are very reliable. It is usually best to obtain this seed from the firm that introduced it to the public. Some seedsmen designate their specialties by using larger print, more elaborate description, or special marks placed before the name.

Never Look for Seed Bargains

Standards include older, tried varieties that have been in use a long time and have stood the test. These are usually good to plant.

Humbugs mean mixed varieties of poor germinating seed, untrue to name and seldom found in reliable seed catalogs, yet there is quite a large amount of unreliable seed sold each year.

Never look for bargains in buying seed. You will be caught almost every time. The first cost of seed, even if it is rather high, is insignificant compared to the value of the full-grown product.

Watering Stored Celery

THE advice that celery stored in cold frames or board frames should not be watered means that the foliage must not be wet more than is necessary. The blanching process itself is hastened if the plants have moist soil at the roots, in cases where there can be much evaporation of water from the leaves.

Folks who for the first time try frame storage in place of trench storage are likely to find the plants drying out much more quickly than they had expected. If you store celery in frames just as you do in trenches, without burying the roots at least a little bit in moist soil, the stock will almost certainly have to be watered occasionally. If water from a hose is at hand, the end of the hose can be thrust down between the celery and the water allowed to run out on the ground surface until all the bed has been moistened. With a reasonably level floor in the frame, the problem of watering in this way is easily solved.

When the floor is uneven, so that water gathers in low places, care has to be exercised that in these low places the water level does not rise so high as to soak the hearts of the celery. Of course, watering by this method is safe only when the surplus water drains away within twenty-four hours.

If a hotbed pit, dug down to a clay subsoil, were being used for celery storage, there would be danger that the water would not drain off quickly enough. If compelled to store celery in such a pit, I would perfer to put down first a layer of sand, gravel, or sifted ashes to provide partial drainage.—W. C. Pelton.

Flax in Maryland

AT THE courthouse in Chestertown, Kent County, Maryland, on December 5, members of the Kent County Farm Bureau, other farmers, and a number of local business men, gathered to hear the proposition and discussion relating to the establishment of a flax industry in this county by capitalists of Philadelphia, Wilmington and foreign countries.

The proposition as set forth by S. Friedberger, of Philadelphia, calls for the establishment of a fiber plant in Chestertown with buildings and equipment to cost between $800,000 and $900,000. This will materialize if the farmers in Kent will agree to grow 4000 acres of flax during each year for a given number of years. Mr. Friedberger is confident that the farmers can grow flax at a financial profit in Kent County.

London Capitalists Represented

The syndicate of London capitalists was represented by Dr. L. C. Cope, who stated that $1,500,000 will be expended in the development of the industry, providing farmers express their cooperation by signing the contract to grow the raw material for a certain number of years.

A general discussion followed and a committee was appointed to look into the proposition to see whether farmers are willing to plant flax and if as much as 4000 acres can be secured in Kent and nearby counties. A final decision will be reached at the meeting with the capitalists toward the close of the year.—Marylander.

An Irishman was sitting in a station smoking, when a woman came in and sitting beside him remarked: "Sir, if you were a gentleman you would not smoke here." "Mum," he said, "if ye wus a lady, ye'd sit farther away." Pretty soon the woman burst on again: "If you were my husband, I'd give you poison." "Well, Mum," returned the Irishman, as he puffed away at his pipe, "if you wuz me wife, I'd take it."

Dempwolf's 1870
DOUBLE STRENGTH
Fertilizer

reduces the quantity to be sowed exactly one-half. This means a clear saving—an additional *net profit* to you—equal to half the freight charges, half the handling, and half the hauling. It also means that only one-half the usual storage space is required. *No business-farmer can afford to overlook a matter so important!*

Saves
Half the Freight
Half the Hauling
Half the Storage Space
Half the Labor Handling

Dempwolf's 4—16—10 Fertilizer is double the strength of the regular 2—8—5 and is suitable for all crops using the 2—8—5 formula. It has been tried out very thoroughly and has the full approval of fertilizer authorities. Backed by the reputation of a manufacturer known to the farmers of Pennsylvania and Maryland for over 55 years.

A sample of this High Analysis Fertilizer will be mailed to you on request. We can furnish all grades of fertilizers and acid phosphate.

Increase Your Feeding Profits *by Grinding Your Grain!*

The McCormick-Deering Engine is built in 1½, 3, 6, and 10-h. p. sizes for successful operation on all jobs and under all conditions. All sizes have removable cylinder, replaceable main bearings, enclosed crankcase, high-tension magneto, throttle governor, and simple, efficient mixer. There is ample provision for cooling. Working parts are protected from dust and sand. All worn parts can be replaced at moderate cost. Altogether, the McCormick-Deering is the ideal engine for the man who wants dependable, efficient, long-lived power.

The horse-power range gives you a choice of power for shelling and grinding, and for running the washing machine, cream separator, churn, lighting plant, water pump, etc. You'll find there is practically no limit to the usefulness of your McCormick-Deering Engine.

Feed Grinders

McCormick-Deering Feed Grinders are made in three types and three sizes for grinding various combinations of grains. Each grinder is well-built for many years of good work. *The local McCormick-Deering dealer will demonstrate.*

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Pennsylvania's Competitors in Apple Growing

NEW YORK and Pennsylvania are close competitors for supremacy among the sisterhood of states. They are rivals in wealth, in population, in commercial and political influence. They are rivals in horticulture. The census statistics show that New York leads in commercial apple growing, with Washington second and Pennsylvania third. Those of us who have watched developments in the Keystone state in recent years are convinced that the relative rank of these three states will be changed by the census of 1940. This is a prophecy. It is also a warning.

Pennsylvania and New York are competitors not so much for the markets of the nation as for the markets of Pennsylvania. We are a state of nearly 10,000,000 people; more than seven millions of these people live in cities and towns. Pennsylvania has 150 cities of 5000 or over, a larger number of local markets than any other state, not excepting New York. With her wealth of coal, iron, and other natural resources Pennsylvania is primarily an industrial state and the proportion of her urban to rural population will continue to increase. The struggle between New York and Pennsylvania fruit growers is for possession of these markets. They are a rich prize.

Outstanding Rivals

The two outstanding competitors of Pennsylvania in her own markets are New York and Washington. In the season of 1924 New York shipped 2496 cars of apples to the fifteen larger cities of Pennsylvania, or thirty-six per cent of the total unload; while Washington shipped 1982 cars, or twenty-nine per cent of the total. During the same season only 340 cars of Pennsylvania apples were shipped to these same markets. On the face, this looks bad for Pennsylvania, but it must be remembered that scarcely ten per cent of Pennsylvania peaches and fifteen per cent of Pennsylvania apples reach the railroad; they are marketed from auto trucks. Our 5500 miles of improved highway are a great help and hauls of seventy-five to 100 miles are common.

New York apples reach all sections of the state, even the smaller towns, but cause the greatest inconvenience to Pennsylvania growers in the northeastern counties. Washington apples have made tremendous inroads during the past four or five years, in spite of a differential of not less than one dollar a bushel in cost of transportation and cost of production, as compared with local fruit. A year like this, with a big crop in the Northwest and a light crop in the East, will witness further progress in this direction. The time was when we boasted of our excellent local markets, as tho they were the peculiar property of Pennsylvania fruit growers. Disillusionment has come. We now realize that we must fight for them; that apples grown 3500 miles away may capture our markets, right under the noses of our growers.

Interested in Lower Freight Rates

That is one reason why we are interested in the proposed reduction of freight rates on apples shipped from the Northwest. "Live and let live," is a worthy sentiment and the fruit grower is about the last person to want to hamper an honest competitor. Yet it does seem, in all fairness, that no reduction of freight rates on western fruit should be made without at least an equivalent reduction on eastern fruit. This is not selfishness, it is equity; surely we have a right to expect to retain some advantage from our location close to markets, since we still have all the disadvantages of such a location.

Planting Few Large Orchards

Pennsylvania is still planting apple orchards, conservatively but steadily. The strictly commercial apple industry of the state is scarcely thirty years old. More than half of the commercial orchards are less than twenty years old. Most of these orchards are small, from five to thirty acres, and are planted with the definite purpose of supplying nearby markets. The planting of large orchards of fifty acres and upward for the general market has practically ceased except in two counties in southern Pennsylvania.

The typical Pennsylvania apple orchard of the future will be one of five to thirty acres o na farm of fifty to a hundred acres and usually associated with some other line of agriculture. This makes for stability, as is shown by the experience of western New York. The continuous planting of new orchards in Pennsylvania shows that the industry has been reasonably profitable. Even thru the recent period of lean years most of our local market growers have made money; many of our wholesale growers have not.

During the summer I made a trip thru the Cumberland-Shenandoah region, which includes Franklin and Adams Counties, Pennsylvania, and contiguous portions of Maryland, West Virginia and Virginia. This is one of the chief competitors of western New York in the wholesale market. Ten years ago it seemed destined to become the apple bin of the East. During and immediately after the war it was the scene of feverish activity in orchard planting and in orchard speculation. Sales of bearing orchards for around $1000 an acre were not uncommon. Now it is suffering from the inevitable reaction after inflation.

Apple Industry Rather Dull

Five successive lean years have punctured the balloon. Here and there are growers who have made money during this period but, on the whole, the apple industry of this region is having a very trying time. It would be foolish to blind our eyes to this fact. The important point is to discover the causes and to correct them. The apple industry of the Cumberland-Shenandoah region is sick, but not incurable.

One of the main irritants—the economic readjustment following the boom period of the war—is beyond our control now; two others—the frost hazard and over specialization—are at least partially within our control. In the enthusiasm of the boom days hundreds of acres of orchard were planted on low land where air drainage is poor. Last year orchards on the famous Apple Pie Ridge of Virginia and West Virginia had a much larger crop than those in the valley. This is an old story. Not every year does the hillside orchard in an inland region demonstrate its superiority but often enough to make a considerable difference in the ledger after a term of years.

The first prerequisite to profitable fruit growing is regular bearing. Efficiency in spraying and other cultural practices cannot compensate for lack of crops. Our northwestern competitors appear to have an advantage over us in this respect. By using smudge pots they get at least fair crops about every year. Smudging has failed to prove an economic success in the East. We must depend on natural means of frost prevention, chief of which is a favorable site.

Certainty of Crops Essential

Unless we can have greater certainty of crops than we have had in recent years we are going to be at an increasing disadvantage as compared with our western competitors. The whole question of frost hazard, its relation to local geography and cultural practices, and the breeding of frost resistant varieties is one of paramount importance to the eastern fruit grower and needs further study. There is bound to be a considerable shrinkage of orchards in the Cumberland-Shendandoah district that are planted on unfavorable sites, but the main body of the industry is on a substantial basis and will survive.

Thruout the Cumberland-Shenandoah region the apple industry is over-specialized. A large proportion of the fruit farms have no other source of income. This explains why the lean years have hit these growers so hard. The time has come for a radical readjustment of farm management practice in this region, so that apple growing may be diversified to a considerable extent with other lines of agriculture, becoming the major, not the sole source of income. The experience of the past five years on this point has been quite impressive.

Market Conditions Changing

Marketing conditions in Pennsylvania are changing rapidly. The central packing house movement has made little headway, partly because of the short crops of recent years. I know of only three successful enterprises of this sort in our wholesale district.

We have watched the growth of central packing houses in western New York with much interest. From this distance it appears that the local associations have justified themselves, on the whole, but that the wisdom of a central sales agency is still open to question. Our orchards are larger and are further apart than those in western New York, hence central packing houses are less likely to be practicable; but they are bound to come in certain districts because they are the most feasible means of securing that first essential of successful merchandising—a standardized pack.

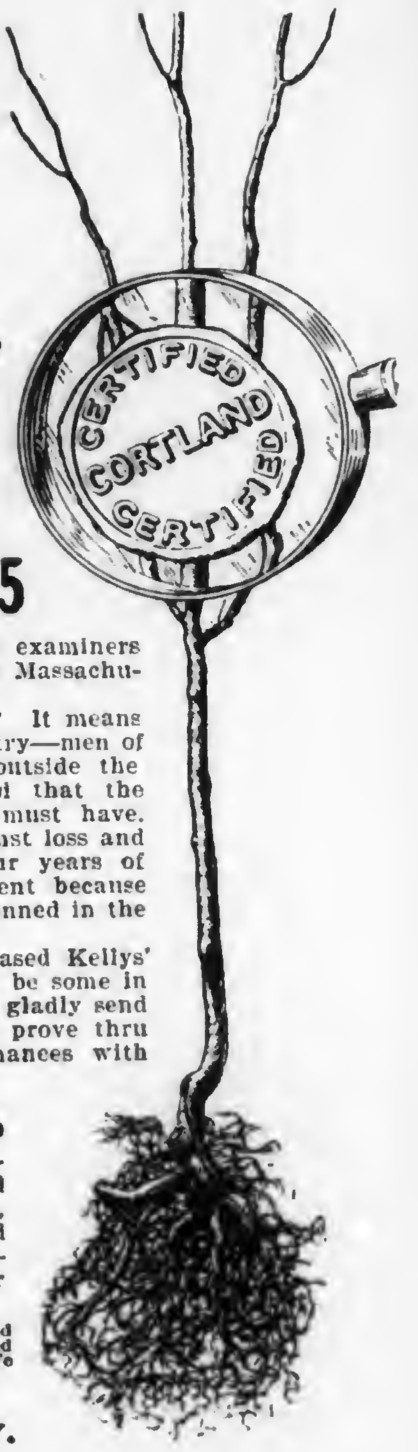
Packing Houses

Heretofore we have thought of central packing houses as a facility in wholesale fruit growing only. It is possible that they will be equally useful in local market fruit growing. One of the most interesting experiments in Pennsylvania is the packing house at West Chester. Here are fifteen growers who formerly competed with each other in the local market, to their own disadvantage, but now cooperate to control it.

They pack collectively in standard grades and under uniform brand. They are gradually crowding out the apples formerly shipped into this market and developing a local pride in and demand for home-grown fruit. The West Chester example could be emulated to advantage by two score similar markets in Pennsylvania. This promises to be one of our most effective weapons in the fight to maintain the supremacy of Pennsylvania apples in Pennsylvania markets.—S. W. Fletcher.

(To be continued)

This Lead Seal "True-to-Name" Guarantee Stays on the Tree



85,000 Kellys' Fruit Trees Certified by Dr. Shaw in 1925

'Trees upon which Dr. Shaw and his staff of examiners have placed the "True-to-Name" Lead Seal of the Massachusetts Fruit Growers' Association.

What does this Certifying Seal mean to you? It means that some of the greatest tree experts of the country—men of unquestioned reputation and standing who are outside the Kelly organization—have inspected and certified that the Kelly trees you order will bear the fruit you must have. This Seal stays on the tree and protects you against loss and disappointment—you know in advance that your years of cultivation and care will be most profitably spent because Kellys' trees will produce the kind of crop you planned in the beginning.

Many thousands of fruit growers have purchased Kellys' trees during the past forty-six years. There may be some in your neighborhood—talk to the owners. We will gladly send you their names and addresses so that you can prove thru your neighbors that you take absolutely no chances with Kellys' trees.

Ask About Our New Cortland Apple

Our free catalog contains hundreds of interesting pictures and gives complete information and prices on Kellys' trees, berry bushes, garden roots, evergreens and ornamental trees, shrubs and hedges. You will find the prices low and the information it gives valuable and helpful to you in your fruit growing.

To be fair, we must fill all orders in the rotation received. You should plan to order your selection of guaranteed "True-to-Name" stock early and let us hold it for you. So write today for your copy of our catalog. We have no agents—you deal direct with us.

COLT LIGHT IS SUNLIGHT

A flock of chickens could finance this for you

A BRIGHT, cheerful, "livable" home — safety from fire risk — shorter working hours! The income from the eggs laid by the average flock of chickens can earn this for you.

That shows how small is the cost of a Colt Lighting and Cooking Plant. A cost which can be financed to spread over months if you own your own farm. A cost that brings you safe, brilliant, *economical* light. Profitable light, too, on a direct dollars-and-cents basis — for scientific tests have shown that efficient lighting lessens by *one-third* the chore working hours on the farm.

Colt Light provides perfect light at a finger's touch for reading, sewing, studying, also for barns and outhouses. It furnishes gas for emergency cooking and does away with the need for matches.

With Colt Lighting you simply bury the generating tank in the yard. Concealed piping leads the gas away from it to wherever outlets may be required. With the large 200-lb. Colt Light Plant, you need only replace the Union Carbide on an average two or three times a year. Union Carbide is quickly available at factory prices from one of 175 warehouses. Investigate Colt Light. Write today for our booklet, "Daylight 24 hours a day."

Lights Draw Bugs

The Fish and Game Warden of the state of Kansas writes: "Referring to the feeding of fish and fowl by means of electric lights to attract bugs and insects: The Kansas Hatchery adopted this practice in the spring of 1923. I am informed that since then Connecticut has adopted this method. It is used at a fish hatchery in Missouri and is spreading to nearly all the states.

The use of electric bulbs to attract insects to feed game birds and fish perhaps is not general, altho I believe you will find that a considerable number of chicken hatcheries are using it. We turn on our electric lights for probably fifteen minutes to an hour at a time near our pheasant pens. These lights attract insects to them. When the lights are turned off, the insects settle in the grass and are there for the young pheasants the next day.

This information is extremely interesting and, we believe, quite valuable. Will you please tell us what you know of this unique way of feeding fowl?—E. W. B., Essex County, N. J.

There are no poultrymen in our section using electric lights during the summer to catch insects for poultry. Many poultrymen use artificial lights during the winter to increase egg production, but, of course, this is from November to April when there are no insects to be attracted to the poultry houses by the lights.

The European corn borer has not reached our section as yet but I understand it is a slow flying moth which flies at night. In that case, if the pest arrives, I shall continue to keep a lot of our colony houses located along the edges of corn fields and may try lights to draw the moths near the houses where the growing poultry may have a chance to catch them in the early morning.

I have not tried the experiment but believe that either electric lights or oil lanterns placed near poultry houses at night might draw an abundance of insect life to the vicinity and increase the number of bugs per hen per day which might be added to the poultry ration.—R. G. Kirby.

Which Breed Best?

I am at present keeping both R. I. Red and White Leghorn hens (about 150 of each). I would like to keep only one of the two breeds and increase the number to 1000 in a few years, but I am undecided which one to select. I retail all my eggs and get the same prices for brown and white. I have found that the Reds are better winter layers and bring about five cents more per pound when sold for meat. The Leghorns grow much faster and require less feed than the Reds and do not become broody. I buy them as day-old chicks and pay about three cents more each for the Reds than for the Leghorns. After considering the advantages and disadvantages of each breed, I am unable to decide which one to keep. Which would be your choice?—E. W. A., Montgomery County, Pa.

As a general rule the large commercial egg farms keeping 1000 hens or more keep Leghorns in preference to the heavier breeds. The preference among farmers seems to be Reds, Rocks, Wyandottes and other heavy breeds. I keep both Barred Rocks and White Leghorns but when I began keeping more than 400 birds, I kept White Leghorns for the largest proportion of the flock.

One of our laying houses which

(Continued on page 13)

Nests in the Poultry House

THE cheapest nesting sections we ever made consisted of store boxes purchased at five cents each. Each box was just the right size to be divided into two nests. The boxes were nailed in rows under the windows with a steep slanting roof built of scrap over them. A two-inch piece of wood nailed across the front of the boxes served as a perch to aid the hens in climbing into the boxes. We have used orange crates in the same manner but the orange crates must have the boards removed from the bottom and renailed close together so the litter will not fall out.

Our best home made nests are made in sections of sixteen nests without backs. They are four nests high and four nests wide with a perch in front of each section. A step roof of matched lumber keeps the hens from roosting on the sections. The sections are hinged to the walls of the laying house partitions. They can be swung out from the wall and braced and all the litter and dust quickly brushed out of the back with a stair brush.

Metal Nests Prove Satisfactory

If there is no time to make good nests I think it pays to buy the metal nests sold commercially. These nests can be purchased either with or without trapnest doors. If a poultryman only has time to trapnest during November and December he can use such nests to aid in selecting the spring breeding flock and then wire the trapnest doors open and not use them during the spring and summer when the days are long and the time is needed with the crops.

It is better to have a surplus of nests than not enough for overcrowding frequently results in broken eggs. The more nests you use the greater the distribution of the eggs and the fewer the eggs to be soiled if an egg is broken occasionally.

One for Every Four Birds

Usually a nest for every four birds is about right even in the spring. But gather up the setting hens every night if you have a breed that is broody or the nests will soon be overcrowded at the peak of the spring laying season even with a nest to every four hens.

Too frequently a poultry house is built with much care and then the nests are thrown in hurriedly. They are one of the most important features of a poultry house and the work should not be done carelessly. Whenever it is not done right there is work to do over and eggs will probably be lost in the meantime.

We never build nests now unless they are removable for cleaning, sunning and spraying. Even the store box and orange crate nests can be hooked to the wall or arranged where they can be quickly removed and the mites dislodged if they have made a start in the cracks and crevices.—R. G. Kirby.

(Continued from page 12)

held 300 Rocks seems to comfortably house about 400 Leghorns. The Leghorns mature earlier, seem to take less mash and are not broody. They bring less for meat and there is less demand for breeding stock from the farmers. I am not definitely prepared to say which is the most profitable breed but the fact that many experienced egg farmers are raising White Leghorns exclusively is evidence of the value of the breed.—R. G. Kirby.

Possibly Tuberculosis

We have had a disease among our chickens for three years and would like your advice as to what it is and what to do. Most of the fowls get lame in one leg, finally get down entirely, and then live like that for ten days some times, but never get well. Some few get crooked necks while others have peculiar colored combs. Some may have a slight diarrhoea. They are in good flesh and have good appetites. We have been told the trouble is worms. So far, I haven't found any worms in those I examined. I have given them tobacco dust in dry mash with no results. We got rid of all our hens in the summer and started a new flock entirely, but they have the same disease now. Could you tell us what to do for them? Is there anything that could be given in drinking water?—Mrs. H. K., Caroline County, Md.

Lameness, bowel trouble and finally the death of the bird are symptoms of tuberculosis. Perform a postmortem and see if the liver is covered with the grayish spots which are an additional symptom of tuberculosis. A laboratory examination is considered necessary for an absolutely accurate diagnosis of avian tuberculosis. If you have a valuable flock suffering losses from this disease, it will pay to have a veterinarian inspect the flock and make recommendations.—R. G. Kirby.

Enter Some Eggs Now

TWO interesting features of the big egg show which will be held at Harrisburg the week of January 18 to 22 are that there will be no entry fees charged and all exhibits will be criticised by some of the world's best egg judges. There will be twenty-one classes for eggs, over one hundred ribbons, many cash prizes, and ten silver loving cups.

Why not get an entry blank from your county agent or the state department of agriculture and send in some eggs. The exhibits should reach the show by Monday noon, January 18th.

When the eggs are packed for shipment great care should be taken. Single dozen entries may be sent in parcel post cartons. Each egg should be wrapped with clean paper. Newspaper should not be used around eggs, as ink discolors them.

Five dozen exhibits can be safely packed in a standard thirty-dozen egg case. Excelsior pads should be used instead of ordinary flats and only two dozen eggs should be placed in each three-dozen filler. All eggs should be packed with their ends down and all packages should be distinctly labeled "Eggs."

When selecting eggs for the show great attention should be paid to uniformity of size, shape, and color. The eggs should weigh between twenty-four and twenty-eight ounces to the dozen. Remember that any egg weighing at the rate of less them, a good supply of lime. There twenty-eight ounces to the dozen will disqualify the entry. When other values are equal, those showing maximum weight will be given preference. The shells should be firm, smooth and of fine texture. A wrinkled, rough, or spotty shell should be discarded.—D. McK. Gray.

Quicker Growth with Less Feed and Earlier Layers Assured—
PROTOZYME
REG US PAT OFF

POULTRY losses are reduced to the very lowest; 20% to 40% quicker growth; pullets are brought into earlier laying or earlier market. Mix PROTOZYME with mashes. Nothing else like it. Tested by N.J. State Agricultural Experiment Station with wonderful results. Wonderful for hogs and cattle also. Ask your dealer or write us for booklet and supply for your flock.

Use the coupon below and send at once for 14-page booklet telling all about this remarkable feed supplement — what it is and what it does.

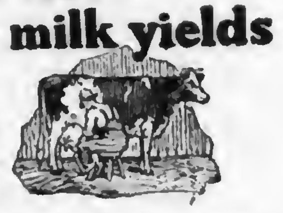
HOYTVILLE HATCHERY, AVE. 25, HOYTVILLE, OHIO.



This Winter—
Prove for yourself how Kow-Kare increases milk yields

Putting Kow-Kare on the job in your dairy is just like adding an extra cow to the herd—without increased feeding cost. For an outlay of a few cents you can take in with the daily milking many added quarts of milk. The difference you will quickly notice in the milk pails will simply mean that now you are getting *full* returns from those hard-earned feed dollars you've invested. Feed fully digested and fully assimilated means dairying *on a profit basis*.

Feed assimilation—vigorous functioning of the milk-making organs—that is the mission of Kow-Kare. It is not a stock food; instead of throwing an added burden on the cow's digestive process, Kow-Kare helps to get *all* the milk values from *Nature's* foods.

Its moderate use in your feeding program costs surprisingly little—the results are a visible money crop in increased milk, out of all proportion to your small investment.

Builds Vigor to Fight Disease, Too

Cows that are in the pink of condition do not fall an easy prey to disease. The use of this famous all-medicine invigorator, while it is paying you regular dividends via the milk pail, is also acting as a barrier to cow ailments.

Simple, Easy to Use—And Inexpensive

Just a tablespoonful of Kow-Kare with the feedings one week to two weeks each month works wonders with your cows. Results speak quickly. The more closely you make comparative tests with Kow-Kare the more sure you are to keep it always working for you.

If you find the least trouble in getting Kow-Kare from your feed dealer, druggist or general store, order direct from us. Two sizes, $1.25 and 65c—in the stores or by mail, postpaid.

Treating Cow Diseases—Free Book

For the home treatment of Barrenness, Retained Afterbirth, Scours, Bunches, Milk Fever, and similar cow ailments Kow-Kare has a thirty-year record of marked success. Hundreds of thousands of dairymen would not be without it.

Our free book, "The Home Cow Doctor" has saved many a sick cow and restored her productiveness. A copy is yours, upon request. It is a book you will save and use the year 'round.

Put Kow-Kare To This Test

Just to quickly convince yourself that Kow-Kare will put more milk money in your pocket, make a careful test for two weeks. Select several cows for the test, carefully weigh their milk for two weeks. Then feed each cow a tablespoonful of Kow-Kare a day for two weeks—and compare the yields of the two periods.

No other change in feeding needed; the whole difference will be due to a greater ability to turn feed into milk.

Don't fail to make this test at once, and after you've been convinced you can apply the Kow-Kare aid to the entire herd.

From W. C. Spitler Greensburg, Ohio—

"During the past five years I have used Kow-Kare with great success. Not only does its use increase the flow of milk, but it improves the general health of the cow. I have also used it successfully for calves affected with scours."

From A. G. Katzur DeLamere, N. Dakota

"I've used Kow-Kare for some time. I find that it is a wonderful aid to increasing milk yield. Had a cow two years ago, she quit milking after coming fresh and would not get with calf. After feeding Kow-Kare for awhile, she came back to milk again and has raised a calf since and is now the best cow in the barn."

Contagious Abortion

About two-thirds of our cows freshen from forty to fifty days before they are supposed to. Some of the calves are dead when they are born and some are so small that they die in two or three days. I would like to know if you could give me some information on what to do for them. Last year the high water from the river overflowed our silage corn. When we put it in the silo it was very muddy. Do you think that the muddy ensilage had anything to do with it? Is it contagious?—B. G. B., Bradford County, Pa.

It is doubtful if the muddy condition of the corn when it went into the silo is responsible for the fact that your cows are dropping their calves from forty to fifty days before they are due to freshen. It is more likely that the trouble is due to contagious abortion. The following suggestions are published by the Agricultural Experiment Station, Madison, Wisconsin, in Bulletin 368 for the managing of an infected herd.

"In making recommendations for the management of a herd of cattle in which abortion infection is known to exist, it is evidently impossible to consider conditions in a given herd. The following suggestions are, accordingly, designed for general guidance rather than with the expectation that all details would be put into practice in every stable where abortions have occurred. The principles of herd management given below are the result of careful study and experimentation and may be expected to bring results. Briefly, then, in the management of an infected herd, it is advised to:

"1. Isolate every cow that has aborted, that has retained the afterbirth, or that has a vaginal discharge and when practicable all that have reacted to the blood test even tho they have not aborted.

"2. Dispose of aborted fetuses and contaminated bedding by burning or deep burying.

"3. Disinfect the gutters and floor with a reliable disinfectant prepared and applied according to the directions of the manufacturer.

"4. Sell at once for immediate slaughter the first cow that aborts.

"5. Douch daily with salt solution (two tablespoons of common salt to one gallon of warm water) all cows that have a vaginal discharge, and spray and sponge the rear parts with a warm disinfectant solution (three per cent solution may be used to irrigate the vagina (0.5 per cent solution of sodium hypochlorite).

"6. Remove retained afterbirths and cleanse the womb, as previously described, in order to prevent an accumulation of pus which would likely result in sterility.

"7. Vaccinate heifers and cows, in herds where abortion is prevalent, about two months before breeding, to aid them in warding off the abortion infection.

"8. Feed a ration that is adequate as to both nutritive and mineral content and free from contamination with disease-producing germs.

"9. Postpone breeding cows that have aborted until all signs of a vaginal discharge have disappeared, and until the genital organs are normal.

"10. Call a veterinarian for all cows that are sick, fail to come in heat, or fail promptly to conceive. He will endeavor to determine the nature, extent, and progress of the affection and will prescribe suitable treatment."—A. A. Borland.

Tiddledywinks Gold, owned by Mr. F. J. Bannister, Missouri, took first place in the heifer class at the American Royal Show in Kansas City.

She Pays Her Board

HOW would you like to own a cow that produced 25,422 pounds of milk, 909 pounds of butterfat, whose product sold for $649.99, whose feed bill came to $195.02 and whose returns above the feed cost were $454.97? This is the record made by Bell Beryl Pontiac 465308, in one year from the date of freshening. She freshened with twin calves, a male and female, on June 26, 1924, and was milked three times daily. Her production of butterfat the first month after she freshened was eighty-one pounds and during the twelfth month after she freshened sixty-five pounds.

This great producing cow is owned by O. D. Smith, of Meadville, Pennsylvania, whose herd ranked highest in production in the Meadville Cow Testing Association with an average production of 11,647 pounds of milk and 429 pounds of butterfat. The herd and Mr. Smith's method of handling it is worthy of study.

Mr. Smith bought Bell Beryl Pontiac No. 465308, when she was a two-year-old for $350. Her dam was Bell Clair Dusty Pietertje, her sire King Pontiac Beryl DeKol. She has had three females which have grown to be good cows, and three males which were sold. She also proved to be a good producer in both milk and

butterfat, holding up well at the latter end of the lactation period. She has a great constitution and large capacity, consuming great quantities of coarse feed and much water.

In 1924 Mr. Smith decided to try her out for a year in cow testing association work. He placed her in a well lighted, roomy box stall about six weeks before she freshened and fed her two quarts wheat bran, two quarts ground oats three times per day as he expected to milk her three times per day. Before she freshened she seemed to be so large and well filled out, that he thought she had plenty of flesh but when she freshened in June, 1924, she had twin calves, a male and a female. This seemed to pull her down in flesh until she was quite thin but she remained in good health and had a good appetite.

Changed Ration Gradually

He continued the oats and bran for about a week and then began to add a little oil meal and corn meal until at the end of the first month she was on a ration of two quarts wheat bran, two quarts ground oats, one quart corn meal and one quart oil meal. This amount was fed three times daily and included from seventeen to twenty pounds of grain per day. She was watered from a pail three or four times per day.

Her roughage consisted of mixed alfalfa and clover hay of good quality plenty of beets all the year and from thirty to forty pounds of ensilage from a small fodder variety with a high percentage of well-matured ears. It is to be noted this cow did not consume an unusual amount of concentrates but did consume large quantities of roughage. She did not lay on flesh but finished the year in thin condition. She had a good appetite all year.

Mr. Smith thinks it profitable, as well as a great satisfaction, for every farmer to have some purebred stock, but he also thinks the average farmer should go slow in the purebred game and remember that many of the large, well advertised places are financed by money that was not made on a farm. Many of these places are maintained by good business men and on good business principles, yet they are carried on at a loss so great that the average farmer would not last long. He thinks the average farmer should go slow in paying large sums of hard earned money for highly advertised purebreds.

How He Made His Start

A start in the purebred business was made by taking two purebred cows on the shares. This method did not prove satisfactory and he does not think the plan a good one. He later bought a few promising heifers, such as Bell Beryl, at a reasonable price and tho they did not all prove to be as good as she, this plan was the more satisfactory to him.

The cow testing association work, according to Mr. Smith, is a good way to find the cows that are desirable to put on semi-official test. He also feels that if every farmer who has a few scrub cows could be persuaded to adopt cow testing work and dispose of the unprofitable animals, the problems of overproduction and low prices would largely be eliminated.—A. A. Borland.

Keystone Wool Pools

THREE Pennsylvania wool pools recently sold their 1925 clip totaling 140,000 pounds at an average price of 51.4 cents a pound. Wool growers not in the pool sold their wool this year for thirty-five to forty-five cents.

There are now twenty-one pools in the state drawing wool from twenty-eight counties. Three of the pools, Fayette, Indiana and Wyoming, handling 75,000 pounds of wool, have not yet sold their crops.

Dairymen should have more profit

THAT dairymen should have more profit on the milk they produce is certain—the real problem is how to get it.

Competition and many other forces make it difficult to advance the price of milk but every dairyman can increase his profit if he can reduce the cost.

This can be done only by using feed that will fully meet the cow's requirement.

TI-O-GA Dairy Feeds meet the cow's requirement and *have never failed* to lower the cost of producing milk and make *more profit* for the feeder when used as intended.

Write for samples and booklet.

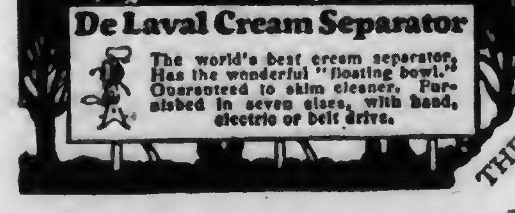
If your dealer doesn't have Tioga Dairy Feeds, advise us and we will see that you are supplied.

TIOGA MILL & ELEVATOR CO. Waverly, N.Y.

(Every claim made for Tioga Feeds has been proved in actual feeding)

Use the TI-O-GA Dairy Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE



10th ANNIVERSARY of De Laval Milker

10 Years of Service — Thousands of Satisfied Users

IN 1916 the first De Laval Milker was sold. Before that 20 years had been spent in its development and perfection. When the De Laval Milker was put upon the market it was a perfected machine.

Today more than half a million cows are milked the De Laval Way—and the number is increasing so rapidly that hand milking will soon be as old-fashioned as harvesting grain with a cradle.

De Laval first gave the world the centrifugal cream separator, which has done so much to make the dairy industry the largest and most profitable branch of agriculture.

Now the De Laval Milker removes the drudgery of hand milking, saves time and labor, does better milking, and produces cleaner milk.

Seven Big Houses Ready to Serve the American People

Seven big houses containing over one hundred acres of floor space! Each house filled with the same bright, new, fresh merchandise!

Seven big houses working together, buying together to secure the lowest possible prices for you!

Such is the service Ward's offer the American nation.

Our Baltimore House Is Convenient to You

You send the coupon to Baltimore for your copy of Ward's new complete Catalogue.

You send your orders to Baltimore because your letters reach us quicker, your goods reach you quicker. You save both time and transportation charges by ordering from Baltimore.

But back of this big Baltimore house there is for you all the advantage, the opportunity and the saving made possible by this entire organization of Montgomery Ward & Co.

$60,000,000 in Cash Secured these Bargains for You

In making ready the merchandise for this big new complete Catalogue, over $60,000,000 in cash was used! Cash buys cheaper than credit—always. Things cost less by the thousand gross, by the train load.

And besides, our complete organization of buyers, of merchandise specialists visited the markets not only of America, but of the world in searching out these greatest possible bargains for you.

That is what is back of Ward's Catalogue. That is the power of these seven big houses. That is the opportunity for saving this Catalogue brings into your home.

And at Ward's your savings are *real* savings. A low price is a *genuine* low price because—

"We never Sacrifice Quality To Make a Low Price"

When you order from Ward's you have an assurance of quality, of satisfactory service, of long wear in everything you buy.

We put into our tires as much new live rubber, as strong heavy cords as can be put into a tire. Measuring and weighing our tires proves them larger and heavier. We could cut this quality to make a lower price.

At Ward's we keep up quality. We consider first your satisfaction. We never sacrifice quality to make a seemingly low price. We offer no price baits. Ward's low prices are low prices on standard *"quality"* goods—always.

Our 54 year old Complete Guarantee

Ward's published the first mail order guarantee. We guaranteed your complete satisfaction. We said: "Your money back if you are not satisfied." And we have lived up to this Golden Rule policy for 54 years. You take no risk when you order from Montgomery Ward & Co.

So send today for your free copy of our big Catalogue. See for yourself the savings. See for yourself just why twice as many people have in the last four years sent their orders to Montgomery Ward & Co.

Our Catalogue is yours, free. The coupon that brings it is printed below. The opportunity for saving, for convenient, satisfactory service is yours. Fill in the coupon and learn for yourself the saving in sending all your orders to Ward's.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

(Continued from last week)

EARLY at the Durham field the "Wasps" gathered to talk over this new development. Roberts' announcement meant that the "Hill Billy" after all had a chance to win. But where could fertile soil be found in a place where only unthrifty yields had grown? And from where came the seed for planting? "Reckon it's possible Woodson got that seed after all?" Johnson asked. "Bull's" answer was profane and emphatic. Didn't they know that Tom couldn't follow them in the darkness, even if he'd had his clothes on. And hadn't they seen where the rotten platform had broken, plunging the box down to float away? Moreover, hadn't they followed the stream for miles hoping to find the missing corn still afloat and unharmed? The "Hill Billy" had just picked up seed and Roberts was bluffing to make "Bull" dig in and do his best. That was the comforting conclusion of the gang and they grinned virtuously when the teacher commended them for their interest and early rising. "Got to help Bob beat that twenty-five bushel yield of Woodson's," Johnson explained patronizingly. Tom flushed but offered no comment as he watched the fine team start off with lister and drill. Durham did know how to handle a team and it was a pleasing picture as the powerful blacks held to their steady and rapid course. Again to Tom came the surge of uncertainty as he recalled his inexperience. His venture with the truck patch, the small success with the little field of corn was but play compared with this matching of brain and brawn against the forces of nature and against other boys. But he'd see it thru and Tom set himself to profit by the observations of Teacher Roberts as they watched the work. His words of praise were as honey to the eager "Wasps" who already were clamoring that "Bull" must divide the prize money with his chums. Roberts checked their bantering with the mild admonition, "Remember, fellows, the old saying says, 'There's many a slip twixt the cup and the lip.' This is a state wide contest. Then at least one other member of this class has an equal chance with Bob. It's too far for me to go out and watch Tom do his planting but after watching Bob here I know he can do the work. Your turn tomorrow, Tom." Silence fell on the "Wasp" crowd for here again was reminder of possible defeat for them. At night they gathered to again discuss the matter and out of his own evil philosophy Durham offered what seemed the most plausible explanation. "Woodson's a sneaking four-flusher," he said. "He lost the corn and he's ashamed to have Roberts find it out. He's just got some seed corn of the same color and he'll lay it on the seed when his crop fails. Course he's got to go thru with the work or be found out. We ain't got anything to fear from him."

Might send someone out to find out what kind of seed was planted. That was Johnson's suggestion but no one volunteered for the job. "Bull" allowed it wouldn't prove healthy for anyone found snooping around Peace Valley and in that there was unanimous agreement. In fact there had been long smouldering fear of what might happen if Woodson "peached" to his mountain kin and named the lads whom they knew he suspected. There was wholesome respect for the men of the ready rifle and the flaming spirit of hill clannishness. Only as a last resort would they brave the wrath of Tom's kin. So off to the Valley went Tom Woodson unmolested and with good wishes and final instructions from his friend. "Up and at 'em," was the parting advice of Pepper Manning and, somehow, the thought did not seem foolish that he was a knight going forth in the battle lists. And with him Tom Woodson bore the magic key of knowledge, won thru hard persistent work.

Cloudless was the day and the sun god had but mounted his chariot of fire when Tom Woodson climbed upon the combined drill and lister and headed his team across the field. Carefully had the corn been shelled and the kernels reflected the gleam of the sun. Early as it was Lame Bill Kidd with proprietary interest was on hand and Sam and Mary Woodson had journeyed to the field. With a mother's pride in a stalwart son Mrs. Woodson watched Tom's deft handling of his team, the calm assurance with which he went about the work. "Set your drill to plant fairly close," John Roberts had advised, "for you have rich soil which will produce abundant stalks as well as ears and we must have the stalks to grow a record yield." Again had the friendly Benson lent his team, Tom to repay in labor when time could be found. A born horseman for all his trapper training, Bess and Ned had come to know and love the calm voice, to have confidence in the hand which held taut reins.

STEADILY moved the team as Tom listened to the "click, click" of the drill, into the ground with the seed went the hope of his buoyant heart. Dimly hereditary instincts from his mother's forbears who had followed agriculture awakened and came to strengthen faith and add to the joy of work well done. Why, this wasn't just a job to be carried on, the task to end at the close of day. It was achievement, the foundation for production of life giving food. It was pleasant pastime, too, this holding the reins over a steady team and watching the rich loam flow from the lister's sides. Tom found himself humming the school song, "Bianton Forever," and building high hopes for the coming days. As the day wore on Tom came to sense dimly the greatness of agriculture and the part sons of the soil have had in this world's upbuilding. With the descending sun his task had taken on new dignity, he was one in spirit with the innumerable millions who sow in faith that the world may reap.

Something of the thoughts that had come to him was imparted to Teacher Roberts as Tom gave report of his planting. There was a touch of eloquence as he told of the rhythm of the drill and his feeling of hope as the rich soil received the precious seed. "Old man," said Roberts affectionately and there was brotherly warmth in the tone, "Old Mother Nature is casting her mystic spell over you. Many the man and boy who sees in farming only drudgery but they are deadened with labor or their eyes are blind. No workshop so wonderful, no craftsman so great a benefactor as the master food producer. If you love agriculture she will repay you well. Now if the gods of rain and sun are kind I know that I can trust you to provide the remaining elements that bring success. Brains and sweat, Tom, will tell the story and many a time this summer your faith and your courage will both be tried. But I'm banking on you, old man." In his heart Tom once more pledged fealty to the elder brother who had befriended him. One thing was assured, the seed was safe from pilfering human hands. If he failed it would not be that in the beginning he had not done his best.

NEVER had the residents of Randall County seen such a stand of corn as grew on the Durham field. Row upon row like tiny soldiers the green shoots stood as if not one kernel had missed germinating. Roberts had taken the class down for the first cultivation and teacher and boys thrilled to the sight as they watched Bob Durham with his splendid team and shining new cultivator going down the rows. Banker Durham rubbed his hands complacently and for once at least his son, the center of all eyes, was proud to be classed as a farmer. "I never saw a finer field this early in the season, Mr. Durham," said Roberts enthusiastically. "With a good season and proper care and cultivation Robert should at least double the state's average yield. The boy is doing a mighty good job of cultivating, too. Watch him, fellows, and profit by it. Notice how carefully he protects the little plants." Durham was nearing the end of the row and had climbed down to uncover some embryo stalks. "It wouldn't surprise me at all," the teacher concluded, "if Bob gets on the Corn Growers' Association honor roll which means that he must produce more than 100 bushels per acre average yield. He's got the foundation for that and more; let's give him a good hand." As the boys cheered many meaning looks were cast by the "Wasps" in Tom's direction and as they left the field Johnson was heard to slyly hum, "Oh the grub, grub, grub, he's a dub, dub, dub." Then as he sauntered close to the Valley lad he remarked so that only Tom could hear, "Don't you wish that you'd had seed that will grow like "Bull's?" Tom ignored the thrust but his flashing eyes betrayed the fact that he knew exactly what the "Wasp" was hinting at. Never mind, some day there would be a settling of old scores. And there might be some surprises for the fellows who thought he was whipped before the fight began.

Tom had not found opportunity to go home after his field was planted and it was Lame Bill Kidd, bearer of tidings from the Valley, who brought word of his young kinsman's good fortune. The boys found him waiting at his accustomed place on the school steps and Marvin linked an arm in friendly fashion as the three walked off together. Durham passed them with nose in air, sniffing loudly, and only the restraining pressure of his small friend's hand kept the trapper from flying at "Bull's" throat. "Grin, durn ye! One of these days you'll grin on tother side of your face." Lame Bill's voice was low but venomous and Durham quickened his step. "Better leave that 'Hill Billy' alone," one of "Bull's" chums advised. "One of these days you'll have the doctors picking a bullet out of your back." But that wasn't Peace Valley's method of avenging an insult. Lame Bill would bide his time.

"LOOK'S as if every corn plant in the field is up and sayin' to its neighbor, 'Lay over brother and give me room'," was Lame Bill's news. "'Too thick,' Grandad Martin says, 't won't never make nothin'. But it sure is poppin' up lively. I never seed such a sight in airy field." True enough for when Tom, accompanied by John Roberts, went out to the field the following Saturday he found that Sheldon's 100 per cent germination test apparently was verified. Moreover, there were no yellow or sickly appearing plants. "Some folks talk about 'Sheldon's Luck'," Roberts remarked as he admired the perfect stand. "If there's anything to that he's passed it on to you. Now for the first harrowing to break the clods and put the field in good condition for cultivation." There was no steady team this time and Sam Woodson's wiry ponies went awkwardly about their unaccustomed work. "Don't worry," the teacher soothed as Tom fumed about plants trod down. "You've got plants to spare here and if nothing happens you'll have a real job of thinning out. My, what a stand! Funny, isn't it, that farmers still will go to a crib and pick their seed with no idea whether it will germinate? Did you notice that patch as we came down with half the hills missing? That's what hit-or-miss farming methods mean. And the plants had no such vitality as yours here. You are off to a flying start so pray now to the gods of sun and rain and we'll work out that Sheldon recipe."

"We've got part of it working, anyway," grinned Tom as he wiped his sweat and dust streaked face. But there was no rebellion, only joy in his heart, as skilfully he guided the team until before long there was some semblance of the smooth efficiency of the Benson span. Roberts watched approvingly, giving an occasional quiet word of advice and encouragement but never offering to touch a line. It was the boy's job and a matter of honor that no other person should have aught to do with the crop project. Again came Sam and Mary Woodson pridefully to watch their son at work. During the days that he had guarded that precious seed Sam Woodson's interest in the work of his student son had grown tremendously. Trained to constant warfare with nature's forces he could visualize combat with an enemy and there was noth- intangible about this contest be- en his son and an enemy who med to have the benefit of over- elming odds. "Book learning" i was something intangible but if dy would better equip Tom to ry the fight Sam Woodson was for strong. Something of this in his couth but forceful language the untaineer imparted to Roberts as y stood together, looking over the d.

"Knowledge is the best weapon th which a man can fight," the cher commented. "There are ousands of men with great natural ility whose usefulness would be in- eased a thousand fold if proper in- uction had been provided. Wise you are in the trapping game, Mr. odson, I have no doubt that there e men who have made a scientific dy of the habits of animals and e proper lure to use who could tell u a thing or two. Right now Uncle m has such men at work ridding olf and coyote infested territory of ese pests. They don't have to take chance on a fur catch, they are id good salaries to do the work. st yesterday I read of a Federal apper who had caught an old wolf hich had fooled the local trappers d hunters for years. 'Old Satan' ey called him and he'd destroyed ousands of dollars worth of live- ock. No bait or set ever had fool- him and yet the professional apper caught him after three days' ork."

"By gum," Woodson replied, "I've ered of that old devil. Always shed I might have a try at him. t them smart trappers had a lot fun tellin' about how 'Old Satan' s goin' to show that 'professor ller' up. Musta been a great joke 'em."

ONE thing more," Roberts concluded. "As I said 'every man his game,' and knowledge thru udy is only the imparted experi- ice of others who have gone before. ou often speak about the time hen I was 'raising wheat' during e war. Well, the punch with which put that big fellow down and out as taught me by my boxing in- ructor in college. As you know I s outweighed fifty pounds and if hadn't known what to do I'd have ad no chance. I wouldn't have aken a licking from the traitor for thousand years of hard work and udy. The vocation of the man who ught me was boxing, that was his b. My vocation is farming and I e it just as you love fishing or unting game. It's my job to train ys who expect to make farming eir life work so that they not only ill understand what they are do- ng and get some returns for their bor but get a lot of fun out of it. xcuse me, Mr. Woodson," Roberts pologized to his interested listener, "for boring you to death but I am nthusiastic over my work. And your boy is one of the keenest and finest ads I've met in school or out."

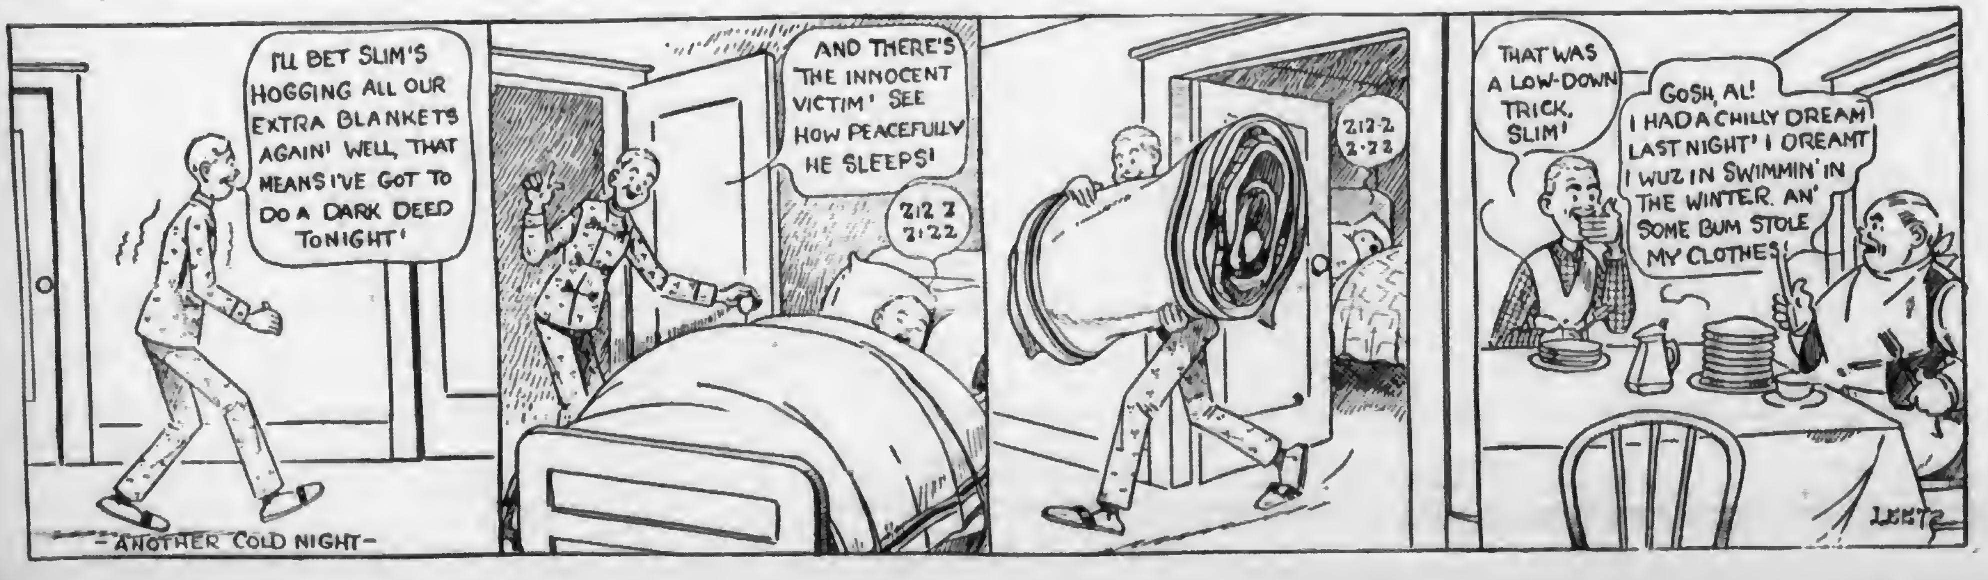
Mrs. Woodson flushed with pleasure at the words and her big husband struck the teacher's shoulder a blow which made him whince. "Young feller," said Sam, "I ain't got no eddication but I got sense. It stands to reason that them things you have told is true. I never thought much of farmin' but I reckon it was because I didn't know anything about doin' it right. Now we ain't askin' any special favors but I think you know them town boys has done Tom dirt. We won't forget what you are doin' for him and as I've said before if my boy can raise corn like you raise wheat he's goin' to be a sure winner." Woodson laughed at his shop-worn joke, then inquired earnestly, "Mr. Roberts, do you really think that Tom has a chance in this here state contest?"

"Absolutely," was the vocational instructor's reply. "I doubt if in the entire state there is another five-acre plot which has the virgin fertility of Tom's field here. But of course we needn't 'kid' ourselves. Tom's inexperience will count against him and there are so many elements of uncertainty in corn growing that no one can tell about the final outcome until the corn is gathered. But Tom has a real foundation for success; good soil, good seed, a clear brain and the will to win. And win or lose he's almost certain of growing a profitable yield and making money on his first year's venture in farming. We won't begin to count prize money just yet but I'll be disappointed if this field doesn't pay big returns on the rent invested. No doubt," he continued as his keen eyes measured the mountaineer, "that a lot of folks here think I am several kinds of a fool for paying $60 rent for this little plot. You'll remember that I told you I'd pay the rent and take half Tom's crop. But now this is a class project and nothing is to come to me. The $60 is to be a loan without interest and if anything happens to prevent payment this fall Tom can pay it later. There's no hurry and Tom isn't to worry about it. What he's to do is to grow corn."

"God bless you, Mr. Roberts," said Tom's mother as she took the teacher's hand, "we'll never be able to repay you in money but we won't forget what you are doing for our boy. All that I ask is that he grow up to be a man like you." No higher praise can come from a mother's lips and Roberts flushed as he disclaimed any credit. Sam Woodson was not so demonstrative but there was no mistaking the ring in his voice when he added, "you ain't goin' to lose nothin', mister, by doin' this for us. An' you'll get your money if their ain't airy ear of corn grown in this field." Here were friends worth having, thought Roberts, friends without the artificiality which marked some of those "Outside." Warm was the spring day and as the four ate their luncheon under the leafy tree while the ponies munched contentedly nearby Roberts told stories of school life, of the things he had seen in travels to other states. But following a graphic description of mountain climbing in the West, Tom who had been listening attentively pointed to the rugged hills which surrounded them. "It must be fine to go 'Far Outside'," he said, "and some day I hope to go, too. But there can't be any place prettier than this, Mr. Roberts, when the leaves are green or when the sun shines on the snow." A part of his mountain home was Tom Woodson and John Roberts respected him the more because of his loyalty. And whatever might come to Tom in life but one spot would be "home" for Peace Valley's sons are as rough-hewn chips from the rocks which frown from forbidding hills.

(To be continued next week)

Activities of Al Acres:—*Look it up in the dream book, Slim:* : : : : : : *By Leet*



I'LL BET SLIM'S HOGGING ALL OUR EXTRA BLANKETS AGAIN! WELL, THAT MEANS I'VE GOT TO DO A DARK DEED TONIGHT!
—ANOTHER COLD NIGHT—
AND THERE'S THE INNOCENT VICTIM! SEE HOW PEACEFULLY HE SLEEPS!
Z-Z-Z Z-Z-Z
Z-Z-Z Z-Z-Z
THAT WAS A LOW-DOWN TRICK, SLIM!
GOSH, AL! I HAD A CHILLY DREAM LAST NIGHT! I DREAMT I WUZ IN SWIMMIN' IN THE WINTER. AN' SOME BUM STOLE MY CLOTHES!
LEET

Did you ever hear this one?—

We would hate to work for some of these astronomers. They were peeved because the eclipse was four seconds late.—Stafford Courier.

The Chase Register, growing tired of all the blather concerning women governors, digs this out of an exchange: "Why all this fuss about women governors? Every home has one."—Kansas Industrialist.

A Scotch wife nagged and nagged her husband until the poor fellow died. Then she was sorry, very sorry, so she erected a fine stone over his grave on which she had carved the following inscription:

"Rest in peace until I join you."

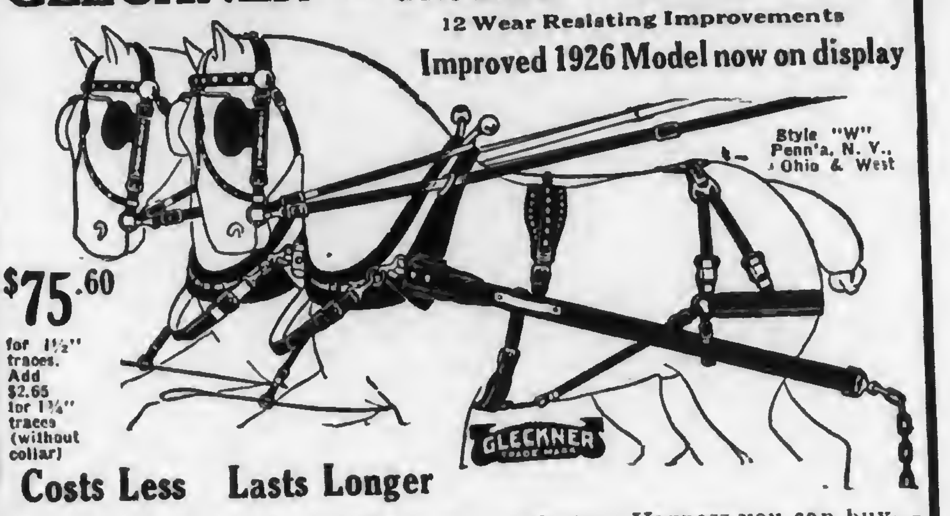
"How do you find marriage?"

"During courtship I talked and she listened. After marriage she talked and I listened. Now we both talk and the neighbors listen."

A Scot applied for a position as patrolman on the London police force. Here is a question they put to him in Scotland Yard and his answer:

"Suppose, MacFarland, you saw a crowd congregated at a certain point on your beat, how would you disperse it, quickly and with the least trouble?"

"I would pass the hat."



GLECKNER 1000 Thousan 1000 HARNESS
12 Wear Resisting Improvements
Improved 1926 Model now on display

Style "W" Penn'a, N. Y., Ohio & West

$75.60 for 1½" traces. Add $2.65 for 1¾" traces (without collar)

Costs Less Lasts Longer

GLECKNER "Thousan" is the most satisfactory Harness you can buy—costs less, wears longer. For forty-seven (47) years the GLECKNER family has made only quality Harness. Every "side" of leather individually selected, every harness part made by hand except where machines do superior work, best waxed linen thread, lock-stitching done by machines to insure uniformity, strength and long life.

GLECKNER "Thousan" is our new standardized Harness, made in large lots, which reduces cost to you. It's made full size, easy to adjust, extra reinforcements absorb the strain where pulls are greatest.

Go to the GLECKNER Dealer near you and examine it, ask about the GLECKNER Guarantee that goes with each set. He will help to fit the harness to your horses. He is always ready to serve you and keeps in stock extra parts for your convenience. No letters to write, no red tape, no delay.

FREE—Send for Booklet with full information about the 12 Wear-Resisting Improvements, and name of nearest GLECKNER Dealer.

Wood Sawing Records *Broken*
Here's the Engine that Did It.
And I'll Send it to YOU on
30 Days FREE TRIAL!

C. E. Gilbert, Ohio, says: "I bought my Edwards Engine in 1920. Have been sawing wood right beside an 8 H. P. engine. The 8 H. P. sawed 24 cords in the same time that I sawed 32 cords. We both used the same size saws. I can also pull a pair of 8-inch burrs wide open and elevate the feed 8 feet above the mill."

EDWARDS FARM ENGINE

I can save you a lot of money on your Saw outfit. We have them for both light and heavy duty, either unmounted, or mounted on stationary or portable frames. Write for circulars and prices.

If you want a portable saw frame, either with or without the saw, ask us for circular describing our wonderful line. Our saw frames are built in all sizes and for all purposes. Strong, durable and long-lived even under the hardest usage. Our policy of selling direct from factory to user guarantees you lowest prices.

Clarence Rutledge, Ontario, says: "Have given my Edwards Engine four years steady work. It runs a 28-inch saw, 8-inch feed grinder, the ensilage cutter, and does all chores. Have had ten other engines—the Edwards beats them all."

I'd like to send you my free book showing hundreds of letters like these—letters that tell how the famous Edwards Farm Engine—six engines in one—not only breaks wood-sawing records, but also all other kinds of records for farm engine service.

It Will Do All Your Farm Power Work

I want you to know what makes my engine so different from any other engine ever built. I want to tell you how this one engine will saw your wood, fill your silo, run your washing machine, grind your feed, pump your water—in fact, do practically every power job you have on your farm.

Change Power as You Change Jobs

I want to tell you how it can be changed from a 1½ H. P. engine all the way up to a 6 H. P. engine—how you change power as you change jobs—how it saves fuel, starts without cranking even in the coldest weather, does not vibrate, is light and easy to move from one job to another, and yet is rugged, durable, and trouble-free. I want to tell you how it has made good with farmers in all kinds of work for more than nine years, and why it is just the engine for you to have.

30 Days Free Trial

You risk nothing. Just send me your name and address, and without the slightest cost, or obligation, I'll mail you my book of letters from farmers, send you all the facts about this remarkable engine, and give you all the details of my liberal free trial offer. This is an honest, bona fide straightforward offer without any strings tied to it. Don't buy a farm engine until you have before you all the amazing facts about the Edwards. Write today.

Highest Development in a Wood-Sawing Outfit
The saw mandrel is connected directly to the crank shaft of the Edwards Engine by means of a flexible coupling, eliminating belts, friction clutch pulleys, idler pulleys, and delivering one-third more power to the saw. The shaft may be disconnected from the engine so that the engine can be used for other work when not needed on the saw. Equipped with 70-lb. balance wheel to insure smooth running. 28" saw blade, filed and ready for use. Mounted on sturdy 4-wheel truck. The weight of the entire outfit is only 975 lbs., making it easy to move from place to place.

No Belt Direct Connected

MAIL THIS TO ME NOW!

The Edwards Motor Co., 313 Main St., Springfield, Ohio
Without obligating me, send me free book and all information about your engine; wood saws; and other farm power machinery. Quote me prices and tell me about your easy payment plan, also about your 30-day free trial offer.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth:—Cousin Ruth, were you ever at Bronx Park, New York City? If not, you have surely missed the time of your life. Here are some of the things I saw: Monkeys, lions, sable antelope, giraffe, deer, tapir, musk ox, totem pole and house, camel, jaguar, golden pheasant, elephant, flying cage with all kinds of birds, flamingo, gorilla, sea lion, elk herd, leopard, bear, snake, toad, fox, bison, zebra, kangaroo, Bronx Lake, Falls Lake, Boston Road, entrance, mountain sheep, owl, squirrel, Adam and Eve (two mules), rhinoceros, tiger, prairie dog, bland, Welsh pony, hippopotamus, "Pete," eagle, mountain goat, and wart hog. There are so many kinds of animals it would take too long to tell about each one. But if every one looked up these in an animal book, they may have an idea of each. I hope everyone gets to see these animals.

PEANUT BUTTER FUDGE

Cook together 2 cups sugar
2 tablespoons peanut butter
½ cup milk

Cook until it forms a soft ball in water. Add one-half teaspoon vanilla, beat and pour in buttered pie plate, then cut in squares.—Blanche Estelle Graver, Carbon County, Pa.

No, I've never been to Bronx Park, New York City. When I call on the animals I go to the Philadelphia Zoo instead. I've been there several times.

Dear Cousin Ruth and Forum Members:—I live five miles from Gettysburg along the Taneytown road. I go to town school and am in the first grade of high school. I like school very much and I am studying hard. I haven't missed one day yet this year.

My three younger brothers and my younger sister go along with me to school. My brother that goes with me is twelve years old. He drives the team. We leave home for school about seven o'clock in the morning and get home about five o'clock. The horse that we drive is a bay and his name is Dan. He does not scare.

I am going to tell you something about my home town. There are a few things in or near Gettysburg that are very interesting to me. They are the battlefield, National Cemetery, Jennie Wade House, and the Cyclorama. We went over the battlefield one day and it took us about three-fourths of a day.

Jennie Wade House is a house where during the war she lived. One day as she was baking bread for the soldiers somebody shot and it came thru two doors and killed her. Anybody can go thru the house and see the place or spot where she was killed.

Cyclorama is a big painting of the battle of Gettysburg. It cost $20,000 to paint the battle and everything looks real and everybody that wants to can also see it if they pay fifty cents to get in. That money is used to keep the building up.—Virginia Althoff (13), Adams County, Pa.

MY SISTER AND OUR PET CHICKEN
Martha McCoy, Indiana County, Pa.

Dear Cousin Ruth:—I am a freshman in Shickshinny High School. I am going to tell you about our "Science Club" in school.

It consists of a secretary, assistant secretary, president, vice president. We organize whenever the persons who have offices get tired of holding them. Every Friday about 2.30 we have our meeting in room one in the basement. There are also three persons on the reporting committee.

The secretary reads the minutes of the previous meeting and there are five persons whom the reporting committee have picked out to read an interesting article out of a pamphlet or magazine. Then the reporting committee meet and tell who is to read on the next Friday. We try to let everyone have a chance to read.

BACK HOME FROM A HUNT
J. Geary Critchfield, Somerset County, Pa.

There are twenty-nine in our class taking our course which is the academic. There is another course named the commercial course which has a science club, too. I have two miles to walk and then ride about four miles on a bus to school.

I am the oldest of a family of seven children. There are four boys and three girls. I live with my grandparents. My parents are living but I like it best with grandpa and grandma. My uncle and aunt also live here. Some mornings it has been quite cold here in Luzerne County, also some nights. We have had snow here about four inches deep.—Jennie E. McMichael, Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—I live one mile east of Reodersville and seven miles west of Cressona. My route is the Cressona route. We are going to have an entertainment at our school. I wish Cousin Ruth and all the Forum friends could be with us. I am in sixth grade. I am sure that Vesta Deiong wrote a letter. I see her every day.

Wishing a happy New Year to all. It is 10 o'clock in the evening and I think it is time to go to bed.—Allen D. Reed (12), Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—We haven't had any school for three weeks because our teacher has been sick in bed. I had the mumps two weeks ago and now my little niece has them. I have two sisters, one of which is a nurse. I live right close to the school house so I can come home for my lunch.

We have a radio and have heard as far as South Africa. I help my father every year digging and picking up potatoes, thresh, pick up cider apples and many other things. We have about 120 acres of farm land.

I am going to send you a recipe.

BLACK CHOCOLATE CAKE

1½ cups sugar
½ cup butter
2 eggs
½ cup cocoa
½ cup hot water
2 cups flour
1 rounded teaspoon soda
2 teaspoons vanilla
½ cup sour milk

Cream butter, add sugar, yolks of eggs beaten slightly, sour milk, hot water, flour, soda, and cocoa sifted together, vanilla and whites of eggs beaten until stiff.—Eleanor E. Benscoter (11), Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a dog named Skippie. I am starting in the bee business and like it very much except when swarming because they all got away from me. I started with one hive that I bought for $5. I wish they wouldn't go away any more.

I go to Luzerne High School and after school I work in a store. I like to work there.—William Rineman, Luzerne County, Pa.

Dear Cousin Ruth:—As I have not written to you since last spring in sugar season I thought I'd drop in at this season of the year. I am trapping for skunk, muskrats and opossum, and I go with my father hunting. We got seventeen rabbits and four pheasants and one quail. I have a rabbit dog and a 'coon dog. I go along for 'coon.

We have fifty Buff Orpington pullets which I help tend and eleven head of Jersey cows and heifers. Some of them came from the state of Ohio.

Well, Cousin Ruth, when you get hungry for wild game come around and we will find a rabbit or a pheasant or perhaps a woodchuck.—J. Geary Critchfield, Somerset County, Pa.

I'm hungry right this minute, bring on some of your wild game! If I lived just around the corner I'd stop in and have supper with you tonight. Thanks for your invitation even tho I can't accept.

Hello, Forum Friends and Cousin Ruth:—I live on a 194½-acre farm. In the summer I help make hay. We have a large huckleberry hill where I love to pick huckleberries. We have lots of fun with our pony, Dan, and two dogs named Ford and Spark Plug.

I go to Sand Spring School and have two miles to walk. I have three brothers and one sister that also go.—Lucy Christner, Somerset County, Pa.

The Reasons Why

SOME of you whose letters appear on this page deserve membership pins for your excellent contributions but the letters were received before the new ruling went into effect and I can't very well make exceptions of you and award pins for any contributions received before last week. Sorry you can't have the pins this time but if you write as well the next time you'll be members I'm quite sure.

Announcement of the winners in the drawing contest, which closed December 26, will be made next week. I couldn't get the drawings made into cuts in time to use this week and I thought you'd like to see the drawings when you read who the prize winners are.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You can find out about what seems to be a peculiarity of this new year by drawing straight lines from the dot beside figure one to the dot beside figure 2; from dot 3 to dot 4; from 5 to 6; and from 7 to eight. I'll admit that, even after that, you'll have to be able to tell just what number these lines will make. When you have found the answer, send it to me on a POSTCARD so that it reaches me by January 16th. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

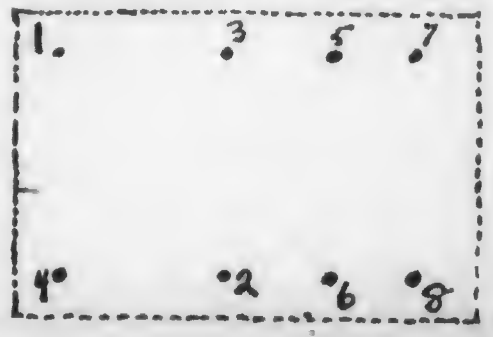
Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the December 19 issue of Pennsylvania Farmer is: MERRY CHRISTMAS.

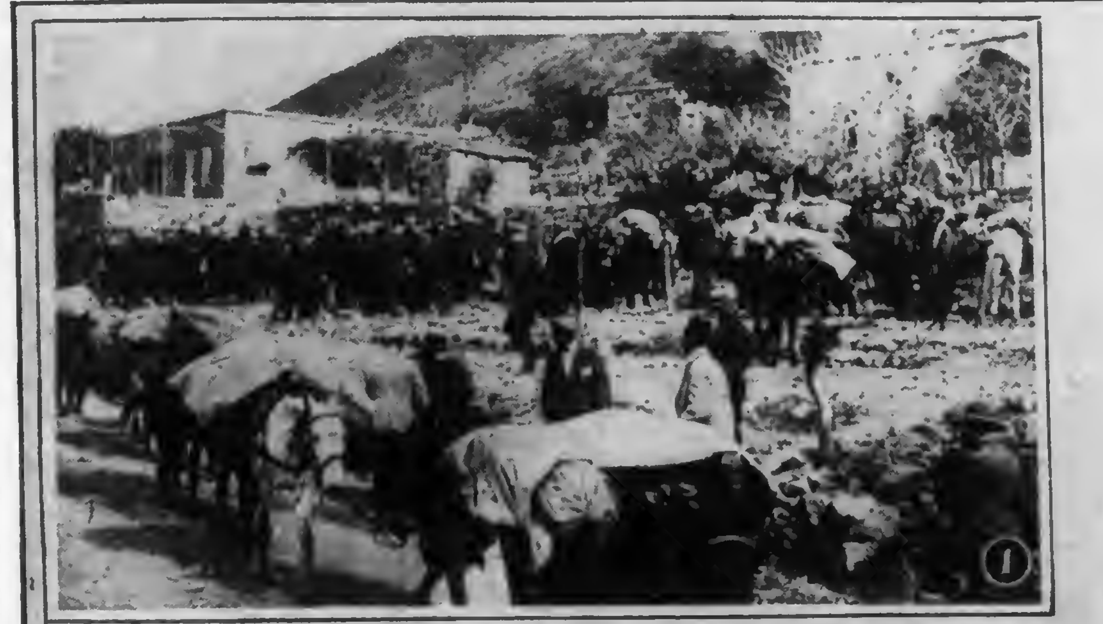
The prize winners are: Adela Baker, age 8, Delta, Pa.; David R. Beyer, age 8, Leacock, Pa.; Mildred Chaney, age 10, Cochranton, Pa.; Hubert Curtis, age 9, Lambertville, Pa.; Rata Long, age 10, Frankford, Del.; Ernest E. Mowrey, age 9, Conyngham, Pa.; Evelyn Parr, age 7, Woodbine, Pa.; Austin Schultz, age 9, Lansdale, Pa.; Ethel Wise, age 12, Cardiff, Md.; Mary Dugas, age 10, Langleloth, Pa.

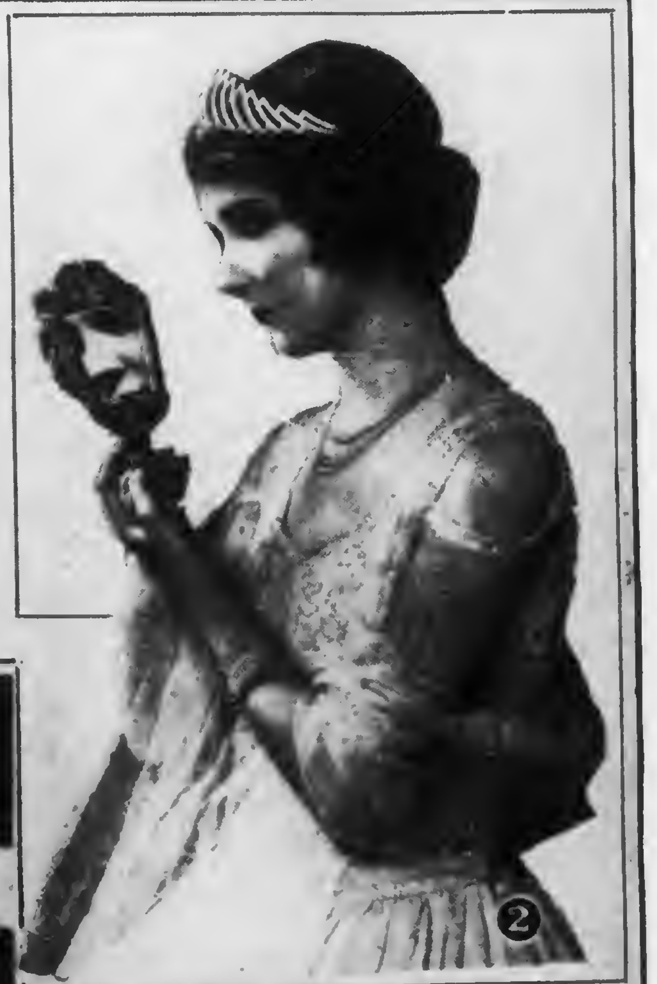
The Honor Prize winner is: Dorothy George, age 9, Clarion, Pa.

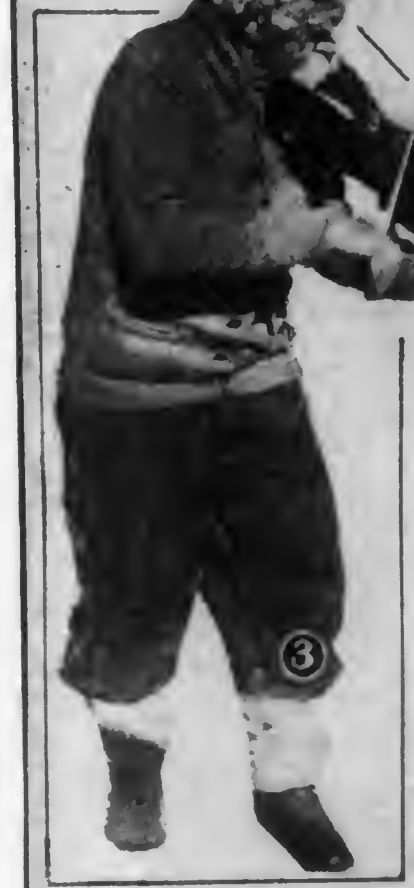
TEACHER ASKED THE CLASS TO WRITE HOW MANY MONTHS IN THIS YEAR HAVE TWENTY-EIGHT DAYS. ONE OF OUR BRIGHT LITTLE FOLKS WROTE:

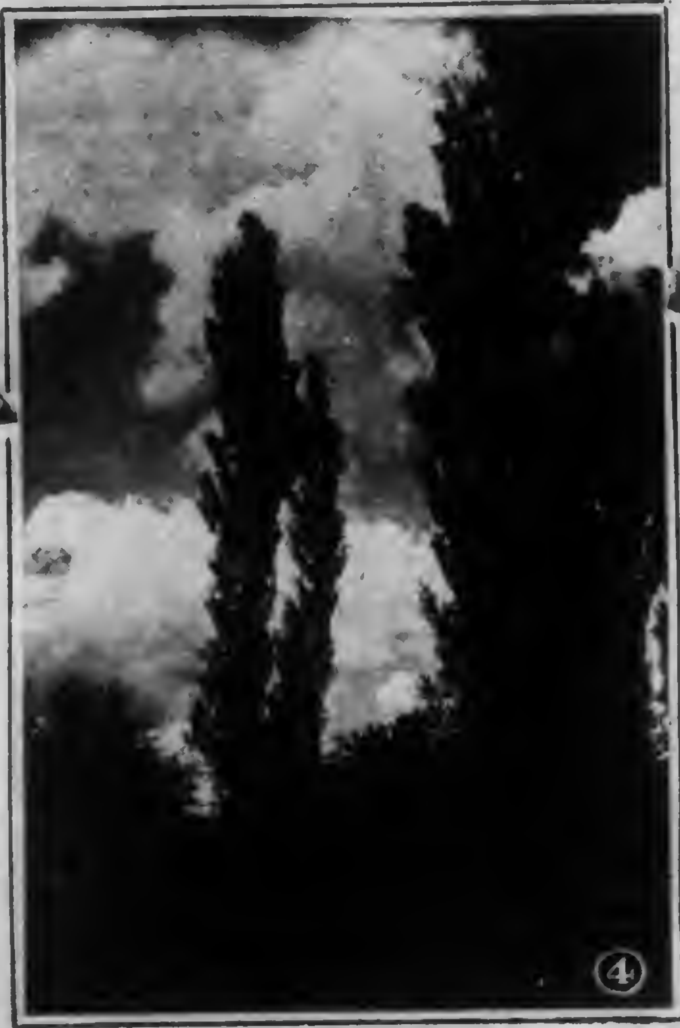


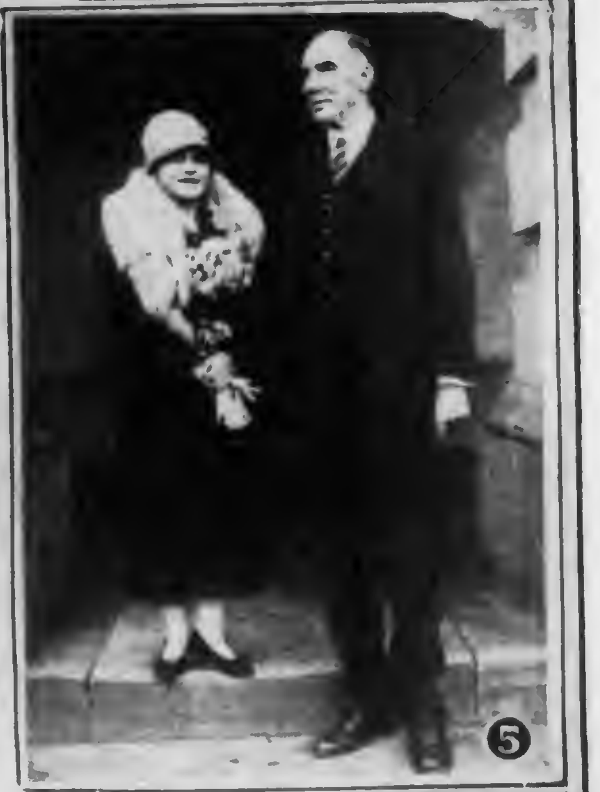
PASSING EVENTS IN PICTURES

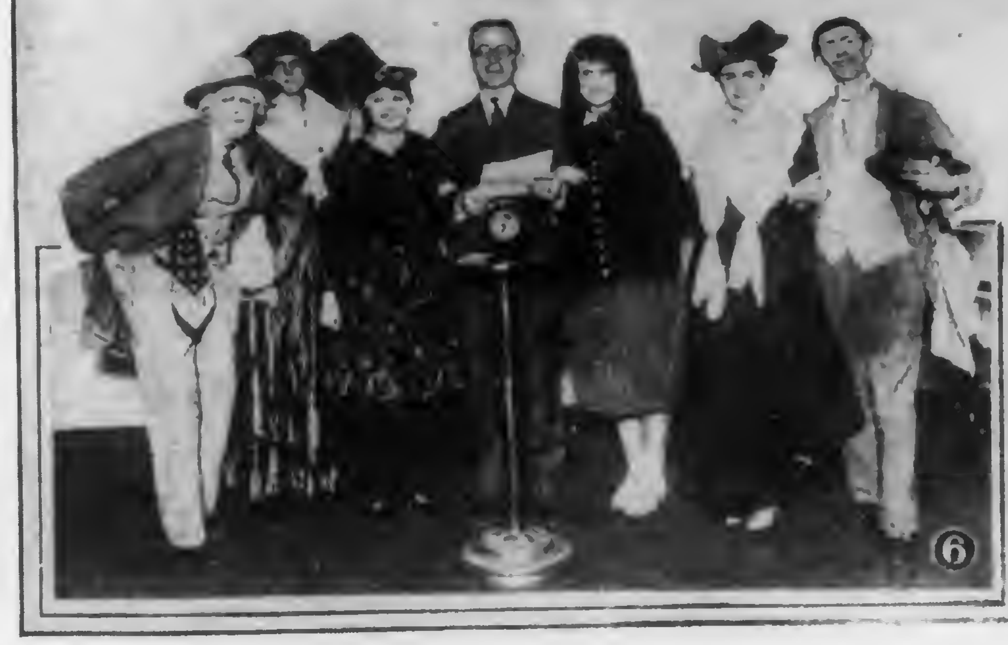


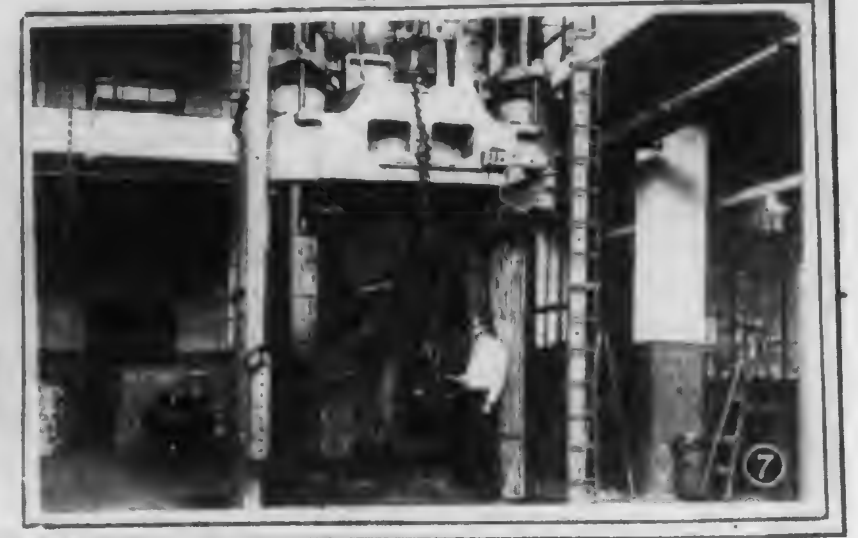












(Copyright by Underwood & Underwood)

1.—New disturbances have again risen in Syria. This photograph shows the French reinforcements entering South Lebanon.
2.—This gem crusted mirror was formerly owned by the Russian Czarina. United States officials appraised it at several hundred thousand dollars.
3.—A. M. Dunham attracted the attention of Henry Ford when he won the Maine state championship as an old-time fiddler, and since then he has played several times at the home of Henry Ford.
4.—An unusually beautiful picture of nature as the thunder clouds gather.
5.—Miss Marie O. Andresen, the youngest woman lawyer to be admitted to appear before the United States Supreme Court.
6.—Perhaps you too have been entertained by these famous radio play broadcasters. They are all dressed ready to produce "Grandma's Dream," a comedy in three acts.
7.—A casting weighing five tons being tested at the United States Bureau of Standards for a Chicago hotel which is to use the casting in the construction of a new building.

The Small Girl and Sewing

How Much and What Is It Best to Let Her Do?

I HAVE never before advocated it as advisable at all to have the small girl do much in the way of sewing, and have thought it much better for her to be out-of-doors as much as possible.

But now my daughter has passed the ten-year limit. Last summer she did first-year club work, and began to take quite a lively interest in sewing.

Of course, along with school work this fall there has been but little time for sewing, but I felt her interest should be encouraged. She goes to bed early, eight o'clock is her bed time, and every evening she goes to the barn for a romp. But there are Saturday afternoons and a few minutes occasionally in the evenings.

She Surprised Her Mother

After her club work was finished I got a center piece for her to work in colors. She surprised me by the quality of work she did.

Next I got pillow tubing and made a pair of pillow cases for her room, and she helped decide on an embroidery pattern for them.

I was quite surprised at the result. She showed marked improvement over her first efforts.

Next I happened to be in town and selected a stamped towel for her to work. She has done all her work in colors, and has largely decided on the colors and combinations of colors herself. When she asked advice, I gave it, but I tried not to give it unasked—and too freely.

I was careful to select patterns that were not too difficult and ones that did not involve too much work. A child becomes discouraged easily, and likes to see results quickly.

Develops Good Taste

I feel that this sort of experience is good. It helps the child to notice household linens and pretty things, it gives her the joy of making things for her own room, and it develops good taste, if properly fostered and encouraged.

A friend gave her a very pretty work basket for Christmas a year ago, another friend gave her a silver thimble. She, of course, appreciated these articles.

I really feel now that the child does as nice embroidery as her mother and that this is a decided improvement over the old method of teaching the girl to piece quilt blocks first.—May H. Mumaw.

More Suggestions

I FIND that the small girl shows much more enthusiasm over her sewing when she can occasionally make something pretty. When this much-desired prettiness is also useful, it makes a fine combination indeed.

Take two strips of ribbon or silk an inch or more in width. Make a casing by joining the edges, either overhanding on the right side or running on the wrong side, and then turn. Run a piece of rubber elastic several inches shorter than the ribbon thru the casing and join the ends, forming a circle like an enlarged garter.

This makes a pretty and convenient way to hold together several articles in the linen or bureau drawers— such as a pile of napkins or stockings. They will be found handy when packing a trunk or suitcase, to keep various articles together. Since the casing is slightly pulled on the elastic the ribbon or silk need not necessarily be new in order to look attractive.

Linen glass toweling can be found in a variety of colors and checks. Very charming are various articles made from it such as table runners, doilies, napkins, curtains for bedroom or bathroom, aprons and even dresses particularly for the small girl.

Decorations are in the nature of applique patch-work and consist of blocks of solid color to match or harmonize with the check in the linen. The blocks may be square or oblong and should conform in size and outline with the lines of color in the linen.

A red and white checked linen makes a gay little apron or dress decorated with red and green. Blue and white linen is charming with alternating blocks of plain blue, green and yellow.

For the breakfast or porch table service these linens are delightful as they launder easily and perfectly, always coming out crisp and cheerful. Unlike some table accessories they have the advantage of being economical for when no longer desired for use on the table, the blocks are quickly removed and the unadorned linen may be used for wiping glasses and the like.

Delightfully cool summer cushions are made in this way. Often times the piece-bag will yield materials for the ornamental blocks and will suggest charming color-combinations.—Alice Margaret Ashton.

For Better Babies

SAMPLE menus for the average and under-nourished woman during pregnancy have been outlined in previous articles. This time we shall give a menu for the overweight woman. This menu yields 2000 calories daily, as compared with 3000 for the average, and 4000 for the underweight woman:

BREAKFAST

Raw Fruit: One-half grapefruit or whole orange.

Bread and Butter: One slice of whole-wheat or graham toast with one pat of butter.

Milk: One cup of cocoa made with whole milk.

Milk: One glass of whole milk.

DINNER

Meat, Fish, or Egg: One beef ball, or small serving of fish.

Green Vegetables: Creamed spinach.

Bread and Butter: One slice of whole-wheat or graham bread with one pat of butter.

Dessert: Baked custard made with whole milk.

SUPPER OR LUNCHEON

Salad: Raw-vegetable and nut salad on lettuce.

Bread and Butter: Two date bran muffins with one-half pat of butter.

Cooked Fruit: Baked apple with whole milk.

Milk: One glass of whole milk.

What I've Learned

HERE are some of the things that I have learned in my kitchen:—

1. The wooden handles on hammers, cake turners or other kitchen utensils can be tightened, when becoming loose, by soaking in a pail of water.

2. A bundle of old newspapers is almost indispensible in the kitchen, to kindle fires, clean the sink, wipe out grease from pans and skillets, spread on the floor when doing some unusually dirty job, etc. We ever find new uses for them when we have them at hand.

3. If silverware is soaked in sour milk, half an hour, then washed and dried in the usual way, it is less laborious and just as effective as much polishing.

4. A small kettle of home made sand soap (made by melting a bar of laundry soap and adding same amount of fine white sand) on the dish washing table is most convenient.—A. S.

Our Home Library

THERE are four interesting books now in our Home Library which should never be found idle on the office shelves. Is your name on the list of readers waiting for these books?

Cooking for Profit, by Alice Bradley.

Getting Ready to Be a Mother, by Caroline C. Van Blarcom.

The Woman of Forty, by E. B. Lowry, M. D.

Your Child Today and Tomorrow, by Sidonie M. Gruenberg.

On receipt of fifteen cents for postage, we shall be glad to send you, by insured mail, any one of these books for a limited length of time. All requests should be addressed to Editorial Department, Pennsylvania Farmer.

An Appreciation

DEAR EDITOR:—The letters in the contest on "What Kind of a Girl Do I Want My Son to Marry?" were most interesting.

Being a young daughter-in-law, I was extremely pleased that all who wrote the prize-winning letters, were modern mothers. It used to be our families thought that "a woman's place was in the home." But every one of these writers has caught the spirit, that a modern girl prides herself on being able to accomplish more than one successful duty. Each one expressed the wish that the future wife of her son should possess keen intellect and should be interested and active in affairs of the church, community and world.—Mrs. A. H. L., New Jersey.

Yellow Linens

IF YOU have a large supply of bed linens and towels, perhaps those at the bottom of the piles become yellowed from disuse. To prevent this, when returning freshly laundered articles to the piles, place them on the bottom of the stack, assuming that you always take needed ones from the top. In this way all are used in regular order, and always in perfect condition.—Helen Manning.

In the Rented Farm House

Helpful Little Devices, Easily Made, and Movable

THE young housewife in a rented farm house, starting with an inadequate housekeeping outfit, is often at a loss where to keep clothing and kitchen equipment.

One such housewife had a rack made of light wood strips that hangs upon strong hooks on the wall. The rack is painted and plentifully supplied with hooks upon which she hangs all her small cooking utensils. It proves a great convenience and the expense and work of making it were very slight.

If the House Is Closetless

Another renter's wife, after a varied and uncomfortable experience in closetless houses, has solved the problem of keeping the family clothing neat at a very small cost. She has a number of neatly finished and painted cleats of strong wood, supplied with wardrobe hooks, which are fastened to the wall with screws. These cleats are put up as needed and over them she hangs curtains of cretonne or unbleached muslin to protect the clothing from light and dust.

One woman likes better the shelves her husband made for her by fastening one planed board to another at right-angles. Wardrobe hooks are placed in the piece that fastens against the wall while a curtain is tacked 'round the edge of the shelf.

Some of these shelves are made to fit into a corner rather than on a flat wall and are especially useful in a small room. The top of the shelf may be utilized for storing hat and shoe boxes. These shelves are so easily taken down and require so little room to store that there is never any temptation to leave them behind on moving day.

After struggling for sometime in an inconvenient kitchen not her own, a young housekeeper and her husband contrived several convenient box cupboards. Smooth pine lumber was chosen, cleats being placed at desired intervals for the removable shelves. These were neatly painted and fastened to the wall with reliable screws. One of these cupboards is used above the work-table to hold cooking supplies, making a very satisfactory substitute for a kitchen-cabinet. One above the sink holds everyday dishes. A cupboard near the back door for the men's mittens, tobacco, belts and the like, proves a wonderful promoter of order in the room.

Curtains Hung on Stout Wire

Curtains hung on stout wire are used in front of the cupboards. So handy have they proved to be that her collection of box-cupboards now numbers five. If the family move, the shelves are removed, placed in the bottom of the cupboard, and it becomes a most convenient packing-box.

Window shades make very neat curtains for such cupboards but the first cost is greater than muslin.

If these conveniences are fastened up with large screws they cannot injure the walls as nails will do, and they are easily removed.—Alice Margaret Ashton.

Teachers in Rural Schools

Don't They Owe Children Something after Hours?

WHAT may we expect from our public school teachers in the way of community work? Are they expected to do outside work, or does their duty end when they have closed the door of the school room behind them?

Good roads and the network of bus lines that penetrate the rural districts are making it increasingly easy for the teachers to hurry away from the scene of work at three o'clock on Friday afternoon and get back Monday morning in time for the ringing of the first bell.

Is this as it should be? This is a problem that is up to a good many school boards to decide right now.

Recently I said to a friend of mine who has been teaching five days a week and "week-ending" in various places, including the sorority house at her alma mater which was not far distant, "You really owe it to the young people of your high school to spend a part at least of your week ends in the village where you teach, taking part in the community life."

Missing an Opportunity

immediately she came back at me: "I am only paid to teach school."

And I replied: "That may be. Of course you have the right to your own interpretation of your duty, but you are losing an opportunity for service."

The young people of high school age need leadership, and leadership needs to be developed among them.

The influence of the teacher is far-reaching. The high school teacher, especially, is copied and looked up to, and this influence comes at the time in the life of the young person when life decisions are being made.

Who can change this influence or have any idea what life channels will be changed because of it?

As parents we have no right to dodge our own responsibility and leave it all to the teachers, but I do believe parents and teachers working together may furnish alluring social life right in the community that will be harmless—and will also develop leaders among the young people of rural communities.

There are many conscientious teachers who have the best interest of the young people at heart and give lavishly of themselves and their talents in every way for community good. Their work is the type for which money is no adequate return, but they have their rewards which the world doesn't see.—M. M.

To Cold Pack Meat

I SELECT good fresh meat, beef, or pork, just what I like best, and cut to desired sizes. This I pack in one-quart jars as tight as possible and make a brine to cover it, as follows: Take warm water and add just enough salt so that the meats can be served out of the jars without resalting. Fill jars with brine to overflowing, taking care to get all crevices thoroly filled. Then set in wash boilers or other large vessels having the bottoms protected with boards to prevent the jars from breaking while boiling.

Fill boilers with warm water until water reaches well up to the necks of the jars. This is boiled four hours. Pork does not require quite this time for ordinary cooking. When boiled place rubbers on and seal properly as you do when canning vegetables.—Mrs. E. M. K.

When beating white of egg add a pinch of salt; it will beat much nicer and in less time.

• • •

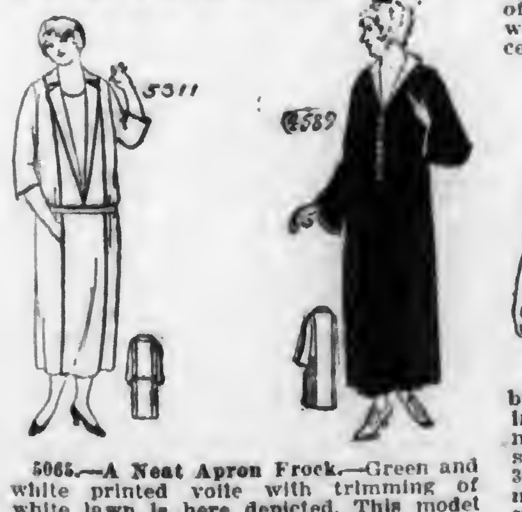
If a little baking powder is added to the omelet, it will not fall so easily.—Mrs. Kintzel.

These Can Be Made in a Jiffy

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

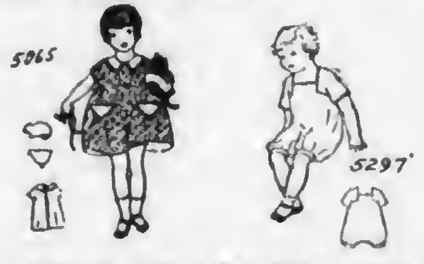
5311.—A Morning Frock.—Crepe, rep, tub silk or gingham, also percale and linen are good for this style. Six sizes: 38, 40, 42, 44, 46 and 48 inches bust measure. A 42-inch size requires 5 yards of 36-inch material, if made with long sleeves. With short sleeves 4¾ yards will be required. The width at the foot is 1⅞ yard. Pattern, 10 cents.

4589.—A Splendid Style.—Velvet or satin would be very attractive for this model. It is finished in slip-on style. The plait portions afford becoming fulness at the sides. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5¾ yards of 40-inch material. For collar and facings of contrasting material ¾ yard is required. The width at the foot is 3⅜ yards. Pattern, 10 cents.

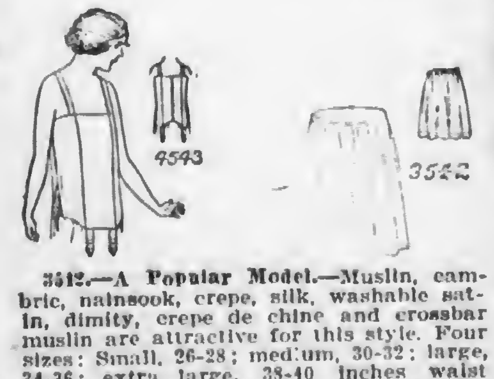


5065.—A Neat Apron Frock.—Green and white printed voile with trimming of white lawn is here depicted. This model is also attractive in chambray, linen, pongee and gingham. Five sizes: 1, 2, 3, 4 and 5 years. To make the frock as illustrated for a 4-year size will require 1¾ yard of 27-inch figured material and 1¼ yard of plain material. One may have either pocket, the "chick," or the kitten. Pattern, 10 cents.

5297.—Rompers for the Boy or Girl.—The practical closing of this garment will appeal to the busy mother. This model will be good for linen or crepe. Three sizes: 6 months, 1 and 2 years. A 6-month size will require 1⅞ yard of 36-inch material. Pattern, 10 cents.



4543.—A Corset Substitute.—Here is a splendid style for the growing girl and the young women of slender figure. It may be made of drill, jean, muslin, cambric, sateen or satin. Four sizes: 12, 14, 16 and 18 years. A 16-year size requires 1¼ yard of 36-inch material. For gussets of elastic or webbing ¼ yard 9 inches wide or wider is required. Pattern, 10 cents.



3542.—A Popular Model.—Muslin, cambric, nainsook, crepe, silk, washable satin, dimity, crepe de chine and crossbar muslin are attractive for this style. Four sizes: Small, 26-28; medium, 30-32; large, 34-36; extra large, 38-40 inches waist measure. A medium size will require 2¼ yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1925-1926 Book of Fashion.

"Ah! Animal Cookies!"

Aren't these cookie cutters funny?
A cat, a horse, a goose, a bunny!
—and there's a set for YOU!

CHILDREN can hardly wait until cookies are out of the oven when they're made with these animal cutters. Four in the set—cat, lamb, goose and bunny. And they'll cost you nothing but the packing and mailing cost—15c. With them we'll send a Davis Cook Book, too.

The cookies you'll make are examples of the many good things made with Davis Baking Powder. Davis is *pure* and *sure*—it makes baking lighter, finer in texture and more easily digested. Biscuits feathery light, cakes and cookies so palatable and pleasing! And in addition, it costs you less and you use no more than of any other high grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

OK for 47 years

THE RANGE BEAUTIFUL---And Efficient

Every woman wants a pleasant kitchen in which to do her daily work. More than that—she wants her kitchen to be fresh—clean—and well equipped.

The beautiful OTHELLO enameled range is the most important addition to any kitchen. It is attractive—efficient—and labor saving.

AS EASY TO CLEAN AS A CHINA DISH

In just a minute the OTHELLO can be cleaned with a damp cloth—for its rich enamel will not discolor—the removable nickel trimmings will not tarnish—and the gun metal top will not rust or turn gray. The tedious hours of "blacking" are eliminated, thereby saving the housewife at least fifty-two hours of work every year.

In cooking and baking, the OTHELLO has for years been renowned. The firebox is scientifically constructed to distribute the heat evenly. And you can keep the oven heat "just right" with the handy thermometer on the oven door.

The OTHELLO is moderately priced to meet the needs of all. You'll enjoy it in your kitchen.

An OTHELLO dealer near you will gladly show you, or write to us for illustrated catalog.

Some Ways to Cook Oysters That Are Different

OYSTERS ON HAM SLICE

Choose a rather thin slice of salt ham, freshen in cold water and sear quickly on either side in hot butter. Lay large oysters entirely over the top, pepper and sprinkle with paprika but do not salt. Place in a hot oven for fifteen minutes or until the oysters have curled. Serve from the baking pan, hot.

OYSTER FRITTERS

Make a thin batter of two well-beaten eggs, half a cup of milk, two teaspoonfuls of baking powder, a pinch of salt and enough flour to make of the consistency of pancake batter. Dip each drained oyster in the batter and fry quickly in deep hot fat or on a lightly greased griddle.

OYSTERS AU GRATIN

Fill a deep baking dish with alternate layers of small, seasoned oysters and bread crumbs. Over the top grate a cupful of cheese, cover with milk and bake in a medium oven for half an hour.

OYSTERS IN ONIONS

Boil enough large Bermuda onions in salted water until tender, one for each person to be served. Remove centers carefully and fill the cavities with several small oysters. Sprinkle cracker crumbs over the top and bake for fifteen minutes in a hot oven.

OYSTER AND SALMON LOAF

Chop enough oysters to make two cupfuls. Mix with two cups of salmon and a cup of bread crumbs. Season lightly with pepper and a little sage but no salt unless the salmon is very flat. Beat an egg light and mix well into the mixture. Pour into a greased loaf pan, cover with cracker dust and bake for half an hour in a medium oven. This should be eaten hot, with or without a cream or tomato sauce.—E. M. P.

Making Over

I CAME into the possession of a bureau and commode made of a very pretty shade of dark oak. They were not scratched and had a good finish but the mirror to the bureau was shattered. I needed a filing cabinet and instantly I saw how easy it would be to fill my long-felt want.

I had the mirror frame removed and also the back of the commode—above the top—for this one had a frame for holding towels. Then I removed the castors from the commode and had it placed on top of the bureau. It was the work of only a few minutes, and I had a filing cabinet with big drawers, little drawers and a cupboard!

Even a home, where no special writing is done, needs such a cabinet in which to store receipts, old accounts, records, clippings, collections of pictures and all sorts of keepsakes belonging to different members of the family. A drawer may be given to each person and when any particular thing is wanted it is easily found without running to the attic.

Instead of a China Closet

Another piece of space-saving furniture is a table with a narrow open closet with plate-holders in front of the shelves. In my wanderings I found the table with one rickety leaf and one good leaf. I took off the rickety leaf and had the shallow closet built on the top at the back of the table. It is only six inches deep with plate-rails two inches high in front of the shelves and a two-inch strip across the top and up and down the sides. The bottom shelves are spaced wide enough to hold the big platters in the way they are usually held in the china closet. Various odd pieces of china seldom used are hung on cup hooks. If there are any small pieces they stand beside them.

The whole piece of furniture is painted black with a large decorative motif on the table leaf. The table cost one dollar and the lumber for the closet $1.60 and the paint $1.25. The work was done by the man of the house so I have a handsome and useful piece of furniture for $3.85.—A. F.

Earning Extra Pennies

FOR her meringue mixtures, original and delicious, one of my neighbors receives much money. On Saturday and Wednesday of each week she whips large crocks of cream and egg whites, adds finely ground dates, nuts, marshmallows, etc. She sells her products in a nearby store, and fills orders for college functions, weddings, banquets and boarding houses. On special occasions she decorates her containers attractively.

• • •

BEET BARGAINS.—Every winter, quantities of beets used to go to waste in the farm cellar of Mrs. B. Once a friend asked her to furnish a crock of chopped or ground buttered beets, and right then she began a paying plan of bottling this beet relish or salad. Now she fills orders, using individual decorated paper cups or dishes filled with ground beets; or she sells by the bulk where it is made attractive when served on lettuce.

• • •

RELISH REWARDS.—"Real Relishes" is the label that sells the home made mixtures for one young housewife on the farm. Her reputation at farm bureau gatherings and the county fair prompted her to advertise that she would sell some of her catsup, chili sauce and other relishes. From her garden she gathers tomatoes, peppers, cauliflower, celery, cabbage and onions for her relishes. She sells her wares in various size bottles or in bulk in paper buckets.

• • •

FILLING FUNDS.—A clever scheme for earning extra money is to sell fillings for pies. With the fillings a cup of whipped cream can be sold to serve on the pie. The mixtures may include chocolate, caramel cream, banana, pineapple, lemon cake, cooked raisin, rhubarb, orange cream, lemon cream, mince, vinegar, cocoanut, grape juice filling, pumpkin, apple whip, meat, etc.

• • •

SALAD DRESSING SUMS.—Salad dressing, if cool, will keep an indefinite time, so why not make it in large quantities, can it in jars and sell it? If you can make several kinds all the better. They might be sold thru your neighborhood stores or orders could be taken and the dressing delivered in glass jars the size desired.—G. W.

Old Fashioned Rolls

WHEN a more aristocratic hot bread was desired than common raised biscuit or soda biscuit, grandmother used to make Parkerhouse Rolls. It is easier in these days of compressed yeast, so I shall give my modern version of one of the old masterpieces.

To a cupful of warm milk add two level tablespoonfuls of lard, the same of sugar, a quarter of a yeast cake, salt and flour. Make a stiff batter, let rise, add flour and knead till stiff, let the dough rise again and then form in rolls; after they have risen once more, bake.—Vida M. Bates.

Roup Quickly Checked

Simply by Putting This in the Drinking Water

Roup is a germ disease. It's terribly contagious—once started, it often sweeps through the entire flock.

Conkey's Roup Remedy is the one doctor that never fails.

It comes in the form of a powder; easily dissolves in water. Chickens doctor themselves as they drink.

Stopped Losses Next Day

Wm. R. Massie, Mechanicville, N. Y. writes: "I have had very good results with your Roup Remedy used in the water on incubator chicks. I stopped losing them the next day. My neighbor had the same trouble and I gave him some with the same good results. I always use it now in the drinking water."

Prices—Packages, 30c, 60c, $1.20; 1½ lb. can, $2.50; 5 lb. can, $5.75; all postpaid.

Conkey's Canker Special

Stops and reduces swelling of membranes in eyes and other places caused by colds or other roupy conditions. Prevents cankers.

Eastern Prices—Packages, 50c; pint, $1.20; quart, $2.00; gallon, $7.00; all postpaid.

Colorado and West—Packages, 60c; pint, $1.45; quart, $2.40; gallon, $8.00; postpaid.

If your dealer cannot supply you with Conkey's, don't accept substitutes, as they may do actual harm. Send us your order, and we will ship C. O. D. postage prepaid. (209)

Conkey's Poultry Book will be sent for only 6 cents stamps to pay postage. The G. E. Conkey Co., 6664 Broadway, Cleveland, Ohio.

ABSORBINE TRADE MARK REG.U.S.PAT. OFF

Reduces Bursal Enlargements, Thickened, Swollen Tissues, Curbs, Filled Tendons, Soreness from Bruises or Strains; stops Spavin Lameness, allays pain. Does not blister, remove the hair or lay up the horse. $2.50 a bottle at druggists or delivered. Book 1 R free.

ABSORBINE, JR., for mankind—an antiseptic liniment for bruises, cuts, wounds, strains, painful, swollen veins or glands. It heals and soothes. $1.25 a bottle at druggists or postpaid. Will tell you more if you write. Made in the U. S. A. by
W.F.YOUNG, Inc., 354 Lyman St. Springfield, Mass.

RADIO DEPARTMENT

Conducted by

BRAINARD FOOTE

THE working parts of a radio set require slight attention. The power supply, however, needs frequent care. The power supply includes the "A" battery, used for lighting the tubes; the "B" battery, for energizing them for amplification, and the "C" battery for controlling the tubes.

Some batteries may be recharged when used up—others must be thrown away and new ones purchased. Careful attention to these matters keeps reception at the peak of efficiency at a minimum cost.

Let us consider first the "A" or filament lighting battery. Where dry cell tubes are used, standard No. 6 dry cells furnish the power. These are connected in various combinations, according to the voltage taken by the tube and the number of tubes. Counting one such dry cell to each "WD" type of tube, the average life will be eighty hours of actual use. Counting three such cells for each "199" type of tube, the average life will be 300 hours. If there are three cells for two "199" tubes, the life will be 150 hours, etc.

Filament Current Regulated

Dry cell sets usually have rheostats, not only for turning the set on and off but for regulating the filament current. The rheostat should never be moved beyond the point where good reception commences. When it is necessary to advance it beyond this point, and to advance it still further after the set has been running a while, the dry cells need renewal. Never turn off the set by the switch and leave the rheostat on full, as the batteries recuperate and may burn out the tubes should the switch be thrown on again.

The voltmeter is a useful instrument. Test dry cells while the set is running. If they drop below 1.2 volts, their useful life is gone and better results will follow the installation of new ones. An ammeter is often used to test them. When new, a reading of about twenty-eight amperes is obtained on "short-circuiting" them in this way—when run down the ammeter reads very low.

The storage battery is perhaps a more popular filament lighting source. The approximate hours' service it will yield may be quickly figured out. If the battery is an eighty-ampere-hour unit, it will deliver two amperes for forty hours, one ampere for eighty hours and so on. If the set has five tubes, each taking one-quarter ampere, the total drain on the battery is one and one-quarter amperes. On an eighty-ampere-hour battery, they will run for about sixty-four hours.

Charging the Battery

The battery may be charged at a service station or at home. Choose a reliable place and check up on the work by testing the battery yourself after charging. Note whether water has been added and the battery cleaned on the surface. If it is charged at home, a charger is necessary. The type of charger using a rectifier tube is quiet but needs a new tube now and then, at a nominal cost. Chemical chargers last a long time, are silent and, if of good make, do not "gas." The vibrator charger is the cheapest and quite satisfactory, altho needing new contacts once in a while.

A voltmeter does not test a storage battery properly, as it will show six volts when it is almost used up. Use a hydrometer. Get one with a wide glass, so that the float doesn't stick to the inside wall. Keep the hydrometer suspended in a wide-mouth bottle, long enough so that the rubber tube doesn't touch the bottom. Keep a bottle of distilled water on hand. Garages sell it, and clean snow may be melted for distilled water. After a half-hour's rainfall (to clean the air) rainwater may be caught for the purpose. Under no circumstances use water from the faucet, as it is full of minerals harmful to the battery.

Don't use the battery to the last drop, as it harms it. Test it with the hydrometer and when below 1.140, charge it. Full charge is at 1.280. The hydrometer float rises to the high point at full charge and sinks if the battery is dead. After charging, clean the dirt off with a brush and pail of water—then dry it. If green corrosion collects on the positive terminal, scrape it off and put on a coating of vaseline or grease. Most chargers are connected either way—and are "self-polarizing." If yours is marked plus and minus, connect it carefully. If you are doubtful as to the battery plus and minus posts, observe that the negative is always clean and the positive usually hard to turn and shows green corrosion.

It is best not to charge in the living room, as some gas is given off, with a small acid percentage which may damage draperies. Stand the battery in a hard rubber or glass tray to protect the rugs, keep it wiped clean and dry and the vent caps screwed on tightly. Squeaking and scraping sounds are heard in the radio set if a battery connection is loose. Clean the connections and tighten them. Just before charging it, add distilled water till the plates are covered. The water can then be seen near the vent hole and no difficulty is had in filling the hydrometer.

Use Sufficient Water

If you use rechargeable "B" batteries, the general advice given above holds with them. Be sure to add sufficient water when necessary. Most radio listeners use dry cell "B" batteries, which are thrown away when exhausted. Never test them with an ammeter, as this not only runs them down but is a poor test anyway. Use a voltmeter, and the purchase of a voltmeter is advised. Sometimes one battery runs down some time before the other and the set fails to work well. Without a voltmeter, both units would be thrown away, when only one new battery is needed. When the forty-five volt battery falls below forty or thirty-eight, it is useless for really good results and likely to cause rasping sounds, on account of chemical decomposition. A 110-volt, fifteen or twenty-five-watt lamp may be employed in lieu of a voltmeter, in case of necessity. Note how brightly it lights on a forty-five-volt unit or on the ninety-volt combination when new. When it fails to light the battery is used up. This is only a rough test, however.

Heat Affects Batteries

Don't put "B" batteries close to a radiator, as the heat dries them out and shortens their life. They are called "dry cells" but are moist within. The large sizes are much more economical in use as they last much longer in proportion to their size than the small ones. Be very careful in changing "B" batteries so that the wires do not touch the wrong binding posts. It is preferable to remove the wires from the batteries rather than from the binding

(Continued on page 27)

WICO Magneto Equipped
Built and Guaranteed by WITTE

Does the Work of 10 Men!

Saws Wood Fast

This one-profit WITTE Log Saw uses Kerosene, Gas-Oil, Distillate or Gasoline and will cut from 10 to 25 cords of wood a day. Easy to operate and move. New device makes easy starting in any temperature. Trouble-proof. Fells trees and saws them into blocks—runs other farm machinery. Fast money maker and big labor saver. Completely equipped with WICO Magneto, speed and power regulator, throttling governor and 2 fly wheels.

Change to Tree Saw in 3 Minutes Ten seconds to clamp on tree. Saws them down level to the ground.

"Felled fifty 18-inch trees in less than 5 hours."
Earl McBurney, Iowa.

Sheep—Receipts, 4000; fat lambs slow; early bids weak to 25c lower; virtually no choice light lambs on sale; supply of yearling wethers liberal; no early sales of feeding lambs; demand narrow; fat sheep, strong to 25c higher; choice fat ewes, $9.35; average around 130 pounds.

WOOL MARKET

Boston, January 1, 1926.

Domestic, Ohio and Penna fleeces—Delaine, unwashed, 52c; ½-blood, combing, 51@52c; ⅜-blood, combing, 53@54c; fine, unwashed, 48c; Mich and New York fleeces—Delaine, unwashed, 50c; ½-blood, combing, 50@51c; ⅜-blood, combing, 55c; ¼-blood, combing, 53c; fine unwashed, 46@47c. Wisconsin, Missouri and average New England, ½-blood, 48@49c; ⅜-blood, 49@50c; ¼-blood, 50c.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, January 4. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran ....$	36.50
Spring bran	35.50
Soft winter wheat bran	37.00@38.00
Hard winter wheat bran	36.50@37.00
Standard middlings	35.00@35.50
Soft winter wheat middlings.	36.50@39.50
Flour middlings	36.00@39.00
Red dog flour	44.00@47.00
White hominy	36.50@37.00
Yellow hominy	35.50
Gluten feed	45.00
36 per cent cottonseed meal..	39.50
41 per cent cottonseed meal..	42.25@42.50
43 per cent cottonseed meal..	44.25@44.50
34 per cent linseed meal.....	53.25@54.50

Millfeed in small supply with inquiry quiet.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, January 1, 1926.

Cloverseed, cash, domestic, $18.75; December, $14.40 asked; January, $14.45; February, $14.60 bid; March, $14.65. Alsike, December, $16 and March, $16.25. Timothy, cash, $3.80; December, $3.80; March, $3.90.

Post-Holiday Trade

TRADING was fairly active on the Philadelphia fruit and vegetable market after the holiday lull. Offerings were liberal and there was a good movement of most lines, according to the State and Federal Bureau of Markets.

Fancy A 2½-inch Pennsylvania apples topped the market selling as high as $7.00 per barrel. The market generally ruled steady and most varieties sold at unchanged prices. Cabbage was firm, altho with several fresh cars prices were not as high as those established last week. Celery was in moderate demand and desirable stock brought higher prices. Onions were in fairly active demand despite the heavy supply.

Florida spinach showed a wide range in quality and condition and the market was easier. Pennsylvania mushrooms weakened slightly but cranberries held steady. Sweet potatoes were in moderate supply and steady. The white potato market was firm and the demand moderate. Pennsylvania round whites ranged from $7.00 to $7.25 per 150-pound sack, with bulk stock selling at $4.50 to $4.75 per 100 pounds.—W. R. Whitacre.

County News and Comment

Allegheny County, Pa.—A Happy New Year, and a much warmer day than we have been used to. Have had zero weather for about one week and with it quite a sharp wind from the west. A very little snow but enough to offer a little protection to wheat. There is still some outside work to be done on a few farms. Stacks of hay to be baled and some corn to be husked. Most farmers have butchered and there is little danger of any of the meat spoiling with the temperature as it has been for a while past. Many of our best dairy cows are being condemned on the T. B. test and many inquiries for tested cows to replace them. Some inquiry for horses. Good ones scarce and prospects for high prices seem to be the opinion of those in position to know.—C. K., Jan. 1.

Blair County, Pa.—Winter arrived on time and is giving us quite a hustle to keep things from freezing. We have very little snow but the mercury has been staying close to zero since Christmas. Most of the butchering is done and the largest job now is to get the summer wood hauled in and worked up. The Blair County Farm Bureau and the various Granges are holding a number of meetings over the county and in a number of places the banks are cooperating in the farm account work. Prices paid by local dealers for farm produce follow: wheat, $1.55; shelled corn, 75c; oats, 40c; hay, $20; straw, $15; dressed hogs, $18 cwt.; dressed turkeys, 65c; ducks and geese, 45c; chickens, 42c at Christmas. Eggs are rather scarce and bring from 50@60c a dozen. A happy and prosperous New Year to all Pennsylvania Farmer folks.—H. E. H., Dec. 31.

Bradford County, Pa.—Bradford County is again in the grip of real winter. Thermometer has registered as low as ten degrees below zero. Winter thus far seems to be very windy. Main roads are good; by-roads have been almost impassable but are getting better. Little snow on the ground as yet. Farmers are busy in the woods and pressing hay. About the same amount of hay to be pressed this year as last with the price about the same. Early sown wheat looks good. Butchering about all done now. Poultry in general is doing quite well. Very few colds or roup reported to date. Eggs dropping fast. The retest for T. B. in the townships that were tested once is now being started.—G. E. E., Dec. 28.

Clearfield County, Pa.—For a period of ten days the mercury has been hovering around zero, the lowest being about ten degrees below. Fortunately the water supply for stock is pretty strong. A few more days of cold will allow opportunity for an ice harvest for the few who store ice. Motor vehicles still moving, but with some difficulty on our country roads. There is an occasional call to a school, road or telephone board meeting but the old-time call to a spelling bee, a singing school or a teachers' or farmers' institute is not heard. Marketing is quiet just now. Demand for good produce is fair. Apples, $1@2, as to variety and quality; potatoes, $1.50@2; turnips, $1; cabbage, 3c; butter, 60c; eggs, 60c; hay and straw are not moving much as yet. Dressed beef and pork sell in half or quarter at 12@20c.—D. H. W., Jan. 1.

Columbia County, Pa.—Fall work all done and every one busy getting in a good supply of wood for the winter months. The severe cold of the past few days has been felt keenly and those caught without fuel of some kind have had to do some hustling. Everyone is anxious for the strike to end, altho no suffering has been reported in this locality as the result of the strike. Plans are being made for institutes to be held next month in the county. Holstein breeders report the purchase of another herd sire to be used in their block program. The demand for cattle is still good, especially for Guernseys. Poultrymen report flocks laying fairly well for this time of year. Market prices: eggs, 45c; butter, 55c; wheat, $1.60; buckwheat, $1.50 cwt; oats, 40c bu.—J. H. I., Dec. 26.

Dauphin County, Pa. — Temperature first three weeks of December about normal, but at this time is cold and stormy and without snow. Country roads are in fair condition. Some corn remains to be husked, much was husked without being cut, leaving much fodder in the fields. Most grain fields look poor because of continuous cold weather since early fall. Market conditions not very good. Poultry plentiful. Turkeys sold at 50c lb.; geese, 30c. Turkeys seemed more plentiful than for some years. Butter, 60c; eggs are not plentiful and sell for 55c.—I. F. M., Dec. 28.

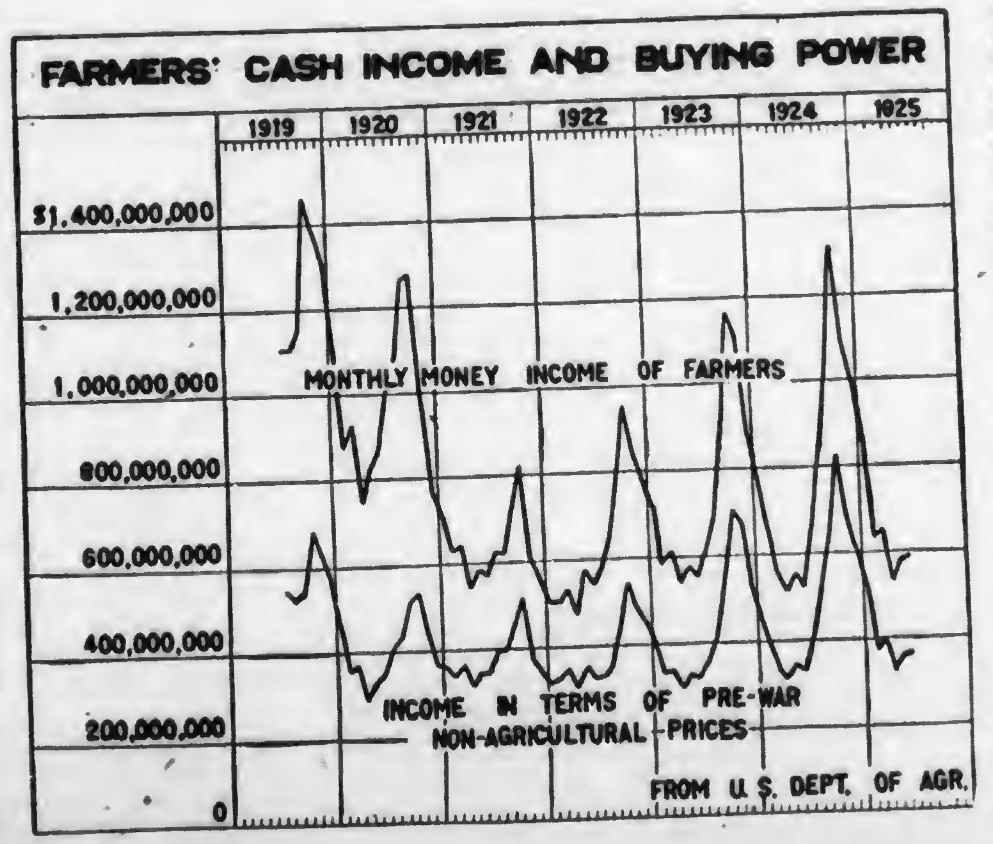
Fulton County, Pa.—Weather has been mild with the exception of last few days which have been intensely cold. Farmers of the county are well prepared for winter. Corn practically all husked, fodder in, manure hauled, large supply of wood prepared for stove and some plowing done. Grain fields are looking very bad, as the grain got but little top this fall. Poultry about all sold. Turkeys always seem cheaper in Fulton than any other county, well matured and fattened turkeys bringing 35c lb. this year. Eggs scarce, with prices lower than usual, 42c; butter, 40c; lard, 18c; beef, by the quarter, 10@12c. Wish all our readers a happy and prosperous New Year.—T. H. T., Dec. 28.

Lackawanna County, Pa.—December was wet with changeable weather. Farmers are busy hauling and sawing wood. There is considerable distress felt thruout the valley owing to the long mining suspension. Most farmers are burning wood. Some have installed the oil burners. Many farmers are doing their butchering just now and housewives are busy taking care of fresh meat. The thermometer dropped to eleven below zero on the morning of the 27th. Ice is in prime condition. Beef is bringing from 13c to 15c by the quarter; pork, 20@25c by the side or wholesale; turkeys brought 53@55c; ducks and geese, 35@38c at the Christmas markets; eggs, 80c; butter, 55@60c; apples, $1.50.—E. A. K., Dec. 29.

Montgomery County, Pa.—December weather much nicer than November altho at present we are having a prolonged cold spell. Farmers have had plenty of opportunities to haul manure and corn stover. The farm products show held in Norristown was a complete success. The exhibits were larger and better than last year. As an added attraction varied programs of entertainment were presented in the evening sessions. The extension representative, Mr. Waltz, has met the farmers at special meetings held in different parts of the county to arrange a definite program of work for the coming year. He was assisted by Mr. Fry of the State College extension department. Prices: wheat, $1.65; oats, 75c; corn, 80c; bran, $1.90; oil meal, $2.80; cottonseed meal, $2.50; gluten, $2.30; hogs, 18c; chickens, 25@30c; eggs, 65c; butter, 60c.—C. N. D., Dec. 30.

Tioga County, N. Y.—Charles D. Marvin, president of Owego village, turned over the first spade full of earth on December 16 which starts the construction of the new nurses' home and training school of the Packer Hospital at Sayre, Pa. Weather open; much rain has fallen. Ground not frozen very deep. Naturalist J. Alden Loring, of Owego, who was with Colonel Roosevelt on his African hunting trip, has on exhibition a mounted goshawk. This bird is a native of United States and Canada but only three specimens, to Mr. Loring's knowledge, have been found as far south as this. R. A. Hellar, head of the Chamber of Commerce, had a pen of ten White Leghorn pullets that finished in fourth place in the egg laying test of one year at Farmingdale, Long Island. No lights were used in this contest. The average egg production during the year for each bird was 240 eggs. One of Mr. Hellar's pullets produced 292 and won second place. Another laid 278 eggs and won third place. The winning pullet laid 299 eggs. He has a new pen of ten pullets entered for the coming year. Anthracite coal is almost impossible to procure in most sections of the county and many are burning soft coal. Potatoes, $1.75@2, according to grade. Retailing for 75c a peck at the stores. Butter, 59@68c; eggs, 80c@$1. Meats keep high, 20c is charged for dressed pork when sold in the carcass.—C. A. B., Dec. 23.

York County, Pa.—Weather conditions during December a little more favorable for farm work than November. Corn about all in the crib. Cutting wood, hauling fodder and manure, and butchering is order of the day. There has been some plowing done during the last two or three weeks. A few stock and implement sales have been held and fair prices received. Two carloads of Michigan seed potatoes were recently received and distributed among the potato growers of the county. The price of York County potatoes, while not quite as high as they were a few weeks ago, still remains around the $2 mark at the farm. Not many to be had even at that price. York and Adams Counties Farm Products Show was held at Hanover, December 15-16 with a fine display of corn and apples. Taken all in all the year 1925 has been a good one for York County farmers. Crops were generally good and owing to short crops elsewhere the prices have been good, tho in some instances, notably potatoes, the bulk of the crop was out of the farmers' hands before the advance in price. Wheat, $1.65; oats, 42c; corn, 80c; eggs, 45c; chickens, 20@25c; turkeys, 40@50c; hogs, 13c; four per cent milk, $2.75 per 100 lbs. W. K., Dec. 23.



Brown and White Eggs

BROWN eggs and white eggs are practically the same in flavor and quality but they do not always sell at the same price. The farmer who sends his fancy white eggs to Boston is likely to be disappointed with his returns, since the housewives in that city have a preference for brown eggs. Dealers in Boston state that there is no fixed premium for brown eggs but that browns generally bring two to four cents a dozen more than white.

The margin may vary due to relative supplies and to the quality of the offerings. Fancy white eggs will naturally bring more than poor grades of white and relatively light supplies of white eggs will tend to narrow the margin.

The housewife in New York City prefers the chalk white eggs and will pay a premium of as high as ten to fifteen cents per dozen to get them. The premium, however, varies much as it does in Boston. One reason for this fact is that the leading poultry farms in the territory supplying New York specialize in white eggs. These are likely to be properly handled and to reach the market in good condition.

Philadelphia, in contrast to New York and Boston, shows no particular preference as to color, quality being equal.—W. R. W.

Prices and Prospects

NEARBY white eggs met a fair demand on the New York market during the early part of week ending January 2nd. Fancy grades held firm but there was some accumulation of medium grades. The market was steady on Wednesday and extra firsts were quoted at 48@50c per dozen on Wednesday and firsts at 47c.

The Philadelphia egg market weakened on December 30 and prices declined. Extra firsts were quoted at 47c and firsts at 44½c. Egg receipts for the period December 22 to 29 totaled 23,576 cases, of which number Pennsylvania furnished 8623.

The Philadelphia live poultry market was firm and supplies were cleaning up well. Dressed poultry was firm with a good demand for fancy stock. Receipts of live poultry were light in New York following the Christmas holidays and trading was rather slow. Trading picked up on Tuesday with chickens and broilers in particular demand. The supply of ducks was not sufficient to meet the demand, and geese were wanted.

Wool Market Quiet

Trading on the Boston wool market has been quiet during the week ending December 30th. The market for domestic fleece wools has been practically at a standstill. Prices, however, have been well maintained and the limited supply of real good fleece wools has had a strengthening influence. In fact, there is a feeling among the trade that all of these wools will be needed before next season's clip is available.

Receipts of spinach from Pennsylvania and New Jersey are very light on the Philadelphia market and the best stock is bringing high prices. The market on Texas and Virginia spinach has been dull but the cold snap cut down receipts resulting in a strengthening of the market. Reports from the Norfolk section indicate considerable damage to the old crop while the young crop is not believed to be badly hurt.

The potato market continued to advance during the early part of the week ending January 2nd. Severe weather retarded trading in some markets. The temperature fell to two degrees below zero in Chicago, on Monday, and altho prices advanced there was little business. Pennsylvania stock opened at $6.50 to $6.75 per 150-pound sack in Philadelphia and advanced to $7.00 by Wednesday. The other eastern markets reported prices ranging from $6.25 to $7.00.

A shipment of strawberries for the New Year's market arrived in Philadelphia on Wednesday and sold at $4.00 per quart. This is the highest price ever recorded on the market. Fancy fruit dealers were the purchasers. The first shipment of Florida cabbage also arrived and brought fair prices.

The wheat market was sharply higher during the week ending December 28, with the speculative market very active. World conditions in general show little change and the demand for cash grain is only moderate. Corn and oats were higher due largely to the colder weather.

Holiday dullness was evident in most of the markets but the general tone was steady. Good grades were firm but the lower grades sold slowly. Alfalfa hay was irregular and the demand limited, especially in the northern consuming sections.—W. R. W.

Radio Batteries

(Continued from page 25)

ing posts on the set—carelessness may mean burned-out tubes!

The "C" battery is called upon for little current. Hence, replace it when the voltmeter reads less than four volts (for the four and one-half-volt unit) or when a three-cell flashlight bulb doesn't light brightly across it. The "C" cell has the unique function of improving the tone qualities of the audio amplifier, and at the same time of cutting down the drain on the "B" battery. Use one, by all means, if you wish to lower your expenses for "B" units.

Get Fresh Batteries

Don't buy dry cells at a little store where business is so slight that the batteries remain on the shelf for months. A "B" unit may show a good voltage test when half worn out thru mere standing around. Get fresh batteries. Be careful with wire connections to batteries—have them plainly marked and use strongly insulated wire as a safeguard against short-circuits.

The most common causes of decreasing volume and sensitiveness of a radio set are old tubes and rundown batteries and the battery part of it is the more frequent.—B. F.

"tomorrow"
—was too late!

Yesterday hundreds of persons were killed in accidents. The number of injured ran into the thousands. And a large proportion of these persons had no insurance. The only "estates" they left to their loved ones were blasted hopes, vain regrets and the threat of want.

Yet every one of these persons had told himself that he would take out a policy—"tomorrow" or "next week" or "next month." He intended to take it out sometime—and was too late. The accident didn't wait.

The hazards are all about you! You can't escape them! You can't put them off. "Tomorrow's" insurance will not take care of "today's" accidents. No one can afford to delay taking advantage of this $5,000.00 travel-accident policy offered by the Federal Life Insurance Company to readers of PENNSYLVANIA FARMER. Get this insurance NOW. Don't wait until the accident.

$5,000.00

Travel-Accident

Insurance

for all readers of

Weekly 1 Year $1.00 PENNSYLVANIA FARMER AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY ESTABLISHED 1880 **Weekly 5 Years $3.00**

Farmers particularly are susceptible to accidents. If you ever drive or ride in a horse drawn or motor driven vehicle, walk on a public highway, take a train or bus, enter a church, school, library or theatre, or if you are ever struck by lightning, cyclone or tornado—you will be protected under the terms of this policy. In addition to death benefits, which increase 10% with each year's renewal for 5 years, this policy pays $10.00 a week for 15 weeks for injuries sustained as stated in policy. No one can afford to pass up the benefits of this protection. Take out a policy for yourself, your wife and each of your children or any other member of your household. Every reader of PENNSYLVANIA FARMER is eligible between the ages of ten and seventy years who can travel safely in public places and is not blind or deaf.

For Only $1.00 A Year

Don't wait---"tomorrow" may be too late---Send application today!

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Lime Requirements of Land Growing Good Clover

Is it necessary to use lime on land that is producing good crops of clover?

LAND on which clover seems to thrive is evidently offering suitable conditions for the crop—among them, a good supply of lime. There is, nevertheless, much difference not only in the total yield of clover obtained from any given area, but also the rate at which the crops develop during the growing season. Furthermore, two fields supplying different amounts of lime to a clover crop might produce the same amount of clover hay per acre and yet the feed value of the clover hay might differ considerably. Indeed, in order to be able to answer the question fully, one must take into consideration the different purposes that lime serves in the scheme of crop production.

So much has already been said and written about sour and sweet soils that there is scarcely any need at this time for a full discussion of the relation of lime to soil acidity. It would be enough to note that every cultivated soil is losing lime at a varying rate and that sooner or later these losses, if not made good, will lead to the development of soil acidity to a point where the economical production of crops is more or less seriously interfered with. But, since clover is a sensitive indicator of soil acidity, it must be assumed that, ordinarily, the vigorous development of clover is an indication that the soil is sufficiently well supplied with lime and similar substances to make the use of additional applications of lime unnecessary for the time being.

Variation of Soil Acidity

In this connection, it will be well to remember that within the clover family itself there is much variation as to the degree of soil acidity that might interfere with plant growth. Alsike clover, for instance, will thrive on land that is too sour for crimson clover. The latter, in its turn, may do reasonably well on land that is too sour for red clover. Alfalfa requires even more favorable conditions from this point of view than is required by red clover.

Aside from correcting soil acidity, lime furnishes the element calcium, one of the essential constituents of plant growth. Some crops can obtain their calcium from the soil more easily than others. Some crops require much larger amounts of calcium than is required by others. For instance, a ton of alfalfa hay will take out from the soil an equivalent of 100 pounds of limestone, and this aside from what is lost by the soil itself on account of leaching.

Carry a Reserve of Lime in the Soil

It is to be remembered in this connection that the calcium is taken up by the plant roots from the soil solution, and that, when conditions are not favorable for the solution of lime in the soil, the crop may actually be checked for lack of a sufficient supply of calcium. For this reason, it is always well to carry a reserve of lime in the soil when clover and alfalfa are to grow at their best.

Applications of lime improve conditions for plant growth, especially in the heavy soils, by making the ground more open and mellow. This is one of the desirable changes that lime can produce. It helps to bring together the very fine particles of silt and clay, thus encouraging a crumb structure and facilitating the movement of water and air in the soil. It is obvious that land on which clover may grow vigorously may yet be texturally defective for other crops and that the fact that clover is growing well on any field is not a certain indication that the use of lime would not be worth while.

It has often been noted that lime is an indirect fertilizer in that it may help to increase the supply in the soil of other forms of plant food. An application of lime to a sour soil will improve conditions for the growth of bacteria. Because of the greater activity of these organisms more vegetable matter will be decomposed in a given length of time and a greater amount of the plant food locked up in dead vegetable matter will be released. Thus, a better supply of ammonia and nitrates, of phosphates and of potash and lime compounds will be made available.

Guard Against the Abuse of Lime

There is much convincing evidence in the publications of our experiment stations to show that by means of applications of lime we can place at the disposal of our crops more nitrogen, phosphoric acid and potash. Indeed, this may be overdone, as has frequently been observed by farmers and by soil investigators. One should guard against the abuse of lime when it is employed as an indirect means of increasing the supply of available plant food in the soil.

The soil may be well supplied with the mineral ingredients of plant food, and, when such soil is not acid and possesses the right characteristics as to texture, water supply, etc., it will, naturally, grow good crops of clover. Now, we must not forget that clover can use air nitrogen and, therefore, will grow well even when there is a limited supply of nitrogen in the soil.

This is not true of corn or potatoes. Therefore, when clover or alfalfa are grown with the aid of mineral fertilizers, or without these when the soil itself is well supplied with the mineral ingredients of plant food, a very considerable increase in the nitrogen contained in the soil may result. The following crops, not belonging to the legume family, will have to depend on the nitrogen in the clover roots and stubble. This must be attacked by the bacteria and the nitrogen converted into ammonia and nitrates. The presence of lime stimulates these processes of ammonia and nitrate formation and it is, therefore, clear that, even tho clover may grow well on any particualr field, the use of some lime may still be worth while for the reasons just noted.

The type of farming and the use of chemical fertilizers will also serve to influence the farmer's practice as to the use of lime. As it is more intensively cultivated and less frequently seeded down, or kept in sod for short periods only, the soil will tend to lose more lime than similar land not so intensively cultivated. The replacement of lime on such land will have to be more frequent.

Chemical Fertilizers

In the case of chemical fertilizers, we know that substances like sulphate or ammonia or murite of ammonia will encourage the development of acidity in the soil. To a lesser extent, acid phosphate and potash salts will do the same. Hence, again the more or less systematic use of lime may be desirable even when the clover crop itself gives, for the time being, no indications of soil acidity.

There is one other fact bearing on this question which should be mentioned. Some soil investigators are coming to believe more and more that the presence of acid substances in the soil does not in itself interfere with the normal development of plants. They argue that, when a soil reaches a certain degree of acidity, conditions become favorable for the formation of salts of iron and alumina, which are poisonous to plants. If the iron and alumina can be kept in an insoluble condition, good crops may grow on the land in spite of the presence of acid substances.

It has been demonstrated, for instance, at the Rhode Island and the Massachusetts Experiment Stations that the use of very large quantities of acid phosphate really increase the acidity in the soil. Nevertheless, these large applications of acid phosphate (at the rate of ten to fifteen tons per acre), having rendered the iron and aluminum compounds insoluble, good crops of clover and of other legumes can be grown. All told, therefore, the question here discussed may be answered in the negative, but the answer is certain to be qualified in the light of the facts herein noted.—J. G. Lipman.

More Money For You in RADIO

THE amazing expansion of Radio has opened up hundreds of wonderful new positions on land and sea. Big salaries, fascinating, easy work, short hours, and a wonderful future are offered to ambitious men who get in Radio now.

Take advantage of these wonderful opportunities to step into a big paying position in this great new field. You can stay at home and work up to a position paying up to $10,000 a year, or Radio offers you an opportunity to travel and see the world, with all expenses paid, and a fine salary besides. One of our recent graduates, Emmett Welch of Peculiar, Mo., secured a position one week after graduating, paying a salary of $300 per month. Hundreds of others report equal success.

Easy to Learn Radio at Home

Thousands of Certified Radio-tricians are wanted to design Radio Sets; to make new Radio improvements; to manufacture Radio equipment and to install it; to maintain and operate great broadcasting stations and home Radio sets; to repair and sell Radio apparatus; to go into business for themselves; to operate aboard ship and at land stations.

You can easily and quickly qualify in your spare time at home through the help of the National Radio Institute, first school to teach Radio successfully by mail, established 1914. No previous experience or training needed. Prominent Radio Experts will help you in every problem, giving you personal attention.

You learn by actually doing, as we furnish free with the course, circuits and parts for building latest receiving sets, making the work thoroughly practical. You learn quickly and easily—right at home.

This is an absolutely complete course which qualifies you for the real "big pay jobs" in Radio and our big Employment Department helps you get one.

Send for FREE BOOK

No other field today offers such great opportunities as Radio. Take your choice of the many wonderful openings everywhere. Prepare now to step into the most interesting and best paid profession today. Read about the opportunities open now—the different kinds of work—the salaries paid. Write today for the 48-page book that tells how America's biggest Radio correspondence school (government recognized) can teach you to become a Certified Radio-trician in your spare time and also Special Offer to those who act at once! Mail coupon or write letter now. **National Radio Institute, Dept. AZ-1, Washington, D. C.**

National Radio Institute, Dept. AZ-1,
Washington, D. C.

Without obligation, send me your book, "Rich Rewards in Radio," which tells all about the opportunities in Radio, how spare time study at home will qualify me quickly as a Certified Radio-trician so I can get one of these splendid positions, and how your Employment Service helps me to secure a big pay job. (Please Write Plainly.)

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia,** is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

ALWAYS mention Pennsylvania Farmer when writing to our advertisers. This will insure you prompt attention and service.

Rural America

NO one can know rural and small town America without having once been a part of it. Those who judge it casually are prototypes of the tourist who sneers at Europe's historic buildings because the plumbing is not up-to-date. Wisdom is a natural rather than acquired gift and the homely "horse sense" of people who dwell close to nature and their fellows is more valuable and more admirable than the sour cynicism of those who speak of them as "yokels" and "boobs."

That they cherish old-fashioned virtues, that they still cling to the ideals and traditions of their country, that they still act like human beings rather than poseurs, that they are not ashamed to act naturally rather than with a view of impressing other people that they are "cultured" in the conventional sense of that term, is not to their discredit.

Judge Men by Their Real Worth

To the man broad enough to take people as they are, to estimate their worth by real rather than artificial standards, the society of these "boobs" and "yokels" is more stimulating mentally and safer morally than that of the egomaniacs, snarleyows, and varioloid Europeans who dub themselves "intelligentsia."

Some day, perhaps, some literary genius may sympathetically and understandingly interpret rural America. When that work is well done, there will be much in the picture which our alien-spirited intelligentsia do not know, and in the nature of things could not understand if they did know.—The New Republic.

We heartily agree with the sentiments expressed, but not all those who assume a top-lofty, sneering attitude towards country people were born in Europe by a long ways.
—Editors Pennsylvania Farmer.

Heights by great men reached and kept
Were not obtained by sudden flight,
But they, while their companions slept,
Were toiling upward in the night.
—Longfellow.

$5 Down and You Can Buy Any WITTE Engine Up to 10 H-P.

To PROVE that this "super-powered" one-profit, light weight WITTE will save you one-half the time, labor and cost of any job on the place I want to send it to you on a 30-day test at my risk. I guarantee it to do the work of 3 to 5 hired hands.

Nearly a YEAR TO PAY

Scrap the Old One — Pay a Little of It Down on the New WITTE

With my generous terms my engine pays for itself. Increases farm profits $500 to $1000 a year. Thousands say the WITTE is ten years ahead of any other make—simple and trouble-proof at rock-bottom, direct-to-you prices. Completely equipped with WICO Magneto, speed and power regulator and throttling governor. All sizes 2 to 25 H-P.

FREE— Write me today for my big, new, illustrated engine book and full details of my guaranteed test offer. No obligation, absolutely Free. Or, if interested, ask for our Log and Tree Saw, 3-in-1 Saw Rig or Pump Catalogs.—ED. H. WITTE, Pres.

Burns Kerosene, Gasoline, Gas-Oil, Distillate or Gas— Yet Delivers 25% or More Power. Cheapest to operate and guaranteed for a life-time. No cranking required. Compact and easily moved. Double, balanced fly-wheels with throttling governor that saves money. Fifty New Features — Write Me Today —a postal will do—for my Special FREE 30-Day Test Offer.

ARNOLD CERTIFICATES

Secured by First Mortgages

6½%

The Arnold plan is safe. Investors in Arnold Certificates may be free from worry. Every Arnold Certificate is an interest in various first mortgages given by different persons and secured by various properties, all combined in one trust and held by a Trust Company. These mortgages are for small amounts, usually $1,000 to $5,000, and are never for more than 60% of the conservative value of the properties covered.

In addition to this highly regarded mortgage security, Arnold Certificates are guaranteed by Arnold and Company with Capital and Surplus of $1,250,000.

They are issued in amounts of $100, $500 and $1,000 to run from two to ten years. They pay 6½%, and may be purchased outright or on monthly payments.

Don't neglect a Cold

Dangerous sickness often starts with a cold. Ward off your colds with Musterole before pneumonia starts.

Musterole is a clean, white ointment made with oil of mustard. It has all the healing properties of the old-fashioned mustard plaster without the blister.

At the first sneeze take Musterole from the bathroom shelf and rub the ointment gently over congested spot.

It penetrates the skin and goes right down to the seat of the trouble.

Rheumatism, tonsillitis, lumbago, coughs and colds are all symptoms that call for Musterole.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Safe Light for Your Farm

With electric light on your farm, you can do away with dangerous kerosene lamps and lanterns, and be free from the worry of fire, which is ever present when an open flame is in the hands of children, or when you use a lantern in your barns.

A Fuller & Johnson Power & Light Plant will give you plenty of bright, white light everywhere—and you know this light is safe. In your home it will make life more pleasant and healthful for all the family. In the yard and barns, after dark, it will help you speed up your chores.

Built by the manufacturers of Fuller & Johnson engines, so well known for their high quality, the Fuller & Johnson Power & Light Units are worthy of the name. There is a power and light unit which will just fill your needs. Write today for complete information.

What a User Says:

Gentlemen: We have used your No. 15 Power and Light plant for three years without one cent of repair expense. We use an electric light in the hen house and this has more than doubled egg production. The one best plant for the farmer is the Fuller & Johnson.

Pennsylvania Breeders
BRED SOW SALES
at State Farm Products Show

Pennsylvania Swine Breeders will sell, at the State Farm Products Show at Harrisburg, an offering of 120 selected bred sows from ten months to two years old picked from the tops in the best herds in the State.

The steady increase in the number and quality of purebred swine in Pennsylvania during the past few years has attracted nation-wide attention. This good blood was largely responsible for the 121 Ton Litters produced in the State in 1925, a record not surpassed by any State in the Union.

Large litters, heavy milking sows, early maturing, easy feeding and proper type animals made this record possible.

You will find your opportunity in these sales to secure animals of proper type as a foundation for a purebred herd or an efficient sow or two that will produce pork at a profit.

DUROC JERSEYS sell Tuesday, January 19 at 2:00 P. M.
Write H. G. Niesley, State College, Pa., for catalog.

LIVE STOCK

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Shall We Beef Her?

Could you tell me what would be the best to do with a cow we have? She freshened last February and we bought her in March. She was shy with us and we were unable to take her away for service. She has come in heat regularly but we intended to beef her, now she is much tamer and our neighbor thinks we should have her served yet. What would you advise? She still gives about eight quarts a day. How long do you think she would be dry? She is about ten years old, drops a large calf, her last one weighed 225 pounds at seven weeks. She is a large Holstein.—H. C. Mc., Safe Harbor, Pa.

It is very doubtful if it will pay you to have the cow bred at this time and feed her practically nine months before you can expect any returns. You are not certain that the cow will settle to the first service which may result in a further loss of time.

Since the cow is giving only about eight quarts of milk at present it is not likely that she will give enough to justify milking her for more than a couple of months. This amount of milk will not pay for her feed at present so that you will have to charge her feed account against the calf and the milk she will produce during the next lactation period. I would suggest that you dispose of her for beef which will be the most economical in the end. The age of the cow is also a disadvantage in attempting to have her bred again and retain her as a profitable producer in the herd.—W. H. T.

Curing Pork

I expect to butcher some hogs for my own use and would like to have you give me a formula for curing hams, bacon and shoulders. Name the ingredients that are commonly used to cure pork that has the flavor of cured pork purchased on the market.—L. R. W., Perry County, Pa.

The successful curing of pork is not a difficult matter under farm conditions. It is important, however, that several common rules of precaution are observed.

Hogs that are to be slaughtered for home use or for market should be kept off feed for from eighteen to twenty-four hours before they are killed. During this time they should have all the water they will drink. Care must be exercised that the hogs are not overheated or bruised just before they are slaughtered. If they are overheated an abnormal condition is created in the system and it will be difficult to properly cool the carcass.

After the hogs have been dressed it is a good plan to remove the warm kidney fat and also split the carcass thru the center of the backbone. Such practice will greatly aid in cooling the carcass and there will be very little danger from bone sour.

Cutting up the Carcass

After the carcass has been cooled and the pork is firm it should be cut into hams, loin, bacon sides and shoulder. All pieces should be neatly trimmed with all scrag ends and surplus fat removed.

The ingredients commonly used are salt, sugar, and saltpetre. Occasionally some other ingredients are used but are not necessary for successful curing of pork. The effect of the three ingredients on the meat is as follows.

The salt has an astringent effect on the meat and is also a strong preservative. Meat may be cured or preserved with the use of salt alone but it has a tendency to harden the muscle fiber and extract the natural color from the meat, and for that reason it is a common practice to use some other ingredient, such as sugar or molasses, in combination with the salt.

Why Sugar and Molasses are Used

Sugar or molasses is used for two reasons: first, to add a sweet and desirable flavor to the meat; second, to counteract the hardening effect of the salt on the meat, and thus retain the more normal texture. Saltpetre is a strong preservative, but is used primarily to help retain the natural color of the meat.

The following formula has given very satisfactory results in curing pork. After the meat has been thoroly cooled and cut into suitable pieces each piece is rubbed with salt and allowed to remain on a table or bench over night. The following day the meat is packed in a barrel with the hams and shoulders on the bottom and the bacon pieces on top. All the meat should be packed with the skin side down with the exception of the top layer.

For each 100 pounds of meat use eight to ten pounds of common barrel salt, three pounds of brown sugar and two ounces of saltpetre. These ingredients should be thoroly mixed and dissolved in four gallons of boiling water. The mixture should be allowed to stand until thoroly cooled, after which it is poured over the meat in the vessel.

If the meat has been properly packed the four gallons of water should be enough to cover the meat. If it is not entirely covered, pour over enough water to cover the meat. The meat should then be topped with a board and weighted down with a clean stone or tile. The meat should be kept in a cool place.

The meat should be kept in the brine for a period of five to six weeks, depending upon the size of the pieces. It is customary to allow from two to three days for each pound of meat in the piece. Frequently the bacon strips are taken out a week or ten days before the hams and bacon are taken out for smoking.—W. H. Tomhave.

Ton Litter Records

PENNSYLVANIA and Illinois each boasts 121 litters weighing a ton or more at 180 days of age. This record ties them for first place.

York was the banner ton litter county of the whole country. Twenty-eight litters in this Pennsylvania county reached the coveted goal in the required time and four of the twenty-eight were grown by S. J. Wiley, Stewartstown, a most unusual feat for a single farmer.

The Pennsylvania record this year also includes the heaviest Berkshire litter ever produced in the United States. Donald T. Smith, Falls Creek, Jefferson County, raised thirteen Berkshires to weigh 3182 pounds. The state also has the largest number of Berkshire ton litters ever produced by a single state, fifteen.

Gentleman—Why don't you get out and hustle? Hard work never killed anybody.

Rastus—You're mistooken dere, boss. I'se lost fouh wives dat way.
—Boston Transcript.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

FORAGE POISONING OR SO-CALLED CEREBROSPINAL MENINGITIS.—I lost four horses which the veterinarian pronounced poisoned from wild cherry leaves. The horses would shiver at times as if in a cold wind. Also seemed to be blind at times. The urine was black and could not get bowels to move. Breathing was natural until a short time before death, when it became fast and hard. Horses could have gotten very few leaves of the wild cherry trees. Two maple tops were thrown on the fence. Horses stripped leaves off these tops, even biting off little limbs. The leaves had been frozen. Would maple leaves have the same effect as wild cherry? These horses all died within thirty-six hours.—W. H. F., Indiana County, Pa. Horses are sometimes poisoned with wild cherry leaves, where a considerable quantity are eaten, tho in your case it does not appear that many leaves were eaten. The symptoms you describe would suggest forage poisoning. This consists of a poisoning of the nervous system, from eating or drinking feed or water containing poison generated by mold or bacteria. Horses at pasture may contract the disease when the growth of grass is so profuse, that it mats together and the lower part dies and ferments or becomes moldy. Mold in certain stages of its growth is a deadly poison, and it is quite possible that your horses might have found some moldy feed in the pasture, or had been drinking stagnant water, or water from a contaminated surface drainage. Death usually takes place in from four to thirty-six hours after the first symptoms are noticeable. Maple leaves would not produce the symptoms you describe.

RUNT PIG.—We have a runt pig four months old that has a cough. What could we give it to start growing? Also have a driving mare fourteen years old that stays poor. She seems to have small white worms. She eats well, but doesn't drink very much water.—B. M., Columbia County, Pa. Some pigs are runty for the want of suitable feed, but as a general rule, it is due to infection with some, or all of the many disease germs that inhabit old hog lots. Try giving new clean quarters. If you have skimmilk, make a slop with middlings and add ten drops of beechwood creosote once daily for a week. Feed slop morning and evening, with all the corn it will clean up at noon. A handful of tankage could be added to the slop in place of milk. Take wood ashes four parts and common salt one part, place in a box where the pig can have access to it all the time. Horse in poor condition: Get the teeth examined, and if sharp have them filed. Give her a drench of raw linseed oil one-quart and three ounces of turpentine. Also give one tablespoonful of salt once each week.

TOXEMIA.—We have received many useful helps from your valuable paper, now I am going to ask your assistance with regard to a fine young cow valued at about $80. About a month ago her udder became swollen and hard. We treated her for garget. The swelling has entirely gone but her hind quarters are so stiff that she can hardly get up or down. She eats, but keeps getting thinner. She was never sick before and is soon to have her third calf. Can you tell what is wrong? I would be grateful, indeed, if thru you I could save the cow.—Mrs. G. J. K., Greensboro, Md. This cow is probably suffering from a toxemia which accompanies the condition of pregnancy. There will probably be little change until the animal freshens. Death sometimes results in severe cases. The diet should be watched to secure proper elimination. Bran, mashes, oats and roots should be fed. Do not hesitate to call your veterinarian in cases of this nature.

SPOHN'S DISTEMPER COMPOUND
Keep your horses working with "SPOHN'S." Standard remedy for 32 years for Distemper, Strangles, Influenza, Coughs and Colds. Give to sick and those exposed. Give "SPOHN'S" for Dog Distemper. 89-ACRE Eastern Penn. farm only $3700; winter's crops, 3 horses, 7 cows, lot poultry, all wagons, implements, tools; in beautiful fertile section on good road, phone in house, store, churches, school all convenient; mellow machine-worked fields, spring water, woodland, lots fruit, sugar maples; pleasantly situated good 7-room house, 66 ft. basement barn, silo, granary, ice house, etc. Real bargain at $3700, easy terms. Details pg. 23 Illus. Catalog farm bargains in many states. Free. Strout Farm Agency, 1422-BE, Land Title Bldg., Philadelphia, Pa.

TRUCK AND DAIRY FARM—230 Acres. All under cultivation. Located on main Cleveland-Toledo highway. Fine large buildings. City electric power and lights. Traction line handy. Can be divided into two smaller farms. Bargain for quick sale. Terms. Address: Estate, Box 297, Norwalk, Ohio.

FOR RENT—Excellent dairy farm, good buildings, electric light and power—convenient to market. Liberal terms. Apply: Arthur Danks, Mgr., Allamuchy, N. J.

TURKEYS

SINGLE COMB White Leghorn Cockerels. Husky, vigorous, from heavy layers. Farm raised. April hatched. $5 each. 5 for $20. Satisfaction or money refunded. Ferguson Bros., R. R. No. 1, Erie, Pa.

TURKEYS—Mammoth Bronze, Bourbon Red, Narragansett, White Holland Hens, Toms, unrelated pairs and trios. Highest quality. Reasonable prices. Walter Bros., Powhatan Point, Ohio.

BRONZE TURKEYS—No blackhead for over 15 years. Mrs. Alfred E. Reid, Star Route, Freehold, N. J.

SHEEP

HAMPSHIRE SHEEP Yearling Rams, Yearling Ewes, old Ewes.
C. F. & M. W. BIGHAM. Gettysburg, Pa.

MISCELLANEOUS

DOUBLE YOUR INCOME by farming on James Ranch, California. No winter there, no drought. Crops growing 365 days in every year and the best of markets offered anywhere. Land is state inspected and state approved. A going proposition for a successful farmer. Write me for details. Herman Janss, San Joaquin, Dept. 1197, Fresno County, California.

FOR SALE, cheap, one 10,400-egg single or double-deck Wishbone Incubator, one 9,600-egg single or double-deck Wishbone, one 8,400-egg Hall Mammoth. These machines are in excellent condition. Write for full particulars. Lancaster County Hatchery, Lancaster, Pa.

OLD MONEY WANTED—Do you know that Coin Collectors pay up to $100.00 for certain U. S. Cents? And high premiums for all rare coins? We buy all kinds. Send 4c for Large Coin Folder. May mean much profit to you. Numismatic Co., Dept. M, Ft. Worth, Tex.

WANTED—Every farmer who does not own a silo to write us for our agency plan whereby he can sell enough to get his own free. International Silo Co., Meadville, Pa.

BREED-O-HABORIRI will get your cows with calf, or money refunded. Treat them NOW to Freshen Next Fall. $2.00 for 3 head. Breed-O Remedy Co., Box P, Bristol, Conn.

WANTED—Hides, Furs, Wool—write for prices and tags. Top market quotations. Send your name today. S. H. Livingston, Successor to Keystone Hide Co., Lancaster, Pa.

HIDES, tanned and finished into Harness Net—and wang leather. Old process. Write for particulars. C. E. Schell, Bunkertown, Pa.

ALL WOOL knitting yarn for sale from manufacturer at great bargain. Samples free. H. A. Bartlett, Harmony, Maine.

INCUBATOR—1000 egg. Wishbone Mammoth, slightly used. Price $100. C. H. Bowden, Bloomsbury, N. J.

CORN—1,000 bu. of Lancaster Co. Sure Crop. Large or small quantities. Willis G. Kreider, Kinzers, Pa.

HELP WANTED

AGENTS—WRITE FOR FREE SAMPLES. Sell Madison "Better-Made" Shirts for large Manufacturer direct to wearer. No capital or experience required. Many earn $100 weekly and bonus. Madison Shirts, 566 Broadway, New York.

MAN WANTED—To sell seeds in each county. A good paying position for a man acquainted with farming. Experience not necessary but honesty and industry are. Steady work. Cobb Co., Franklin, Mass.

AGENTS—Our new household cleaning device washes and dries windows, sweeps, cleans walls, scrubs, mops. Costs less than brooms. Over half profit. Write Harper Brush Works, 176 3rd St., Fairfield, Iowa.

WE PAY $200 Monthly Salary, furnish car and expenses to introduce our guaranteed poultry and stock powders, cleaner, etc. Bigler Company X-718, Springfield, Ill.

FARMER WANTED—March 1st, 1926, married, experienced, capable man. References required. State wages and full particulars. E. K. Bready, Howard and Huntingdon Sts., Philadelphia.

SALESMEN WANTED everywhere to represent us on liberal commission. The Clyde Nursery, Clyde, Ohio.

TOBACCO

KENTUCKY LEAF TOBACCO—Chewing 5 pounds $1.50; Ten $2.50; Smoking 5 pounds $1.25; Ten $2; Guaranteed, pipe free. Pay when received. Cooperative Growers, Elva, Ky.

HOMESPUN TOBACCO—Chewing, 5 lbs. $1.50; 10, $2.50. Smoking 5, $1.25; 10, $3. Mild 10, $1.50. Pay when received. F. Gupton, Bardwell, Ky.

Every Year More Growers Use

Niagara

DUSTS and DUSTERS

Because Dust Users Are Getting Results

They find that dusting the Niagara way offers the simplest, most economical and most effective method of protecting fruit and crops from the ravages of insects and diseases.

Dusting the Niagara Way Means—

1—That growers are dusting with accurate long-lived equipment made especially for the purpose—Machines that have been developed to sturdy perfection by years of actual commercial use plus years of constant study to make them able to meet any condition under which dusting machines must operate.

2—That growers are dusting with perfected dusts—The name Niagara on insecticides and fungicides is recognized everywhere as a mark and guarantee of quality.

3—That growers are dusting with the constant o-operation of Niagara trained men—Experts who work hand in hand with the grower to insure that both Niagara Machines and Materials produce clean crops.

Ask us about
Niagara KOLODUST
Niagara KOLOTEX
The new NIAGARA "Kolo" Dusting Materials that you can see stick.

It will pay you, too, to Dust the Niagara Way

Every grower will find it to his advantage to investigate the Niagara Method thoroughly and find out how to save money, time and crops by getting the right Niagara for his farm. Talk with your dealer, write us, or better still visit our booth at the—

Farm Products Show
Harrisburg, Jan. 18-19-20.

and find out just what model Duster and what Dusts are best to use on Apples, Peaches, Pears, Potatoes, Hops, Grapes, Strawberries, Celery, Small Fruits, Vegetables, etc. Our specialists are at your service.

Mark and send the coupon today—get the booklets on protecting the crops you are interested in. Be posted on Dusting. It will save your crops and your money.

Turn Your Eyes Towards the South

This is the land of opportunity for the farmer. Farms of every size await the skilled hands of Northern farmers and will produce more profit than in any other section of the Nation. Crops will grow practically every month in the year and find a ready and profitable market.

Because the South needs farmers, these lands are now selling at much less than their actual worth, and make the attraction much stronger to the progressive farmer who is seeking something more than a bare living for his family.

While this railroad does not own, or offer for sale a single acre of ground, this department will, without cost to you—now or ever—help you to locate in the South; give you advice as to what crops to plant and how to market your products, also have one of its farm agents help you with all of the problems which confront you.

Write today asking for information.

In this issue: What goes on behind the scenes in the famous radio broadcasting station, WGY, Schenectady, New York.

D.F. will keep M.D. away

"DRY Feet every day keep the doctor away" is an adage worth remembering these wintry days. A pair of Top Notch arctics for *each member of your family* is the cheapest health insurance you can buy.

The Top Notch store near you has a complete stock of arctics for all purposes and needs. Built into every pair are the same qualities which have made Top Notch Buddy Boots known as the longest-wearing boots made.

The Top Notch line includes cloth-top arctics in 4-buckle and 5-buckle styles—arctics of *all-rubber* from tip to toe—women's arctics with the new automatic fastener—heavy and light rubbers.

Every pair will save you money because they last so much longer than the ordinary kind which are not fortified at the vital points of wear. Good-fitting and good-looking as well as long-lasting and serviceable.

Ask for Top Notch Rubber Footwear by name and look for the Top Notch cross. The best stores carry it or will get it at your request. Remember—it's the *most economical* footwear you can buy.

THE BEACON FALLS RUBBER SHOE COMPANY

Makers of Top Notch Rubber and Canvas Rubber Sole Footwear

Beacon Falls, Connecticut

We found the weak spots—and made them strong!

IN ALL Top Notch arctics every vital point of wear is doubly fortified.

The heel, an especially vulnerable spot, has the patented Top Notch construction. So these heels last as long as the soles. Strips of the toughest rubber reinforce all other points which have to stand the hardest punishment.

This *balanced* construction makes Top Notch arctics and rubbers unusually durable without being heavy or clumsy.

TOP NOTCH

A GUARANTEE TOP NOTCH OF MILEAGE

Old Colonial Family Homesteads

No. 30—Bonnie Spring Farm

UPON the accession of James II to the throne of England hundreds of persons who differed from him in his religious views were made to suffer persecution in various forms. Of the Quakers alone, over 400 were cast into prison for adhering to their religious convictions. Small wonder then that William Penn, who while at college had become a convert to their faith, should desire to found a colony for the oppressed of all creeds in the New World.

One of those who sought a home in Penn's colony was John Dixon, progenitor of the Dixon family in Franklin County, who, when a youth of eighteen, landed in Philadelphia about 1693.

Compelled to Go to Ireland

He was a Scotch Coventer of the house of Argyle, and other members of his family were compelled to go to the north of Ireland because he refused to renounce his faith and subscribe to the religion of James II. Here the Dixons remained for three years but glowing accounts of the wealth, the possibilities, and the marvelous freedom of Penn's colony reached them, and they decided to cast their lot with others of their countrymen who were leaving for America.

After their arrival John Dixon remained in Philadelphia for some time and then moved to Lancaster County. Thence he went to Carlisle and later to Shippensburg, but finally, in 1737, forty-four years after leaving Ireland, he located in Franklin County on a tract of land one mile from the present village of St. Thomas at the head of Dixon's Run.

The Dixons and Campbells, both of the Argyle clan, were the first settlers in St. Thomas Township. From McCauley's "History of Franklin County," we glean the following of John Dixon: "He had seven sons. Willam, the grandfather of Colonel Dixon, was born at this place, and at the age of seven years he was captured by the Indians and retained in their custody for eleven weeks, a good part of the time in a cave on the adjoining farm.

Troubled by the Indians

Thru the humanity of an old squaw he was returned to his parents and because of the kindness shown her on different occasions, she warned the family to leave for a safer place, for the Indians who had gone away to hold a great council, were to return in two moons and slaughter all the whites. The family took the warning and went back to Carlisle where they remained for about three years."

William Dixon was a sergeant in Colonel Boquet's command, and served to the end of the campaign. He also joined a company that was raised in the county. At the commencement of the war for independence, he was an ensign of his regiment, which position he retained until the end of the war, having declined frequent offers of promotion, preferring rather to have charge of the colors.

When the Civil War began William Dunlap Dixon felt impelled to offer his services to his country at Lincoln's first call for troops in 1861. He was made captain of company D, thirty-fifth regiment, sixth Pennsylvania reserves. All thru the war he was noted for his bravery and nobly sustained the traditions of his ancestry. At the time of his discharge he had reached the commission of brigadier general.

The farm long-owned by the Dixon family is now the property of Colonel Dixon's daughter, Mrs. Edgar B. Diehl, who resides thereon.—Mary Grace Diehl.

No. 31—Longview Farm

LONGVIEW is situated in Union Township, Berks County, Pa., and has been in the Yocom family since purchased from the Penns by Daniel Yoder in June 1749. In 1801 it was bought by his son-in-law, Mr. Yocom, who sold it to his son Daniel in 1806, who, by will, deeded it to his son Isaac in 1860.

The barn on Longview farm.

After the death of Isaac Yocom, his daughter Sarah Jane Yocum bought it and sold it to her brother Albert Yocom in 1897 who farmed it until the spring of 1920 and then sold it to his son Isaac, who is the present farmer and owner.

Isaac's father, Albert, is now seventy-six years of age, hale and hearty, and still helps with hay and harvest.

This farm has been owned and farmed by direct descendants of Yocoms since 1801.—Isaac N. Yocum.

1925 Lynchings

THE following shows the lynchings for the past year as compiled by the Tuskegee Institute in the Department of Records and Research. There were sixteen persons lynched in 1925. This number, ranking with the number sixteen for 1924 as the smallest number of persons lynched in any year since records of lynchings have been kept, is seventeen less than for 1923, and forty-one less than for 1922.

Two of the victims were insane, three others had been formally released by the courts, ten were taken from the hands of the law, two from jails and eight from officers of the law outside of jails. All the persons lynched were Negroes and all were in southern states.

Radio Seen from the Inside

What Goes on Behind the Scenes in One World-Famous Broadcasting Station

By C. L. WHITE, Associate Editor

I WAS sitting in one of those comfortable, overstuffed chairs in the end of a large, tastefully decorated room. It might have been the living room in somebody's home. Seated in front of me, facing the center of the room, were several musicians with their instruments. Beyond them stood a group of men and women.

Along one wall between two windows was a small writing desk. On the other side were two grand pianos and a phonograph. Near the center of the room, but a few feet apart, were two objects which appeared like floor lamps, with the shades removed and the lights replaced by long black enameled cans.

The musicians were sorting their music and tuning their instruments. The men and women were talking and laughing, or looking at the papers, evidently sheet music, they held in their hands.

A door opened at the other end of the room and a man entered.

He said, "All right."

One of the women said, "Shhhhh."

Everyone stopped talking.

The Warning Signal

The man went to the desk and touched something that gave a "click." On the wall above the desk a brilliant red light flashed on. It was like a railroad signal light.

Another man had stepped out in front of the group. Standing near one of those first cousins to a floor lamp, he began to talk.

"This is WGY, Schenectady . . ." he was saying.

It was the chief announcer of the famous radio broadcasting station, WGY, noted over half the world for its fine programs, starting that monologue so familiar to every listener-in. And I was sitting in a corner of the main studio at Schenectady, New York, waiting to see one of those famous programs broadcast.

The WGY Players. These are the members of the studio staff whose work is described in the accompanying article.

Fifteen minutes earlier I had walked down to the broadcasting station from the hotel and inquired for Mr. Fay, one of the announcers, who was expecting me. Things were humming in the announcers' offices when I arrived. Men and women were shedding coats (How the wind does blow in Schenectady!), looking over musical scores, humming tunes, running typewriters or discussing the evening's program.

Across the hall from the offices I was shown the two studios, one fairly large, the other smaller, with the control room between. The small studio is used for lectures and recitals; the large one for orchestra concerts, plays, etc. An orchestra in the large studio can tune up and be all ready to play the moment a singer or speaker finishes in the small room.

Altho the studios have been carefully built to insure the proper acoustic properties, all special construction is carefully hidden so they appear simply like well furnished rooms in a modern home.

Three men whose voices you have often heard from radio broadcasting station WGY. Left: William Fay, announcer and musical director. Center: Kolin Hager, studio director and chief announcer. Right: A. O. Coggeshall, announcer and program director.

The control board is the principal thing of interest in the control room, which may be entered thru sound-proof doors from either studio. It is twelve or fourteen feet long by about seven feet high, and is covered with a bewildering array of knobs, dials, switches, plugs, and colored lights. Beside the control board is a loud speaker, which takes the programs "off the air" so the operator knows just how they are being sent out to the WGY listeners scattered over four continents. If the voice or the music doesn't sound just right he adjusts a few knobs and in a moment has them going out clearly enough to suit even his discriminating ear.

The generators, the large vacuum tubes, and the other equipment that actually put the programs "on the air" are not in the six-story building with the studios and control room. With the aerial, they are located several hundred yards away, in the heart of the enormous plant where the company that operates WGY makes everything electrical from the smallest of insulators to the largest of turbine generators.

Mr. Fay had installed me in the overstuffed chair in the end of the large studio about five minutes before the program was scheduled to begin. The drummer of the orchestra, who was back in the corner beside me, was unpacking his traps. The other musicians were sorting their music. I had begun to worry for fear they wouldn't have it all straightened out in time to start. The microphones, those cousins of the floor lamp, weren't where they belonged, I was sure, and those who were to take part in the program were busy playing jokes on each other or studying their music.

But shortly a man had placed the microphones in position,—one in front of the orchestra, and the other near the group at the other end of the room. He had brought the cord from one of the "mikes" over by my chair and pushed the plug into a socket in the wall close to the floor.

And now the red light was on, and Kolin Hager, the chief announcer, was talking.

That red light meant "Keep still." I thought: If I should sneeze now I might be heard in Europe, Africa, South America or Honolulu.

And New York City, Too

Mr. Hager didn't stop when he announced the letters WGY. He went on to say this was also station WJY at New York City! While I had been worrying about the orchestra someone had connected the microphone cord that ran by my chair to the famous station in New York City, four hours away by train.

My mind wandered while Mr. Hager told his radio audience about the musical play to be given that evening. I was thinking of the many times I had heard that voice, in various parts of Pennsylvania, when I couldn't see the man who was talking. And I was wondering how many people, over half the earth which is within range of WGY, were listening as I watched him speak.

The announcer was saying that the WGY Players would repeat "The Hidden Idol," at the request of hundreds of listeners who had written in about the first presentation a few weeks earlier. "The Hidden Idol" was the 1924 play of the Massachusetts Institute of Technology. The words were written by Witter T. Cook, now one of the WGY Players.

Mr. Hager gave a synopsis of the story and named the members of the cast. Then the familiar call letters again, and the orchestra swung into the opening number.

I cannot tell you all about the play. If you didn't hear it over your own radio you missed some good music, some thrills and some fun. You wouldn't have gotten all the fun over your receiving set, however, for it didn't all go out thru the microphone. The players were having a wonderfully good time, and so were the members of the orchestra.

The scene of the play was Kookoostan, which would probably

Don't Forget Better Farm Equipment Week, March 15 to 20. See the John Deere Quality Line on Display at Your Dealer's.

You Control It with Your Feet

It's a Remarkable Two-Way Plow

THINK of a plow that, by applying slight pressure on a foot lever, moves the exact degree desired, so that it makes a full-width furrow around curves and on slopes, with no side draft on the team. A plow so simple in operation that a boy can use it.

Think of a riding plow that maintains straight furrows and makes uniform seed beds on side-hill land and in irregular fields; that leaves no dead furrows or back furrow ridges.

The John Deere-Syracuse with the following features is the most remarkable Two-Way Plow ever designed:

Patent Auto Foot Frame Shift, All-Steel and Malleable Frame and Steel Arch; Long, Malleable Beam Clamp; Automatic Shifting Hitch and Horse Lift, Unusually Wide Bearing Base, Adjustable Jointers, Quick-Detachable Shares, Renewable Shin Piece on Moldboard.

Write to John Deere, Moline, Illinois, and tell us what implements you plan to buy and we'll send you "Bookkeeping on the Farm", also folder describing the Two-Way Plow. Ask for folder EO-536

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THERE are a few little matters to which we referred last season and which probably need a little further discussion. One is in relation to keeping a small amount of cabbage for home use. Our plan is as follows: Select small, hard heads, preferably of the Ballhead variety, which are fully mature but have not burst. Trim off the loose leaves and let them lie out in the open several days. If the sun shines, so much the better. The outer leaves will tighten and the entire surface become somewhat seared. It should then be placed in a protected but airy place until freezing weather comes. When it is necessary to put it away we place it on the cellar floor. We still have cabbage of fine quality at this writing.

✦ ✦ ✦

ANOTHER matter is that of the Honeydews. Our success in raising cantaloupes last year did not include the Honeydews we planted, because the vines were much harder to bring to perfection. While only about five per cent of the cantaloupe vines went down with the wilt, or blight, fully fifty per cent of the Honeydews died without a struggle. The other fifty per cent, however, bore well and produced as fine looking melons as we ever saw. We did not know enough about them to know when they were ripe, but after the others were done and it seemed they should be ready to eat we tried several of them and pronounced them no good. Then somebody told us to pull them and put them away to ripen. We did so and a few weeks later we had as good Honeydews as we ever ate in a restaurant. That was the first we knew that this variety of melons did not fully ripen on the vine,—at least not in this country. We are not sure, however, that we shall plant any more of them. A well-grown, fully ripe cantaloupe is better than any Honeydew that ever grew.

✦ ✦ ✦

STILL another question we have queried over in the past is that of the St. Regis, or everbearing raspberry. Our first planting was a substitution by the nursery when we ordered Cuthberts. We grew them two seasons and last fall plowed them up. They are nice, good berries but they are too small, except the first ones, and briggle along all summer producing their crop. It costs too much in these days to go over a patch ten times to get a crop of fruit.

✦ ✦ ✦

I HAVE a letter from an up-state man who is worried over the outlook for the future of farming. He had been in other business until a few years ago when he married, bought a farm and has been succeeding very well. But he sees such a steady drift of people away from the farms that he wonders whether it is worth while to hold on with the hope that his little boys will be attracted to the farm when they grow up and be farmers. He thinks it the best place in the world to live, but this does not seem a sufficient inducement to keep the young people from flocking to the cities. He fears that the time will come when the farms as we know them now will be deserted and food raised on small pieces of land, as in Europe.

✦ ✦ ✦

OUR friend has been thinking, but he has not been thinking straight. People are and have been "flocking to the cities." The proportion of farmers to consumers has been lessening for fifty years. In other words, excessive competition in food production has been becoming less and less each year, thus giving a better chance to those who stick. Nothing has been invented which will do away with the universal human necessities of food and clothing, nor no way of getting them has been devised, other than producing them from the soil. This proves beyond question in my mind that the future promises better for agriculture than it has been at any time in the past. Good farmers should stick and hold on to their land.

✦ ✦ ✦

THE New Year is fairly off. It will be only a few weeks until the birds will come back and the buds begin to swell. During the intervening time the successful agriculturist, whether he be dairyman, gardener or fruit grower, will be studying his business in the light of past experience as well as gathering from others their views and advice. Books, papers, catalogs, will all contribute to inspiration as well as understanding, and no time need be lost because the ground is frozen and cold winds blow. Every day is an opportunity to the wide-awake farmer whether it is January or June.—R. P. K.

THE CHEERFUL PLOWMAN

Chill Weather Pigs

CHILL weather pigs! Poor little mites, I have no doubt they've hit a world of frosty nights and struck a crooked deal! No doubt they say, "Ah, woe is pig, and grief is baby pork! There's not a soul, methinks, that's big from 'Frisco to New York! Why was I born in lands like these where all is damp and chill, with frozen hornets in the breeze, where so-called zephyrs kill? Why was I born on such a day, in midst of rain and sleet? It takes my baby breath away and nips my tail and feet! Then, too, I feel nobody cares how much I chill and shake, nobody notes my twitching hairs nor sees my bosom quake! Nobody living is my friend, that's very plain to see; I'll shake and shiver to the end; ah, poor and wretched me!"

If pigs are like us human guys no doubt that's what they say when new found problems greet the eyes and seem to spoil the way! If pigs are like us human kind I have no doubt at all they feel they're doomed to go it blind and butt against a wall! If pigs are like us human folks they'll fail to understand that I am here with wraps and cloaks and bring a helping hand. If pigs are like us human jays I doubt that they will see a hint of better, warmer days nor any good in me; but none the less I'm here to aid these poor chill weather swine, I have a box that's neatly made and bedded snug and fine. If later on they come to see the world is not so cold I hope they'll give a thought to me when they are fat and old—J. Edw. Tufft.

"I am Sold on Power Farming"

— Says A. E. GRIFFIN of Texas

"I have been a Fordson owner and Fordson farmer for the past four years," says A. E. Griffin of Lubbock, Texas.

"It would be difficult for me to continue farming without the use of the Fordson. Likewise, it would be difficult for me to farm without the use of the Ford Truck and the Ford Car. These three Ford products are beyond a doubt the most valuable assets a farmer could have and I would not do without them.

"I do not hesitate to say that I am thoroughly sold on power farming. The tractor does not get tired and hungry. It is possible for me to work it 24 hours a day, if desired."

Tribute to a Tree

WE ARE indebted to the Service Letter of the Pennsylvania Department of Forests and Waters for the following arrangement of Joyce Kilmer's beautiful poem about trees.

I
THINK
THAT I
SHALL NEVER
SEE A POEM
LOVELY AS A TREE
A TREE WHOSE HUNGRY
MOUTH IS PRESSED AGAINST
THE EARTH'S SWEET FLOWING
BREAST. A TREE THAT LOOKS AT
GOD ALL DAY AND LIFTS ITS LEAFY
ARMS TO PRAY. A TREE THAT MAY
IN SUMMER WEAR A NEST OF ROBINS
IN HER HAIR. UPON WHOSE BOSOM SNOW
HAS LAIN—WHO INTIMATELY LIVES WITH
RAIN.
POEMS
ARE
MADE
BY
FOOLS
LIKE
ME
BUT ONLY GOD CAN MAKE A TREE

Money for Foreign Monopolies

THE Wall Street Journal takes Secretary Hoover to task for suggesting to the American bankers that loans should be refused those foreign corporations which use their monopolistic powers to exact extortionate prices from American consumers. Some of the biggest offenders to which Mr. Hoover referred by inference are the potash syndicate, the rubber syndicate and the coffee trust. The Wall Street Journal considers the suggestion that American money should act patriotically as an unwarranted interference in big business. But then, just when did hard, cold cash show signs of having any sentiment, not to say anything of real patriotism? Mr. Hoover's suggestion was made in the interest of the American consumer and is worthy of serious consideration by our financial institutions. However, he warns against any form of retaliatory legislation which would only accentuate rather than mitigate the difficulties.

Attend the Show

EVERYONE whom we have ever heard express himself after attending a State Products Show has spoken in the highest terms of its entertaining and educational values. Each year the features have been greater, and the prospects are that the one to be held at Harrisburg next week will surpass any held in the past. It is to be hoped that weather conditions will be favorable for the largest attendance possible. There will be a splendid opportunity to see some of the best products of almost everything produced in the state and there is no better form of education than that which results from the visible comparison of different articles. In addition to this feature there is the chance to attend some of the most helpful meetings to be found at any time or place. Altogether, the State Products Show is the outstanding agricultural event of the year, and we hope its popularity will lead to making adequate provision for its entertainment in a single place sometime in the near future.

Keep Public Lands for the Public

THERE are many reasons why private interest should not be given greater grazing privileges on national forest lands. The first, of course, is the well-being of the forests themselves. The second is the unfair advantage it would give such meat and wool producers over those who must use privately owned land.

A strong move backed by powerful interests hase been started to have laws passed which would lessen the government's control over the national forests by extending to those who now have limited privileges the perpetual rights to use government lands for grazing purposes. Such wholesale granting of privilege to use public lands for private profit would jeopardize the entire national forest system and should meet with instant and emphatic opposition. But it is going to require effort on the part of the general public to offset the influence of the strong political and economic pressure which these few hundred persons are able to bring to bear upon western congressmen.

Loyalty to What?

DURING the last few years a certain class of newspapers and magazines has kept up a persistent cry of alarm over certain doctrines or political creeds which a few more or less visionary people have put forward. Jail sentences have been imposed for talking "radically," and warnings against "red radicalism" have been numerous. We have been told that the nation was in danger from the undermining influence of disloyal revolutionists who are trying to bring our government into disrepute. It is to be noticed that all this talk has been directed against those who propose a different economic system.

But let us see just who are doing the most to belittle the government. Scarcely a day passes but what some of these same papers and magazines print the most scurrilous articles about Congress, our lawmaking body. In general and in particular Congressmen are apparently held in contempt by these self-admitted loyal (?) spokesmen. Especially such representatives of the people as propose legislation favorable to farmers are subjected to violent abuse. The publications, reaching millions of people, do infinitely greater damage towards lowering the public's respect for the government than could the most violent political radical holding forth on a street corner.

Another instance of the insincerity of these papers, at least most of the class, is the disrespect for the law engendered by their treatment of news concerning the prohibitory amendment which is as much a part of the Constitution as is any other section of that document.

When it comes to the practice of consistency, loyalty, decency and good citizenship it would seem that some of our most blatant and self-righteous publications could find plenty of room for improvement in their own households.

Let the Rural Routes Alone

THERE is a move starting in some places which, if it should succeed, would undoubtedly injure the rural delivery mail service. The sponsors of the movement would abolish the present system of paying salaries to rural mail carriers and put the routes out to the lowest bidder. This may appeal to some who have not given careful thought to the subject, and those who have forgotten the national scandal connected with the star routes during President Garfield's time.

Much is made of the shorter time it requires a mail carrier to make his trip as compared to the time when he used a horse and wagon. Is nothing to be credited him for the up-keep and depreciation of his automobile? The rural carriers are performing a noble service for rural people and no false economic theories should be allowed to cripple that service. Letting the routes out to the lowest bidder would be a certain step towards poorer and slower service. Rural people have a right to the prompt delivery of mail, so that even greatly lengthening the routes by the cutting off of others would be a backward step. Let the busy-bodies who are trying to find something to give them a little notoriety find something other than the farmer's mail service.

Notice

THE ex-members of the old State Board of Agriculture and the Institute Lecturers' force will find an announcement of interest on page twenty-seven of this issue.

Washington Letter

ERADICATION OF TUBERCULOSIS.—The proposed cut in the appropriation for tuberculosis eradication work in the estimates submitted to Congress by the Budget Bureau has brought a storm of protest from stock raisers and dairymen everywhere. Hearings on the appropriation before the House Appropriations Committee, dealing with agricultural appropriations, were attended by a large number of representatives of the dairy and livestock industries.

Evidence was given showing a gradual reduction in percentage of both cattle and hogs found to be infected with tuberculosis, and this was said to be due to the tuberculosis eradication campaign. The reduction of tuberculosis in hogs in accredited free counties, has enabled the buyers to pay a premium of ten cents a hundredweight for hogs from these counties.

There are now 149 counties that are clear of bovine tuberculosis, and 500 more counties are in process of being cleaned up It was claimed that the progress being made in the fight against tuberculosis is in direct proportion to the amount of the funds used in the work.

DESIRE CENTRAL ORGANIZATION.—It was argued that a strong central organization was needed to successfully combat a contagious disease such as bovine tuberculosis, and that this could be supplied only by a federal government. While eradication work is making some progress there are more cattle on the waiting list than ever before. A highly efficient organization has been built up by the federal government and states cooperating, but it is handicapped by lack of funds. The present appropriations are inadequate to keep the organization employed more than eight or nine months of the year. The states are now appropriating around $10,000,000, while Congress appropriates around $3,000,000 for the work. The speakers for the dairymen asked not only that the cut of $580,000 made by the Budget Bureau be restored, but enough more be appropriated to keep the present organization employed the year around in the campaign to stamp out tubercuolsis from the herds of cattle and swine and flocks of poultry.

NO TARIFF CHANGES.—There will be no tariff tinkering this session of Congress. This point is definitely settled. No combination of groups is in sight that has the votes to make any important change in tariff schedules. Any proposal to reduce tariff rates will be turned down flatly. Proposals to increase rates are not welcomed by the protectionist group.

WILL PROBABLY PASS.—It is confidently predicted that the tax reduction bill will get thru the Senate substantially as it passed the House. Nevertheless, Senator Norris, of Nebraska, has given notice that he is prepared to make a fight for continuance of publicity of income tax returns.—E. E. Reynolds.

Harrisburg Letter

WANT QUICK ACTION.—Instead of politics stringing out the special session of the Legislature of Pennsylvania, indications are it will operate to make it short and snappy. As candidates for every seat in the House of Representatives and half of the Senate will be nominated at the May primary, the effect of a prolonged sitting is being given far more consideration than a month ago when talk was rife of holding numerous investigations and preventing action on the program to be submitted by Governor Pinchot until after the primary. It is now recognized, in view of the limited number of subjects submitted and the character of the campaign the Governor will wage for the enactment of his ideas into laws, that it would be dangerous to pile up a heavy expense bill and then turn down the proposed legislation when if it is to be killed it might as well be done promptly and with less cost. It has also been found there is more sentiment in behalf of changes in the election laws than calculated upon in counties containing no large cities.

FARM SHOW, TOO.—The fact that the Farm Products Show and the meeting plans of twenty-five organizations will bring thousands of people to Harrisburg when the special session is under way is having something to do with the working out of plans of the legislative majority. The plans for the show call for the largest exhibits ever seen at the mid-winter exhibition and the public meetings will afford opportunities for discussion of topics of the day.

PREPARING DRAIN ACTIONS.—Officials of the State Highway Department are getting ready to put into effect this spring the new state laws relative to drainage of roads, a number of which were adopted last winter caused some trouble in farm districts. Steps to get people informed of the provisions of laws are to be taken.

WARN ON STALLION LAW.—Officers of the State Bureau of Animal Industry have issued a warning that early registration of stallions is advisable so that names can be put on the lists and that clear titles to animals should be insisted upon. This is the result of experience the last few years. Offering of unlicensed stallions will be prosecuted.

WATCHING SIGN BOARDS.—Judging from reports coming here of reports to courts, considerable attention is being paid to sign boards on highways this winter. Owing to growth of motor traffic off main highways complaints have been made of condition of boards and in some instances supervisors have been ordered to fix them up before spring comes around.

GOING AFTER BORER.—Plant industry officials have given notice the greatest care will be taken to see that the quarantine regulations to check the corn borer are taken. Special attention is being given in northwestern counties to importance of burning all corn field refuse and the areas to be planted in the spring will be looked over as far as possible.—Hamilton, Harrisburg.

New York Letter

MERCER BOARD ELECTS.—Speaking before the recent annual meetings of the Mercer County Board of Agriculture at Windsor, Prof. W. A. Allen, of the State College poultry department, said that under present conditions farmers must get an average of forty eggs per bird between November 1 and February 28 in order to make a profit. Twelve dozen eggs per year, he stated, give a profit of $4 per bird above feed cost. Officers of the board for the coming year were elected as follows: J. W. Miller, of Princeton, president; C. N. Hutchinson, of Robbinsville, vice president; Howard Rogers, of Crosswicks, secretary; A. C. Reeves, of Lawrenceville, treasurer. C. E. Rue, of Windsor, was named delegate to the State Board of Agriculture, and Mr. Hutchinson delegate to the State Horticultural Society.

STATE FOREST APPROPRIATION.—The New Jersey State Legislature will be asked to appropriate $250,000 for the purchase of additional land suitable for state forest purposes. During the year just closed the State Department of Conservation and Development with an appropriation of $15,000 for the purchase of additional land, added 2471 acres to the state forest reserves. The majority of the acquisition was to the Lebanon State Forest in Burlington County. The program is part of a long-time development by which the state forestry division eventually hopes to bring 200,000 acres into the state forests.

GYPSY MOTH VANISHES.—Only two colonies and twenty-six egg masses of gypsy moth were found last year as compared with 855 colonies and over 3,000,000 egg masses found during the first year of scouting, when control methods were first effected in New Jersey. The State Department of Agriculture last year hired forty-six men who worked in crews. Inspectors were stationed at various nurseries in the originally infected area. The department plans to close in on the original gypsy moth territory during the coming season, and will employ a large force of men to do the inspection work in a thoro manner. The legislature will be asked for an appropriation to make this possible. With such protective measures available, the department expects to eliminate the gypsy moth entirely within a year or two.—B.

THE NEW Galloway SANITARY No. 9

Galloway's Big Surprise Sale

SAVES 40% OF YOUR BUYING DOLLAR

1926 CATALOG FREE

FREE 32 Piece Dinner Set
Given to Galloway Separator customers in Big Surprise Sale, a beautiful 32-piece set of dishes, handsomely decorated. Any women would be proud of such a dinner set. Write for Galloway's Big Bargain Sale literature telling you how you can get this beautiful and handsomely decorated 32-piece dinner set ABSOLUTELY FREE.

Buy direct from the Galloway big factory at factory prices and under Galloway's guarantee of absolute satisfaction. The only way to get highest quality and lowest prices.
Galloway goes farther in this big Surprise Sale to make customers and friends than ever before. It is a world beater. The kind of a sale you have always wanted.
Thousands of Galloway customers are saving 40%—40 cents out of every buying dollar every year.

$4.95 DOWN

WAIT! Don't buy a Separator, Engine, Spreader or any kind of farm and household equipment until you get Galloway's New 1926 Catalog and big Surprise Offers—Surprise Gifts—Surprise terms—Surprise savings on factory-guaranteed farm equipment.

GALLOWAY'S SANITARY CREAM SEPARATOR
Leads the World for durability, easy running, easy cleaning and cream saving. Special features of construction make the Galloway last longer and skim closer than any and all others. Self-centering neck bearing and low-speed, no-vibration bowl. Helical cut gears, running in an oil bath gives easy running and longer life. Compare it with all others before you decide. The Galloway must sell itself or no sale. Galloway's easy payments help you to pay for a new Galloway Sanitary Separator for less than 20 cents a day.

90 Days Trial
180 Milkings on Your Own Farm

Made in Four Sizes — 375 to 850 Lbs.

GALLOWAY'S FAMOUS RADIO
5-Tube Galloway Balladyne—Non-Regenerative—Radio sets low as $44.95 bring radio entertainment to every home. Unequalled for volume, tone, distance or selectivity.
INCUBATORS
At money-saving prices. Set the pace for big hatches of peppy chicks. Easy to handle. Hot water heat. Positive control. Fuel reservoir filled once to a hatching. Genuine Redwood case. Get Galloway Surprise Offer, NOW.
OTHER BIG BARGAINS
on fencing, roofing, paint, farm implements, work harness, washing machines, aluminum ware—everything for the farm. Sold on Galloway's 20 years' reputation for quality and direct factory prices. Get our new 1926 catalog.

Galloway Spreader
3-in-1—Three spreaders in one, the only all-purpose spreader. Spreads manure, spreads straw, spreads LIME and other fertilizers. Built heavier—wider tired wheels with spokes in countersunk center, angle iron top rail. Low down. Big capacity. Light draft. Changed from manure to lime in a few minutes. Costs less than any other, quality considered.

Galloway Engines
Heavy duty. Long stroke, slow speed. Magneto equipped. All sizes. "Used mine 16 years, still going great." "Pulls a bigger load for rated H.P. than any engine I ever saw." "You saved me more than 25 per cent on the cost." These are a few of the fine things thousands of users write us about Galloway Engines. Write for special offer

DR. CLARK'S PURITY MILK STRAINER

Her Milk
—Is It Clean?

Cows may give rich milk but it is impossible to keep the milk free from dirt and dust. And the ordinary methods of straining do not remove this sediment.

The U. S. Government says, "Strain milk through sterilized cotton if you would have milk absolutely free from all sediment." And that's exactly what Dr. Clark's Purity Milk Strainer does!

It removes all the dirt and sediment from milk. It gets dirt no other method of straining can possibly get. No fuss, no muss, no dirty rags to wash, scald and dry. The Purity Strainer is easy to use and easy to clean.

World's largest dairies and condensaries such as Borden's, Van Camp, Carnation, Mohawk, etc. use and endorse it. Guaranteed to do all we say or your money back!

PURITY Cotton Discs are made in any size from 6½ in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

Made in two sizes—10 qt. and 18 qt. Ask your dealer about the Purity Milk Strainer or write us for circular and prices. Send today!

The Potato Problem

WILL next season be favorable? Will it pay you to increase your potato acreage and cut down on other crops?

In other years after a good marketing season, the tendency has been toward increased acreage—often followed by overproduction and low prices.

The best solution is: increase your yield per acre—reduce your production cost per bushel.

Through careful cultural methods—proper selection of seed, spraying, and other details—and through careful soil management such as crop rotation and the use of high analysis fertilizers, you can increase your yield per acre and reduce your production cost per bushel.

The results of many experiments show that 80 to 100 pounds of actual potash per acre, applied with the proper quantities of nitrogen and phosphoric acid, gives profitable returns.

On this basis at least 1,000 pounds per acre of a high analysis complete fertilizer containing 8 to 10% potash, or 2,000 pounds per acre if the potash content is 5%, are required to supply the necessary potash. Many successful growers prefer sulfate of potash in their mixtures.

FREE. Potato growers interested in higher yields per acre—at lower production-cost per bushel—will find helpful information in the newly revised booklet "Better Potatoes." You can obtain your free copy by writing to the address below.

441 bushels per acre!

In 1925, Mr. Tom Denniston of Butler county, Pennsylvania, achieved membership in the "400 Bushel Potato Club" through a 441 bushel yield.

Mr. Denniston reports that his potato crop followed a rotation of wheat and clover—each of which had received 10 to 12 tons of manure.

The potatoes were fertilized with 1400 lbs. per acre of 12% phosphoric acid and 6% potash. (0-12-6). This gave 84 lbs. actual potash per acre. Potash Pays!

Cabbage in Frames

What is the possibility of growing Chinese cabbage in cold frames for marketing in December and January? What variety of this cabbage is best for the purpose?—L. B., Cumberland County, N. J.

It is unlikely that, except for home use and for a restricted local trade, Chinese cabbage would prove to be a profitable crop for frame culture. Of the two varieties commonly offered to the trade, Pe Tsai and Wong Bok, the former is too tall for frame culture, and even the latter is so tall that the frames would need front boards at least fourteen inches above the ground level. When such a high south-side wall as this is used, the shadow cast by it in late fall affects at least a third of the space under the frame, and the crop on this third is always inferior to that which receives better light.

The Keeping Qualities

If the frames are not permanent but only temporary, and are placed around the bed of cabbage when freezing weather is expected, the plants then being practically mature, the crop will probably remain in good condition for six weeks or two months.

The keeping qualities of Chinese cabbage after the heads are formed, however, is not as good as the keeping quality of the more familiar cabbage varieties, and there would almost certainly be loss from both seed-stalk formation and decay, the latter due partly to the drip of condensed water from the glass into the loose heads.

In my experience, also, the ordinary strains of Chinese cabbage have not attained the sure heading quality that some of the older sorts have. This means that in frame culture one would suffer a loss because perhaps not over a half of the plants would make salable heads. This is a heavy risk to take, and does not appear to me to be justified except under very unusual conditions.

The use of frames for temporary storage of Chinese cabbage plants moved from the field is more promising, altho the length of time the crop can be so stored is not as great as that which we can expect for Ballhead or even Flat Dutch cabbage. We would store only fully formed heads, so that all the space in the frames would be fully employed. I believe that the frames would have to be made light-tight, as for celery, and the cabbage sold not later than the Christmas holidays.—W. C. Pelton.

Mice Will Nibble

MICE are active enemies of stored squash and pumpkins. They work in the dark, usually from the under side of the fruit so that many a fine squash may be ruined before any signs of damage have been seen. Hubbard squash that has been only gnawed on the surface, the seed cavity not being opened by the animals, will usually keep pretty well, altho its appearance is not improved by the mice.

We find that traps and cats do little good when the mice are working in a pile of squash, as long as the mice can reach the squash easily without exposing themselves. They do not enter traps as long as there are squash seeds within easy reach.

When the squashes have been attacked, they should be looked over, the badly injured ones thrown away, and the good ones stored in a safer place. In case no better place is available, the new pile may be made in the middle of the floor instead of next to a wall, so that the mice will have to pass across open floor. Cats then have a chance at them, and traps are useful if placed near holes in the wall.—W. C. Pelton.

Mushroom Growers Organize

IN THESE days of organization it is only natural that growers of mushrooms should form an organization of their own. Of all the agricultural interests in Pennsylvania theirs is probably the most centralized. Within a thirty-mile radius of West Chester, Chester County, approximately eighty-five per cent of all the mushrooms grown commercially in the United States are produced.

On December 11 a representative gathering of the growers met at West Chester and formed the Mushroom Growers' Cooperative Association. The board of directors elected at that time met later and selected the following officers: President, M. R. Darlington, Pomeroy; vice president, George C. Calvert, Kennett Square; secretary, Walter W. Maule, West Grove, and treasurer, E. B. Walton, London Grove.

The Association's First Exhibit

The association's first exhibit appeared at the recent Chester County Farm Products Show and the growers held a banquet the second night of the exhibit. It was to the 350 seated at the tables that the real aims and purposes of the new organization were outlined by the officers and outside speakers.

President Darlington, who has been growing mushrooms for twenty-seven years, spoke of the remarkable growth of the industry in that time. At the present time for seven months out of the year from $12,000 to $20,000 worth of mushrooms are shipped daily to the city markets, nearly all of them going by a fleet of motor trucks making a specialty of mushroom transportation. The average housewife, according to Mr. Darlington, does not know how to cook mushrooms or realize their worth so the association plans an extensive educational advertising campaign in an effort to get two people to eat its product where only one is eating it now.

The Speaker of the Evening

E. L. Nixon, State College, well known in Chester County for his work with potatoes, was introduced as the chief speaker of the evening by his well earned degree, "The Potato Bug," because he was largely instrumental in conquering this pest. Mr. Nixon disclaimed all practical knowledge of the mushroom business but made an exceedingly interesting address which opened the eyes of many growers as to what scientific study can do for the production of mushrooms. It is an untouched field for the scientist and Mr. Nixon said it might take ten years before the underlying scientific truths can be enumerated and practiced with the same degree of success as is done today in other agricultural lines.

Pennsylvania's Secretary of Agriculture, F. P. Willits, who was one of the pioneer mushroom growers, told the gathering some of the advantages to be derived from a strong

organization as he had learned them from his several years presidency of the Inter-State Milk Producers' Association.

He said that as nearly as could be ascertained between ten and twelve million dollars was invested in the industry in the territory represented at the banquet and he was looking for big things from the new organization.

L. R. Downing, Downingtown, one of the directors of the new organization, in responding to his name when all officers and directors were called upon by the toastmaster, expressed the hope that all those present would help the association find a suitable slogan or trade name which could be used in connection with its advertising. He recalled the various turns placed upon sun to advertise citrus and western products and hoped an equally catchy name or phrase could be found for the only agricultural food product which is grown in darkness.—Thos. H. Wittkorn.

Peach Yellows

DURING the past five years peach yellows has been definitely curbed in Pennsylvania by careful state inspections of peach orchards. W. A. McCubbin, plant pathologist, Bureau of Plant Industry, State Department of Agriculture, recently completed a report on the inspection of 665,493 peach trees in thirteen counties during the 1925 season. Only 2326 trees, or about one-third of one per cent, were found diseased. Five years ago, when inspecting work started, 287,466 trees were inspected and 4½ per cent found diseased.

Figures Tell the Story

The following figures tell the story of how peach yellows has been reduced in peach orchards in Pennsylvania:

Year	Trees inspected	Per cent of yellows
1925	655,493	.35
1924	674,012	.89
1923	482,614	2.21
1922	442,507	2.50
1921	287,466	4.45

While the disease is not now prevalent, Mr. McCubbin warns against anyone gaining the impression that the disease is completely eradicated from the state. The inspection work must continue since one of the characteristics of the disease is that it seems to come in waves.

The Fruit Exhibits

THIRTEEN classes of apple exhibits will add color to displays in the big State Farm Products Show at Harrisburg next week, according to Dr. S. W. Fletcher, secretary of the State Horticultural Association of Pennsylvania and staff contributor of Pennsylvania Farmer.

Varieties galore will be represented in the barrels, boxes, baskets, hampers, trays, and plates of apples which will come in from the fruit growing sections of the state.

Prizes to Be Awarded

More than two hundred dollars in prizes will be distributed among the winners. Outstanding among the prizes is that which goes to the leading fruit county. To the county horticultural association having the largest number of members taking premiums in the thirteen classes of the fruit show a large banner and $50 in prize money will be awarded.

The State Horticultural cup will go to the exhibitor of the best bushel box, basket or hamper of apples in the regulation classes of the apple show. This cup will become the property of the exhibitor who wins it three times, not necessarily in successive years. The name of the winner each year is to be engraved on the cup.

PLAY SAFE on the SEEDING JOB!

SUPERIOR

The World's Standard Grain Drill ~~ for More Than Fifty Years

WHETHER you farm fifty acres—a hundred—or a thousand; whether you use horses or tractors—Superior Grain Drills give your crops the right start for sturdy, healthy growth and bumper harvests. A half-century of specialization in seeding machinery—and a half-century of world leadership in that field—have made Superior Seeding Machines the outstanding value in grain drilling equipment.

Note the definite advantages Superior Grain Drills offer. For uniformity of drilling to proper depth—for even spacing—roomy trenches—and well covered seeds, evenly planted, the Superiors have no equal. These amazingly accurate machines are designed from a first-hand knowledge of the farmer's needs—they embody every labor-saving feature known—and they are built for a lifetime of dependable service under the hardest working conditions.

Superior Corn Planter

Like all Superior machines this Corn Planter is thoroughly well built, extremely simple and exceptionally accurate. No feed rod clutches to get out of order. Either flat drop or edge drop plates can be used without changing hoppers.

Row adjustment 28 to 48 inches—two-inch spacings. Double marker. Instantly adjusted for drilling. Special plates can be furnished for planting Beans, Peas, Peanuts, Kaffir Corn, Beet Seed, etc. Get full details of this truly Superior corn planter.

The Black Hawk Spreader

The Black Hawk Manure Spreader is truly a Superior Product. Made in the same factory that produces the famous Superior Drill and other quality implements.

The Black Hawk does not merely unload manure or dump it on the hit-and-miss plan—it thoroughly shreds and pulverizes it and spreads it widely and evenly, literally carpeting the ground in any quantity desired. It is a two-horse spreader that does perfect work on both hillsides and level ground.

See the complete line of Superior farm implements at your dealer's—or check and mail the coupon for circular and full details.

Pennsylvania's Competitors in Apple Growing

(Continued from last week)

ONE of the most striking developments of recent years has been the extension of local marketing to districts which heretofore have been strictly wholesale. This has been brought about by hard surface highways and motor trucks. Adams and Franklin Counties, once carload shippers exclusively, now are disposing of a steadily increasing proportion in truck loads to towns and cities within a radius of 125 miles. New York will have practically no competition from Pennsylvania in carlot shipments to other states in a few more years.

The outstanding problems of the future in Pennsylvania apple growing relate mainly to marketing. If we are to possess our own markets we must not only produce a better grade of fruit, thru better spraying and other improvements in culture, but also merchandise it more effectively. This means improvement in packages, grading, farm storage and sales methods.

Drift Toward Round-bottom Bushel

The drift is decidedly toward the round bottom bushel. The hamper still prevails in the Philadelphia district and the barrel in the Cumberland-Shenandoah district, but the bushel is supreme in the remainder of the state and is gradually encroaching on the barrel. Box packing has made no headway whatever and is not likely to. Various types of special packages are being used on our increasing number of wayside markets.

The United States standard grades are rapidly winning recognition. They have found instant favor in the wholesale district, where shipping point inspection is now firmly established. Local market growers, however, have been slower to see the advantage of using them, altho it is certain that packing in standard grades will do as much to create confidence and improve sales in local markets as in wholesale markets.

With nearly ninety per cent of our apples going to nearby markets and hence requiring a regular supply thruout the season, farm storage becomes a paramount factor in Pennsylvania horticulture. There has been a marked increase in the number of storages during the past few years. Most of these are bank cellars built into a hillside with one or both sides and one end against the earth bank, a dirt floor, and possibly covered with soil also.

The temperature of this type of cellar is determined and controlled, not by ventilation, but by the normal temperature of the ground at that time of the year. The above ground insulated storage, in which the temperature is regulated by ventilation, is not common in Pennsylvania.

Marble Research Laboratory

We are fortunate in having within the state the Marble Laboratory of Canton, Pennsylvania, a research agency devoted exclusively to a study of problems in the construction and operation of the farm storage. The present widespread interest in this subject in Pennsylvania may be traced largely to the notable investigations of this laboratory. These experiments have demonstrated the great importance of constant ventilation in the farm storage, not to control temperature, but to keep the fruit dry and to remove the gaseous products of ripening and decay. Bulletins covering the work are available to any who are interested.

Our State Horticultural Association recently has embarked on a publicity venture that promises to be fruitful. Ten thousand booklets describing the best ways to cook apples and the best season to use prominent Pennsylvania varieties were distributed to our members at cost, which is about three cents each. A local market grower buys these, has his name printed on the cover and distributes them to his customers. This has been a very effective bit of advertising.

Publicity Enterprises

The association also has distributed a large number of placards which show an attractive red apple and admit that Pennsylvania apples are superior to ordinary run of fruit. The association proposes to continue this publicity. I wish, however, that it were only a part of the nation-wide advertising campaign to "Eat Apples," and not necessarily Pennsylvania apples either. Apples are still losing in competition with bananas and oranges and will continue to do so until the apple industry as a whole—not any fraction of it—handles this problem in a large way.

The Japanese beetle is spreading in spite of the quarantine; it is only a question of a few years before it will overrun southeastern Pennsylvania. Eventually it will find its way to western New York. But there is little cause for alarm. It is yielding to spraying and cultural treatment in the orchard and there is every probability that its natural enemies soon will multiply and hold it in check, as is now the case in Japan. Ten or fifteen years from now, perhaps, it will not be a devastating scourge, but just another one of the long list of bugs we have to watch; and probably far less injurious than the codling moth.

The Oriental fruit moth is a much more serious problem and is threatening the very existence of the peach industry in some sections. It has not yielded to spraying, but cultural practices give partial control. Here again, apparently, we must await the development of natural enemies and they are bound to come, as they have with all other major pests.

Deer Loss Increases

Pennsylvania fruit growers are concerned at the rapidly increasing loss from browsing by deer. As a result of an excellent system of game protection, there are now more deer in a large part of Penn's Woodland than when the Red Men roamed these forests. They have ruined or severely damaged many thousands of fruit trees as well as many acres of farm crops. The damage is local, not general. Young trees are browsed until they are worthless; in bearing orchards the damage is confined to the lower limbs. The state will fence a badly damaged orchard, paying half the expense, but this is little relief to an impecunious fruit grower.

The last legislature authorized the State Board of Game Commissioners to designate certain areas within which fruit growers and farmers who are damaged may kill the deer themselves, either buck or doe, at any season of the year when they are damaging private property. The Game Commissioners also are authorized to designate certain areas in which a short open season on doe may be declared.

These provisions give some relief

but they arouse the animosity of local sportsmen and hurt local sales. Our ultimate objective is to require the state of Pennsylvania to assume full responsibility for its livestock. It owns and protects the game, hence it should either prevent the damage or pay for it, not thrust the burden of responsibility on the property owner. The deer problem in Pennsylvania is bound to become increasingly acute until it is settled right.

The apple industry of Pennsylvania on the whole, is in a flourishing condition; new planting is going forward steadily but conservatively; and in spite of the discouragements of the past few years there is a general feeling of confidence in the future of the industry. We do not propose to yield our unequaled markets to the apple growers of New York or Washington without a struggle. It will be a fight to a finish, a fair field and no favor, and all in a spirit of friendly rivalry. May the best state win.—S. W. Fletcher.

Nursery Stock

IMPROPER cellar storage, extended period in transportation, immaturity, and faulty planting all influence the success of growing nursery stock.

We are all interested in the quality of trees that we are to plant next spring, consequently we should consider the proper protection of these trees for the next few months, says John U. Ruef, fruit extension specialist of the Pennsylvania State College.

The Storage Cellar

As we all know, the greater percentage of the nursery stock is transferred from the nursery row to the storage cellar or shed. This is done primarily to facilitate packing and shipping, but unfortunately the practice permits many of our trees to be injured during the period spent in storage. The storage cellars are good, bad and indifferent; as a result, our trees vary in condition. A condition frequently made more serious by delayed delivery is the loss of moisture due to improper storage.

A number of Pennsylvania growers are avoiding trees of low vitality by purchasing their stock in the fall and giving it proper protection during the winter months. There are a number of additional advantages in carrying out this practice, such as availability for spring planting and certainty of obtaining the desired varieties and number of each.

The trees should be "heeled-in" directly after arrival. A location should be selected which affords good drainage. In this case it is advisable to avoid locations near buildings or meadows where mice are likely to be troublesome. A trench should be dug eighteen to twenty-four inches deep.

Care of the Trees

The bundles of trees are then cut open, and the trees inclined toward the south at an angle of forty-five degrees, with the roots in the trench. The roots are freed of packing material and then thoroly covered with soil. Precautions should be taken to have the soil firmly packed around the roots. The trench is then completely filled so that about two-thirds of the trees are covered with soil. This also helps surface drainage. The success of heeling-in depends on good drainage and the exclusion of air around the roots.

It is still possible for growers who are contemplating planting additional trees next spring to obtain their trees and make provisions to give the proper winter protection in order to possess trees of good condition for spring planting, says Mr. Ruef.

LARGER TRACTORS
Pay Greater Profits!

Be Sure to Choose a Tractor Big Enough for Your Farm

More than 60 per cent of the cost of operating your farm is for POWER and LABOR.

The quickest way to increase your profits is to reduce the cost of these two items by using a TRACTOR with greater power.

For example, a three-plow OilPull pulls one more plow than a two-plow tractor.

Theoretically, it will do just half again as much work. Owners of three-plow OilPulls report, however, that because of the increased power and speed, they actually plow twice as much as the average two-plow tractor.

This means that three-plow OilPull owners cut their labor costs in two and add the saving to their profits. Larger OilPulls reduce labor cost still more.

Think of the time saving. By doing twice the work the three-plow OilPull saves one-half the time. Consider what *this* means when working time is short and a heavy crop loss hangs in the balance.

And, finally, an OilPull of *any* size *reduces power cost*. An OilPull has won all principal fuel economy tests for the past 12 years. Upkeep cost, according to latest reports, averages less than $20 per year. Average OilPull life is 10 years and more. In addition, such features as Oil Cooling, Ball Bearing Transmission, Cut Steel Gears, Complete Enclosure, Triple Heat Control, and others, help to reduce power cost to the lowest point. Add this difference to your profits.

Why pay the penalty of too little power when an OilPull of the RIGHT SIZE for your farm will cut labor cost, save time, reduce power cost and increase profits?

Light-Weight
OILPULL
A 10-Year Tractor

The Advance-Rumely line includes kerosene tractors, steam engines, grain and rice threshers, husker-shredders, alfalfa and clover hullers, bean hullers, silo fillers, corn shellers, motor trucks and tractor winches.
Serviced Through 33 Branches and Warehouses

Shortage Threatened

Everywhere farmers are turning to the OilPull for More Power. Last year hundreds who delayed were disappointed. Right now our factories are taxed to the utmost. A shortage is threatened in some sizes. Protect yourself. See the nearest Rumely dealer as soon as possible. At the same time mail the coupon for vitally important economy facts and figures. Now Cod Liver Meal in FUL-O-PEP EGG MASH

Gives your hens longer and steadier laying power

Feed Ful-O-Pep Chick Starter containing Cod Liver Oil *and Meal*, first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash containing Cod Liver Meal from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash containing Cod Liver Meal at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on

This life-sustaining, growth-promoting, vitamin-charged ingredient brings much the same effect to your poultry as *spring sunshine all year round*—leading directly to these

Eight Ways to Greater Poultry Profits

1. More eggs through the year, and at the seasons when they bring the highest prices.
2. Better average of large eggs. Minimized loss from undersized eggs.
3. Stronger shells. Less loss from breakage.
4. Healthy flocks. High resistance to roup, white diarrhea, chicken pox and tuberculosis.
5. Low mortality of both grown birds and chicks.
6. More hatchable eggs, larger hatches.
7. Stronger, vigorous chicks that live and grow.
8. Better sale of eggs because of high food value.

Scientific research has shown that the vitalizing effect of Cod Liver Meal is much the same as that of direct sunlight and the ultra-violet ray.

Demonstrations on our own flocks at our Experimental Farm at Libertyville, Illinois, have proved through more than two years of test that this remarkable ingredient transmits an improved condition all along the line.

Fed on Ful-O-Pep Egg Mash, hens lay more steadily; eggs run much more uniform in size, with a high food value; the shells are stronger, reducing risk of breakage; hatches are much larger; chicks hatched are strong, healthy and unusually free from chick troubles.

Our new Ful-O-Pep Poultry Book, tells all about this new vital element in Ful-O-Pep Egg Mash and how to feed it for profitable results. Send for it—it's Free. Tear off and mail the coupon now.

Some good dealer near you sells the Ful-O-Pep line of feeds. He can supply you.

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Still Losing Birds

I had a flock of more than 100 Rhode Island Reds and lost over half of them last summer. They would only be sick a short time. I decided to change and get an entirely different breed so a week or two before I did away with the old flock I got a flock of about 100 Barred Rocks. Now they are beginning to die. Have already lost five or six. I cleaned and fumigated my hen house thoroly. Is there anything you can advise me to do?—M. H., Susquehanna County, Pa.

You give no symptoms which would indicate a specific disease. Performing a postmortem and studying the internal organs may give some clew. If the sick fowls rapidly became thin and the liver shows grayish nodules, the trouble may be tuberculosis. If the flock has not had a laying mash and green feed, some of the losses may be due to digestive disorders.

Sometimes hens die from eating moldy or spoiled grain. Decayed meat and other poisonous substances found on the range often cause sudden losses.—R. G. Kirby.

Keep Houses Clean

Please answer the following questions in your valuable paper as soon as possible. This summer coccidiasis developed in my flock of White Rock pullets at the age of three and one-half months, lost about five hundred. How can the houses and runs be disinfected so it will be safe to use them again next spring? Could good portable brooder houses be built from a round stave silo twelve by thirty feet which will not be used any more?—C. F. C., Lehigh County, Pa.

If colony houses are thoroly cleaned in the fall and not used during the winter, the sun and air give them a lot of disinfecting. In addition spray the walls and floor with a strong solution of commercial coal tar disinfectant or stock dip.

If possible the colony houses should be moved to soil on which no poultry have been raised for several years. If this is impossible the plowing and liming of the soil will improve conditions. Plowing helps to turn under the soil rich in poultry manure and bring up the clean soil. Seeding the range helps to use up the fertility added by the birds.

Both Colony and Brooder Houses

I would wish to take the silo down and use as much of the material as possible in building portable shed-roof colony houses with dimensions either eight by ten or ten by ten. It might be possible to use the material in making round brooder houses. Colony brooder houses of that type are now on the market and give satisfaction.

Good colony houses can always be made of scrap lumber of almost any kind if the sides are later covered with heavy roofing paper sealed at the seams to keep out draughts. Narrow wooden strips should then be nailed over the seams and the strips painted to improve the appearance of the buildings.—R. G. K.

Care of Chickens

Would like to have you send me a book on how to take care of and feed chickens and also on health conditions.—H. L., Erie County, Pa.

We do not have books for distribution on the care of poultry, but by addressing the Division of Publications, Washington, D. C., they will send you available bulletins on poultry management. The Orange Judd Co., New York City; MacMillan Co., New York City, or the Lippincott Co., Philadelphia, will send you a list of books which they publish on the raising of poultry. You can also obtain information from the Pennsylvania State College poultry department.—R. G. Kirby.

Broodiness in the Flock

WHY does a hen go broody? Hundreds of years ago, the hen laid one or two clutches of eggs during the year, perhaps twenty to thirty in number. She would set on those eggs, hatch them out, and rear her family to maturity. The remainder of the year she recuperated for the next season's work. Man, however, thru the domestication of the wild fowl, has changed things to suit his wants, and by good methods of selection, breeding and the use of well balanced rations has turned the twenty to thirty-egg hen into the one of today, capable of producing 200 to 300 eggs in a year.

Leghorns Almost Immune

Today we have the Leghorn which is almost, but not quite, immune from broodiness. Some flocks are more broody than others, even tho given the same feed, care and management, because some have been bred along non-broody lines, while little or no attention to this has been given others. I find it a good practice to band a bird every time she goes broody and see how many times she tries to take a vacation. I have seen some hens go broody five times during the season. Such a hen should never be used as a breeder regardless of her egg production. We will get less broodiness in our flocks from year to year if we never breed from a hen that goes broody. Should this be impossible, it is best not to breed from a hen that goes broody over three times. This does not mean, however, that a broody hen is not profitable. I know of a trapnested hen that laid 250 eggs and went broody five times. That egg production was good, but she shouldn't be used as a breeder.

Broodiness is an inherited characteristic and may be transmitted to offspring just as good egg production can be transmitted from one bird to another. If it is necessary to purchase eggs for hatching it is best to get them from a man who is not bothered to death with broody hens.

There is a woman in Pennsylvania who had 250 R. I. Reds last summer and had as high as 150 in broody coops at one time, yet she bred from the same flock of hens this year. If she keeps on she may have a flock that will be 100 per cent broody at the same time.

Of course, care should be taken to select a male bird from a flock of hens that lacks the broody characteristics. One may have a wonderful flock of non-broody hens, but get a male bird from a hen that is persistently broody and he will tear down in one season what it will take five years to build up.

There are dozens of old fashioned ways of breaking up broody hens, such as immersing them in the watering trough, putting them in a barrel for a week without food or water, tying a string to one leg or tying splints about the knees so they can't set, and many other inhumane things. Just what happens when we do such foolish things?

Results of Improper Treatment

Suppose a hen has been laying heavily for the past month and then decides to go broody. In her body are dozens of yolks varying from the size of a pin point to a full sized yolk. Suppose we put her in a barrel without food or water for a week. The yolks are absorbed back into the body and she exists upon the nourishment derived from them. Should we let these yolks be absorbed back into the body in this way? Emphatically, no. What we want to do is feed that hen the best we ever fed a hen in our life and get those eggs out of her.

Just as soon as a hen shows the inclination to stay on the nest, place her in a broody coop. A coop that will answer this purpose is one having a slatted bottom. Two-inch slats two inchs apart are all right. Suspend such a crate from the ground and let her get plenty of fresh air. Feed a good scratch feed and a good mash in small containers, along with plenty of water, grit, and oyster shell.

Worth While Methods

It would be well to feed the hen moist mash that can be cleaned up in fifteen minutes, once a day. This will enable her to get a good forcing into her system and come back into laying in a hurry. A hen should not be in a coop more than two to five days before she will come back into laying, tho I have known of hens that would go broody for fourteen to twenty-one days, then lay twenty eggs, then go broody again for the same length of time, and be profitable hens. Such hens may be profitfitable, but are far from desirable.

Heat in the summer is worse on a hen than cold in the winter. We have all seen hens overcome by the heat during July and August. The remedy is to have ventilators in the rear of your house immediately below the roof and the same in the front of the house. Windows below the roost in the rear of the house are a decided advantage in overcoming this trouble.

Small windows of six glass eight by ten inches every ten feet will give more light for scratching under the roosts in winter and if removed will give a better circulation of air in summer. Remove the windows in the front of the house and have plenty of open space. This enables the air to circulate and keeps the temperature many degrees below normal.

Ventilation the Prime Factor

When the laying quarters are "sweat boxes" instead of comfortable nests, a hen is more inclined to set than where the nests are cool. To further overcome broodiness, the bottom of our nests are made of fine wire instead of board. This gives a cooler nest and at the same time allows the fine chaff and dirt to fall thru to the floor.

In summing up the following five points are worth remembering:—

1. Place the hen in a slatted coop as soon as signs of broodiness are noticed, and feed a good laying ration.

2. Band birds each time they go broody.

3. Breed from non-broody hens or hens that go broody no more than two or three times.

4. Get rid of hens that are almost continually broody.

5. Provide quarters that are well ventilated during the hot summer months.—L. W. Steelman.

Does the Work of 10 Men!

Saws Wood Fast

This one-profit WITTE Log Saw uses Kerosene, Gas-Oil, Distillate or Gasoline and will cut from 10 to 25 cords of wood a day. Easy to operate and move. New device makes easy starting in any temperature. Trouble-proof. Fells trees and saws them into blocks—runs other farm machinery. Fast money maker and big labor saver. Completely equipped with WICO Magneto, speed and power regulator, throttling governor and 2 fly wheels.

Change to Tree Saw in 3 Minutes Ten seconds to clamp on tree. Saws them down level to the ground.

"Felled fifty 18-inch trees in less than 5 hours."

BABY CHICKS DIRECT TO YOU

Do You Feed Your Hogs Cream?

OF course you wouldn't do so knowingly—with butter-fat worth 40c to 50c a pound. Yet hundreds of thousands of people are feeding large amounts of cream in skim-milk to their hogs, because of inefficient separators.

Without a cent of expense you can tell whether your cream separator is skimming clean. Ask your De Laval Agent to bring out a new De Laval and try this test:

After separating with your old separator, wash its bowl and tinware in the skim-milk. Hold the skim-milk at normal room temperature and run it through a new De Laval. Have the cream thus recovered weighed and tested. Then you can tell exactly if your old machine is wasting cream, and what a new De Laval will save.

The new De Laval has the wonderful "floating bowl"—the greatest cream separator improvement in 25 years. It is *guaranteed* to skim cleaner. It runs easier with milk going through the bowl, and lasts longer.

Send coupon below for name and location of your De Laval Agent and *free* catalog.

SEE and TRY the New De Laval
TRADE in your old Separator

The De Laval Milker
If you milk five or more cows, a De Laval Milker will soon pay for itself. More than 35,000 in use giving wonderful satisfaction. Send for complete information.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used for years in the big dairy country Sweden, and has cleaned up whole districts over there literally rotting with abortion. Frank Halfman, Crown Point, Ind., writes: "Two years ago, I lost every calf from my herd of forty cows. All remedies failed until I used yours. I have never lost a calf since."

C. C. C. (Cow, Calf, Control) is guaranteed to absolutely stop abortion or the treatment cost is refunded. Write today for full details explaining our free trial offer.

Simply send your name and address without further obligation on your part to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

Stamp Out Abortion!

By using Aborno, the pioneer guaranteed remedy. Easily administered—rids animal's blood of abortion germs—stops losses — prevents barrenness.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Lactation Period

I have a large Holstein cow that gives forty-two pounds of milk when fresh. She is dry for three and a half months. Do you think her lactation period could be lengthened by feeding her plenty of good feed when she is dry? I cannot see why she always dries so soon. I fed her well last year but she is dry again for almost four months.—H. W. F., Berks County, Pa.

The probability is that the feeding of plenty of good feed to your cow when she is dry would not greatly lengthen her lactation period after she freshens. The characteristic of drying off too soon is an individual habit with different cows. The cow that has a habit of drying off at the end of eight or nine months after she freshens will probably continue to do so regardless of the feed given her. On the other hand, there are many cows that can scarcely be put dry even after they have been in milk for eleven to twelve months.

Cows Should Be Dry Six Weeks

Cows should be dry about six weeks before they freshen in order to give them an opportunity to build up a reserve supply of nutrients which will facilitate a large yield of milk and butterfat after they freshen. A cow that stands dry longer than eight weeks is likely to be unprofitable unless she gives an exceedingly large flow of milk during the period when she is milking. It is the total yield of milk and butterfat for the year that counts.

If this Holstein cow averages thirty-five pounds of milk for 300 days she is a good cow even tho she may be dry the rest of the year. In fact, any Holstein cow that will produce 10,000 pounds of milk per year testing three and one-half per cent of butterfat will probably make her owner an excellent profit over and above the cost of feed. If she produces 9000 pounds of milk in a year she will be worth keeping.

The average cow in Pennsylvania only produces a little over 4000 pounds of milk. This is too low a production to be worth while. Probably in the neighborhood of 6500 to 7000 pounds is about the dividing line below which yield it does not pay to keep cows.—A. A. Borland.

To Hold First Meeting

THE first regular annual meeting of the Pennsylvania Dairymen's Association to be held at Harrisburg, January 20, during the State Farm Products Show, will be addressed by more than a score of speakers, announces A. A. Borland, head of the Dairy Husbandry Department of the Pennsylvania State College, president of the association, and staff contributor of Pennsylvania Farmer. Many of those who will appear are known the world over in dairy circles.

C. L. Burlingham, assistant general manager of the Breeder's Gazette, and formerly national secretary of the American Ayrshire Breeders' Association; H. E. Van Norman, formerly president of the National Dairy Exposition and the World's Dairy Congress and now president of the American Dry Milk Institute, Chicago, and R. W. Balderston, secretary of the Inter-State Milk Producers' Association, Philadelphia, will speak at the big Dairymen's Banquet scheduled for the evening of January 20th.

At the banquet winners of the milk and butter exhibits in the state show will be announced, and 290 cow testing association members who have herds averaging 300 or more pounds of butterfat per cow will be honored.

Other speakers who will be heard during the day include S. J. Brownell, C. R. Gearhart, and R. H. Olmstead, all members of the dairy extension staff of the Pennsylvania State College.

After Thirteen Years

AFTER he has used the same milking machine for thirteen years what a dairyman tells you about it ought to carry some weight. If you will visit a little with Norman L. Spencer, Chester County, as I did recently, you will find that this is the record on which he bases his statements.

We had just finished a good supper, so he had no need to hurry but as he started to tie up the cows for the evening milking I looked at my watch. One hour later the milk was cooling, the cows out, everything washed and we were out in the starlight talking about his fine stand of alfalfa.

Thirteen years ago Mr. Spencer's father was milking twenty-eight cows when his help suddenly left him. It was a case of get a machine to do the work or go out of the dairy business. The machine was installed and has been there ever since. Only fourteen cows are being milked now but they are making "A" grade milk which is shipped to the Philadelphia market.

Mr. Spencer uses a two-unit outfit and does all the milking himself before and after his man comes and goes for the day's work. In this way he is able to devote all the time with the man in the field. It has been found that the two units make it possible for one man to get the greatest efficiency from the machine. Three were tried but while doing the "stripping" a machine often was left too long for the good of the cow and the man lost time running around trying to keep things moving properly.

When I asked Mr. Spencer the usual question about the effect on the cows, he pointed out a fine black and white which had been machine-milked for the past seven years. The pailful she gave would have been a credit to any dairyman and apparently the machine hadn't hurt her in any way. "You bet we wouldn't have kept it all these years if we weren't satisfied with the results," added Mr. Spencer. And what more evidence was needed?

But this milking machine does more than milk, it also provides electric lights for the house, barn, garage, chicken house, pig pen and places outside. The generator and batteries are in the room with the engine which runs the compressor and the two hours it runs each day are sufficient to furnish all the lights needed the greater part of the year. Of course, only a few of the lights are burning at once and then only for a short time but Mrs. Spencer says those in the house alone are worth all the milker cost.—T. H. W.

Carbon County Records

LEWIS A. ZIMMERMAN, Lehighton, not only has the highest herd average in the Carbon County Cow Testing Association which recently completed its first year's work, but also the highest C. T. A. herd average in Pennsylvania. With three milkings per day, Mr. Zimmerman's herd averaged 15,958 pounds of milk and 519.6 pounds of butterfat for the year and nine cows in the herd produced more than 500 pounds of fat during the year.

Wallace Drumheller, also of Lehighton, has the second highest herd average in butterfat among the cow testing associations in Pennsylvania for the year 1925.

With an average production of 9650 pounds of milk, the Carbon County C. T. A. takes first place among the Pennsylvania associations for 1925. First place for butterfat production was lost by only one-tenth of a pound, the average production being 333.4 pounds. No other association, tho, can boast of nineteen cows in the 500-pound butterfat list.—A. L. B.

A Silo for Every 133

FOR all of the states of the Union there is an average of one silo for 133 head of cattle and if they used the silo as Connecticut, Michigan and Wisconsin do, this country would need 1,500,000 more silos. By using the silo as the three base states are now doing, eighteen per cent of the crop would go into the silos which would absorb 600,000,000 bushels of corn and more than take up our surplus.

The proper use of the silo would have a most beneficial effect on the livestock industry. Beef, butter and milk would be produced at less cost and with less labor. This would not affect the volume of supply but it would give the farmer considerable more profit, and better fit him to compete with foreign producers.

Will Award Ribbons

THE Pennsylvania Dairymen's Association is offering a ribbon to all C. T. A. members whose herds have produced an average of over 300 pounds of butterfat during the year 1925. A purple ribbon will be given to the owners of all herds which produced 400 pounds of butterfat, a blue ribbon for those herds with from 350 to 400 pounds, and a red ribbon for the herds which have an average production of from 300 to 350 pounds.

These ribbons will be presented at the banquet to be held in the Masonic Building by the Dairymen's Association on Wednesday, January 20, during the week of the Farm Products Show.—A. L. B.

Wins Silver Medal

"CARRY ON LADY LETTY," a young Jersey cow, owned by the Bureau of Dairying, U. S. Department of Agriculture, Washington, D. C., has established a new senior two-year-old Jersey record for Maryland by producing 571 pounds of butterfat and 12,417 pounds of milk in 352 days.

She carried calf 210 days of the test and won the American Jersey Cattle Club silver medal in addition to the state championship. She also produced 1500 pounds more milk than her dam made as a mature cow.

Dumb-Bell—Who is the smartest man living?

Wise Guy—Thomas A. Edison.

Dumb-Bell—Why Thomas A. Edison?

Build~Remodel Ventilate or Equip A Hog House, Dairy Barn Horse Barn or Poultry House Until You Get Our Free Book
BECAUSE *It Tells Why*

Jamesway
Costs Less and Saves Costly Mistakes

James Manufacturing Company,
"We very much appreciate the splendid architectural service you have rendered us. The ability you showed to adapt plans to meet results desired, were a revelation to me. Your suggestions saved me considerable money in material and time."
Island Farms,
H. L. Hartley, Mgr.

If you are thinking of building, remodeling or ventilating a cow or horse barn, hog or poultry house, or if you are considering the purchase or labor and time saving equipment for such buildings, by all means, fill out coupon in this advertisement and let us send you free, our valuable Jamesway book.

This book will show you how we can save you a lot of money. Our many years' experience in planning and designing practical, convenient layouts for farm buildings has taught us how to plan buildings to save cost of material and construction—just how every door, window and general arrangement should be to make buildings convenient—in short, we save you regrets and costly mistakes.

This book also tells you all about Jamesway Equipment—Stalls, Stanchions, Drinking Cups, Litter Carriers, etc., for the cow barn. Troughs, Waterers, etc., for hog houses. Feeders, Nests, Incubators, Brooders for the poultry house—a complete line of every kind of labor-saving, money-making equipment for any farm building. Jamesway Equipment is better and costs less in the long run.

Mail coupon today—learn all about Jamesway complete service—How the local Jamesway man in your district will give you the benefit of his experience without obligating you. Tell us just what you are interested in—whether building, remodeling, ventilating or equipping cow barn, horse barn, hog or poultry house, and we will send you the book that tells you just what you want to know.

FEED MORE *Linseed* MEAL

You may have been feeding a certain amount of Linseed Meal for its laxative effect—its beneficial action on the bowels. But are you aware that liberal quantities, fed for the PROTEIN content, show splendid results? The following are typical endorsements of the general qualities of Linseed Meal:

Increased Milk Flow 15% to 25%.

J. H. Berger, Mgr. Jersey Crest Farms, Oconto Falls, Wis., writes: "Approximately 10% to 15% of our ration consists of Linseed Meal. I have found that in many instances, it has increased our milk flow 15% to 25%, especially in cases where the hay was poor."

Shortens Beef Finishing Period 30 to 40 Days.

R. J. Barrett, Dallas Center, Iowa, says: "Linseed Meal shortens the finishing period from 30 to 40 days over straight corn and clover hay, and gives a much better appearance and a smoother coat of hair."

Profitable for Anyone Who Feeds Cattle or Hogs.

Mr. C. W. Falcon, Secretary Marion Inter-State Fair Association, Marion, Iowa, states: "I feed Linseed Meal to pigs from the time they commence to eat till they go on the market, right with the other feeds, ground, in self feeders. They get all they want to eat. I would say that Linseed Meal is profitable for anyone who feeds cattle or hogs.'

—AND LIKEWISE IT'S PROFITABLE FOR SHEEP AND POULTRY, AND EXCELLENT FOR HORSES, AS WE CAN READILY PROVE.

Balance Your Rations for Greater Profit

We can help you—easily but accurately—it has all been figured out in the two books listed in the Coupon below. These books are chock full of feeding rations which include all manner of feeds in various proportions, extensively used by farmers, breeders, feeders and experiment stations. Get these books, and in addition write to our Secretary, who has had extensive farm and experiment station experience, if you have any unusual feeding problems to solve. No obligation.

A Going Cooperative

This Exchange Has Loyal Support of Its Patrons

THE Eastern States Farmers' Exchange is an outstanding example of what eastern farmers can accomplish for themselves thru cooperative buying. In eight short years this cooperative institution has grown from an idea into a farmers' organization with more than 16,000 members, doing a business of more than six million dollars annually at a sales expense of less than three per cent. It bought, in April, 1925, for $300,000, one of the finest feed mills in the country located at Buffalo.

The Eastern States is organized as a non-stock cooperative. The patrons are the sole owners. To them reverts any surplus which accrues over running expenses and reserve for working capital. The patrons elect their own officers and board of directors. The board appoints its executive committee, and holds it responsible for the administration of its policies thru a paid staff and office at Springfield, Mass.

Included on the board of directors are officers and active members of state and county farm bureaus, of state and local Granges, of legislatures, of dairymen's associations, of state departments of agriculture, of state chambers of commerce, trustees of agricultural colleges, and officials of large manufacturing and business interests.

Common Interest Prevalent

Much is being said about the common interest existing between industry and agriculture in solving agriculture's problems. There is a common interest and business men and farmers can work together. This is demonstrated by the manner in which farmers and business men have cooperated to solve the problems faced by the Eastern States Farmers' Exchange in distributing supplies to farmers. The exchange is so organized that not one of these men can profit personally from the time and effort he has put into the direction of the business, but he can profit indirectly as agricultural pursuits become more profitable thru proper methods of buying and marketing.

The Eastern States Farmers' Exchange has succeeded because it has stuck close to sound fundamental principles of cooperative business. This does not mean that ideals have played no part in the remarkable development of the exchange. Sound idealism and vision have made of the exchange what it is today. The loyalty on the part of the membership has been an inspiration to the management, but that loyalty has always been based on a thoro knowledge of the fact that their cooperative was being soundly managed and directed along right lines—that their cooperative was worth supporting.

A committee consisting of the college dairy specialists from the states in which the exchange operates determine the formulae of the dairy and stock feeds. The poultry experts are consulted for the poultry rations, and all the manufactured feeds of the Eastern States Farmers' Exchange are distributed on the open formula basis. Most up-to-date mixing machinery is used to insure exact blending of the rations, the dairy and stock feeds all passing over a screen and a powerful magnetic separator just prior to entering the sacks.

Farmers Served Thru Stations

The Eastern States Farmers' Exchange is serving farmers thru 450 stations in New England and Delaware. As groups of farmers about a shipping station become interested in the work of the exchange and desire the service, the exchange, thru a field man, helps get the station started. The field man keeps in touch with the farmers and the local organization so that the exchange at all times may give satisfactory, regular, dependable service. Most stations have monthly shipments, the cars arriving regularly enough so that farmers by ordering a full month's requirements may depend upon having their grain hold out until the arrival of the next car.

The exchange's practice of sticking closely to the work it was organized to accomplish has won for it the support of the agricultural leaders in the seven states in which it is functioning. There has been the closest cooperation between the extension service, the colleges, the farm bureaus, the Grange and the Eastern Farmers' Exchange. In short, the Eastern States Farmers' Exchange is a bona fide farmers' cooperative feed manufacturing and distributing organization.—A.

From a Subscriber

DEAR PENNSYLVANIA FARMER:—Enclosed find check to extend my subscription another year. Farming with me just now is more a matter of theory than practice, but I hope to get into the harness again next spring. I can't feel right, however, to let Pennsylvania Farmer lapse, altho I have consented to forego the pleasure of some other journals, for altho P. F. is edited by humans and is therefore fallible in its opinions, it seems to be one of the few papers whose diction, whatever else it may be, is always safe and sane.—Wm. A. Libby.

Mixing for Strength

STRENGTH is generally considered the most important quality in concrete construction. According to the rural engineer at the New Jersey State College of Agriculture the three factors governing this desirable quality, are: (1) the fineness of the materials used in coarse and fine aggregate; (2) the quantity of water used in relation to the cement, and (3) the cleaness of the materials.

Various Mixtures

Various mixtures, such as 1-2-4 and 1-3½-7 are used because different classes of work require varying degrees of strength. Just as very coarse aggregate weakens the concrete, so a fine sand strengthens it, altho a sand may be too fine for good results. In the standard formula the first figure always stands for the cement, the second for the sand, and the third for the pebbles or crushed stone. Thus a 1-2-4 mixture means one sack (one cubic foot) of cement, two cubic feet of sand, and four cubic feet of pebbles, or coarse aggregate. This particualr mixture is suitable for foundations for farm machinery and concrete work in general.

Too much water is not good, for a sloppy mixture makes weak concrete. The best mixture has equal parts of water and cement regardless of the proportion of aggregate.

Clean materials are necessary for strength. Sand or gravel containing clay, loam, vegetable matter, or humus makes poor concrete. When possible, sand and gravel should be washed before being used in concrete work.

Much concrete has only fifty per cent strength because of a failure to observe one or all of these simple requirements.

Radio Seen from the Inside

(Continued from page 3)

be the same if you spelled it Cukoostan. I wouldn't know just where to find it on the map, but the names of some of the "natives" who appeared in "The Hidden Idol" are sufficient to indicate the kind of country it was supposed to be. For example, there was the Rajah of Kookoostan, stern, cruel and inscrutable; General Allaghab, the leader of his army; and Hasahdha, a temple dancer.

The story dealt with the adventures of a party of Americans who were trapped and taken prisoner by the Rajah. Just then they thought they were to meet their fate, they discovered it was all a big hoax. The Rajah was a friend, the General Allaghab turned out to be an American darkie who liked his fried chicken and corn pone as well as the next one.

Spooks in Kookoostan

Some weird things happened in Kookoostan, and, of course, the orchestra was there to help chase quivers up and down the radio listener's spine. The man who played the cello was particularly adept at producing quivery, quavery sounds. Whenever he achieved a particularly spooky one he looked around at me with a grin to see if I enjoyed it as much as he did.

The evening gave me some good exercise in self control. Some of the situations were very funny, and I wanted very much to laugh aloud. But I wasn't on the program and I didn't want to send my "ha-ha" to Europe or California, so I managed to restrain myself.

But one of the jokes caught the man with the clarinet off his guard. He relieved himself of about half a "haw-haw" before he saw the red light on the wall and remembered that he had better save the rest of it for some other time. And the first violinist helped him to remember by turning slowly around and giving him a look of mock severity, evidently intended to mean, "Say, boy, where were you when the brains were passed out."

The love scene in "The Hidden Idol" probably satisfied the radio audience, but it didn't appear just right to the observer in the studio where the lovers were holding forth. The sweet nothings the hero was supposed to be whispering into the shell-like ear of the heroine were spoken directly into the mouthpiece of the unemotional microphone, while she stood back out of the way. Then he went to his corner, while the girl made eyes at that black tin can and said to it the sweet, soft things intended for him alone.

The Love Scene

The climax of the love scene was a kiss, of course.

Did the heroine trouble her lover to come forward for the osculatory exercises?

Not at all.

She gave herself a vigorous smack on the wrist and saved him all inconvenience.

This wasn't the only time these actors took advantage of the audience that could hear but could not see. The lid of a phonograph when struck with a drumstick sounded enough like a distant tom tom to send a chill down the spine of an imaginative listener. A bottle, rattled around in an empty glass pitcher, made a perfect substitute for ice. The General of color couldn't have made the flying dominos sound just right on the carpeted studio floor, but he secured a natural effect by rolling them on a board held up in front of the microphone.

Necessary to Make Audience "See"

The average theatrical performer, appealing to the sense of sight as well as that of hearing, has a comparatively easy task. But the WGY Players have to make their voices carry to their radio audience a moving picture of the stage scenery, the costumes and the action of the play. The necessity of making the radio listener "see" the stage and everything on it calls for the highest type of skill on the part of the actor before the microphone.

Nevertheless, this method of giving a play has its compensations. I am sure that Kolin Hager, playing the part of General Allaghab, was glad that he could make himself sound like a southern negro without the aid of burnt cork and loud clothes. And, while this is no place for compliments, it would have been a shame if Pansy, the "colored" servant girl, had played her part in anything but her natural complexion.

The three acts of the play passed very quickly. The rapid succession of thrilling and humorous situations was broken only by the frequent musical numbers.

Finally the cast gathered around the microphone for the last chorus, the haunting "Spooky Blues." The singers put their best into that song. It had a rhythm they liked.

Then the music stopped.

The show was over.

Mr. Hager was before the microphone. Now he was not General Allaghab, head of the army of the Rajah of Kookoostan, but the chief announcer. He told the radio audience that they had been listening to Stations WGY of Schenectady and WJY of New York City broadcasting a production of the WGY Players from the main studio of WGY at Schenectady. He said good-night to those listening thru the New York station and WJY was disconnected.

"One Moment, Please"

While he was speaking the members of the cast and the musicians had left the room. When he finished with "One moment, please," and followed the rest, he left only Mr. Fay and myself in the studio.

Mr. Fay sat down at the desk at the side of the room, turned a switch, and started talking into the small microphone before him. In a low, even voice, he told about the programs to be broadcast from WGY during the next week. While he was speaking I opened the sound-proof door and went out into the control room to see how his voice sounded as it came from the loud-speaker by the operator's desk. It was the same voice, only stronger, and louder. Evidently the radio announcers substitute electric power for the lung power that must be expended by the ordinary public speaker.

I went back into the studio. Mr. Fay was finishing. He looked at his watch and, using that formula so familiar to every radio fan, he gave the time and "signed off" until the next morning. He snapped a switch, the red light on the wall went out, and the evening's program was finished.

ALL programs broadcast from station WGY at Schenectady are sent out on four wave lengths. The wave length at the main station is 379½ meters. At experimental stations a few miles away the same programs are simultaneously broadcast on wave lengths of 41.88 meters, 109 meters and 1560 meters.

TUNE IN— *with Goodrich*

... the entrancing strains of the Goodrich Silvertown Cord Orchestra have set many feet a-dancing. These weekly programs, also featuring the Silver Mask tenor, are listened to by thousands of farmers. Every Thursday—ten to eleven, eastern standard time.

... *And enjoy the* BEST *in Footwear as well ...*

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

(Continued from last week)

THE first term in high school had been completed and Tom was home and ready to take up the real job of cultivation. But before that John Roberts again had accompanied him to the Valley and had smiled at the garrulous account of Grandsire Martin as he recounted an undreamed spectacle. For those of the Valley had beheld Sam Woodson, knight of the rod and gun, awkwardly steering his pony team as he "scoured" the shovels of a cultivator that had spent many seasons sheltered only by the "big shed"—all outdoors. "See that the shovels are shining," had been the teacher's instruction and it would be no fault of Sam's if his son was handicapped by rust. After hours of plowing during which time, according to Grandad, Woodson had "plowed up half the mounting" there followed added hours of patient scouring and polishing with sandpaper and grease rag. The cultivator was old and rickety, a relic of long ago when good farmers thought it a disgrace to be caught riding, but the shovels on Bob Durham's new riding cultivator were no more glistening than those of Tom's when he took his place between the handles and started down the first row. It had been amusing to Sam Woodson's friends as he wrestled with rust but they did not know that with each jab of the sandpaper he was moulding a bullet to help his son's warfare. Gone was all pretense of indifference on the part of Sam Woodson. In honor bound not to so much as pull one weed from the field yet in every possible manner he was going to show the faith that was in him and encourage his boy. With the sublime faith of motherhood manifested by Mary Woodson and the winning spirit of his father to cheer him on John Roberts felt that there would be no handicap in lack of family interest to help Tom win. Here he knew were tremendous factors for many a lad who has entered the long grind of a contest with courage and determination has had his ardor dampened and his work ruined by the indifference of those to whom he looked for encouragement. The fight was on and Tom's parents were in the second line, cheering him on to victory.

MY, HOW the corn had grown! Kind had been the gods of sun and shower and the plants were sending down strong rootlets to take on invigorating life. As the team, now trained to fair efficiency, heeded voice and rein and Tom kept steadily on, one by one the dwellers of the Valley came trooping in. Quite casually they came in little groups or singly with lame excuses that they "just happened by and thought they'd stop a mite an' watch Tom work." Still the undercurrent of feeling that farming was a job beneath hunter and fisherman but John Roberts smiled inwardly as with growing satisfaction he noted the comments. "Never seed no field like that did ye?" was the challenge of Lame Bill, avowed partisan. "Ain't nary nother one in this state so good I reckon an' Tom's tryin' to beat all 'Outside' agrowin' corn on it. Put seed in thar that he said was wuth as much as Old Trail, my 'coon dog. Well, it's a sort of pup of Trail's," and Lame Bill chuckled enigmatically. "Ain't nary one of you to pull a rostin' ear this summer or you settle with me. Hear that now?" In the Valley a cornfield was common property in time of roasting ears and Tom grinned appreciatively. But the warning need not have been given. As the Valley folks talked and visited all pretense disappeared and as one family they expressed their faith in the lad who was "blood kin." Little they knew of seed or soil, the handicaps of Tom's environment and little training. The call of blood had triumphed and as one man Peace Valley was behind a champion. "Here's the fellow that learned him how to do it," Lame Bill informed and the mountaineers came crowding to shake his hand. "He's the feller that I told you about 'raisin' wheat' endurin' the war," Sam Woodson told them and with the laugh that followed Roberts saw that they knew the story well. They might not know books but red-blooded courage was a thing the men of mountain and Valley could understand and henceforth John Roberts was to be one of them, blood brother of strong men.

WITH school over, Tom found the chief plain of parting was separation from his room mate. Unlike in temperament but each with strong individuality Tom and Marvin had become far more than just school friends. To them had come the abiding friendship which when clean and pure has been told in song and story since the days of David and Jonathan. Had it not been for the contest plot Tom doubtless would have accepted the generous offer of Marvin's father, accompanied his chum and added to his savings by the liberal wage assured. "You can get home often enough to cultivate your corn," Marvin urged, "and think of the good times we'll have together this summer. Think of the way we'll make mother's fried chicken hide out, too. Jiminy, Tom, you just can't afford to fool your time away on five acres of corn."

"I'd like to go," Tom had responded, "but I'm new at the game and I've got to make up with hard work for what I don't know. Maybe I wouldn't be worth what your dad has offered me. Anyway, I've got to watch my field. I've got a hunch, Pep, that the fellows who stole my seed aren't going to let that corn mature if they can help it. They don't know that I got the box back but they'll find out I've got a good prospect. Day and night if necessary I'm going to be on the job to see that nothing more happens for Mr. Roberts has trusted me."

"You are nutty," had been Marvin's inelegant reply. "Nothing can happen to a corn field." But Tom, playing his "hunch" went over the hills to the Valley where he would work and watch. True, he might pick up a little money by helping Mr. Benson after use of the team and plow had been repaid in labor but only $14 of the generous sum his uncle had provided was left at the term's close. No very promising foundation for future educational expense but deep in his heart Tom had resolved that somehow he would carry on. He was beginning to realize what possession of the magic key of knowledge really meant to one who would strive to gain possession and then use it to unlock the mysteries of Mother Earth.

FAITHFULLY John Roberts visited their plots and supervised their project work. During the summer months his "flivver" became a symbol of progress to the folks of Blanton community for wherever Roberts went things grew as they never had grown before. His field of service was proving far more than work with his boys alone for seldom did Roberts visit a farm home that he was not called upon to give helpful advice or suggest some labor saving improvement which would mean much to mother or dad. At first the farm folks had held aloof, asking these little favors only on suggestion of the lad in school, but soon the young teacher with his sincerity and zeal had won all hearts. Before many months had passed they were wondering how Blanton neighborhood ever had gotten along without the pleasant and efficient chap who had a habit of saying, "Sure, let's go ahead and do it," then proceeding to lead the way. It was as a leader, not one who drives, that Roberts inspired his students during the grind of class room or summer toil. Occasionally he called the boys together for demonstration work and one such occasion again found Tom Woodson and Marvin Manning at the Durham farm. There was another visitor, too, for "Slim" Barnett had come to feel a proprietary interest in Tom's field and had invited himself to go along and see what a rival's project looked like. So they stood together as Durham, cocky and arrogant as ever, paraded his fine team before the gathering then started down a corn row.

"Doggoned if this corn ain't about as good as ourn," confided "Slim" to Tom. "It ain't right that anything should grow so good fer that feller. He's got a mean eye. Look at the ornery cuss! Any feller that abuses a dumb critter ought to be shot." The horses had not turned promptly at the row's end and "Bull" was lashing them savagely. "We gotta skin him, Tom," was "Slim's" decision. "It would be a plumb disgrace to let a skunk like that whup us."

Tom grinned for the extent of "Slim's" work as "we" was draping his fat form over a stump while his friend cultivated. "We'll do our best, 'Slim'," he replied, "and who knows, maybe the time will come when you will have a lot to do with making a win possible." It was good to have friends and well wishers. Little, did Tom realize that his casual remark to "Slim" was fraught with prophesy. But seeing the Durham field with its rich promise of future growth brought forceful reminder that right here at home was real competition while out over the state thousands of other lads were bending every energy toward winning promised rewards. As the ponies took their way homeward Tom's lips set in grim lines that made him seem an older boy. He wasn't beaten in the first quarter's play, it would take the full game to tell who was on the winner's end. But Tom missed the friendly conferences with John Roberts, the inspiration of his irrepressible smaller chum. His work was in danger of becoming just a grinding job, a bad thing for one of Tom's intense, silent nature. And Mary Woodson, no student of psychology but a mother with the intuition of mother love, knew that something needed to be done. Home to the cabin one night came Tom to find Marvin Manning sitting under a shade tree, ineffectively trying to make the pup Trailer sit up and beg. With a whoop Tom grabbed his chum and the boys executed a war dance while Trailer danced excitedly about.

"Your mother invited me to come over for a day or so and go bass fishing," Marvin informed. "Said she thought you were working too hard. Now you ought to do like me, save yourself for a good old man." Tom grinned in sympathy as Pep went hobbling across the lawn, picturing an old, decrepit man bowed down by toil. Perhaps it was more than could be expected, this keeping one's nose to the grindstone every day. Wouldn't Pep's eyes stick out when he showed him some of the beauties that lurked in the clear, deep pools which only he and his father knew. Up in the loft that night the boys visited and laughed until Father Woodson's warning voice reminded them that unless they hushed soon there would be little sleep before the morning's quets. Gone was the obsession of fighting a winning battle, the constant reminder that unremitting care was necessary if his corn crop was to come up to expectations. Tom was just a boy again with no responsibility except that of catching the biggest bass that ever had taken fly. And his mother smiled in her sleep knowing that wise had been her plan.

DAWN found the boys slipping noiselessly along a stream which rippled over gravelled bars and sandy stretches to fill deep pools whose placid surface shone silvery white in the rising sun. Marvin carried a minnow bucket. Tom's hatband was adorned with a row of artificial flies. Stealthily they approached a pool and just as they stopped to peer thru the surrounding bushes a giant bass broke water to leap high and fall with a resounding splash. "Geementily!" Pep gasped, "didga see that whale? Lead me to 'im. He's my meat." Tom grinned silently as he showed Marvin how to adjust a minnow then with a beautiful cast whipped his fly over the mirrored surface of the pool. Like a flash the lure was taken and after a few minutes' exciting play Tom drew his prize to the water's edge, then held him high while the excited Pep danced and yelled like a Comanche Indian. "Shut up," was Tom's stern command. "You'll scare all the fish into deep water. One of us may catch that big fellow if we keep quiet and try long enough. Now get that minnow wet." And as Marvin awkwardly cast his baited hook again there was a strike and within a minute Tom's visitor was rolling on the bank as he frantically clutched at a big bass which, tossed far back and freed, was flopping back to his watery home. "Grab 'im, Pep!" Tom yelled, then dashed forward but too late. With one final flop the fish, eluding his pursuer's clutch, regained the water and a second later Marvin fell sprawling to plunge head down into the pool. As he crawled out a dripping and dishevelled figure Tom gave way to howls of mirth. "That's goin' in after 'em, old man," he yelled, wiping tears from his eyes. And for once a crestfallen and subdued youngster had no reply to make. But game to the core Pep demanded, "Show me another fish. I'm learning how to make 'em bite, anyway."

"TOO chilly for you to wear wet clothes," was Tom's rejoinder, "and there isn't going to be any trouble catching all the fish we can carry home. They are biting today and I'm going to add that big fellow to my string. We'll just build a fire and after you get dried out and we've fished a few other pools we'll come back here." Sitting near a roaring fire Tom confided to his chum that of all the lads of his acquaintance Marvin was the only boy who ever had been brought to the hidden pool. Nor did Marvin fail of understanding as to what that might mean. For stream and forest had been store-house for the Woodson family. Long before the garments were thoroly dried the impatient visitor had donned them and the boys went on to try their luck at another pool. The shadows were lengthening when they came back to the starting place and on Tom's stringer hung many a bronze beauty while to Marvin's lure had come many fish only to be lost in his inexperienced eagerness. Only two small bass were the reward of his first day's effort but to Marvin they were more precious than if cast from gold. Tired but bubbling with happiness he sat down on the bank as Tom prepared for a final cast.

"Try your luck, too, Pep," Tom advised. "You never can tell what might happen. You've still got a frisky minnow and another minnow like those you are carrying might want to make a supper of him. You are welcome to anything in the pool except the big fellow, he's my meat."

No challenge ever was delivered to Pepper Manning without acceptance. "That so? Well, I wouldn't swap my 'minnows' for your whole blamed string. But just for that, Mister Smarty, watch your Uncle Fuller show you how to fish. Gimme one of those flies." Grinning in amusement as he "kidded" his chum Tom fastened the fly then let his own lure sweep in a graceful curve. But altho he reeled and cast again and again not even a minnow rose to the alluring bait. Meanwhile, a few steps away, Marvin was making ineffective efforts to get his hook a few yards from the bank. "Coming fine, Pep," Tom commended but like every expert fisherman he couldn't help joking the novice who now and again snarled his line. "You'll make a real fisherman in about a thousand years." But a second later all "kidding" was forgotten as Marvin's fly disappeared in a swirl of water and as he drove the hook home a mighty bass rose high to shake savage and dripping jaws as he fought to free the stinging thing that held him fast.

"Jiminy Crickets! Tom, oh, take 'im! Lord A'mighty he's gone." Down went the bass to unknown depth while Pepper, reeling frantically, implored his friend to take the rod. But Tom Woodson, true sportsman and friend who knew what winning such a victory would mean refused tho his fingers tingled for the feel of the rod and reel. The fish was Marvin's, win or lose, and in calm but intense tones he gave advice. Here was a battle royal between a lad who never before that day had cast a lure, and a scarred veteran of the finny tribe. Up came the bass, to leap high again, a magnificent picture against the setting sun. And now with clenched teeth and steady hand Pepper Manning fought a fight that seemingly could have but one end.

"Easy, old man! He's tiring, give him line. Now reel him slow. Let him jump," as the bass made one last desperate leap. "He's hooked to stay, never get loose unless you tear the hook out. No! No!" as Marvin made as if to toss the fish on shore. "Play him until he's all in. Easy, easy, you've got him!" With Tom's confidence compelling presence at his side Marvin carried the fight until finally the great bass weakened and was gently drawn to the water's edge. There Tom slipped his fingers into the fish's gills and held him up, a prize undreamed of in all Marvin's wildest imaginings. Wordless for a moment they stood high on the bank, the great bass between them and then with the reaction the lad who had fought and won broke forth in alternate laughter and sobbing. "Know exactly how you feel," Tom comforted as he patted his chum's shoulder. "My dad helped me catch my first big one and I nearly throwed a fit after it was all over. Old man, this is the biggest bass that ever came out of this creek. Say, I'll tell you what we'll do." In his excitement Tom was relapsing into the vernacular of his father. "This big feller ain't goin' into no skillet. Lame Bill is a natural born taxidermist and his house is full of mounted animals. He'll fix this feller up until you'll think he's ready to jump at you. Boy, some fish!"

(To be continued next week)

MOTOR
WOOD BURNING STOVE

Did you ever hear this one?—

He was selling meat-slicing machines and his first canvass was a Dutch butcher. He started right off with a demonstration, slicing diligently at the slab of bacon until it all had been cut. Then he turned to the butcher and asked: "What do you think of 'er? Some machine, eh?"

The butcher, eyes shining and his face wreathed in smiles, slapped his hands approvingly and said: "Py gollies! Dot's fine! Dot's a great t'ing. Effry butcher in dis town should have vun."

Then elapsed a period during which neither spoke. The salesman placed another slab of bacon in the machine and repeated the demonstration. Then he turned again to the butcher. "Don't you think that's a time saver—a real investment?"

"Sure! Dot's de stuff, all right."

"You think it's a good thing for you?"

"Sure! Dot's de perries."

"You know you need it, don't you?"

"Sure! I should say so."

"Well, why don't you buy it?"

"Vell, vy don't you ask me?"

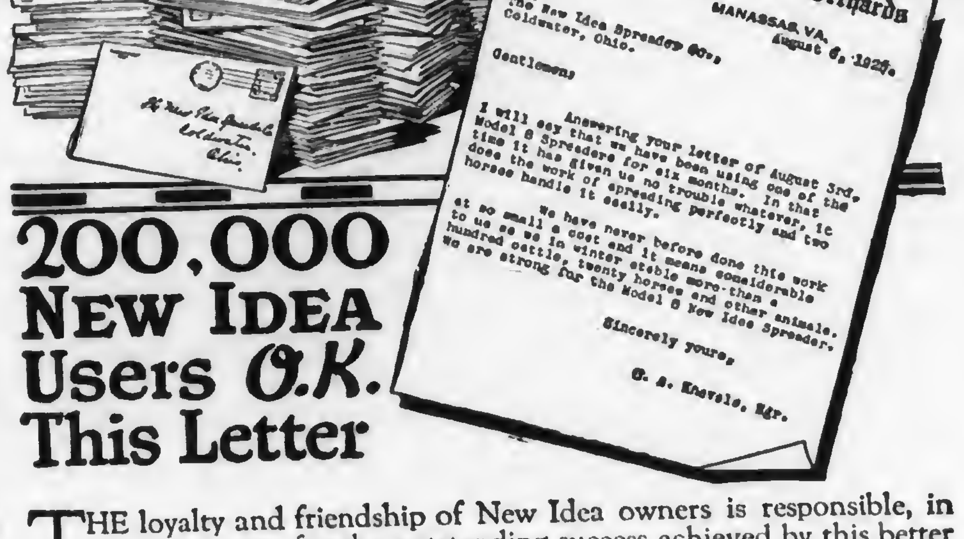
William was thirsty for knowledge and interesting facts shone like jewels in his brain. "I read today," he said to Michael, "of the wonderful progress made in aviation. Men can now do anything—absolutely anything—a bird can do."

But Michael was tired of wonders. "Is that so?" he answered. "Well, when you see an airman fast asleep, hanging onto a branch of a tree with one foot, I'll come and have a look!"—London Answers.

"Yes," said the man in the ancient overcoat with bulging pockets, "Bill and me are in partnership, but we don't carry the same goods."

"What do you mean?"

"Why, Bill goes around sellin' a stove polish that leaves a stain on the fingers, and I go around next day to the same houses with the only soap that'll take it off."—Haversack.



The New Idea Spreader Co, Coldwater, Ohio.

Ben Lomond Farm and Orchards
MANASSAS, VA.
August 6, 1925.

The New Idea Spreader Co.,
Coldwater, Ohio.

Gentlemen:

Answering your letter of August 3rd, I will say that we have been using one of the Model 8 Spreaders for six months. In that time it has given us no trouble whatever, it does the work of spreading perfectly and two horses handle it easily.

We have never before done this work at so small a cost and it means considerable to us as we in winter stable more than a hundred cattle, twenty horses and other animals. We are strong for the Model 8 New Idea Spreader.

Sincerely yours,
G. A. Shavele, Mgr.

200,000 NEW IDEA Users O.K. This Letter

THE loyalty and friendship of New Idea owners is responsible, in great measure, for the outstanding success achieved by this better spreader. Our best advertising has always been the well-deserved praise of farmers who have bought our machine.

NEW IDEA SPREADER
An Invention ~ Not an Imitation

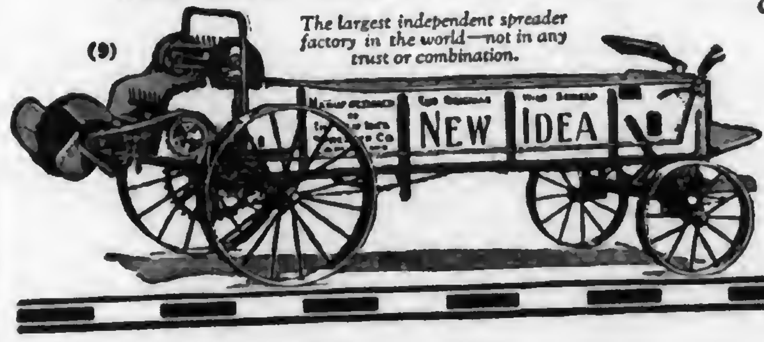
Our present Model 8, introduced about two years ago, is the last word in spreader construction. It is the perfect result of 26 years of hard work, honest service and careful study. And just as we have always set the pace in the spreader field, we again lead the procession with our "balloon tires." They are extra wide, ride over soft fields without cutting them up, and have continuous cleats which give better traction and easier riding. No wonder users say it is "the easiest running Spreader built."

See the New Idea dealer today or write us direct for catalog and prices.

THE NEW IDEA SPREADER COMPANY
COLDWATER, OHIO

The largest independent spreader factory in the world—not in any trust or combination.

(9)



Covered by Original Patents. Widely Imitated—Never Equalled

FAMOUS Ohio SPREADERS

Special "Gold Bond" Offer

In every neighborhood where a farmer buys this spreader we sell many more.

Farmers tell us that it is the strongest, best built machine they have ever seen or used.

To get this spreader into every neighborhood we are making our special "Gold Bond" offer. It will save money for every farmer who needs a spreader.

Ask your dealer for particulars on this remarkable offer—or if he cannot tell you about it—send us his name.

Congratulations to the prize winners in the contest "Winter Is Here." The drawings were so good that I had to give extra prizes! That's fine, keep it up. We'll draw again sometime.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—How did you like Christmas? I think it's just great. I love to go around Christmas eve giving baskets of food to the poor. How many Forum readers do that?

I have many pets but the ones I like best are Prince, my Scotch Collie, and my Angora kitty, Fluffy.

I love flowers and have a big garden filled with all kinds. Now I have a plot fifty by 100 feet filled with Dutch bulbs of tulips, narcissus, hyacinths and some iris and other bulbs. Do you like flowers and birds, Cousin Ruth?

FIRST PRIZE DRAWING
Bernice Stanley, Otsego County, N. Y.

We have a tree that has a nest of birds that I never saw before. They are pure white with a tuft of feathers of black on top of their heads like a blue jay.—Louise Stifany, Lackawanna County, Pa.

Dear Cousin Ruth:—I wish you a happy New Year. We all had a splendid Christmas and hope Santa Claus filled your stockings, too. I am nine years old and in sixth grade at school, where all the eight grades are taught.

SECOND PRIZE DRAWING
Thelma Lucille Miller, Franklin Co., Pa.

Our new consolidated school is nearly ready for us to go into. Four rural schools will go in the new building. I live on a farm of 218 acres, and enjoy feeding the calves, chickens, and little pig.—Nina Duvall (9), Washington County, Pa.

Dear Forum:—I wish more boys from Centre County would write. I always read the letters and give the recipes to my mother.

We don't live on a farm but we have three acres of a meadow. We have two cows, a Holstein and a Jersey. My brother and I have a dog that is a very good watch dog. —William Everhart, Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—I go to Church School and I am in the eighth grade. Yesterday was Christmas and we had a chicken roast and had a fine time. I received lots of presents.

We live on a farm. I milk two cows and help my mother with all the work in the house. We had an entertainment at our school on the Thursday before Christmas. We had a fine time. I was Mrs. Santa Claus in a dialogue and it was a funny one. Our teacher gave us a tumbler for our Christmas present and Santa Claus was around and treated us to candy and oranges.—Freda K. Spence (12), Adams County, Pa.

Dear Cousin Ruth and Forum Friends:—Sometimes we play football at our school. We like to play football. Cousin Ruth, have you seen guinea pigs? I have two. In summer I put them outside on the lawn, while in winter I keep them in a coop so they won't freeze. They are pretty little animals and I like them very much.

My father has taken Pennsylvania Farmer a long time. I always read the Forum page. I like it very much so I decided to write.—Bobslaw Nowilas, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—Cousin Ruth, do you like skating? I like skating very much. The water is frozen over now so I am going skating today.

Well, Cousin Ruth and Forum Friends, this will be the last time I can write to you this year. We have watch service at our church tonight. —Anna Gaventa, Salem County, N. J.

Dear Cousin Ruth and Forum Friends:—I have four rabbits, two gray ones and two whites ones, but they are tame. I also have two cats. I almost ate too much candy on Christmas and didn't feel very good.

Cousin Ruth, did you enjoy your Christmas? I did, and I hope you did, too. Did you have a Christmas party? I didn't, but I think it would be a fine idea to have parties for poor children who do not have as many things as we do. I help my father at the barn. We have about sixty or seventy chickens. My sister Carrie milks the cows.—Iva Shadle (12), Schuylkill County, Pa.

Dear Cousin Ruth:—I live on a large dairy farm called Braeburn Farm. It is a branch of the Hermes-Grove Dairy. My father and big brother milk sixteen cows every day. They keep thirty horses and about 210 cows. I like to watch the bottling machine bottle the milk.—Blanche Eastman (11), Westmoreland County, Pa.

Dear Cousin Ruth:—I would like to belong to your dandy club. I'm in the eighth grade but I'm poor in writing so excuse it. I go to the Eberhart School in Butler County.

For pets I have two little calves. Well, I didn't know that I could write such a long letter. I hope you won't get tired reading it. Hope you have some more drawing contests.—Paul Krenisky (13), Butler County, Pa.

FIRST PRIZE DRAWING
Paul Krenisky, Butler County, Pa.

Dear Cousin Ruth and Readers:—I hope Santa Claus was good to you and all the Forum members. He was good to me and brought me lots of nice presents.

Our school had a Christmas entertainment on December 23rd. I was in it. My father got a radio for Christmas. I like it very much.—Clementine Beaver (11), Perry County, Pa.

Dear Cousin Ruth:—We have two weeks' vacation for Christmas. My I hope it snows so we can go sledding. We have two sleds. We have a tree. I went with my daddy after it. We always have lots of fun at Christmas time. Does someone have a good recipe for making pop corn balls?—Gladys Fuller (9), Susquehanna County, Pa.

Dear Cousin Ruth:—In looking over the last Pennsylvania Farmer I saw a boy who had been trapping. I have been trapping, and I have caught four skunks, three muskrats, one mink, and four weasels. I have had pretty good luck, I think.

I have a pony, horse, one spaniel and a Collie dog and two kittens. We have thirty acres and five acres of woods. It is very cold here now.

I wish some of the boys would write about their trapping.—Abbott Conley, Morris County, N. J.

Dear Cousin Ruth:—I enjoy reading Forum letters, especially from the boys. I live on a farm. I can milk, drive horses, and do lots of work on the farm. We live one and one-half miles from school. So we drive a pony. I have one sister that goes to school with me. I have two brothers and two sisters. We have lots of fun playing together with our pets and pony.—Boyd W. Smith (10), Tioga County, Pa.

SECOND PRIZE DRAWING
Louise Henrie, Columbia County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—This puzzle is not so hard as it looks. "My first" means the first letter of the word you are to find, and so on thru the little rhyme. Several of the letters—the third, fourth and seventh, for example—will be easy to find. I'll help you just this much—the first letter is "V,"—now get your pencils and a piece of scrap paper and find the others. Mother will tell you that you need this same important thing which these letters spell if you want to store apples, and father knows that even the hen-houses have to have it. When you have found this word, send it to me on a POSTCARD so that it reaches me by January 23rd. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

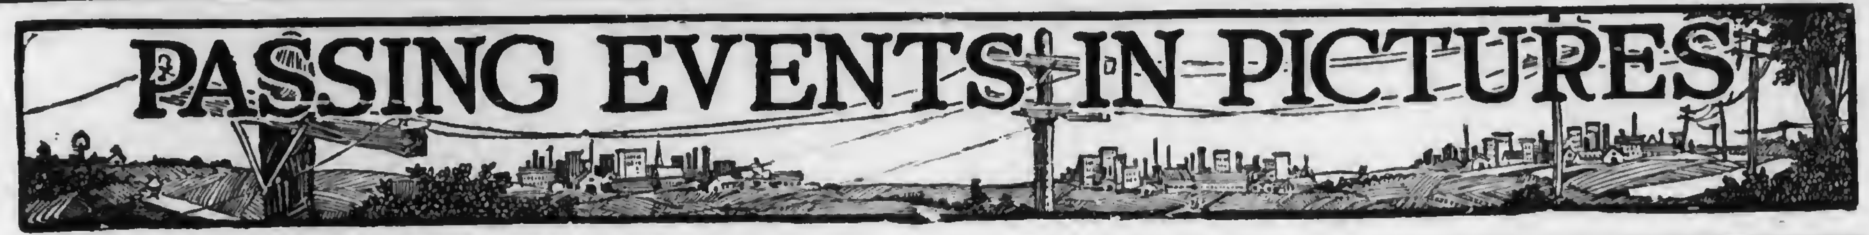
The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

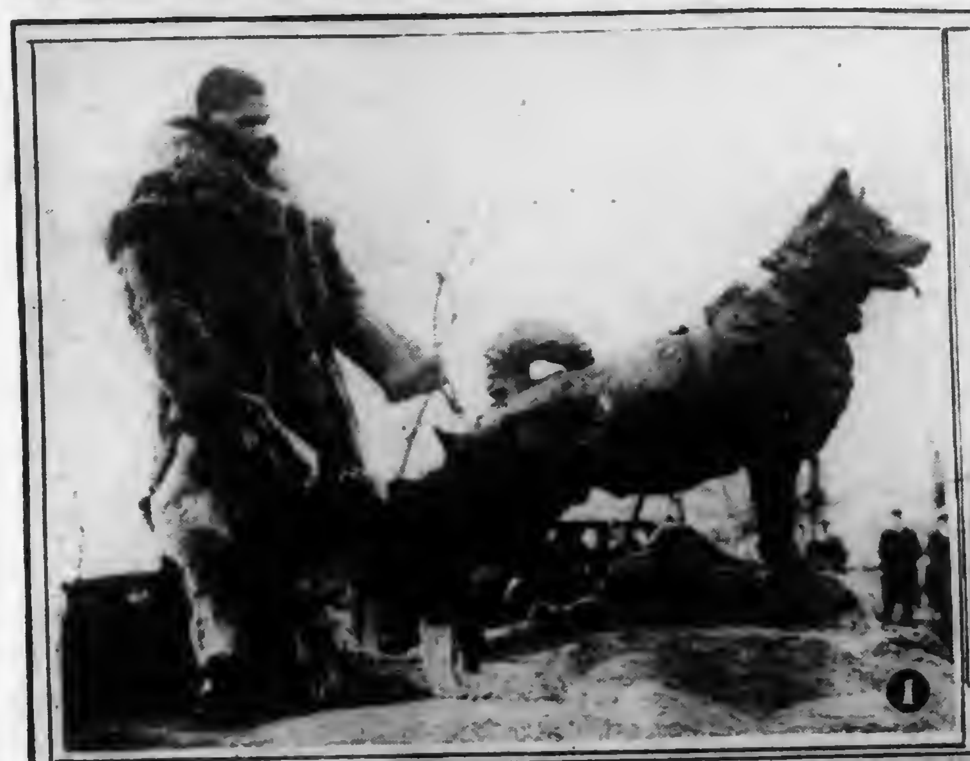
The answer to the puzzle published in the December 26 issue of Pennsylvania Farmer is: SAFETY FIRST.

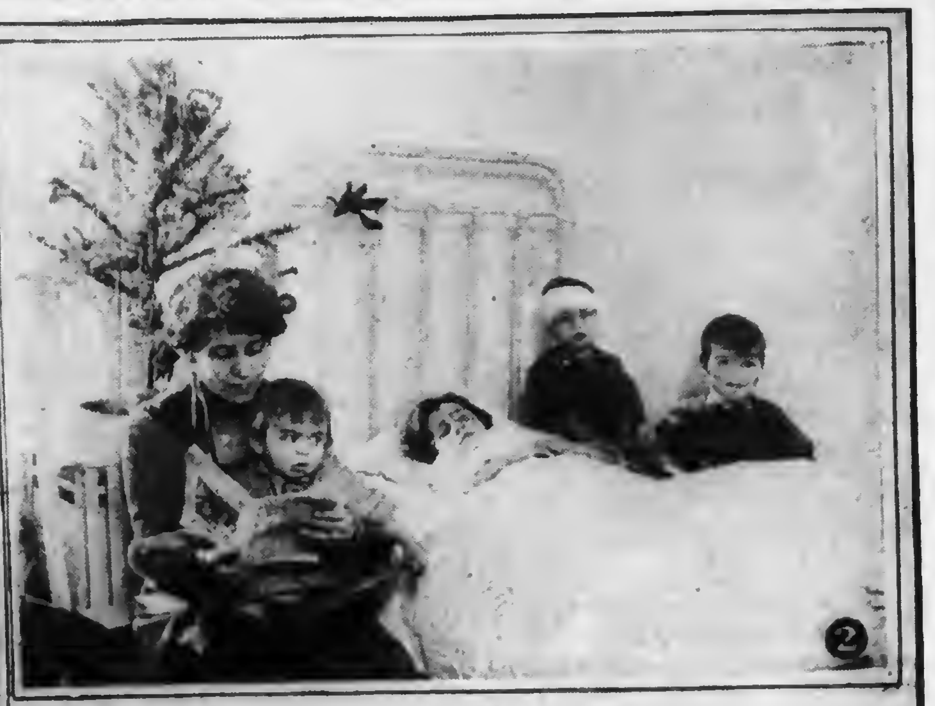
The puzzle prize winners are: Florence Bealor, age 13, Newport, Pa.; Nina Duvall, age 9, Coal Center, Pa.; Glenn Fulmer, age 10, Shelocta, Pa.; Paul Greenfield, age 10, Jasper, N. Y.; Mamie Kolodcbak, age 9, Millville, N. J.; Frances Lauver, age 12, Millersburg, Pa.; Garson A. Lutz, age 12, Kempton, Pa.; Edward W. Mays, age 10, Clarion, Pa.; Florence Schuler, age 12, Jackson Centre, Pa.; Mike Spewak, age 9, Waymart, Pa.

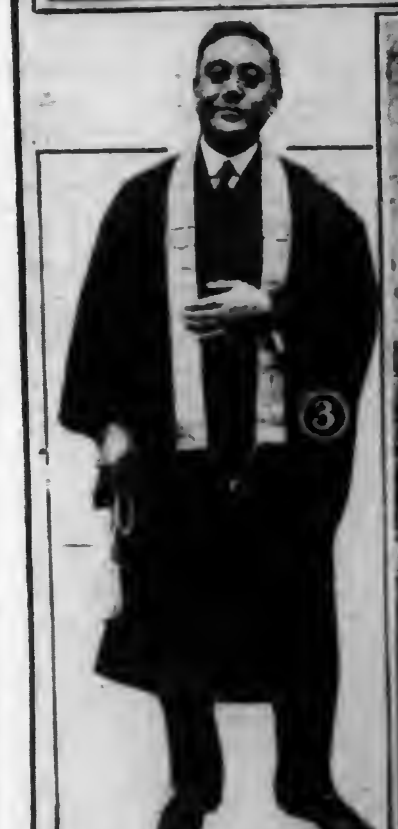
My FIRST is in THRIVE but not in THRIFT.
My SECOND in PRESENT but not in GIFT.
My THIRD is in TEN but not in THREE.
My FOURTH is in PLANT and also in TREE.
My FIFTH is in PINK and also in WHITE.
My SIXTH is in BATTLE but not in FIGHT.
My SEVENTH in ANGRY and also in MAD.
My EIGHTH is in FATHER but not in DAD.
My NINTH is in LIONS and also in MICE.
My TENTH is in OATS but not in RICE.
My ELEVENTH is in NOT, NEITHER and NOR
But not in IT, EITHER or OR.
My WHOLE is something you need in each room
To bring health and happiness into full bloom.

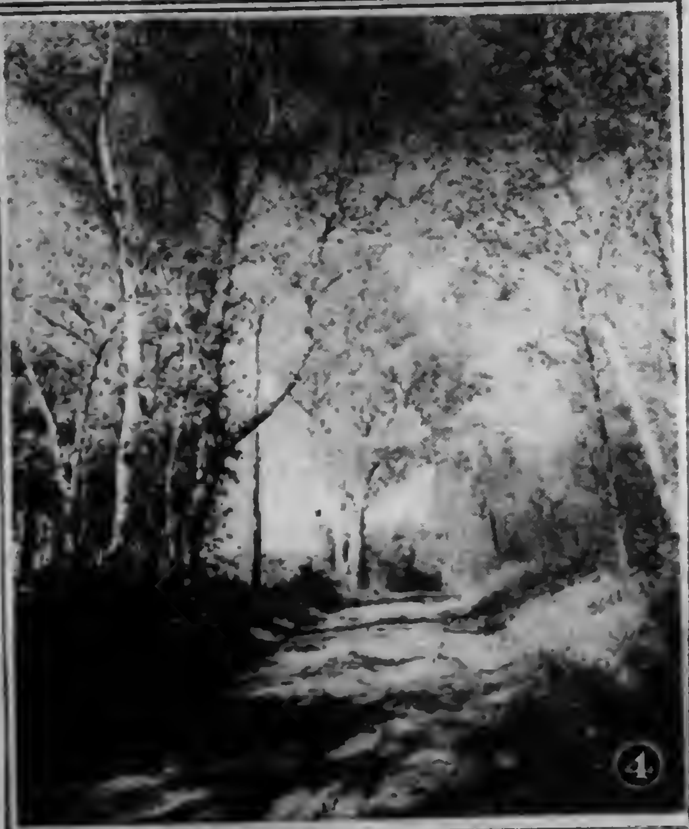


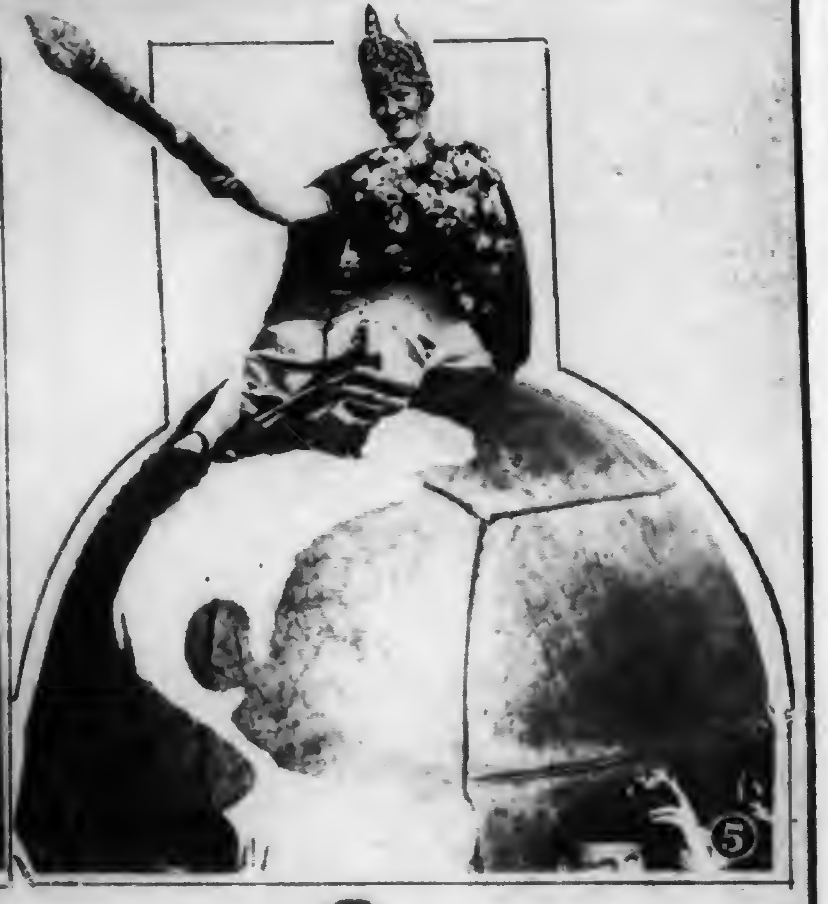
PASSING EVENTS IN PICTURES

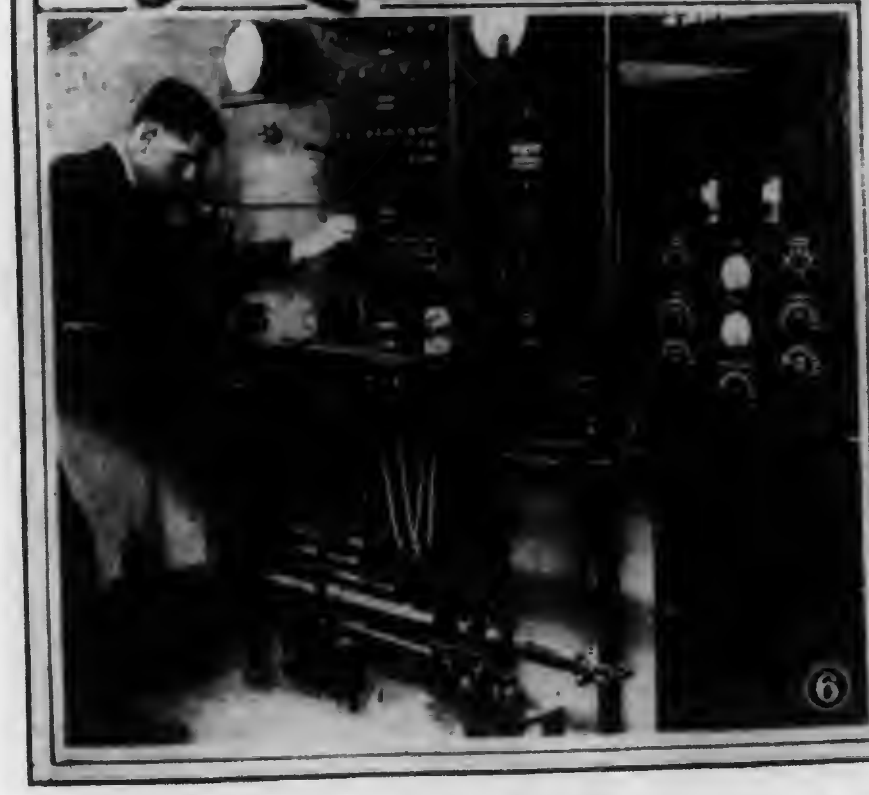


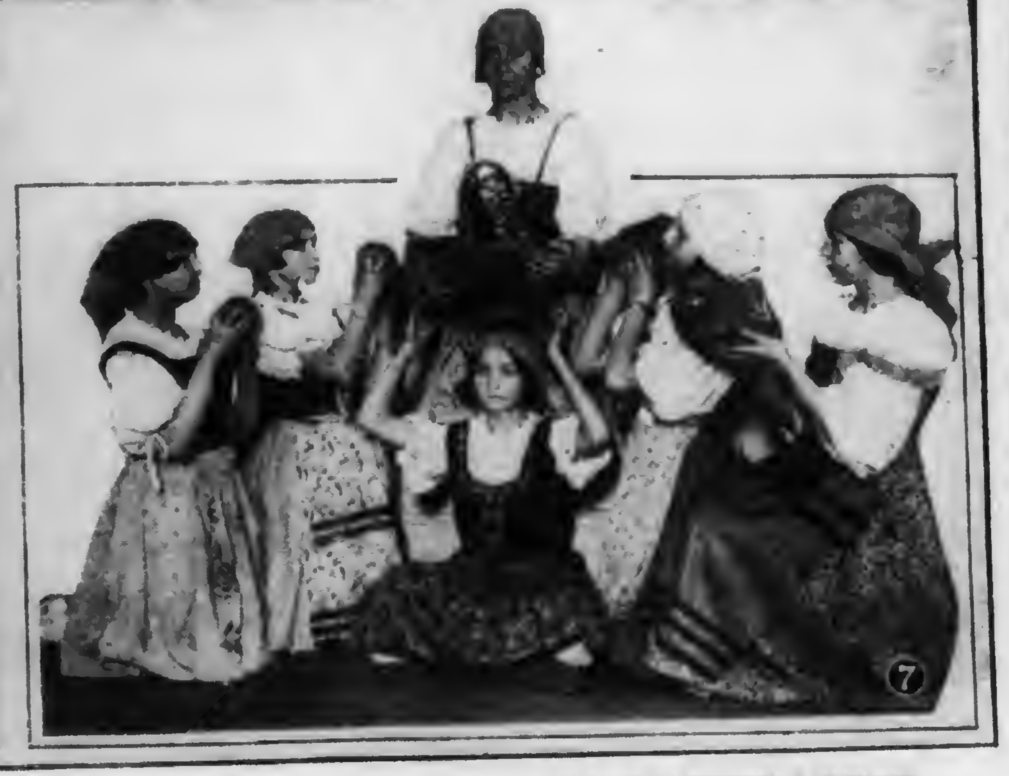












(Copyright by Underwood & Underwood)

1.—Last winter Gunnar Kassan and Balto drove to Nome, Alaska, with diphtheria anti-toxin to relieve the epidemic there. This winter a monument of bronze was unveiled in New York City by Gunnar Kassan with Balto by his side.
2.—Mrs. Coolidge found time during the holidays to bring happiness into the lives of the unfortunate little tots at the Children's Hospital in Washington, D. C.
3.—Count Sonyo Otani, head of the largest sect of Japanese Buddhists, recently visited President Coolidge.
4.—White birches, the white hands of the forest, lure many motorists to the roads of Maine.
5.—A novel float in the Tournament of Roses, an annual event, which takes place on New Year's day in Pasadena, California.
6.—No doubt many enjoyed the program broadcast the world over from this powerful radio broadcasting station on New Year's day. A part of the control room is photographed here.
7.—The custom of giving miracle plays on Christmas day was again revived by the New York Symphony Orchestra.

Winter Jams and Jellies

Some Delicious, Different, and Tasty Recipes

THE supply of sweets put up in summer diminishes fast. Here are delicious jams, different from the usual, that may be made in winter and kept thru the summer for picnics.

PINECOT PRESERVE

Number three can grated pineapple, or broken slices cut into pieces

½ cup lemon juice
1 cup light brown sugar
1 pound dried apricots
½ cup pecans

Soak apricots overnight in water to cover, cook, rub thru sieve, add pineapple and sugar. Cook five minutes, add nuts and cook five minutes. When dropped from tip of a spoon on a cold saucer this should be thick enough to spread.

ORANGE JELLY

½ pound white part of orange peel
½ pint water
2 tablespoonfuls lemon juice

Peel orange thin, using yellow part, cut in thin strips with scissors for marmalade. Run white part thru food chopper, let stand with water and lemon an hour, add 1½ pints cold water, let stand an hour. Boil gently ten minutes, cover and let stand till cold, boil five minutes, and let stand covered till cold again. Drain thru jelly bag, then thru flannel to clarify. This is orange pectin which will make other fruits jell. Combined with orange pulp and juice it makes orange jelly.

MINT JELLY

2 tablespoonfuls lemon juice
1 pound sugar
2 drops oil of peppermint
2 drops green vegetable coloring
1 pint orange pectin.

Orange pectin, sugar and color are boiled almost to the jellying point, flavor added and when it gives a good jelly test, is poured into hot jelly glasses which have just been boiled. After a few moments the scum which rises is removed with a teaspoon. When cold, cover with smoking hot paraffin, put on cover, and label.

The jellying point is 219 degrees Fahrenheit. When you lift the wooden spoon, move back and forth a moment, then drop and you will notice three drops running together to form a sheet or flake.

AMBER MARMALADE

1 large orange
1 large grapefruit
1 large lemon
1 pound sugar

Select tender, clean, smooth thick-skinned fruit. Wash and pare and run white part thru food chopper, cut yellow part in thin strips; remove "rag" and slice pulp. Add three times the bulk of water, boil fifteen minutes, let stand overnight. Next morning, boil ten minutes and let stand again. When cold, reheat, add sugar and cook over a rapid fire to the jelly stage about 222 degrees.

For conserve add 1 cup pineapple, ½ cup seedless raisins and ½ cup nut meats. Marmalade should be clenr, not at all brownish in cast, with strips of peel transparent and tender.

CALIFORNIA CONSERVE

3 pounds dried apricots
2 pounds raisins
2½ pounds sugar
Juice of 2 soft skinned lemons

Soak apricots overnight in lemon juice and water covering them, cook in the same water, add raisins, sugar and lemon. Add finely cut lemon peel. Cook until a rich syrup is formed.

CHERRY CHUTNEY

1 quart canned cherries
½ pound seeded raisins
1 cup brown sugar
1-16 teaspoon ground allspice
⅛ teaspoon ground cloves
½ cup honey
¼ teaspoon cinnamon
Grated rind of one orange
2 lemons
1 cup mixed pecans, hazlenuts and Brazil nuts

Cook until thick, taste to be sure you like the spicing, and pour into glasses.

QUICK JAM

½ pound mixed dried fruits, figs, apricots and peaches
2 cups water
2½ pounds sugar
½ pint bottle commercial pectin

Soak fruit overnight, run thru food chopper, add water in which it was soaked, sugar and pectin. Cook to jellying point without scorching. This jells quickly.

PINEAPPLE CONSERVE

1½ pint pineapple
½ cup currants
½ cup figs, chopped
1 cup orange pectin
¾ cup sugar
1½ cups water or more if needed

Mix fruits, cook five minutes, add sugar and pectin, cook till it jells.

PRUNE CONSERVE

4 pounds prunes
2 pounds sugar
2 small oranges
½ pound English walnut meats

Soak prunes and sliced oranges overnight, boil until tender, mash, and lift out pits with a teaspoon. Add sugar, cook until thick, adding nuts five minutes before finishing, using heavy aluminum kettle, stirring often with wooden spoon to prevent scorching.

CHEAP PRUNE JAM

4 cups water
1 cup prunes
½ cup dried currants
2 oranges
1 cup sugar

Soak fruits, cook till tender, remove pits, add sugar, cook till it jells. This makes only four glasses.

These jams are all tested, all good to taste and different. If you find you do not like raisins or the bitter flavor of orange peel, omit. Most of my friends like these flavors. These jams are not oversweetened; they taste of the fruit rather than being syrupy. If you prefer to use more sugar it may disguise the fruit flavor.

Be careful to get the exact jellying point, when the jelly just flows from the spoon in a sheet. When cool, it must quiver, yet not flow. The jams spread easily. When dropped from a spoon they retain the slightly rounded shape. Do not let a scorched flavor spoil them.—Mrs. Doris W. McCray.

Comfort at Last

TWO years ago we installed a pipeless furnace and during the severe winter our house of seven rooms is comfortable. The dirt is all in the cellar, and the heat is more evenly distributed. We are all pleased with it and find it an economical means of heating.

Our latest improvement is a lighting plant for house and barn. The plant needs very little attention, gives a fine light and costs less than oil used to. This plant also pumps our water into the house and barn. Running water for the kitchen and bathroom is what we wanted long ago, but funds were not available. But it isn't always the lack of money on the farm that is responsible for existing conditions, often mere thoughtlessness is the cause.

We have not acquired these conveniences all at once but have bought them one at a time so that we have not felt the expense so much.

Often the farm woman herself is to blame for going along in the same old rut and doing without labor savers. Let her realize the problems before her and rearrange her kitchen in such a way as to take the fewest steps in doing her work. If we wish to improve our minds, and make our homes more beautiful and comfortable, we must eliminate the kitchen drudgery by the use of up-to-date devices.—Mrs. S. U.

Using Up the Silk Scraps

Most Homes Have a Place for a Woven Cover

THERE are many uses for the old silk petticoats, dresses or scarfs but one of the most attractive and durable is to have woven covers for the piano bench, library table or davenport. Cut into strips one inch wide and sew together as for rag carpet. If possible have two or three

balls of solid color to be woven across the ends.

The illustrated cover has a wide stripe of black at each end, about four inches deep, the next three stripes are one inch each, bright pink, black and white checked, then rose and white figure, blue two inches wide, yellow three inches wide, bright green one inch. The body of the cover is made of short strips of all colors.

A square woven with narrow stripes in border makes a wonderfully pretty piece for the round table. If used for the cedar chest it can be woven the desired length to have the stripes hanging over the ends.

One and one-half pound of rags will make a yard of cotton but the silk requires about double the weight and sometimes a little more. —C. S.

Sugar-Cured Bacon

THE bacon should be in pieces one inch to one and one-half inch thick, six to eight inches wide, and fifteen to eighteen inches long.

The "cure" is made by allowing for every 100 pounds of meat, eight pounds of salt, two pounds of granulated sugar and two ounces saltpetre mixed thoroly together.

Sprinkle the bottom of the container in which the meat is to be packed with the mixture.

Dampen the top side of the pieces of meat (not the skin side) with a whisk broom dipped in water. Then rub the salt mixture thoroly into the top, edges and ends of each piece.

As soon as a piece has been so rubbed, lay it, skin side down, on the layer of salt in the container. Sprinkle with the salt mixture, put another prepared piece of meat in and proceed as before.

Every seven days from the time of first packing, take the meat out, rub each piece as before, sprinkle with the salt mixture and repack.

The bacon that is one inch thick should cure for fifteen days, that of one and one-half inch thickness twenty-two days. Heavier bacon takes more time in proportion to its weight.

At the end of the curing period, wash the meat thoroly, hang in the smoke house for twenty-four hours to drain, and smoke until it is a light chestnut color.

Rosy Cheeks and Health

CHRISTMAS has gone leaving in our homes many toys and interests, new to our little folks. You have undoubtedly kept up with your reading and profited by Mrs. Mumaw's splendid article in the December 26 issue of Pennsylvania Farmer offering suggestions on the occupation of the little one under six. Now do not swing the indoor pendulum too far, but remember that out-of-door games, involving fresh air and health-giving exercise, by far eclipse any set entertainment in the house.

Dress the little tots comfortably for needed warmth, without destroying freedom for action, and suggest the outside. Normal youngsters will prefer it to any other fun. It will help their appetites and their rest periods, build up their general health, give them red blood and rosy cheeks. It also helps parents to chase with them a bit, too, but still it's better to let them alone for the greater part of the play time.—G. S. S.

Have You Made This Mistake?

Daughters Should Be Allowed to Cook at Home

WE HAD enjoyed so much having her in our home—the girl who had earned several domestic science diplomas—and I had learned—oh so many things from her—this bit of a winsome girl who went into my kitchen and made a cake that she knew would not fall and why it would not.

"How lucky your parents are to have such a capable daughter," I said to her, "especially your mother who can take a real vacation with ease when you arrive."

And she laughed, mirthlessly.

"You have touched a very tender spot in my anatomy," she said by way of explanation. "My mother to this day would not trust me to get a whole meal unassisted. You know my aunt has always lived with us and I was always crazy to mess around in the kitchen, but they shooed me away—they could do it much quicker because they knew how. And so I took a domestic course and then another—to learn how—only they have no faith in my type of learning."

She twisted the tell tale ring on her finger and added: "But I know that I will put my course in college to practical use soon."

How many mothers—good ones—are in the class with this mother? It is so much easier to do it ones self than be patient while the young daughter is learning. But it is doing the daughter a grave injustice not to let her learn the rudiments of cooking and housekeeping in her own home.

Above all when the girl goes to the kitchen to cook don't nag and boss. She has to learn the same as you and I did—by experience. If she asks for advice, give it, judiciously, not lavishly, and if she makes a cake that fails remember that there are things in life more tragic.

One wise mother of my acquaintance has established a nice custom in her home. She has one daughter who is now in the teens. Every other week the daughter has entire charge of the kitchen and the mother does not go near. The daughter does all the buying and tries a new dish each meal. During that week the mother has charge of the housework (the washing is sent away) including the family mending. The next week they alternate.

One Mother's Method

This mother and daughter have another nice custom. When the daughter has a guest her mother does all the housework and cooking and the daughter is free. When the mother has guests daughter takes charge of everything.

Another mother friend of mine has a younger daughter who will some day be a good cook. When the child was quite young she gave her a recipe and had her make one dish for a meal. The family was generous with praise and did not criticise. Now the mother writes out a menu and permits, not drives or makes, the child to get an entire meal while she is in another part of the house. The child is proud of her accomplishment and naturally does her best.

It is the daughter's right to have the chance to learn these things in the home.—May H. Mumaw.

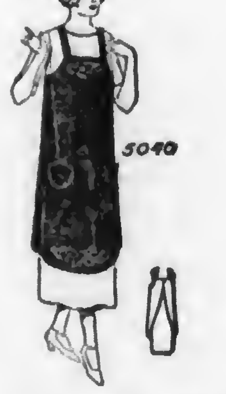
Editor's Note:—Will the reader desiring help on "Macaroon Baking" please send her complete address to the Household Editor?

Something for All Occasions

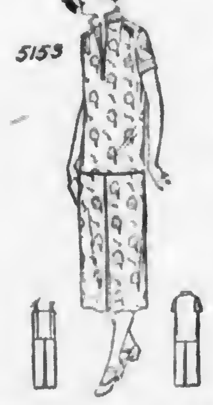
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5040.—Apron Model.—Sateen embroidered in colors would be attractive. It is also good for gingham, unbleached muslin, chambray or rubberized cretonne. Four sizes: small, medium, large and extra large. A medium size requires 2¼ yards of 36-inch material. Pattern, 10 cents.

5153.—A New Model.—The design here portrayed shows the skirt with the new inverted plaits, and the blouse with fulness in front below the yoke extensions of the back. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires five yards of 36-inch material. If bodice is made of lining or other contrasting material it will require ⅞ yard. The width of the skirt at the foot is 1⅞ yard with plaits extended. Pattern, 10 cents.



5040

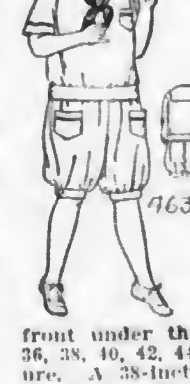


5153

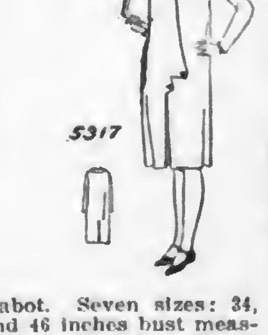
4633.—A Popular Model.—The blouse and bloomers are separate. One could join the bloomers to an underbody. The sleeve may be in wrist or elbow length. Five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 3¼ yards of 36-inch material. Pattern, 10 cents.

5317.—A School Dress.—Flannel, jersey or wool rep could be used for this model. The right front overlaps the left front in a notched outline, above a center kick plait. This plait is repeated at the center back. Four sizes: 8, 10, 12 and 14 years. To make as illustrated a 10-year size will require 2¾ yards of 36-inch material, and ¾ yard of contrasting material to face collar, cuffs and pocket opening. Pattern, 10 cents.

5192.—A Stylish Dress.—Charmeen, kasha, taffeta, crepe or linen would be appropriate. The closing is at the center front under the jabot. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 yards of 54-inch material. Pattern, 10 cents.



4633



5317

5303.—A Coat Dress.—Figured silk with trimming of crepe in a contrasting color is here portrayed. This design could also be developed in fine serge or in broadcloth. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4⅝ yards of 40-inch material. The width of the dress at the lower edge is 2⅜ yards, with plaits extended. Pattern, 10 cents.

Auto Battery for Radio

THERE are so many automobiles in use nowadays almost everybody has something to do with one. The automobile storage battery receives such severe treatment that it generally doesn't last so very long before it fails to turn the starter over snappily. Ordinarily, the battery is thrown away when the new one is installed in the car.

A radio battery, while it may have as many ampere-hours on its nameplate as the auto battery, is made in lighter fashion and will not stand the rough jarring the auto battery receives. It has thinner walls and plates, too. Therefore, the radio battery, even tho of the same voltage as the car battery, is not suitable for use in the auto. On the other hand, the auto battery will do for the radio set, even when rather poor in the car, since radio service is less exacting.

Determining Battery Voltage

Most cars use a six-volt storage battery—the same as is used on a radio set. The storage battery voltage can be determined by counting the vent caps—one to a cell. Each cell yields two volts and they are connected in series to add up to six. There are three cells in the usual car and radio battery. A few makes have a twelve-volt battery (six cells). To use this on a radio, one has to make a tap at the center and use only half of it at a time.

Be sure to mark the polarity, if you haven't a voltmeter which will give it to you. The positive is always the dirtiest terminal—the one that is very hard to unfasten in the car. Clean the battery thoroly—a good wash with soap and water and scrub brush outdoors will do the job.

To make contact with the terminals, heavy copper wire may be wrapped around a number of times and twisted, or a hole can be drilled into the lead terminal, tapped and a machine screw inserted. Another good scheme is to make a side cut with a thin hacksaw and hammer a clip into the slot thus formed. Mark the polarity by scratching plus and minus signs on the wax coating or else paint the plus pole red.

You won't be able to charge the old battery fully, but will get a year or more of service out of it.—B. F.

Need Proper Combination

THE wavelength range of a radio set is governed entirely by the combination of its tuning instruments. Almost every set has a fixed coil of wire and a variable condenser for adjustment to any of the broadcast waves. Many sets have two or three such combinations, all approximately or exactly the same. If the set fails to tune low enough or high enough, the fault is to be found in this coil and condenser combination.

The ideal radio set tunes from 200 to 550 meters uniformly. Few sets are perfect in this respect. Many cover the stated range but do not receive stations at the low and high extremes satisfactorily. Any such defect is a matter of coupling to the aerial and between the radio frequency stages.

Should the set tune too high and not get short waves at all, even when the dial is set at O, the fault may be remedied by unwinding or removing some of the turns of wire from the coil. KSD, being the highest wavelength broadcasting station, is a good guide for the upper limit. KWY should come in around ninety or ninety-five. WNYC at about eighty-five or ninety is satisfactory

Dictionary of Radio Terms

UNDER this head we'll provide short discussions from time to time of radio terms that are likely to be confusing and misunderstood.

RADIO COILS.—Coils are given an almost endless variety of names. A coil is what the name implies—a length of wire wound 'round and 'round on some suitable "form" or holder. A coil is sometimes called an "inductance" just as a condenser is called a "capacity," altho these terms really refer to the properties of the instruments. You often hear a coil called a "winding."

Coils vary greatly in shape—they can be cylindrical, and called "solenoids," or "helices" (singular: "helix"); spiral, and termed "pancakes," or "spider-webs;" circular, and named "toroids," etc. One special form of winding was, technically, a "curtate epitrochoid." A loop is nothing but a square or diamond-shaped coil.

Construction of "Low-loss" Coil

A "low-loss" coil is constructed so as to handle radio energy with a minimum loss. Such loss manifests itself by having to oppose the resistance of the wire if it is too small in size; by radio energy leaping the space between wires if they are too close together and by creating disturbances in the tubing or framework on which the coil is wound if the material of the framework is unsuitable or too bulky.

The ideal radio coil is like a helical spring—the turns of wire being slightly separated and held up by nothing more substantial than thin air. Naturally, such a coil is impossible of actual attainment, so the manufacturers get as near to it as can be by using skeletonized frames for their windings.

✣ ✣ ✣

A CONDENSER, electrically, is a storehouse for electricity. It may be briefly described, mechanically, as two separate metallic areas with insulating material between. The latter may be mica, hard rubber, air and many other non-conductors of electricity. The larger the area and the closer the separate metal areas or plates, the more electricity can be stored.

The insulating material is called the dielectric. In radio we have small size fixed condensers, made up of copper, brass or metal foil plates and mica dielectric. These are made up in various sizes, .00025 mfds., .0005 mfds., .001 mfds., and many others. Mfds. stands for micro-farads, the unit of condenser storing capacity.

A variable condenser is used for controlling the wavelength of receiving sets and while much bigger than the fixed condenser of similar electrical capacity, the extra size is necessary on account of the greatly increased separation between the plates. Air forms the dielectric and there are a number of plates in both groups. One group of plates is movable, turning on a shaft and as they are more and more interleaved, the capacity increases.—B. F.

OBERCO
[PROTEIN-MINERAL FEED]
for *Hogs, Poultry & Dairy Cattle*

Poultry, swine and dairy cattle must have protein and minerals if they are to get the best from their farm ration. Mix Oberco with the feed you are using and see the difference.

Write for details. Practical poultrymen, hog raisers and dairymen have tried Oberco and it has produced surprising results. Write for booklet.

We do not believe better Barron Blood Leghorns can be obtained in this country. Also Chicks from good, selected Barron Strain flocks of Leghorns at a less cost. Also Chicks from selected, heavy laying Barred and White Rocks, and Rhode Island Reds at very reasonable prices in quantities from 25 to 1000. Jersey Black Giant Chicks. Write me your wants and get Catalog and full particulars and prices before placing your orders elsewhere. Chicks shipped postpaid. 100% Live Delivery Guaranteed.

C. M. LONGENECKER, DEPT. B ELIZABETHTOWN, PA.

---

and WEAF should be at eighty to eighty-five.

Where one cannot tune high enough, getting WEAF, for example, around ninety or ninety-five, there aren't enough turns on the coil. Four or five may be added and a test made of the new dial setting for WEAF, which will be lower than before.

It is possible, of course, to alter the wave range by altering the variable condenser. This is not easy, particularly where it doesn't tune high enough, for it would then be necessary to add plates. If it tunes too high, plates can be broken off. But this is likely to injure the frame of the condenser. The coil is the easier to change.—B. F.

Variable Condensers

How do the various kinds of variable condenser compare. I notice advertisements of "Straight-line" condensers. What does that mean?—F. B.

"Straight Line" means little, of itself. A variable condenser may be "Straight-line Capacity" in type. This means that the capacity varies uniformly with the dial motion. Its rotor plates are semi-circular. Its tuning crowds the stations of shorter waves too much. "Straight-line Wavelength" is better from this standpoint and probably the best average tuning instrument unless you are hard after DX stations. Then use a "Straight-line Frequency" instrument. In this capacity increases much faster than dial movement.—F.

Is This Advisable?

I have been advised to put a .002 mfds. fixed condenser across the secondary of the second audio transformer in my set.. Is this advisable?—H. F.

Perhaps a .001 mfds. size will be large enough. If you use a horn type speaker it may be helpful in suppressing the high tones and bringing out the low, making the output more mellow. It sacrifices the volume to some extent.—B. F.

How Do They Work?

How do "Tube Rejuvenators" work?—J. E. S.

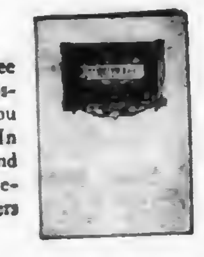
Tubes become exhausted when the thorium is "boiled away" from the surface of the filament. They can be renewed and used for quite a while by lighting them very brightly for a short period. This brings the thorium that is deeply embedded in the filament to the surface and there it may be used.—B. F.

Killing a Battery

IT HARDLY seems possible but I found a good Chester County farmer who has been refilling the cells of his home lighting storage battery with water dipped from his spring. And the chances are, to make matters worse, that he was carrying it in a metal container of some kind which should not be used even for pure distilled water.

Of course, there was a heavy deposit in the bottom of each cell, in some cases it touched the plates, and my good friend complained he would have to buy a new battery. His treatment was about the worst he could give something which needs only a little care to give it a long life.

Commercial distilled water can be bought very reasonably at service stations, or nature's distilled water, rain, can be obtained with only a little trouble. After it has rained enough to wash clean a slate, tile or shingle roof, and if there are no metal gutters or snow guards, rain water may be caught in any kind of container, except metal, and used to replace the water which has left the battery cells. If it is to be kept before being used it should be tightly covered.—Thos. H. Wittkorn.



ATWATER KENT RADIO

Radio, *yes*—
but what kind?

This is a commonsense advertisement, meant for farmers, their wives and children.

The set shown is the MODEL 20 COMPACT Price, $80

Every Sunday Evening
The Atwater Kent Radio Hour brings you the stars of opera and concert, in Radio's finest program. Hear it at 9:15 o'clock Eastern Time, 8:15 Central Time, through:

YOU already know that a radio set is a good thing to have, and if you don't get one pretty soon you'll begin to feel you are lagging behind the neighbors.

But as the kinds of radio sets are as the sands of the sea for number—and as nobody wants to make a mistake—you may be hesitating.

If you will select your radio just as you select your livestock or farm machinery, you can't go wrong. You learned long ago that poor animals and poor implements don't do the job, and, in the long run, cost more than good ones.

It's the same way with radio. Who makes it—and how? What's its reputation? Whatever set you buy, your satisfaction will depend on the answer to these questions.

Atwater Kent Radio comes from the same manufacturer who makes the Atwater Kent ignition system for automobiles. It is designed in our own laboratory. It is made in the largest radio factory in the world with as much care as if this were the smallest factory in the world and a reputation was yet to be won!

So strictly is the integrity of our nameplate guarded that one out of every ten workers in the factory is a tester—and every set has to pass 159 tests before it can leave the factory.

The result is that when Atwater Kent Radio reaches your home it is absolutely dependable—*and it stays so.* You do not have to fuss and tinker and apologize.

In addition, it has *all* the other good qualities—tone and volume, range and selectivity—without the sacrifice of any one to over-emphasize another. It is so good looking that it makes an agreeable companion in any room.

And the price is the lowest at which reliable, full-powered (you'll need that!) thoroughbred radio can be sold.

That's the whole story. It is so compelling that more farmers and their families—as proved by *every* survey—intend to buy Atwater Kent Radio than any other make.

Listen to your neighbors' sets. Consult the nearest Atwater Kent dealer. Look outside and inside. Tune the stations in and out. Make any test—any comparison—for performance, appearance, price. That's the way Atwater Kent Receiving Sets and Radio Speakers are sold.

Send for it!

We will gladly send you free a copy of this beautifully illustrated 32-page booklet if you will just write and ask us. In it you will find descriptions and prices of Atwater Kent Receiving Sets, Radio Speakers and other equipment.

ATWATER KENT MFG. COMPANY
A. Atwater Kent, President
4769 WISSAHICKON AVENUE, PHILADELPHIA, PA.

You'll need this, too

A good set deserves a good mate. Remember that the sound, as it comes to you, is made in the speaker. The best radio set cannot do itself justice if the reproducing instrument is inferior.

So you will need an Atwater Kent Radio Speaker. It is designed to give you the true values of speech and music, without blurring, without loss of high or low notes—and it does.

If you already have a set with another speaker—try it with the Atwater Kent Radio Speaker and note the difference.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-five Per Cent.

A Dime Brings Two Test Packets

A. L. Rice, a prominent manufacturer of Adams, N.Y., discovered a process of making a new kind of paint without the use of oil. He named it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Send 10c in coin to A. L. Rice, Inc., 114-B North St., Adams, N. Y., for two test packets, also color card and full information showing you how you can save a good many dollars. Write today.

LIVESTOCK

Review of local market for week ending January 9, 1926: Market slow, trading hampered by snow. Compared with week ago: Beef steers steady, some sales in-between kinds 25c higher; top, $9.50; some held above $10; bulk, $8.75@9.50. Bulls, she stock and canners closing steady to strong. Stockers and feeders firm at week's 25c advance; bulk of sales $6.50@7.25. Calves holding firm; top vealers, $16.50. Hogs, strong to 25c higher for week; top westerns, $13.75; bulk, $13.25@13.50.

Receipts for Saturday's market: Cattle, 13 cars; 7 Penna, 2 Chicago, 2 Canada, 1 Indiana, 1 Iowa, containing 333 head, 206 head trucked in. Total: Cattle, 539 head, 10 calves, 607 hogs. Receipts for week ending January 9, 1926: Cattle, 61 cars; 19 Penna, 13 Virginia, 10 Chicago, 6 St Paul, 3 Iowa, 2 Indiana, 2 Canada, 2 St Louis, 1 Tennesse, 1 Ohio, 1 South Omaha, 1 Missouri, containing 1522 head, 549 head trucked in from nearby farms. Total: Cattle, 2071 head, 60 calves, 2440 hogs, 179 sheep. Compared with previous week: Cattle, 55 cars containing 1423 head, 27 calves, 625 hogs, 139 sheep.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)...	$ .44	$ .48½	$ .49	$ .41
Eggs, fresh gathered extra firsts (N. Y.).....	.41½	.43½	.54	.59½
Chickens, live, by express (New York)......	.32½	...	.28	.29½
Potatoes, 150-lb sacks (Philadelphia).......	7.25	7.13½	6.17½	1.42½
Steers, good to choice (Lancaster)	10.00	10.00	10.37½	9.50
Hay, Number 2 timothy, baled (Phila.).....	24.50	24.50	24.50	20.50
Wheat, No. 2 red winter (Philadelphia.......	1.80½	...	1.68½	1.91
Corn, No 2 yellow (Philadelphia).......	.88	...	...	1.44½
Oats, Number 2 white (Philadelphia)........	.53	...	.52¾	.70½

Steers:—	
Good to choice	$9.50@10.50
Fair to good	8.75@ 9.50
Medium to fair	8.00@ 8.75
Common to medium	6.50@ 8.00
Cows:—	
Good to choice	6.00@7.50
Medium to good	4.75@6.00
Common to medium	3.75@4.75

HAY AND GRAIN

Feed—Quotations were as follows (all prompt shipment): City bran, $36; middlings, $36, in 100-lb sacks; red dog, $45, nominal, in 100-lb sacks; western spring bran, $34.60@35.10; standard middlings, $35.10; flour middlings, $35.10; red dog, spot, $43.60, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $36.35, all in 100-lb sacks; cottonseed meal, 30 per cent protein, $39.50; prompt shipment linseed oil meal, $53.50, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $29; No 2, $26@28; No 3, $23@25; sample, $14@17. Straw—large bales, rye, $19@20.

Grain—WHEAT, No 2 red, c i f, dom, $2.01⅝; No 2 mixed durum, f o b, export, $1.72⅝. OATS, No 2 white, 54½c; No 3 white, 53½c; No 4 white, 52c; ordinary white, clipped, 53@56c; fancy white, clipped, 57½@58½c.

YORK PRODUCE

Butter—Country, 50@55c; separator, 55@60c.

Poultry—23@28c lb; dressed, 75c@$2 ea.

Eggs—40@45c doz; storage, 39c doz.

Vegetables—Potatoes, 20@40c ½ pk; cabbage, 5@12c hd; lettuce, 15@25c hd; celery, 2@15c stalk; carrots, 3@8c bch; horseradish, 5@10c glass; onions, 10@18c box, beets, 1@5c ea; 10c box; soup beans, 15c pt; lima beans, 35c qt; peppers, stuffed, 5c ea; spinach, 18@20c ¼ pk.

Fruits—Apples, 10@25c ¼ pk; 75c@$2.50 bu; pears, 10@20c ¼ pk.

Retail Grain Market—Wheat, $1.88; corn, $1.20; oats, 65c; rye, $1.15; bran, $2.10 cwt; middlings, $2.20 cwt.

Wholesale Grain Market—Wheat, $1.75; corn, $1; oats, 50c; rye, 95c; bran, $38 ton; middlings, $42 ton.

WOOL MARKET

Domestic—Ohio and Penna fleeces—Delaine, unwashed, 53c; half-blood combing, 53c; ⅜-blood combing, 54@55c; fine, unwashed, 48c. Michigan and New York fleeces—Delaine, unwashed, 50@51c; half blood combing, 51@52c; ⅜-blood combing 53@54c; ¼-blood combing, 54@55c; fine, unwashed, 46@47c. Wisconsin, Missouri and average New England—Half blood, 48@49c; ⅜-blood, 49@50c; ¼-blood, 50c.

CHICAGO LIVESTOCK MARKET

Cattle—Receipts, 500 head; compared with week ago: Light and medium weight fed steers 15@25c higher; weighty steers around 10@15c lower; extreme top, $11.50 for all weights; stockers and feeders and fat heifers, 15@25c higher; fat cows and canners and cutters strong; bologna bulls, 15@35c lower; vealers, 75c@$1 lower. Week's bulk prices follow: Fat steers, $8.85@10.35; fat cows, $5@7; heifers, $7@8.25; canners and cutters, $3.85@4.50; veal calves, $12.50@13; stockers and feeders, $7@8.25.

Hogs—Receipts, 7000 head; largely 25c lower than Friday's best prices; underweights, 25@50c off; bulk better, 225@300-lb butchers, $11.55@11.75; desirable 160@180-lb averages mostly $12@12.25; 140@150-lb selections, $12.40; tops, 130 lbs up, $12.35; 160-lb up, $12.25; bulk packing sows, $9.75@10.10; desirable killing hogs, $12.50 down; heavyweights, $11.30@11.65; medium, $11.40@12; lights, $11.25@12.25; light lights, $11.25@12.50; packing sows, $9.20@10.10; slaughter hogs $12.25@12.50.

Sheep—Receipts, 3000 head. Compared with week ago: Fat lambs, strong to 25c higher; yearling wethers, 25c higher; cull natives and aged sheep steady; feeding lambs weak to 25c lower. Tops for week: Fat lambs, $16.50; feeding lambs, $16.25; fat yearling wethers, $13.60; 2-year-old wethers, $12; fat ewes, $9.25. Bulk prices follow: Fat lambs, $15.50@16.25; cull natives, $12@13; feeding lambs, $15@16; slaughter yearlings, wethers, $12.50@13.50; wethers, $10.50@11.50; fat ewes, $8.50@9.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, January 9, 1926.

Cloverseed, cash, domestic, $19; January, $15.15 asked; February, $15.15; March, $15.15; October, $15. Alsike, cash, $16; January, $16.25. Timothy, cash, $3.85; December, $3.85; March, $3.90.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, January 11. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$36.00@36.50
Spring bran	35.50@35.75
Soft winter wheat bran	36.50@37.50
Hard winter wheat bran	35.00@36.00
Standard middlings	35.50
Soft winter wheat middlings	36.50@38.50
Flour middlings	38.00@38.50
Red dog flour	43.50@46.00
White hominy	36.75
Gluten feed	45.00
36 per cent cottonseed meal..	38.50@40.00
41 per cent cottonseed meal..	41.00@42.00
43 per cent cottonseed meal..	43.50@44.25
34 per cent linseed meal	53.70@54.20

Mill feed in better demand with continued light output.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE first heavy snowfall of the season hampered trading on the Philadelphia produce market January 9 and most lines moved slowly, according to the State and Federal Bureau of Markets.

The feature of the week was the boom in the cabbage market. Prices advanced to $90.00 per ton on Thursday, or an advance of $50.00 over the early part of last week. During the latter part of the week receipts increased and the market weakened.

The potato market opened firm with round whites ranging from $7.00 to $7.25 per 150-pound sack, and closed steady with prices showing but little change. There has been considerable stock showing freezing injury that has been sold at a discount.

Apples moved slowly under a light demand. There were some fancy Adams County Baldwins offered that brought top quotations. Strawberries have been arriving in larger quantities and altho there was a fair demand prices dropped sharply. Carrots held firm and most other root crops were steady. The celery market was firm and prices held about steady.

The feed market has developed an easier tone as the demand continued dull. Wheat feeds are easier with offerings moderate and the demand limited. Linseed meal market is firm but quotations are practically unchanged. The production is smaller with the demand less active. Cottonseed and alfalfa are unchanged.—W. R. W.

Butter Markets

BUTTER markets for the week ending January 9 opened in the buyer's favor with prices at all markets sharply lower than at the close of the previous week. This condition continued thruout the greater part of the week. On Thursday eastern markets appeared to rally to some extent and small advances were effected.

Chicago also developed a steadier tone but real buying support was lacking and stocks moved out in a rather unsatisfactory manner. Confidence in the situation was by no means universal. Receivers viewed accumulations with apprehension and buyers had not forgotten the result of carrying a surplus during the recent declines. The markets so far as the average trade was concerned closed unsettled with a very nervous undertone apparent.

County News and Comment

Berks County, Pa.—We had ideal weather conditions this fall. All outside farm work is practically completed. About one-half of the sod had been plowed before the ground froze. Grange meetings are well attended and a great deal of interest is created in the meetings. Installation of officers with splendid installing teams create an additional interest in the first meeting of the new year. Another carload of dairy feed has been unloaded by the local Grange. The Berks County Agricultural Extension Association held a community meeting, mapped out its program for the year and made proper assignments to prominent farmers in the community which will be carried out under the supervision of the association. Butchering season is at hand and from reports gathered some heavy hogs and heavy steers have been slaughtered. No snow of any account, ground bare and frozen. Ice reported to be seven inches thick. Wheat, $1.70; potatoes, $2.20.—W. N. M., Jan. 4.

Broome County, N. Y.—Cutting wood is order of the day. Many farmers who usually burn coal are selling wood. It brings from $3 to $4 per cord. No dry wood can be purchased. A great deal of corn was left standing. Some well filled with ears. A few fields of buckwheat were unharvested because of the heavy fall rains. Potatoes are scarce. A neighbor sold thirty bushels at a store for $2.50 per bushel. We have fine weather and roads for this time of year. Hens are laying unusually well. There have been numerous farm auctions this fall and winter. Everything brings a good price but cows, hogs and sheep bring unusually good prices. Whitney Point reports ice nine inches thick in the coves and everything set for harvesting. Present weather is warmer and threatens to thaw rather than freeze.—E. M. C., Jan. 2.

Centre County, Pa.—We have had a lot of cold weather in December. Today was warmer with sunshine. The State Highway Department is planning to protect the main roads in Centre County this winter from snow drifts. Thirty-five miles of snow fence have been erected at different points along the road where in former years snow drifts were deepest, and two large snow plows are waiting to remove the snow when it comes. At the annual meeting of the Centre County Sheep and Wool Growers' Association it was reported that in comparison with the local price at the time of the sale a pool netted an increase of $1114 over what the members would have received from local buyers. The threshermen of Centre County held their annual meeting and transacted important business. They listened to a talk on the importance of carrying compensation insurance for all employes. Local grain market: Wheat, $1.75; oats, 35c; rye, 90c; corn, 75c barley, 80c; buckwheat, 80c.—A., Jan. 6.

Clarion County, Pa.—The thermometer was hovering around five to fifteen degrees below zero the first day of the New Year but today it is thawing very fast Snow that covered grain fields has about all gone again. Farmers not doing very much but chores and repair work. Some corn to be husked yet. Butchering still on the go. Hogs for market getting scarce. Eggs plentiful and falling off in price. Beef cattle plentiful and not much sale as the price offered is too low and farmers are hanging on for more money. The roads are frozen so hard and deep rutted that it is almost impossible to get along with a team. Market prices: wheat, $1.65; oats, 50c; potatoes, $2.50; butter, creamery, 62c; country, 40c; eggs, 40c; oil meal and cottonseed, $2.75 cwt.; bran, $2.25 cwt.; buckwheat, 1.50 cwt.—C. R., Jan. 1.

Juniata County, Pa.—Last week the thermometer registered around zero. Today it is warm like spring, the frost is coming out of the ground and the roads getting muddy. Have had no snow since October 30th. Grain and grass look good. Some ice houses were filled during the recent cold wave. Some hogs yet to butcher. Cattle feeding with the prevailing low prices of feeding stuffs has received a new impetus. Farmers not doing much except cutting wood and feeding stock. The seventh annual meeting of the Juniata County Agricultural Extension Association, which was held at Mifflinstown on December 19, proved to be one of rather unusual interest. A number of scarlet fever cases reported in the county. Local prices are: wheat, 1.75; corn, 70c; oats, 40c; eggs, 34c; butter, 45c.—C. B. F., Jan. 6.

Lawrence County, Pa.—We have been passing thru a season of extreme cold weather. Young people enjoying the fine skating. Butchering usually the last job for the farmers before the holidays are finished. A little let up now and relaxation while planning for the new year. Stock is wintering well despite the cold weather. Most farmers grind their own feed and have water in the barns. No longer do the cattle seek shelter from the winter winds around a straw stack and drink from an opening thru the ice. Men are more humane and stock responds to kind treatment. The signs of the times spell progress. Butter scarce. Eggs more plentiful and are down to 40@50c; ear corn, 40c. Not much demand for hay; timothy, $15; clover, $18.—M. L. V., Dec. 31.

Lebanon County, Pa.—January started with a cold wave, but weather has moderated considerable. Many farmers are engaged in getting wood for fuel and shredding corn fodder. Many are still slaughtering hogs and beeves for their own use. Farm stock sales more numerous each week. Prices realized on these sales are generally good. The stock on most farms is in good condition and wintering well. The wheat fields generally made a good appearance prior to the strong winds lately. A little snow would be beneficial to wheat and grass fields, however. Prices: wheat, $1.65 bu.; rye, 90c; corn, 85c; oats, 50c; hay, $18; straw, $11; butter, 60c; eggs, 50c; milk, $2.50 cwt.—P. L. M., Jan. 4.

Susquehanna County, Pa.—The latter part of Christmas week the mercury dropped to eight and ten below zero and stayed there for three days. At present there is little snow, but on various ponds and lakes, ice is thick enough so the regular work of putting up ice for creameries, dairymen and for village consumption has begun. The season for ice harvesting is much earlier than it has been in several years. A number of veterinarians are now engaged in the tuberculin re-test, following up the campaign carried on thruout the country this fall to eradicate bovine tuberculosis. People in various parts of the county noted a brilliant blazing meteor or comet, which made a beautiful display in the western sky about 5:30 P. M., December 29, lasting more than five minutes by the watch. Granges are active and thriving splendidly. The next sub-district meeting of the Dairymen's League Cooperative Association will be held in the Grange Hall, at New Milford, January 9—an all-day meeting. Former treasurer of the League, Director L. M. Hardin, will be the speaker.—E. L. M. B., Jan. 5.

Prices and Prospects

THE hay market was draggy during the week ending January 2, with holiday dullness depressing the demand. Offerings were generally ample for current needs. The market is in stronger position than a year ago. Considerably less hay remains to be marketed than at this time last year, according to dealers' reports. Nearly one-half of the marketable surplus of timothy in the leading producing states had left farmers' hands on December 15, compared with about one-third in 1924.

The grain future markets continued active and advanced sharply, while holiday dullness prevailed in the cash grain markets. Wheat prices advanced to new high levels but the market was highly speculative. The colder weather stimulated the demand for feed grains and combined with the advance in wheat resulted in a firm market for both corn and oats. Prices made considerable advances.

Potato Markets Break Records

The mill feed market is firmer as the result of higher grain prices. Offerings of wheat feeds by the western mills are light but eastern buyers appear unwilling to pay higher prices.

Potato markets broke all recent records during the week ending January 9th. Prices have been advancing since around Christmas time and altho trading slowed down over the holiday season, the markets have been generally firm. Pennsylvania round whites sold at $7.00 to $7.25 per 150-pound sack in Philadelphia on January 6 with some sales up to $7.50. The highest price previously recorded this season was $7.25 during the week ending November 7th. Bulk stock sold at $4.65 to $4.85 on January 6, but considerable stock showing freezing injury ranged from $4.00 to $4.50. New York, Baltimore and Pittsburgh markets have made price advances and Chicago in the West reports improved trading and higher price levels.

Cabbage prices advanced $5.00 to $20.00 per ton during the last week in December. An unusual condition existed in Philadelphia on December 31, when bulk cabbage made a jump of $30.00 per ton and sold at $70.00. On the same day in 1924 cabbage sold as low as $17.00. The condition was due to exceedingly light offerings.

Receipts increased during the early part of the next week and prices dropped to $60.00 per ton, but on January 6 offerings were again light and sales were made at $85.00, shattering all previous price records. The situation is abnormal and increased receipts would undoubtedly force price to normal.

Domestic fleece wools were generally quiet on the Boston market during the week ending January 5th. It has been possible to purchase Delaines of fairly good stock at around 52c in the grease, delivered East. The spot stock of fleece wools has been reduced somewhat thru the week due to some of the larger manufacturers buying in volume.

The egg market opened weak in Philadelphia but strengthened on Tuesday and by Wednesday prices had advanced 2c per dozen. Extra firsts were quoted at 42½c and firsts in second hand cases at 40c. Egg receipts totaled 34,385 cases from December 28 to January 5 and of this number Pennsylvania furnished 1719.

Live Poultry Firm

The New York live poultry market was firm with a scarcity of fancy fowl and chickens. Prices continued to advance. Ducks and geese were in demand. The situation was much the same in Philadelphia and the market held firm under moderate receipts.

A decline of 3½c on ninety-two score butter featured the Philadelphia market during the week ending January 6th. The decline was in line with sharp reductions at other large distributing points, notably Chicago and New York, and was featured by successive daily declines. Neither buyers or sellers displayed any confidence in the situation. Buyers operated close to immediate needs and dealers, with some accumulations after the New Year holiday, were pressing sales daily to the point of offering sharp concessions. A factor of considerable influence was the receipt of offerings of foreign butter for prompt shipment.

Fancy Danish butter was offered at 37c to 38c c. i.f. To this must be added eight cents a pound duty for tariff. In addition the make thruout the western producing territories is reported as showing an increase and offerings of centralized cars are being made more freely. The week closed with ninety-two score quoted in Philadelphia at 46c, in New York at 45c and at Chicago at 43c.—W. R. W.

Old Institute Workers

A COMMITTEE, representing the old State Board of Agriculture and the Institute Lecturers, has arrange a get-together meeting and banquet at Harrisburg, on Tuesday of Products Show week, January 19th. The first session will be held in the Assembly Room of the Public Library, corner of Front and Walnut Streets, at two P. M. A banquet will be held in the Harrisburg Auto Dealers' Club, third floor. Fourth and Market Streets at 5:30 P. M. The charge will be $1.25 per plate.

It is hoped that a large number of those who at one time made Farmers' Institutes such a helpful factor in the promotion of better agriculture and the improvement of rural life will be present. Those expecting to attend are requested to notify John M. McKee, Deputy Secretary of Agriculture, Harrisburg, Pa.

Nature Keeps The Milk Clean Here
The Surge Milker
Only 4 inches from Teat to Pail—
The Short Surge Tubes Keep The Milk Clean Here

Demonstration in your barn FREE

finishes the job other milkers only start

Nearly all milkers *partly* milk a cow. That is, they START the job—BUT—The Surge FINISHES the job. All milkers suck; some suck and release—BUT—The Surge is the ONLY milker that—tugs—sucks—releases—and pulls—just like the calf—Nature taught the calf. Nature knows and the calf knows that to FINISH the milking right these 4 actions, exclusive with The Surge are vital—And when you watch The Surge work you'll see it surge—forward—backward—tugging—pulling like the calf — the cow loves that — and that's why she gives down MORE milk with The Surge Milker.

No old-fashioned claws or 4 ft. tubes

That's where the other milker's give high-count trouble. That's where the bacteria harbor—breed—thrive—try as you will you cannot get at all the cracks and twists where the bacteria are reveling and that's why you cannot keep your count down—EXCEPT—with The Surge—*Because* The Surge Has No MILK CLAWS and NO LONG MILK TUBES—the milk travels ONLY 4 scant straight inches—the milk is delivered direct—CLEAN—just as Nature delivers it—with your count way below regulations—better than Grade "A".

Only 4 parts to wash

You can take The Surge all apart, wash it and assemble it while you're just taking others apart. The patented 2-Piece Surge Teat cup will please you—one jerk and it's apart—it never "swallows the udder" or "ring-marks" the teat—no metal touches—just a soft rubber cushion. The Surge is the greatest labor-saver in the milker market today.

Will increase your income

Really, you have never seen anything like it; it's the greatest milker buy for you. The Surge will do better and cleaner milking—and best of all—it will effect a nice increase in your income. Why not have us prove this to you—we will, *gladly*—right in your barn, FREE. You have nothing to lose and everything to gain. Mail coupon below NOW!

How to have Running Water!

If your supply of running water under pressure is to be entirely satisfactory, much depends upon your getting the equipment best suited for your needs.

There is a Hoosier Water System that will exactly meet your requirements. That will give you water for every farm and home purpose. That will give you city water service at LESS than city cost. That will take supply from any source and use any power. That will last a lifetime because of its GALVAZINK protection, inside and out.

FREE BOOK

Get our free book, "How To Have Running Water." It will show you how to select the equipment that will meet YOUR requirements.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Replacement of Plant Food Removed by Crops

Is it necessary to replace in fertilizers all of the plant food removed by the crop?

THE frequent analyses of plants during the past seventy-five years have made us quite familiar with their composition. We know that a large part of the dry material present in crops is derived from the air. Roughly speaking, a ton of dry plant substance contains 1000 pounds of carbon. This carbon, the main constituent of dry plant substance, is of air origin. Every 10,000 parts of air contain three parts of an invisible gas known as carbon dioxide or carbonic acid gas. This is decomposed by green leaves and the carbon utilized for growth purposes.

There are three other constituents in plants which directly or indirectly come from the air, namely, oxygen, hydrogen and nitrogen. The oxygen and hydrogen are found in water which the plants take up from the soil. It is evident, therefore, that the great amount of carbon, hydrogen and oxygen derived from the atmosphere need not be replaced. The supply is, for all intents and purposes, inexhaustible. Recent investigations have shown that in greenhouses, where vegetation develops very rapidly, the supply of carbon in the air may be used up so fast that the supplying of additional quantities makes for larger crops. Under field conditions, the natural supply of carbon seems to be adequate for all purposes.

More Complicated Problem

In the case of nitrogen, the problem is somewhat more complicated. Nearly four-fifths of the air consists of the element nitrogen, but this is a simple invisible gas which plants cannot use. The well-known exceptions are plants like clovers or alfalfa, which, in the presence of certain bacteria in their roots, can make use of air nitrogen. Other plants—and in part also clover and other legumes—must obtain their nitrogen from the soil in the form of nitrates or ammonia.

Under ordinary conditions of farming, the nitrogen taken up by crops may reduce the supply in the soil to a point where the yields become small and unprofitable. We are all familiar with the appearance of wheat or corn growing on land deficient in nitrogen. It is not only the crop itself which reduces the supply of nitrogen in the soil. The vegetable matter, as it is decomposed thru the action of bacteria, is converted in part into nitrates and these are, in part at least, washed out of the soil.

It has been shown time and again that very often a pound of nitrogen is lost in the drainage for every pound taken up by the crop. Under practical conditions, therefore, the use of manures and fertilizers supplying nitrogen is recognized as necessary.

Result of Experiments

By tabulating the numerous experiments with fertilizers, it will be found that, where the application of fertilizers has given an increased crop, nitrogen has more often than other fertilizer ingredients produced an increased yield in the Northeastern, Middle Atlantic and Southeastern States. The experiments reported from western Europe show the same results. It is quite proper, therefore, to answer the question in the affirmative in so far as nitrogen is concerned.

Aside from the four ingredients directly or indirectly derived from the air, there are others found in the ash of plants, such as phosphates, lime, magnesia, potash and compounds of iron and of sulphur. In the case of phosphates, containing the element phosphorus, a replacement is often necessary. In fact, it is the present fertilizer practice to use more phosphorus than is removed by the crops. At any rate, this is true in a large portion of the farm areas where commercial fertilizers are used more or less regularly.

Accumulate in the Top Soil

Since phosphates do not become very easily soluble in the soil and since any soluble phosphates applied in commercial fertilizers become insoluble and fixed in the soil, the phosphates employed in commercial fertilizers tend to accumulate in the top soil as has been shown by actual analyses. In spite of this accumulation, the limit has apparently not been reached insofar as the profitable use of phosphorus-carrying materials is concerned. It has been shown that very often the leaving out of phosphate for one year may lead to a decreased crop even tho for many years previous fertilizers containing this ingredient have been applied in substantial amounts.

In the case of lime and magnesia, the supply of these ingredients in the soil is reduced not only because of the removal by crops but also because of the formation of soluble salts, such as nitrates and sulphates, which are carried away in the drainage. There is, for this reason, a pronounced tendency in all humid areas for cultivated soils to become acid. Liming from time to time becomes necessary in order that the lime supply in the soil may be maintained.

In the case of potash, the situation is somewhat different. Some soils are naturally well supplied with potash. When crop yields on such soils are moderate or small, the natural supply may be sufficient. On the other hand, where an effort is made to grow very large crops, the natural supply may not be sufficient and the use of potash fertilizers may prove profitable.

Returns from Potash Fertilizer

For instance, where the average yields of wheat per acre are fifteen to twenty bushels, or of oats, twenty-five to thirty bushels, the use of potash fertilizers may scarcely be expected to show profitable returns. On the other hand, where the land has been improved to a point where the yields are thirty bushels or more per acre of wheat, the application of small quantities of potash fertilizers may be worth while. The crop itself must be considered in this connection.

Potatoes are an outstanding example of crops which draw on the potash supply of the soil so rapidly as to create a temporary deficiency. It has been shown experimentally that potato yields are increased when potash fertilizers are used for the reason that the soil potash itself was not being made soluble fast enough to feed the rapidly growing crop.

Materials containing sulphur may or may not be present in the soil in sufficient amounts to provide for all of the needs of the growing crops. Long before commercial fertilizers became a well known commodity, farmers used land plaster to stimulate the growth of clover. In some instances, truly wonderful results were reported.

Modern investigations have shown that the favorable effects obtained from land plaster are to be ascribed largely to the element sulphur present in the land plaster. But, since present-day fertilizers usually contain more or less land plaster, we are no longer concerned with the replacing of the sulphur taken out by the crops treated with commercial fertilizers.

On the other hand, in sections of the country where commercial fertilizer is not used, applications of gypsum, of ground brimstone or of other sulphur-carrying materials may still be a matter of practical significance. For instance, it is reported from sections of Oregon and Washington that very large increases in yields of alfalfa and clover are obtained when materials containing sulphur are applied. As to iron, even the lighter types of soil contain enough of it to make replacement unnecessary.

Supply Nitrogen in the Fertilizer

It seems, therefore, that in progressive farming a part of the nitrogen should be supplied in commercial fertilizers. The rest of it should be taken from the air by means of legumes used as green manures or as regular crops in the rotation. The replacement of all of the nitrogen in commercial fertilizers would be an expensive method and at times costly enough to be prohibitive. The phosphoric acid should be replaced in large part at least, and preferably completely, in order that a deficiency may not develop in the soil.

In the case of potash, it would be desirable to replace a portion of that removed in the crop. The proportion to be replaced is to be determined by the climate, a soil type and the character of the crop. As much as seventy-five to 100 per cent should be replaced in the case of light soils and under conditions of intensive cropping. For less intensive methods, replacement should be to the extent of fifty to seventy-five per cent.

In the case of medium and heavy soils, the replacement should be to the extent of fifty to seventy per cent in intensive production and to the extent of twenty-five to fifty per cent in the case of less intensive production. Lime should be replaced more or less regularly, especially where alfalfa, clover and other legumes represent important crops in the rotation.—J. G. Lipman.

Popular Bulletins

THE State Department of Agriculture received requests for about 25,000 bulletins during 1925. These include publications prepared by Department specialists on more than fifty different subjects.

Among the most popular bulletins are Bulletin 392, "The Mushroom Industry of Pennsylvania;" Bulletin 404, "Bovine Infectious Abortion;" Bulletin 407, "The Farm Electrified;" Bulletin 412, "How Farmers Can Secure Electric Service by Cooperative Effort."

Control of Japanese Beetle

The bulletins on the Japanese beetle, namely, Bulletin 390, "The Japanese Beetle in Pensylvania;" Bulletin 406, "Sprays for Japanese Beetle," and Bulletin 410, "Control of Japanese Beetle in Lawns," have all been popular during the past year.

Bulletin 400, which contains a directory of county and state agricultural organizations, published for the first time in 1925, has been requested in practically every county. The crop and livestock report, Bulletin 409, proved exceptionally popular and hundreds of requests were received for it, a number coming from other states.

NEW INVENTION SAVES MILLIONS

A Lamp that Burns 94% Air.

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Pennsylvania Breeders
BRED SOW SALES
at State Farm Products Show

Pennsylvania Swine Breeders will sell, at the State Farm Products Show at Harrisburg, an offering of 120 selected bred sows from ten months to two years old picked from the tops in the best herds in the State.

The steady increase in the number and quality of purebred swine in Pennsylvania during the past few years has attracted nation-wide attention. This good blood was largely responsible for the 121 Ton Litters produced in the State in 1925, a record not surpassed by any State in the Union.

Large litters, heavy milking sows, early maturing, easy feeding and proper type animals made this record possible.

You will find your opportunity in these sales to secure animals of proper type as a foundation for a purebred herd or an efficient sow or two that will produce pork at a profit.

Housing and Feeding the Breeding Ewes in Winter

WITH winter it becomes necessary to give some thought and attention to the housing and feeding of the ewe flock. It is not important that expensive quarters be provided, but they must have comfortable quarters. If the flock is large it should be divided so that each lot contains about fifty head. A group of this size is easier to handle and the sheep will thrive better than when a greater number is kept in one flock.

The quarters in which the flock are housed must be dry, free from drafts, sunny and well ventilated. It is not necessary that the quarters be warm as sheep do not suffer from the cold if they are protected from the wind and have a dry bed.

Plenty of Exercise Necessary

The ewes should have access to a yard where they can be turned out for exercising every day when the weather is suitable. The exercise is necessary to insure strong, vigorous and healthy lambs. If the ewes cannot exercise the lambs as a rule lack strength and vitality.

In addition to producing weak lambs the ewes are not able to withstand the ordeal of lambing nearly as well as the vigorous and well kept ewes. In some cases it may be a little difficult to get the ewes to go out for exercise. This difficulty can be overcome by scattering some hay over the ground of the pasturage so that the ewes can nibble at it while out during the day.

The feed supplied the ewes is very important. It should consist very largely of good clean roughage. The most acceptable roughage consists of clean corn silage fed in limited amounts, ordinarily not over three pounds per head daily should be in every ration where it is possible to provide it. In addition they should have good clean clover or alfalfa hay. This should be allowed in such amounts as the ewes will consume daily in addition to the silage.

The Kind of Grain to Feed

Roughages such as oat or wheat straw or timothy hay have no place in the ration of the breeding ewes. The ewes may be allowed to pick over some clean corn stover during the day.

The amount of grain to feed the breeding ewes will depend upon the condition they are in and the quality of the roughage. If the roughage is of good quality it will usually not be necessary to feed grain until four to six weeks before lambing. Such feeding will bring the ewes up to lambing time in medium condition of flesh and usually in condition to produce a liberal flow of milk.

The kind of grain to feed will depend upon the feeds on hand, a combination of five parts corn, three parts oats, two parts of wheat bran and one part linseed oil meal is a splendid combination for sheep. Other combinations such as corn four parts, and one part oil meal may be used to advantage.

The ewes should be allowed one-half pound of the grain mixture daily. When the ewes are fed this amount of grain there is no danger of getting them in too high condition at lambing time. After lambing the amount of grain allowed daily can be materially increased so that the ewes will produce a good flow of milk for the lambs.

The liberal feeding of breeding ewes not only means a strong lamb crop, but it will also result in a heavier fleece of better quality than is secured from a flock of ewes that are poorly fed. Liberal feeding, clean surroundings and dry, comfortable winter quarters are very essential to successful sheep raising.—W. H. Tomhave.

Round-up of Calves

IN THE round-up of club calves at Mercer, Pa., last month, the Hereford steer owned by Leonard Beach, Venango County Baby Beef Club member, topped the thirty-seven calves from the baby beef clubs of Clarion, Mercer and Venango Counties. The calf weighed 1068 pounds and in the sale which followed the showing of the baby beeves topped the price list at seventeen cents a pound.

Bland Tait, with a junior Shorthorn calf, took first in the Mercer entries, and Andrew Masson, with a senior Shorthorn calf, led that division of the Mercer County Club. David Delp and Gorge Pollard, both with Shorthorns, tied for first on merit in the Clarion County group, but the benefit of the doubt went to David Delp because his animal showed a higher daily gain.

The thirty-seven club calves averaged $12.34 per hundredweight, and the average price for the entire sale was $11.77 per hundred pounds.

Leonard Beach and his Hereford steer which topped the round-up recently held at Mercer, Pa.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

BUNCHES ON LEGS.—I have just purchased an eighteen-month-old mare colt and I notice a bunch on the inside of each knee the size of a walnut. I think the bunches have grown since I've had her. I feed pretty well, also give her plenty of exercise. She is a purebred Percheron. Please let me know whether this condition is curable.—G. H., Albion, Pa. From your description, it would seem advisable for you to consult a veterinarian regarding this purebred filly. These enlargements may be bone growths or simply liquid in the tendon sheaths. The treatment of each would vary hence the necessity of a careful examination of this animal. I feel sure that long range treatment would be ill advised in this instance.

CURB.—I bought a 1600-pound horse three years ago. Now he is eleven years old. When I bought him he had a small curb, now the heavy cord is four or more times its natural size and tapers to natural size where it connects to postern joint. He does not limp but rests leg half the time and steps a little heavier on toes than on heel. Can I cure this?—M. A. G., Lewisburg, Pa. Curb is a thickening of the ligament that passes over the point of the hock. In some cases it can be reduced by the application of a blister. Massage is beneficial and should be applied in a downward direction. A blister can be secured from your veterinarian and applied to the affected part. The animal should be tied where he can not get to the part to bite during the time the blister is on. The condition is of such long standing that treatment will be aimed at relief and not complete cure.

FISTULA OF WITHERS.—I have a horse nine years old. He has a wound on top of his shoulder. It is like a boil. Pus has been running for a month, and a week ago he got small boils on both sides of his shoulders. Please state what is the cause.—P. W. G., Benton, Pa. Your horse may have fistulous withers, a condition usually described as a boil discharging on the top of the neck. Such cases are treated usually by an operation in an endeavor to remove the dead tissue causing the boil. Such an operation is performed only by a veterinarian of considerable training. Should this be only a skin wound it should improve by dusting dry boric acid powder on the wound daily. The parts should be kept clean and as dry as possible. The smaller spots are probably infected areas caused by organisms from the upper wound being rubbed into the skin of the shoulder.

SORE THAT IS SLOW TO HEAL.—Five months ago my horse ran away and calked herself on her ankle bone. I have been putting pine tar on it but it does not seem to heal. She knocks the scab off when she lies down at night. Have been putting on powdered calomel and powdered alum, equal parts, but it seems to make slow progress. Please tell me what to do to aid in healing this cut. A. V. S., Cachecton, N. Y. Keep the wound clean, using a solution of creolin and after drying wound with cotton apply a reasonable amount of tincture of iodine, one ounce; glycerine, one ounce; tannic acid, one-half ounce. Apply to wound with cotton.

ITCHY SKIN.—Our young cattle are inclined to lick themselves; also each other, until the hair sheds. I have sprayed with disinfectants; they are not lousy.—A. B., Lycoming County, Pa. Give each animal a teaspoon of salt and a tablespoonful of baking soda in feed twice a day; also groom your cattle, as the dust and dirt on skin causes them to itch. The preparation you have been using is a proper remedy to apply to them.

DAIRY

PUBLIC SALE
Wednesday, Jan. 20, 1926, 11 A. M.
Two miles east of Waynesboro on State Highway.
30 High Grade Tuberculin Tested Guernsey Cows and Heifers
Fresh Springers, Open Heifers. 70 Duroc Hogs. Shoats, Bred Sows.

Here's My new CUT PRICE CATALOG

Fencing Gates Steel Posts Barb Wire Steel & Ready Roofing and Paints

FREE!

YOU can SAVE a lot of Money this Year if you will send for my new big CUT PRICE CATALOG. Don't buy a rod of fence, barb wire, gates, posts, roofing and paint until you get this money-saving book. I'VE CUT PRICES to the bone on my 150 styles of DOUBLE GALVANIZED Farm, Poultry and Lawn Fences — Farm, Drive and Walk Gates; on Corner Posts, Steel Fence Posts, and Gate Posts—Barb Wire, Smooth Wire, Grape Wire—Roofing and Paints. Catalog shows a bigger variety than you'll find in a dozen stores and at prices that save you fully one-third or more. Send for this catalog today — compare my quality and NEW CUT PRICES with what you have to pay elsewhere. You'll SAVE big MONEY.

Jim Brown PAYS the Freight

The new low prices in my catalog are *delivered* prices. I pay the freight right to your freight station. You know when you look in my catalog exactly what your goods are going to cost laid down at your freight station. You've no extras to pay. You'll find a big difference in price and a tremendous difference in ***quality*** — for instance — my fence is made of Basic Open Hearth Steel Wire and all ***double galvanized*** by the famous Brown process which puts on twice the usual amount of galvanizing. That's why it don't rust out—why it lasts two or three times longer than ordinary fence. My Gates have Carbon Steel one piece frames—last a lifetime. My Steel Posts are bigger, heavier and much stronger; my Barb Wire and Smooth Wire is the best ever; my Roofing is ***asphalt*** Roofing with ***wool felt*** base—not coal tar and paper; my ***WEARBEST paint*** with its big percentage of Pure White Lead and Pure Linseed Oil is all that its name implies. Just read these letters:

"The 140 rods of fence you shipped me seven years ago is as nice and bright today, with no sign of rust on it. I put up another make of fence about the same time I did yours, and it is very nearly ruined by rust. The Brown Fence is by far the best fence put up in this locality." John Brace, Cauthron, Ark.	*"I received my roofing in good condition. I feel that I saved at least $1.00 on each roll by ordering from you and if I ever need any more roofing I sure will send you my order for I know I would get the worth of my money. I certainly will recommend your roofing to all my friends." A. B. Ingram, Eton, Ga.*	*"Yours is the heaviest paint I have ever used. It covers better and it goes farther. And my neighbors say it is the whitest paint they ever saw. You saved me $1.30 a gallon." Harry Thomas, Athenia, N. J.*

Fill Out and MAIL COUPON NOW!

Everything made in the Brown factories is so unusually high quality that it always gives the best of satisfaction as expressed in the letters above. Besides you take no risk in buying from Jim Brown—my unqualified guarantee makes you safe. You have nothing to risk but lots to gain when you buy from Brown. I ship promptly from my 3 big factories at Cleveland, Ohio, Memphis, Tenn., and Adrian, Mich., also shipping points at Kansas City, Mo., and Davenport, Iowa. Fill out and mail coupon today and get my latest New Cut Price Money-Saving Book before you buy.—*Jim Brown.*

FARQUHAR
Farm Implements

The Farquhar is the original low-down Grain Drill. Its forced feed sows all kinds of grain. Pin or Spring Hoe or Disc openers. Makes the wide bottom furrow with complete coverage; Sows grass seed and fertilizer. Built in seven sizes. Ask for catalog No. 325.

The Farquhar All-Steel Sled Runner Harrow does a remarkably good job in preparing the seed bed. Teeth adjustable as to depth and cannot trail. Steel runners receive the wear and are easily replaced. Ask for complete description. Also Wood Frame Harrows and Roller-Harrows.

The Farquhar STAR CORN PLANTER is simple, sure and dependable. Each row independent as to depth. The ideal hillside planter. Disc runner or shovel opener; with and without fertilizer sower. Special plates for beans, etc. Consult your nearest dealer. If he does not have the implements in stock, write for catalog.

A. B. FARQUHAR CO. Limited
Box 846 YORK, PA.

Old Colonial Family Homesteads

No. 32—The Carhart Farm

THE old house on our farm has been remodeled. The old Dutch Colonial roof has been taken off and some things changed altho in the picture you will see that the old Dutch door is still on the kitchen, and is in fact the only door to the house. This door, and its hinges, were made by the blacksmith. The nails that were used to put them on were also made by the smith. The house is still in very good repair, filled in with soft brick from bottom to top.

This farm is a truck farm of twenty-five acres. It was bought in two tracts, fifteen in one and ten in the other. The one of ten acres was bought by my grandfather in 1798. I have the old deed for this purchase. It was sold to my father in 1861 then sold to me in 1906. In 1923 I sold it. My grandfather died at eighty-two and twelve days and my father at eighty-two, two months and two days.

The lane from the house to the barn. At the right is the packing house.

I am sorry that I cannot now get the true facts about the first part, the fifteen acres, which I know would go back to four generations, or over 160 years. It was purchased so long ago that I cannot find the facts in the records at our county seat but I hope to find them somewhere later.

The farm is situated in Monmouth County, New Jersey, and is now on the state highway leading from Keyport to Red Bank.—Iva Carhart.

The Car in Winter

"WHY, I had plenty of oil when I left home only a couple of hours ago, and to be doubly sure I put in another quart," peevishly explained Mr. Doe to the garage man. "How on earth could a bearing burn out with the crank case full of oil, and only fifty miles from home?"

"It is hard to tell offhand, but you have some bearings burnt anyhow," remarked the garage man.

This experience is one of hundreds that occur every winter. Many a driver has started on a winter trip with a full crank case as shown by the gage, only to be halted by this exasperating trouble.

Mr. Doe's irate inquiry is well answered by J. H. Holloway of the Engineering Experiment Station of Purdue University, Indiana. Time after time Mr. Doe has freely used the carburetor choke to start his cold engine, with the result that at each start some of the excess gasoline, which is necessarily drawn from the carburetor during choking, works past the piston rings, diluting the oil.

This dilution is further increased in a running engine by the condensation of gasoline and water vapor that leaks into the crank case from the combustion chamber. Therefore, it can easily be seen that altho the gage shows a full crank case the actual amount of oil may be small and due to the presence of the water and gasoline is seriously impaired in lubricating value.

On long trips the crank case gets hot enough to vaporize the gasoline and water which escapes thru the breather vent leaving only the oil that is poor in quality, being combined with sludge and sediment, and an insufficient quantity. This small amount of dirty oil cannot properly lubricate the engine, and results in burned bearings and excessive wear to other parts.

Here are a few of Mr. Holloway's winter rules:

(a) Reduce choking to absolute minimum.

(b) Use as lean a mixture as possible.

(c) Use high test gasoline for best results and easy starting.

(d) Provide a good radiator cover.

(e) Keep the engine warm—(it suffers from the cold, too). Cold radiator water greatly increases dilution.

(f) Drain and refill the crank case for a long trip.

(g) Watch the oil pressure—if it falls, stop engine immediately.

Observe these rules and your engine will wear longer, be quieter and give more satisfactory operation.

The old house has only one door and that enters the kitchen. The shadows in the picture are cast by a white mulberry tree, nearly 100 years old, that stands at the end of the house.

A Good Manager Saved This Creamery

Under Him Greenville Dairymen Paid Off the Old Debts and Built a Fine New Plant

By HUGH FERGUS

GREENVILLE had a sick creamery. All its nurses, (the directors) and many of its patrons said that the symptoms pointed to the disease known among creameries as Failure. And no wonder. It started early in 1918 with $10,000 capital. Later in the year this was raised to $20,000, but in spite of this the management paid out more than they took in for ten out of the twelve months of the first year.

Finally, on one of the many nights when the directors met one of them got up and said, "I hear there is a good creamery 'doctor' operating the government creamery at Grove City with outstanding success. Perhaps we can hire him to manage this one."

Oh, my no," said another director, "he would cost too much."

So the question was argued back and forth until finally it was decided to try to hire J. C. Joslin, the manager of the Grove City Creamery. The result was that their offer was attractive enough to lure Mr. Joslin into the Greenville management and, as has often been proven, the high priced man turned out to be the cheapest in the end.

Ten Thousand Dollars in Debt

In December, 1919, when Mr. Joslin came to Greenville he found the creamery ten thousand dollars in debt and the twenty-five patrons bringing about 1500 pounds of milk to the creamery daily. Now there are 165 patrons bringing in 18,000 pounds daily.

The creamery was started on account of the war. Greenville, a manufacturing town of several thousand people, had over a dozen farmers retailing milk in the town. Naturally there was a lot of duplication on the routes covered. As the war progressed it became hard enough for these men to get their work done on the farms without having to retail milk.

Finally one of the men, who was the hardest pressed, called a meeting of all the retailers, and the creamery was started, primarily as a plant to retail milk. The first man hired to run the creamery was a good machinist but totally inexperienced in the operation of a milk plant. They were successful in cutting the more than a dozen retail routes to four, but in getting rid of the surplus the management fell down.

One of the first things Mr. Joslin did was to put in a system of accounting. This led to the discovery that a branch of the creamery at Sharon had already caused a loss of $1000 and so far as he could see could not immediately be turned into a profitable proposition, so it was closed up.

Specialized in Sweet Milk and Cream Products

Then, as at Grove City, nothing but sweet milk and cream were accepted. The result was that butter, cottage cheese, and milk that was retailed in Greenville were of the very best quality and brought the top price on the markets wherever sold. This naturally meant a better price for them and in turn a better price to the farmers for their milk. In two years all debts and back dividends were paid.

In 1924 the business had increased to such an extent that the old building was inadequate. The business was also out of proportion to the capital stock. So the directors and Mr. Joslin met and decided to reorganize and build a modern up-to-date plant.

The new capital was fixed at $100,000. Twenty-five thousands dollars of this was to be preferred, sold to the town people who had helped to foster the creamery from the beginning, and to pay a seven per cent dividend annually. The $75,000 common stock was to be divided among the farmers and was to have as a dividend the balance of the net profits, after deductions incidental to operating all creameries were made. Thus far the common stock has paid quarterly dividends averaging twenty-seven per cent.

Farmers Purchased Stock

They tried to get farmers to buy the stock in proportion to the number of cows they owned, but some who had the adverse beginning of the creamery fresh in their minds were skeptical and would not buy. Now when such success has been assured they cannot get any.

The creamery belongs to the Pittsburgh Dairymen's Cooperative Sales Company and pays the patrons for their milk on that basis. In the past five years they have made a profit of $50,000 after paying the D. C. S. price, taking out for taxes and reserve.

Now the skeptics will say, "How can they do this and do an honest business?" Well, they retail 500 gallons a day in Greenville. This year (1925) they expect to sell 50,000 gallons of ice cream. In summer they sell cream and condensed skimmilk in Pittsburgh. In winter when the ice cream business is slack they wholesale milk in Pittsburgh. Cottage cheese and butter are two other products but they are the least profitable.

As Mr. Joslin took me over the fine new plant that was about ready for occupancy and explained the various parts of it and the pieces of machinery and their uses I could not help but feel that the future for the dairymen around Greenville was indeed rosy.

Maple Sugar Season Will Soon Be Here

Now Is the Time to Get Equipment Ready for the Harvest in the "Sugar Bush"

IT IS now high time for the maple sugar producers to get busy as the season is again almost at hand. Makers in the northern section often find the season ready to open by February 20, but more often it is a week or two later. Makers have often lost half and even more of their crops by not being prepared for the first run which is generally sweeter and, therefore, the best producer.

The Right Time for Tapping

The time is right to begin tapping trees when the weather becomes warm, with the temperature going above freezing in the day time and below freezing at night and with a southwest or a mild west wind. When the days begin to get warm, sunny and bright, the sap flow will soon start if not checked by high winds. Even then the sap flow will continue with quite a high wind from the southwest but it will be completely checked if the wind comes from other directions.

One should never tap trees unless they are at least ten inches in diameter. Where the trees are large enough two buckets can be used per tree, placing the buckets about two feet apart.

When tapping a 13-32-inch bit is often used. Its direction should be slanting slightly upward into the tree which will allow proper drainage of the sap. Make two holes about four inches apart for each bucket. With an ordinary tree the hole should not be over one and one-half to two and one-half inches deep at most. Use spouts that are easily driven in to insure close fit and small air space and which extract easily. Try to tap in a new spot each year. Do not tap just above or below the old holes, but about ten inches to the side of them.

Vermont experimenters have found that they get their best sap flow by tapping the tree about four feet up from the ground. The earliest flows come from tappings on the south side of the trees, altho tappings on the north side get a longer period of flow. The tapping, if done properly, in no way injures the tree. Bore into the wood with the bit, remove shavings and drive spouts in at once so as not to permit drying out. Drive them tight enough to hold the pail or bucket, yet not tight enough to split the wood.

Large Outlay Not Necessary

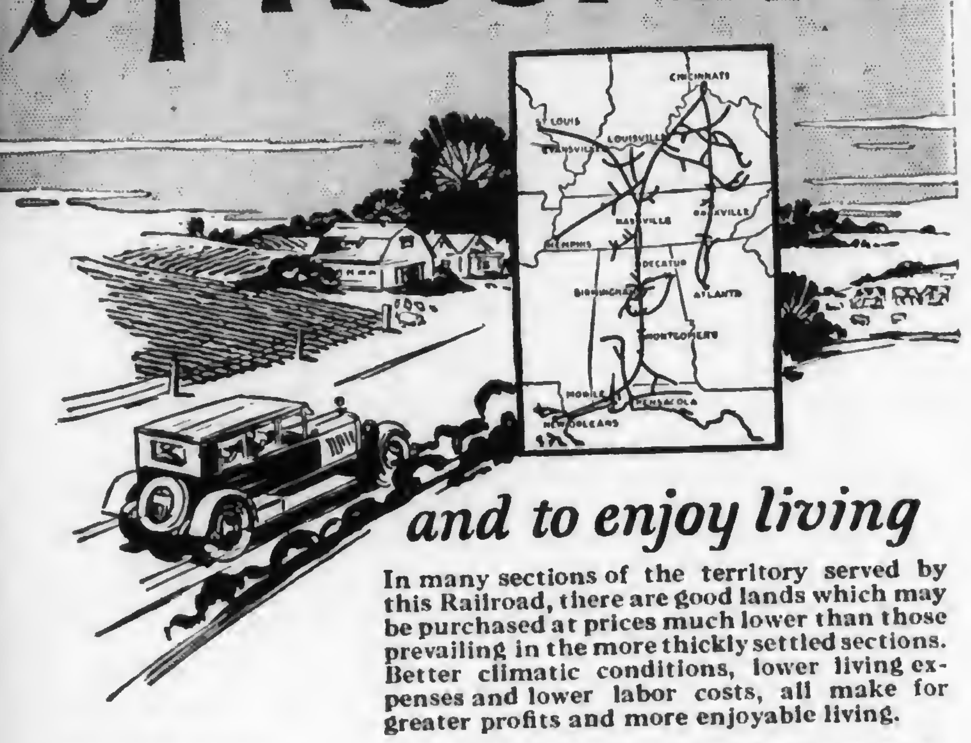
Apparatus for syrup and sugar making does not necessarily represent a large outlay. A number of sap spouts are needed, either wood or metal;. the metal ones being preferred by many. The sap is usually gathered in buckets, so one can tell the number needed by counting his trees and making an estimate. The larger trees will require more than one bucket.

Some who cannot afford the new sugar making equipment on account of the high cost, give up the idea of making sugar, at a great loss to themselves when they possess a good "sugar bush" or even a few good trees, as it is well known that ten to fifteen trees usually will yield enough syrup for family use and in (to page 32)

The Heaviest Berkshire Litter

Donald Smith, pig club boy of Jefferson County, Pennsylvania, and his litter of thirteen purebred Berkshires which weighed 3182 pounds at 180 days. This was the heaviest Berkshire litter in the whole country in 1925.

GO SOUTH to PROSPER



and to enjoy living

In many sections of the territory served by this Railroad, there are good lands which may be purchased at prices much lower than those prevailing in the more thickly settled sections. Better climatic conditions, lower living expenses and lower labor costs, all make for greater profits and more enjoyable living.

Plenty of good, pure water, fine roads, excellent schools, and the free help and advice of our agricultural agents in making and marketing your crops. These are the attractions of the Southland.

Write today telling us something of your experience in farming and asking for descriptive literature. There is no charge for this service—now or ever.

$5 Down and You Can Buy Any WITTE Engine
Up to 10 H-P.
To PROVE that this "super-powered" one-profit, light weight WITTE will save you one-half the time, labor and cost of any job on the place I want to send it to you on a 30-day test at my risk. I guarantee it to do the work of 3 to 5 hired hands.

Nearly a YEAR TO PAY
Scrap the Old One—Pay a Little of It Down on the New WITTE
With my generous terms my engine pays for itself. Increases farm profits $500 to $1000 a year. Thousands say the WITTE is ten years ahead of any other make—simple and trouble-proof at rock-bottom, direct-to-you prices. Completely equipped with WICO Magneto, speed and power regulator and throttling governor. All sizes 2 to 25 H-P.

FREE—Write me today for my big, new, illustrated engine book and full details of my guaranteed test offer. No obligation, absolutely Free. Or, if interested, ask for our Log and Tree Saw, 3-in-1 Saw Rig or Pump Catalogs.—ED. H. WITTE, Pres.

Burns Kerosene, Gasoline, Gas-Oil, Distillate or Gas—
Yet Delivers 25% or More Power.
Cheapest to operate and guaranteed for a life-time. No cranking required. Compact and easily moved. Double, balanced fly-wheels with throttling governor that saves money. Fifty New Features — Write Me Today —a postal will do—for my Special FREE 30-Day Test Offer.

WITTE ENGINE WORKS, 2046 Witte Building, KANSAS CITY, MO.
2046 Empire Building, PITTSBURGH, PA.

(OUR FARM)

Where an Editor Works and Thinks

I HAVE received more letters asking about our radio, concerning which I wrote recently, than I have had in relation to any other one subject. The statement that we had heard direct from the station at Los Angeles, California, seems to have impressed many people. In this connection I want to say that getting a station on the Pacific Coast is not an everyday experience. In fact, it is very seldom that it can be done. Here are a few ifs. If the atmospheric or ethereal conditions are just right, if the aerial is of the right length, if the tubes are new and if the batteries are strong, it can be done.

* * *

SEVERAL readers have kindly offered to furnish our late inquiring friend with scions of the Yellow Newtown Pippin. This variety is a good one wherever it will bear even if the fruit is not fancy, but it should be borne in mind that the apples come to perfection in comparatively few localities. In many places they are exceedingly subject to scab. We had one tree of Newtowns on the old Home Farm. It had been top-worked and bore many crops of fine apples, but usually a large part of them were unsalable because of scab. We did not spray in those days.

* * *

WE ARE planning to buy a few hundred baby chicks this year. Of course, we want them from good laying strains and without a predisposed tendency to white diarrhea—if we can find them. There has been a great deal done towards cleaning up the hatchery business during the last three years. I wish readers would write me their experience in this regard, especially those who have raised chicks without loss from the white diarrhea.

* * *

IT HAS been interesting to hear the potato growers express themselves as to the planting of next year's crop. About half of them will plant the acreage usually planted. Some will plant more, while others will reduce their acreage. It looks as if the rush to plant high-priced seed would not be so great as is sometimes the case. This is wise, and I hope it proves to be the final decision of growers. Surely, information concerning acreage, yields, prices, etc., is sufficiently widespread in these days so that farmers might apply sound judgment in planting and avoid disastrous surpluses.

* * *

I HAVE read with much interest the reports of results achieved in making artificial manure. The first successful attempt was made in the English experiment station. The process has been tried on this side with good results. It is accomplished by piling straw, fodder, spoiled hay and other refuse in a flat pile, wetting it and introducing a special kind of bacteria into it. After three or four months the pile of material is converted into real manure, and analyzes about the same as barnyard manure. Market gardeners will be interested in further developments. —R. P. K.

Test Seed Potatoes

THE extension service in Potter County has for the past six years been conducting demonstrations to prove the comparative yielding qualities of different strains of potatoes. Seed from many sources has been imported. Many growers are seeking a super-yielding variety of white potatoes.

Last year a few bushels of a new White Rural potato were planted in the demonstration fields. It proved a better yielder than Russets or other White Rurals in a test on two farms. The county agent has completed checking up on the potato seed demonstrations this year. The tests of the new seed were made on the farms of Ben Tomke and Straley Bros., near Germania, with the following results:

Straley Bros. farm:—
Tramp Rural ......250 bu. per acre
Somerset Rural ....297 bu. per acre
Russet Rural ......263 bu. per acre

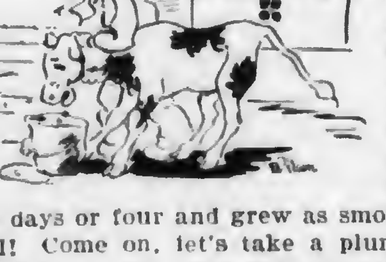
Ben Tomke farm:—
Sir Walter Raleigh.240 bu. per acre
Somerset Rural ....270 bu. per acre

The results have been similar for three years. The Somerset Rural has been freer from disease than any other white potato among the 100 different strains tested in six years.

That this seed may be distributed generally thruout the county, each Grange is asked to form clubs of ten or more members who will plant five bushels of this seed side by side with their own seed.—M. C. S.

THE CHEERFUL PLOWMAN

Patience Pays



THIS calf is such a stubborn lad, he will not learn to drink! He'd drive a hasty fellow mad, or else to gin, I think! The scamp's been weaned for seven days yet will not yield a speck, altho his hungry body sways from hock-joints to the neck! I force his head into the pail, and say, "I warn you now! You must take on some food or fail; That's gospel, Master Cow! Take one good sip you'll bawl for more, this is your mother's milk, you lived on it three days or four and grew as smooth as silk! The same old milk, but in a pail! Come on, let's take a plunge! Why do you switch that knobby tail? Why do you rear and plunge? 'Tis for your good and not for mine that I propose a feast! Come on, old boy, fall into line, and take one gulp at least!"

The rascal! He puts forth his strength and gives a mighty lurch, he always rams his tether length and knocks me from my perch! He rams, and snorts, and blows his nose, he acts like one insane, while I, as Heaven surely knows, don't mean to give him pain! Well, I could lick the little scamp and thrash him with a whip; I could proclaim that calf a tramp and loose my temper grip; I could cut loose and cuss and swear, shoot words against his face, I could pump sulphur in the air, and fall from hope and grace; but I know very well indeed when such a fit was o'er that calf would down as little feed as he had done before! So, I must take the patient way, I'll triumph in the end! He'll drink six bucketsful some day and class me as a friend!—J. Edw. Tufft.

$15000.00 Cash Prizes

For Feeders of Dairy Cows *and* Beef Cattle

Big Rewards for Skill in Feeding

This is a new kind of prize contest. There was never anything like it before. It is not a contest of feeding materials. We want to know who the *best feeders* are. The prizes we offer are *for skill in feeding.*

Many feeders are making big money right along—month after month—because they know their animals and how to feed them right. They should be encouraged and rewarded for their skill. Thousands of others should have the benefit of their experience.

So we have planned this unusual contest for feeders who get the best results from rations balanced with Corn Gluten Feed. You can feed your home-grown feeds, a ready-mixed ration, or anything you like, just so one-fourth or more of the grain mixture is Corn Gluten Feed.

120 Cash Prizes, Totaling $15,000.00

There are prizes for Cow Testing Associations—Independent Herds—Champion Cows—Beef Cattle Herds. Individual prizes for Cow Testers—County Agents and Representatives of Agricultural Colleges and High Schools and Purebred Associations. Special Prizes for Co-operating Feed Dealers.

These Awards Are—

1 Grand Prize of		$1,500.00	2 Prizes—each	$ 150.00	$ 300.00
2 Prizes—each	$1,000.00	2,000.00	9 Prizes—each	100.00	900.00
4 Prizes—each	500.00	2,000.00	1 Prize of	75.00	75.00
4 Prizes—each	400.00	1,600.00	48 Prizes—each	50.00	2,400.00
4 Prizes—each	300.00	1,200.00	35 Prizes—each	25.00	875.00
3 Prizes—each	250.00	750.00			
7 Prizes—each	200.00	1,400.00	120 Prizes, making a total of		$15,000.00

Contest Starts April 1 and Closes September 30, 1926

No Charge to Enter

It does not cost you anything to enter this contest. If you are milking six or more cows, or feeding 40 or more beef cattle, you are invited to compete for these prizes.

You will make more money on your feeding by coming in than you will by staying out.

It will be a rich experience for you—any way you figure it. You will gain a better knowledge of feeding materials and how to feed for larger profits.

If you show unusual skill in feeding, you will win a prize and be that much ahead.

Conditions of Contest

The conditions—or rules—are few and simple:

1—You must feed 6 or more dairy cows or 40 or more beef cattle.
2—One-fourth or more of your grain ration must be Corn Gluten Feed.
3—The amount of feed and production of animals must be properly certified.
4—Application to enter contest must be made on our blanks so we can give you the proper classification and know the kind and number of animals you are feeding.

The rules, classifications and all particulars are fully explained in our "Bulletin No. 4." Mail the coupon at once for this bulletin and application blanks.

Note:—In the event of a tie for any prize the full amount of the prize will be paid to each of such contestants.

You have 10 weeks to get ready. It will pay you to start now. Don't put it off. Please fill out and mail the Coupon.

Keep Sane about Potatoes

THERE is some straight thinking needed on the part of potato growers just now. Possibly we had better say on the part of intermittent potato planters, as it is the farmer gamblers who cause most of the trouble from surplus production. The unusually high price of potatoes this season is no justification for a large increase in acreage the coming summer. The white potato acreage in 1925 was 3,113,000 acres, producing a yield of 323,243,000 bushels, while in 1924 there were 3,348,000 acres yielding 425,283,000 bushels. Thus it is seen that, owing to favorable conditions, the yield in 1924 was thirty-two per cent greater, while the acreage was only three per cent larger. The average yield per acre in 1925 was a little more than 103 bushels per acre and in 1924 it was 127 bushels. If it had been the same in 1925 as it was in 1924 the total yield would have been about 400,000,000 bushels and the price would now be about one dollar per bushel instead of three dollars. The in-and-out fellows in farming are forever taking the poker by the hot end, yet they do not seem to learn the lesson. Let them be wise and quit the practice of plunging in potato raising.

The Delaware Bridge

IN RESPONSE to the invitation made here a few weeks ago for readers' views on the question of tolls in connection with the Delaware bridge several have expressed themselves and everyone has favored the collection of tolls until the bridge is paid for. Since the editorial was published, the State Chamber of Commerce and the Philadelphia Chamber of Commerce have passed resolutions favoring the collection of tolls. In addition to this Governor Pinchot recommended the repeal of the "free" passage in the law in his recommendations to the extra session of the legislature.

But from letters received there seems to be a good bit of misinformation in the minds of some people. The state government of Pennsylvania is pledged to pay one-fourth of the total cost, the City of Philadelphia one-fourth and the state of New Jersey the other one-half. A little knowledge of human nature will readily show why, under this arrangement, many people in Philadelphia favor a free bridge.

Inflated Land Values

SOME of the commercial and financial agencies are claiming that the chief cause of the farmer's troubles is to be found in the high valuation placed on farm land. There is no doubt some truth in this in many places, but what can the farmer do about it? Aside from lowering the value of his property on his inventory sheet and thus reducing his "overhead" it would do him little good to offer his farm for one-half what he could get for it. It is the assessor's valuation after all that sets the amount of tax the farmer must pay. But, after all, the rise in the general level of farm land prices is not nearly so great as the rise in the value of land devoted to other purposes. Town and city property, business and manufacturing cities have, in prosperous places, risen several hundred per cent in the same time. Why should not farming be profitable enough to allow for the same increase in land values and yet pay out?

Enforce Arbitration

WHAT'S the matter in the hard coal industry? We say "in" the industry because the trouble undoubtedly is within the industry itself. Other big industries seemingly have gotten past the age of periodical strikes and lockouts and are able to settle their differences within themselves. But the coal producers are still lagging in this respect, causing themselves and the general public extreme loss and inconvenience. Their actions and attitude are those of twenty-five years ago and indicate that they have failed to keep pace with the progress made in other lines of business so far as the adjustment of human relations is concerned. The present situation in the hard coal industry is naturally reviving the demand for a scheme of enforced arbitration, a demand that was quieted some years ago by the voluntary adoption of improved methods in many lines. Practically every big industry passes from the state of a private affair when the product becomes a public necessity, hence the demand that the public keep its hands off private business is not well taken in the cases where the public is vitally concerned.

Our Biggest Problem

THE editor of this paper last week sat in a conference of agricultural editors from every part of the country except the Pacific Coast. We were interested to note the very different character of the farm problems in the different sections of the country in comparison with the questions before the farmers in this locality. The questions discussed included surpluses, banking facilities, railroad rates, cooperative organization, price fixing, waterways, tariff schedules, federal legislation, etc. Most of these questions, or some of them, are pertinent in all the localities largely given to the immense production of one or a few products which are sold and shipped in a wholesale way. We found most of these questions are not vital in the Northeast States. Here, production is much more diversified. The market is close at hand to almost all farmers. In fact, not nearly enough of anything is produced to supply the millions of consumers who are within hauling distance of the farms in this section.

But this does not mean that we have no agricultural problems to solve. Our condition of independence has bred in us a carelessness which makes us indifferent to what we might do. The biggest question which eastern farmers have to solve is that of how to put into force uniform packing and grading rules. We are losing our markets to competitors from other sections because of our lack of standardization in the preparation of our products for market, and this will continue as long as we put on the market poor and indifferent stuff. Cooperative organizations are needed for this purpose if for nothing else. Commodity organizations should be organized in every neighborhood and they should invite the aid of state and federal marketing authorities to the end that all might know what standard packs and grades are and then enforce the rules with all members. Let there be a persistent effort put forth by all farm leaders to accomplish the adoption and practice of proper grading. If this were done the problem of surpluses and glutted markets would be solved.

The Extra Session

THE extra session of the Pennsylvania legislature is fairly under way. It bids fair at the present time to be just what the neutral observer expected, an arena in which shrewd games of politics will be played before the people, and where jugglery and sleight-of-hand tricks will be performed. Politicians will continue their old-time methods as long as the people fall for their tricks and follow them. They have no fears as long as the voters follow them, or as long as they remain at home on election day. If the people want any of the legislation passed which Governor Pinchot has recommended it will be necessary for them to get after their representatives and senators at once, else it is likely to be beaten. It looks now as if the time will be spent chiefly in playing personal and gang politics instead of honestly studying the needs of the Commonwealth. However, an aroused public when it acts concertedly can have anything it wants.

Washington Letter

CORN SUGAR AS A PRESERVATIVE.—A bill amending the pure food law so that corn sugar will not be held to be an adulterant when used as a preservative in canned goods, has been approved by the Senate manufacturers' committee. The secretary of agriculture has held that the term sugar applies only to sucrose, a product of beets and cane. Corn sugar is a product known as dextrose, but essentially the same as sucrose for all practical uses. This ruling, however, requires that canners who use corn sugar as a preservative must label their cans in a manner that would lead the consumer to believe that an adulterant had been used as a preservative and sweetener.

FREIGHT RATES.—Convincing reasons have been advanced by witnesses from several western states at hearings before the House Interstate Commerce Committee, as to why Congress should pass the Gooding bill, which would prevent the railroads charging higher rates for short than for long hauls.

It was plainly indicated that unless the railroads can be prevented from cutting rates to destroy water competition, there will be little use of the government appropriating money to develop our inland waterways.

COOPERATIVE MARKETING.—The administration measure, known as the McNary-Haugen cooperative marketing bill, to create a division of cooperation in the Bureau of Agricultural Economics, is not an emergency measure, but a long time program, declared Secretary of Agriculture Jardine, at the opening of the hearings on proposed agricultural

legislation before the House Committee on Agriculture. Neither does it conflict with the Dickinson bill to overlap any other bureau or department. He is convinced that cooperative marketing is fundamentally sound, but it needs the active cooperation of the Department of Agriculture.

Secretary Charles W. Holman, secretary of the National Cooperative Milk Producers' Association, and other representatives of the cooperatives placed their organizations on record in favor of the adminstration bill. The proposed measure has the endorsement of cooperative marketing organizations handling four-fifths of all the agricultural commodities sold cooperatively in this country. Judging from the attitude of members of the Committee on Agriculture, it will have little opposition in Congress.

NOT WARRANTED BY FACTS.—The newspaper statements that Secretary of Agriculture Jardine "backs the Dickinson agricultural surplus disposal plan," is not wholly warranted by the facts. Secretary Jardine says he believes the Dickinson bill may pave the way for more tangible consideration of the agricultural surplus problem. He says the bill "provides for the establishment of a government board with broad powers to attack the surplus question in a scientific way; but he has some reservations as to certain portions of the bill.

REPORT ON ECONOMICS OUTLOOK WILL SOON APPEAR.—A report on the economic outlook for leading crops and livestock produced in this country will be issued by the Department of Agriculture, February 8th. It is intended to help farmers plan crop and livestock production to meet probable consumptive demands in the United States and abroad. It will deal with a long list of farm products, with a review of the agricultural credit situation, and outline the situation relative to major expenses of agricultural production.

SCHOOL SUPERINTENDENTS WILL MEET.—The annual meeting of school superintendents will be held in Washington, February 21-25th. Many group meetings will be held, including three sessions of the Department of Rural Education. In addition there will be a sectional conference of county superintendents and a similar one for state supervisors of rural schools. It is expected that many interested in rural schools will be in attendance and that out of the discussions may come some useful ideas in regard to the improvement of country schools.
—E. E. Reynolds.

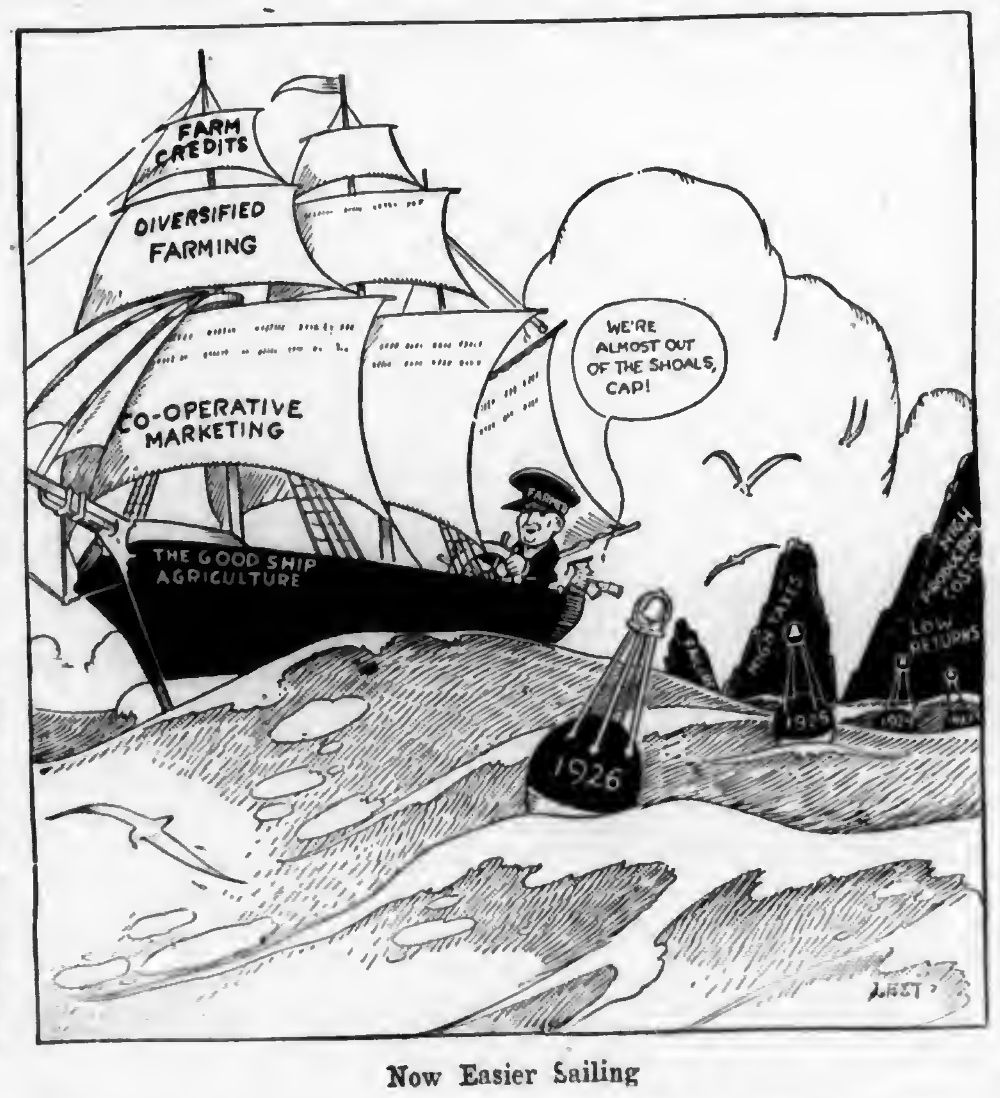
Harrisburg Letter

RATE CLAUSE TAKEN OUT.—Regulations for the furnishing of electric power to rural districts of Pennsylvania, approved a few days ago by the Public Service Commission and to be promulgated unless an appeal is taken to the courts, provide a complete system for obtaining connections for current where lines are within a reasonable distance, but without the proposition for single rates. Details of the regulations are to be formally announced by the commission and will cover all features, the plan being to later work out a method of procedure whereby service can be asked and costs apportioned. The rate clause was the subject of strong attack because it was claimed that it would put the farmer with a possibility of a growing demand for current, thru development of appliances and uses for power, on the same basis as a small merchant whose demands would be stationary.

FIGHT ON POWER BILLS.—Prospects are getting better every day for a hot fight in the special session of the legislature just convened over the Pinchot Giant Power bills. There are eight such bills, covering features of the dozen and a half presented in the last regular session. Two of them relate particularly to country lines, one affording a means for organizing companies for strictly rural business and the other providing methods for rural power districting and distribution. The big electric interests object to the enactment of the bills at this time and are demanding hearings.

BARN FIRES DROP.—Predictions of a decrease in the number of barn fires, especially those due to "green" hay, in the latter part of 1925 have been borne out by the preliminary figures reaching the State Bureau of Fire Protection. The percentage of decrease is said to be remarkable in some counties and in those sections where drives were made to demonstrate how fires could be controlled and the thermometer made as useful as in dairying, state officials say results have been gratifying. It is the plan to issue a report showing just what is meant by the tests and how the figures sized up.

PARASITES GOING STRONG.—Official reports on development of the parasites of the Japanese scale are said to reveal very satisfactory results in the southeastern counties of Pennsylvania and the tiny bugs, which it is hoped will slow up the pest, have been getting acclimated and showing a disposition to multiply. The coming summer will be a test. Meanwhile the state and federal quarantine restrictions will be enforced.



Now Easier Sailing

WATER SUPPLY SURVEYS.—A new departure has been taken by state authorities in charge of water by arranging for surveys of areas whence large water companies draw their supplies. The streams are being gone over and every possible source of pollution, residential, agricultural or industrial, mapped. In some instances companies are cooperating in the plan.

FOREST FIRES AWAY DOWN.—Less than 500 forest fires occurred in Pennsylvania woods coming under supervision of the State Forests and Waters Department in the last half of 1925. This is less than half the number, as well as acreage, of 1924 and lower than any recent year. Fires in farm woodlots were very small in number and size.

MONEY FOR ROADS.—Enough money is said to be in sight for undertaking a considerable part of the construction of the primary road program during the coming spring and it is believed a showing can be made which will be worth while before the proceeds of the bond issues are all used up. The February bidding will be on over 200 miles.

SNOW HAS NO TERRORS.—The first snow of the season did not cause much trouble for the State Highway Department snow clearing brigades and there was no delay due to blocking up of roads. Many thousand feet of snow fences are being constructed by the state this year in sections where drifts have impeded travel in the past.—Hamilton, Harrisburg.

New Jersey Letter

POULTRY PROTECTIVE ORGANIZATION.—The Salem County program of hiring detectives to help in breaking up the poultry stealing ring now operating in South Jersey has awakened considerable interest in other counties. Poultrymen and farmers in Gloucester and Cumberland Counties are now contemplating an organization of poultry farmers to combat the activities of poultry thieves. United action on the part of the farmers in the various counties is considered the only way of breaking up effectively and permanently the organized bands of marauders. It is probable that a protective association financed on the basis of number of fowls will be the outcome of the present agitation.

COLLEGE MARKET INSTITUTE.—Commencing January 25 the New Jersey State College of Agriculture will conduct a marketing institute in an effort to improve methods of distribution. The sessions, which will run for a week, are designed primarily to help farmers who are confronted with marketing problems. The enrollment for the institute is coming from members and managers of farmers' cooperative organizations, bankers in rural districts, superintendents of city markets, transportation officers, and farmers and their sons who are heavy producers. The question of marketing thru roadside stands and organization management are two of the problems of wide interest to be specially considered during the week. New York City markets will be visited as a phase of the institute course.

CAPE MAY POULTRY NOTES.—The Cape May County Poultry Association held a well attended annual meeting on January 7, at which time the organization set its cap to increase its membership by another 100 during the coming season. With rapidly growing seashore resorts adjacent to Cape May farms, poultry raising has assumed an increased importance in the county within the last few years. The New Jersey baby chick industry, previously centered almost exclusively in Hunterdon County, has broadened so as to create many hatcheries in Cape May and adjoining counties. The largest increase in the poultry population of the state within the last few years has taken place in this area.

WHITEHOUSE GRANGE INSTALLS.—At the mid-January meeting of the Whitehouse Grange in Hunterdon County the following officers were installed for the coming year: Master, P. David Reed; overseer, Howard Burdette; lecturer, Rev. William Fassitt; steward, Edward Fassitt; assistant steward, Raymond Cornell; chaplain, Charles P. Oliver; treasurer, Theodore C. Vliet; secretary, Miss Ethel Burdette; gatekeeper, George Eckholm; ceres, Mrs. Ella M. Reed; pomona, Mrs. Hugo Ade; flora, Mrs. Bertha Oliver; lady assistant steward, Miss Dorothy Koch.—B.

New York Letter

STATE RENTS WATERWAYS.—The water power resources owned by the state along the Barge Canal and in the natural waterways will have been completely leased out under state regulation by January 1, 1927, at a combined annual rental of $500,000. But two big projects remain before the waterpower commission, the 1000 horsepower of Long Sault Channel in the St. Lawrence River, and the development of 175,000 horsepower in the lower Niagara gorge. Hearing on permits for these has been set for February 15th.

MILK WAR FEARED.—Dairymen are dismayed to learn of the proposed invasion of eastern milk markets by cheap outside milk, to be shipped here in tank cars. Two new companies have made public such plans, one having purchased fifteen plants in northern New York, and the other is building a two million dollar receiving and distributing station in Newark, and is placing Ohio and other Middle West stations under New York City Board of Health regulations. Western farmers are being told there is a shortage of milk here, when in reality there has been a surplus lasting over the fall and winter period for the first time.

TO CHECK THEFT OF FARM CROPS.—Cortland County farmers, most of them non-members of farm organizations, came out in the greatest numbers last week ever known in the Farm Bureau's history in the county to discuss the bureau's plans to check thefts of farm property. A vigilance committee has been appointed and farms will be posted and rewards offered for information leading to arrest of thieves.

DAIRY CHANGES.—After long agitation of a needed increase in the four cents a point increase now made for milk for each point of a tenth of one per cent above three per cent butterfat the farmers of the state are almost startled to have Prof. H. H. Wing, of the State College, announce his belief that the rise should go to six cents a point. This is more than dairymen had hoped for but is no more than they feel is just and it is believed that such increase would do more to encourage the production of high grade milk than anything else. Prof. Wing believes the change would be as valuable to Holstein owners as to others.—M. G. F.

Let's put back what we take from the soil

MEN who make good money at farming are very careful to keep their soil fertile and rich. They realize that there are poor years and good years in farming but that the man who puts manure on his fields in the right way will reap big profits.

The McCormick-Deering Manure Spreader is one of the most valuable machines on the farm. It increases yields, pays for itself in a hurry and goes on building bank accounts.

It spreads smoothly and evenly, putting on just as light or just as heavy a coat as you want. The pitchfork method of spreading cannot equal the yields that follow the McCormick-Deering. That has been proved many times. Besides, hand spreading is hard work; the McCormick-Deering saves many hours of time and much hard labor. Its good strong beaters tear the manure rapidly and spread it well beyond the wheels.

See the real wide-spread spreader at the local dealer's store.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

Winter Lettuce

Can I expect to grow Iceberg lettuce in cold frames so as to have it for use all winter and until the spring crop outdoors is ready for use?—L. C. K., Salem County, N. J.

Until it heads Iceberg lettuce is very hardy and will stand temperatures down to twenty degrees in cold frames without protection other than the glass. When the heads are forming, however, the crop is much more likely to be injured by frost. Thus, you may expect to have green leaves to eat from this kind of lettuce most of the winter if the plants are started late enough that they do not begin to form heads before freezing weather starts. You may expect to get good heads up until Christmas if you start the plants early enough that the heads are well formed before severe frost.

To Prevent Injury from Cold

To keep the heads from being injured when the temperature goes down to twenty degrees or less you would have to provide mats, cornstalks, or other form of covering for the glass. If the sash are in a windy place, where west and north winds can get at them freely, it will be very hard to keep the temperature above the danger point for partly-formed heads.

It does not seem likely, therefore, that any one lot of Iceberg plants will give you both good heads and a continous supply during the winter, nor that with the same kind of protection you could produce both early heads and a winter supply in the same frame.

The leaves of the Iceberg type of lettuce, when the plants are grown in frames, are apt to be tender and sweet, even when no real heads are formed. Thus, as leaf lettuce this variety is satisfactory under glass, whereas the man who expects solid heads in winter is apt to be disappointed.—W. C. Pelton.

Handy After a Big Rain

A narrow cement walk like the one pictured above makes work around hotbeds and cold frames easy in muddy weather. A walk not over a foot wide often answers the purpose and the cost is repaid by better returns, since the frames may be cared for at the right time.

Brussels Sprouts

A PENNSYLVANIA FARMER subscriber sent in three lots of Brussels sprouts seed for trial this summer, and we grew plants of each. There was supposed to be a difference in the length of stem and in the method of disinfecting the seed. We could see little variation in the appearance or behavior of the three lots. All three were rather variable in size and vigor, as Brussels sprouts plants are apt to be. Some plants produced sprouts twice as large as others, and some of them produced harder sprouts than others. In one or two plants no hard sprouts at all were produced, the buds opening up into clusters of leaves without making any of the miniature heads that constitute the commercial crop.

The first buds of all the plants opened into tufts of leaves, instead of making marketable sprouts. These facts suggest both the desirability of careful selection of parent plants when seed is to be saved, and also the necessity of timing the planting of seed in such a way that the first buds will not appear before cool weather.

Lice in Brussels Sprouts Crop

We had much trouble to keep lice from the Brussels sprouts crop this year, and in fact did not fully succeed in doing this. At the end of the warm period, when the sprouts were well formed, the lice were at work among the sprouts and could not be reached with dusts and sprays In the case of plants that formed somewhat loose sprouts, which were open at the base like poorly formed cabbage heads, the lice penetrated well into the sprouts, and made them unattractive for the market.

The sorting of the crop to eliminate the lice and keep out diseased and soft sprouts takes so much time that almost any effort to protect the plants from lice and disease from the very start of the season is justified. Even at twenty-five or thirty cents a quart, which has been the local price this season, the cost of sorting and cleaning lice-infested sprouts is too great to make the crop profitable.—W. C. Pelton.

Marketing Institute

SOME of the most prominent marketing authorities in the east will speak at the marketing institute which is to be held January 25 to 30, 1926, at the State College of Agriculture, New Brunswick, N. J.

Chris L. Christensen, in charge of agricultural cooperation, United States Department of Agriculture, is scheduled to speak on "Cooperation in Denmark." Rob R. Slocum, agricultural economist, also from the United States Department of Agriculture, will speak on "Marketing Poultry Products." He will also give a demonstration of egg grading.

L. A. Cooley, manager of the Atlantic Coast Products Association, is scheduled to speak on "Managing a Cooperative."

Members of the New Jersey State Department of Agriculture on the program and their topics are: A. L. Clark, chief, "The Work of the State Bureau of Markets," and, "The Consumer's Side in a Marketing Program"; B. W. Sherbourne, market reporter, "Roadside Stands"; Kenneth Hankinson, specialist in city marketing, "Marketing Fruits and Vegetables"; P. B. Bennetch, specialist in dairy marketing, "Marketing Milk in New Jersey"; H. B. Weiss, chief, bureau of inspection and statistics, "Factors Influencing Prices"; H. B. Bamford, transportation specialist, "Transportation Problems."

Others to speak will be Dr. John Martin Thomas, president of Rutgers University, and Dr. J. G. Lipman, dean of the College of Agriculture and director of the Experiment Station, who will give the welcoming addresses at 11 A. M., Monday.

The sessions will last from 9 A. M. to 4 P. M. each day. On Wednesday evening, January 27, a dinner will be held at the Hotel Klein.

Pruning Apple Trees

ACCORDING to horticulturists at the State Agricultural Experiment Station, Geneva, New York, who have conducted pruning experiments with apples for a number of years, apple trees require comparatively little pruning for best results, while low-headed trees are said to have decided advantages over high-headed trees.

The pruning tests were made with Baldwin, Boiken, Esopus, Hubbardston, McIntosh, Spy, Greening, Rome, and King, all good standard varieties. The comparison of little and much pruning was made with trees all headed about two feet above the ground when set out in the orchard. After the tree is started properly, little pruning will later produce a tree with a larger head, having a greater bearing area, with less effort on the part of the orchardist than will much pruning. This condition developed in about ten years in the station experiments, and the trees maintained equally as good shape and symmetry. The specialists say that this applies to all standard varieties of apples.

High and Low Heading

With regard to high and low heading of apples the station workers found that the root systems of the low-headed trees were more firmly established in the soil and thus offered greater resistance to the wind than did high-headed trees. This should be an important advantage, especially in exposed locations. The low-headed trees were also much larger and stockier in the trunks and branches and had larger heads with a greater bearing area than did the high-headed trees.

Spray Increases Sales

ADDITIONAL information on the question, "Does Orchard Spraying Pay?" has been secured by County Agent R. S. Clark in orchard spraying demonstrations in Huntingdon County. Three varieties of apples were used in these demonstrations.

The trees which were sprayed showed a yield of 94.9 per cent salable fruit and only 5.1 per cent defective fruit. The proportion of salable and defective fruit from the unsprayed trees was just the reverse of the above figures.

Of the total yield from the unsprayed trees only 6.3 per cent was salable while 93.7 per cent was found to be defective. The total cost of the increased yield due to spraying was 91.6 cents per tree. This included cost of materials, labor, and interest and depreciation on the spray machine.—A. L. B.

Happiness can't be worked from the outside in; it has to be worked from the inside out.

A Real Garden For a Dollar!

You can have a real garden with this great Dollar Collection of "True Blue" Vegetable seeds. Every variety included is the best of its class. For many years this collection has been known as the biggest dollar's worth of really good seeds on the market. Here is what your dollar will buy:

Full Measure and Wardwell's Kidney Wax Beans, Detroit Dark Red and Swiss Chard Beets, Early Jersey Wakefield and Danish Ballhead Short-Stem Cabbage, Chantenay Carrot, Klondyke and Early Fortune Cucumber, Golden Bantam and Evergreen Corn, Siberian Kale, All Heart and Curled Simpson Lettuce, Netted Gem Muskmelon, Yellow Globe Onion, Hollow Crown Parsnip, Double Curled Parsley, Ruby King Pepper, Cooper's Sparkler and Cincinnati Market Radish, Mammoth Sandwich Island Salsify, Victoria Spinach, Livingston's Beauty Tomato, Purple-Top Strap Leaf Turnip.

"Good Equipment Makes A Good Farmer Better"
CASE
CASE

Another Chance for Profit

CROP production costs are of two kinds—those that can and those that cannot be greatly reduced. Rent, taxes, insurance, etc., which cannot be much reduced, are largely beyond your control. Power and labor, which can be greatly reduced, are in your own hands.

According to U. S. D. A. Bulletin No. 1348, power and labor costs, on the average, represent approximately 60 per cent of the cost of producing farm products.

Sixty per cent is the general average. Your costs will be higher or lower according to the efficiency of your equipment and methods. Whether higher or lower, you can make a material saving by using a Case tractor and power farming machinery — because they make possible the most efficient methods of producing farm crops.

Your profits can be increased by reducing production costs. Write us for information on how to make this saving.

Established 1842

For eighty-four years this Company has specialized on machines that made more money for farmers. The Case thresher, tractor and combine, are all examples of the high earning capacity standards of Case products.

PAN-A-CE-A

puts hens in laying trim

Put your hen in laying trim —then you have a laying hen

YOU WANT music in your poultry yard—song, scratch, cackle.

You want an industrious hen—a hen that will get off her roost winter mornings, ready to scratch for her breakfast.

A fat, lazy hen may be all right for pot-pie, but for egg-laying—never!

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily, and see the change come over your flock.

See the combs and wattles turn red.

See them begin to cheer up and hop around. See the claws begin to dig in.

That's when you get eggs.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Disease Transmitted

Please let me know thru your poultry adviser how bacterium pollorum infection is transmitted from hens to baby chicks. I have an incubator, 2640-egg capacity, 528 eggs can be put in every five days. Is it possible to infect chicks if eggs are put in from untested flocks if trays and bottom of machine are thoroly disinfected with coal tar disinfectant after every hatch? Am doing custom hatching and there are only a few blood tested flocks in this community.—C. F. C., Lehigh County, Pa.

White diarrhea is transmitted to the chick thru the egg from a hen which is a carrier of the disease. By means of the blood test the carriers can be removed from the flock. If the incubator trays are thoroly cleaned and placed in the sun and both the trays and inside of the machine are sprayed with coal tar disinfectant, there will be little danger in using them to hatch eggs from flocks which have not been blood tested.

I find a small hand potato sprayer handy for covering the inside of an incubator with a fine film of disinfectant. The machine is first carefully brushed to remove the dust. Any droppings on the side walls can be scraped loose with a chisel. When the machine is free from dirt, pump a cloud of misty spray thru the doors and then close them tightly for a few minutes.—R. G. Kirby.

Give Them Sunshine

IN BUILDING colony brooder houses it pays to remember the comparatively recent discovery that pure raw sunshine helps to prevent leg weakness in chicks and window glass filters out the violet rays which are so necessary to normal growth. Instead of using large windows which swing back and forth, some of the best modern colony houses have windows sliding up and down the same as in a dwelling house.

On windy, sunny days the upper sash can be dropped and the chicks can enjoy the pure sunshine while the lower sash acts as a windbreak. On still, sunny days the lower sash can be raised and the chicks can enjoy the front of the brooder house in the sunshine.

Glass Substitutes Valuable

The glass substitutes which do not filter out the violet rays are very valuable in colony brooder houses. Often the spring winds are very strong even on bright sunny days. It is fine to give the chicks the benefit of the sunshine without exposing them to the chilly wind.

It is found that cod liver oil is a substitute for sunshine but I see no objection to using all the sunshine possible plus the cod liver oil as a supplement when it is necessary. Sunshine is our cheapest and best disinfectant for a brooder house floor, as well as a promoter of growth. It pays to construct the brooder houses so that plenty of raw sunshine can strike the growing chicks.—R. G. Kirby.

Meat Scrap for Poultry

WHEN sacks of meat scrap are stored for several weeks in the feed house or elevator there is a tendency for the scrap to gather in large lumps. If these lumps are dumped into the poultry mash it is difficult to make a uniform mixture. My method is to lay the lumpy meat scrap sacks on their side on the floor without opening. Then I walk on the sacks. They are turned over a few times and the walking repeated.

This powders up the meat scrap in a short time and it can be poured from the sacks like fine brown dust. It is easier than breaking up separate lumps with the shovel.

When feeding high grade tankage I have found it more apt to lump than meat scrap and powdering the material while still in the bag helps to save time in properly mixing the mash. It pays to use high grade meat scrap or high grade tankage. The very low grades of tankage which are really fertilizer should not be used as poultry feed and are not so intended by the manufacturers.

To Test the Quality

If you have any doubt as to the quality of meat scrap, place a little in a dish and cover it with boiling water. If it sends off the odor of spoiled meat the scrap should not be used. If meat scrap is stored on the farm be sure to keep it in a dry place. The fact that bags of meat scrap draw flies does not mean that the scrap is not good. Flies are naturally attracted by the odor. It is best to keep the scrap in a darkened bin where flies will not easily find it.

When making a home made laying mash I always add the bran to the meat scrap and mix the two thoroly before adding the middlings, ground corn and ground oats. This helps to obtain a good distribution of the meat scrap. Carelessly mixed mash might give the hens thirty per cent meat scrap one day and ten per cent the next and produce second rate results.—R. G. Kirby.

Sometimes Old Hens Pay Best

REPORTS from the Nebraska Experiment Station indicate that it costs $1.50 to develop a pullet to the time of production while a hen can be fed thru the molting period for thirty cents. It was also found that some pullets laid 200 eggs during their pullet year but produced more profit during their second year when laying only 150 eggs. The difference of fifty eggs in production was not equal to the cost of producing the pullet.

It has been the general impression among most poultrymen that pullets paid the best and that the surest way to keep up poultry profits was to produce a large flock of early hatched pullets to turn out fall and winter eggs. In fact the farm flock with too large a percentage of old hens has often been classed as a mismanaged flock. Possibly the farmers with vigorous two and three-year-old hens in their flocks have not lost as much as might be expected.

Depends on Quality of Old Hens

The whole question rests on the quality of the old hens. Among my two and three-year-old Barred Rock hens kept for breeding purposes I note a great resemblance to pullets after the molting time. These hens have been thru a lot of culling and have been saved because they have neat feminine heads, an active disposition, a good shape for egg production and positively no tendency to take on fat.

A beef type hen baggy with fat could never approach a pullet in egg production. Such hens are apt to be spring layers and not good fall or winter layers. They should be culled out, not because of their age but because of their type. Possibly they produced little profit even during their pullet year. I have noticed that my hens produce eggs of good size late into the fall because they are largely late molting hens and do not readily cease production during the fall. Their eggs are first grade stock.

Eggs of Leghorn Pullets Small

Many of the eggs from my Leghorn pullets are rather small during the late summer and early fall and bring only three-fourths as much per dozen as hen's eggs.

I have always envied some of my friends in the dairy business who can build up a high producing herd with fair assurance that it will be good for several years of service. As soon as a large heavy laying flock of hens and pullets are produced, another year has passed around and the poultryman must work with patience and skill to reproduce that flock.

One of the greatest values of culling has been the finding of the type of hen which can be left in the flock for two years and occasionally three years without failing to produce a profit. This type of bird will be a great help on the general farm where it is profitable to keep a fair sized flock of hens but the abundance of spring field work makes it difficult to care for many colony brooder houses and replace most of the laying flock every year.—R. G. Kirby.

OFFICIAL CONTEST CHAMPIONS
Leghorns—Reds—Wyandottes—Barred Rocks

There can be no doubt as to what our strains WILL DO for you. What they HAVE DONE is proof. **Consistent Contest Winners since contests began,** they make the ideal first choice for those who desire the most profits from their poultry. **We are now booking orders for our limited supply of**

HATCHING EGGS, BABY CHICKS and BREEDING STOCK

from these Official Record Strains which **pay best** because they **lay best.**

Get your copy of our valuable FREE catalog, "The Story of the 300-egg Hen", and FREE illustrated leaflet on

PEDIGREED PROTECTED CHICKS

All from full daughters of 306-egg Champion Keystone Maid and 304-egg Champion Lady Victory and from our other noted contest winners. Full count guaranteed to LIVE as well as arrive safely. **Act Now.**

Most Profitable Poultry Known

306 eggs per year

Pennsylvania Poultry Farm

Poultry Accounts

THE keeping of poultry accounts helps to make the business interesting. Without accurate accounts the profits are apt to be overestimated or underestimated. When the poultryman buys feed it looks like the business was nothing but expense. When you have a good day selling eggs and birds it looks like a very profitable venture. Only the figures down in black and white can tell an accurate story.

On the general farm poultry accounts are often lacking because there are no separate feed bins for the birds. The hens and hogs receive corn from the same crib. The ground grain bought for the cows may be borrowed to mix up a laying mash for the hens. The eggs may be traded for groceries and the hens given credit for the necessities they have brought into the home. If you do not care whether the hens pay or not that is an easy way of running the flock.

Just a Small Notebook Necessary

In keeping poultry accounts a small notebook is all that is necessary. Enter up the amounts spent for feed and charge the hens for the home-grown feed that goes into their bins at market value. Give the hens credit for all eggs produced and all poultry meat sold. I do not think it is necessary to charge the hens with waste material, skimmilk and buttermilk produced at home or straw for litter which is later returned to the soil in a more valuable condition.

At the end of each year an inventory of the flock can be made and compared with the inventory of the previous year. The figures plus a study of the inventory give a fairly correct idea of the year's poultry business. It is a great help in planning operations in the year to come. —R. G. Kirby.

"When you come upon a friend quarreling with another friend do not attempt to be a peacemaker, but find some important business which quickly takes you elsewhere."—Inscription 2300 years old on a mosaic in a palace at Ostia, Italy.

***The New* DREW LINE**

COAL BURNING BROODER
Bigger and Better for Less Money

At last!—It's here! Just the kind of a coal-burning Brooder you have long been waiting for—at the price you want to pay. For simple construction—for ease of handling—for accurate heat control—and for economy of first cost and future operation—this remarkable new Drew Coal-Burning Brooder will surpass anything on the market. We want you to compare it point by point with others—see its many new convenient features—for if you do, you will agree with us that for fine quality, true value, perfect performance and low cost this new Drew Line Brooder has no equal.

Burns Either Hard or Soft Coal—

but, the big, outstanding features which make the New Drew Line Brooder superior are:—*1st* It coals through the hover, without raising or removing the canopy. *2nd* Every other section of the big 60 inch wide cover is *hinged* so you can reach under any part of the canopy at any time—*easily.* And *3rd*—the thermostatic control of simple check and draft dampers on the stove gives an accurate and positive control of the temperature at all times.

Don't fail to get all the facts about these and other improvements on the new Drew Line Coal-Burning Brooder. Drew Line Brooders and Poultry Equipment are sold by good dealers everywhere. See them at your dealer's before you buy, or

Write for our Free Poultry Book

If you do not know the Drew Line Dealer in your locality—write us. We will send you his name, also a copy of our valuable book, "Profitable Poultry Keeping." Tells the methods and equipment used by other successful poultrymen and describes the new Drew Line Coal-Burning Brooder fully. We send it FREE and postpaid on request. Write for it NOW.

Better Poultry Equipment For Less Money

The BEST Feed for Baby Chicks

Globe Chick Starter

The experience gained in nearly a quarter of a century devoted to the manufacture of Globe Poultry Feeds together with our strict adherence to a policy of permitting nothing to go into them except high grade materials that have proven absolutely correct, has established a reputation for Globe Poultry Feeds second to none. Poultry raisers everywhere have found by experience that for dependability, uniformity and quality, Globe Feeds are unequalled. If you want the BEST feed for your baby chicks you'll find it in Globe Chick Starter.

Raises BIGGER, Healthier Chicks—Less Losses

There is no "guesswork" about Globe Chick Starter. Every ingredient used is of KNOWN quality and PROVEN value. It is in no sense an experiment. In a test made on our experimental farm last season 1,078 chicks were raised to 8 weeks of age out of 1,100 hatched. Globe Chick Starter and Globe Chick Scratch were used exclusively. As an experiment, and while we do not recommend it, 300 of these chicks were kept indoors without sunlight and **not a single case of leg weakness developed,** proving conclusively the proper balance of our ration to supply the necessary vitamines. These three hundred chicks kept indoors under these unfavorable conditions grew rapidly and averaged 1½ pounds in weight at the end of eight weeks.

Why take chances with your chicks this year when you can feed Globe Chick Starter and KNOW that you are feeding a feed you can always depend on as being uniform. One that is tried and tested.

Plans for February Fun

The Birthday Month Offers a Variety of Ideas

THE second month of the year has such an unusual number of birthdays why not hold a birthday party if planning a social evening during the month? The invitations may be decorated with the zodiacal sign for February and the primrose, the flower of the month.

The authors Dickens, Longfellow, Lowell, Ruskin, Hugo, Lamb; the musicians Mendelssohn, Handel, Paganini, Victor Herbert, Sembrich; the statesmen, Sir Robert Peel, Montcalm, Lincoln, Cardinal Newman, Queen Anne, George Washington, as well as Sir Henry Irving, Jules Verne, Thomas Edison, Charles Darwin and Charles Lamb, were all born in February. With such a list to draw upon you might have a guessing contest.

The picture of an English inn with these words below: "Born, February 7, over 100 years ago," might suggest Dickens. Lamb may be represented by a miniature lamb placed somewhere about the room and the letter "L" tacked to the floor, Lowell. These and many original ideas can easily be worked out.

* * *

LOVERS of Dickens the world over celebrate his birthday, which falls on the seventh day of February. For such a celebration, invite the guests to come in costume, representing characters from some of Dickens' books or the titles of his books. As the guests arrive take the name of the character represented. When all have assembled, pass cards and pencils, then allow time for the guessing of the characters present.

* * *

LAST winter we tried a new way of choosing partners that proved to be most amusing. It was in the form of an auction. The boys or men went to an adjoining room and were "sold off." Each lady was given a sack of beans, each bean representing a dollar, with which to buy a man.

Two sheets were placed across the opening between the two rooms, so arranged that between them the hands, and beneath them the feet, of the men offered for sale could be placed. An auctioneer auctioned off each man to the lady who made the highest bid. The purchaser bought the goods offered for sale merely by seeing the hands and feet!

* * *

TO ASSURE a jolly valentine dinner the hostess should invite Madam Grundy, The Chaperon and Mrs. Busybody, to aid her in entertaining her guests.

Madam Grundy should wear a full skirt, with hoops, a kerchief, and silk mitts. Her hair should be arranged in the style of the 50's, with cunning curls bobbing over each ear. Mrs. Busybody may wear a similar dress, only a little stiffer, without the bobbing curls. "The Chaperon" is a doll, made of wood and mounted on a strong pivot pin placed in the center of the dining-room table.

As the guests arrive, Madam Grundy separates them, "shooing" the men to one side of the room, the women to the other. All the men are given cardboard hearts, and a pencil. The women are given large pasteboard keys. Then, at a signal, the men are to write the description of the kind of girl they like best; the women are to make a list of their matrimonial assets.

When the lists are completed, the men set out to find their affinities and each woman endeavors to prove that she, and she alone, has the key which will unlock the heart of the man with whom she is at the moment coquetting. When they have finally paired off, each couple must appear before Madam Grundy and prove their fitness for each other.

Then to the Dining Room

When the couples are all arranged they go into the dining room, where Mrs. Busybody greets them. When the guests are seated, Mrs. Busybody spins the Chaperon on the pivot, announcing that the couple she faces after she makes the spin will be the first to answer a list of questions, which may run something like the following:

For the ladies: What is your disposition in the morning? Do you solemnly promise to black your husband's shoes at least once a week? Can you burn the steak without trying? How often do you become mad? etc. For the men: How old do you look? Are you willing to spend anything but meal time with your wife? Are you worth what you are being paid? Can you drive your car with one hand? etc.

These questions are only suggestions; it might be more fun to give questions more closely fitting the individuals present.

For souvenirs, give the ladies small boxes of safety matches, the men toy frying pans.—E. W. G.

Touches of Color

ONE of the present fads is a flower on the coat lapel or fur collar. A bright flower brightens up the whole costume, and young and old indulge in this fancy. Nearly everyone has on hand some flowers that have done duty on a hat. Get them out and straighten the petals and leaves a bit by gently working them with your fingers. If their body seems gone you can stiffen them with thin glue water. Amateurs often dip old roses in melted thinned paraffin to restore luster and body.

* * *

If you want to brighten up a plain dress of any dark shade, try braided wool. You can make bands, belts, cuffs, collars and even pockets of charm. Four ply braids, using several strands of gay yarn in each group, and with the same colors on the two outer groups, and the same on the two center groups. Braid from the two outer sides toward the center like weaving, over, under, etc.—Mrs. E. A. K.

Old Window Shades

IF only the lower half of your window shade is torn or soiled, why not take it off the roller and turn it end for end, first making a new hem, using the long stitch on the sewing machine?

If it is too badly worn for further use as a shade, soak it all night to remove the starch, wash thoroly, and you will be surprised to find what nice cloth you have. An ingenious mind will find dozens of uses for just such cloths in the daily round of housekeeping.

One woman uses good uppers each spring to make scarfs and table covers for the summer camp. Another makes covers for the porch tables. They require no washing and are very easily dusted. They decorate beautifully, too, with oil colors.

A picture book that rolls pleases every child. Pictures from magazines can be pasted on both sides, and how they do amuse the sick or convalescent.—Mrs. C. W.

DUTCH CHEESE PIE

Prepare sweet milk and sugar just as you would for custard pie. Add one well beaten egg and one cup Dutch cheese, well drained but not sweetened. Use any preferred flavor. Pour into crust-lined tin and bake in moderate oven. A very economical recipe when eggs are costly.—Mrs. M. C. Smith.

OVER THE RADIO

Lessons That Can Be Learned While You Are Working at Home

HOW many of our readers grasp the opportunity of listening to the radio talks given by Betty Crocker, famous cooking school teacher? All who do profit greatly by it as she teaches many helpful things concerning the home in general, as well as valuable lessons in cooking.

It is a busy time for most of us, but if we carefully plan for those fifteen minutes, no time need be lost. We can do different small tasks like peeling potatoes, mending, darning, etc., while our mental self is being fed. Careful instructions were given last fall for planning, cooking, and serving the Thanksgiving dinner. Many of us are wiser wives and better cooks since these valuable and interesting lessons on the potato and macaroni. Everyone will relish the baked spaghetti recipe she gave us.

BAKED SPAGHETTI

2½ cups spaghetti
2 quarts water
4 teaspoons salt
¾ cup diced bacon
½ cup bread crumbs
2 cups tomatoes
½ cup grated cheese
½ cup onion
4 tablespoons butter

Cook spaghetti in boiling salted water until tender. Drain, rinse well with cold water. Fry diced bacon until crisp, add onion, and brown nicely. Then add tomatoes and seasoning and let boil several minutes, then add grated cheese. When cheese has melted add spaghetti, pour into baking dish and cover with buttered crumbs. Bake thirty minutes in moderate oven. Ten portions.—Mrs. C. C. G.

Basket Weaving Again

LAST week one of our readers wrote asking for help with her weaving. Her letter has made me wonder if many of our family are taking up again this winter the reed work which we so much enjoyed last year. Do you want any new lessons, and perhaps some more advanced models? Or have some of you had trouble and put a basket aside unfinished? Remember the old adage: "He who makes no mistakes does nothing," take new courage, and write us of your wishes, and of your troubles, if you have had some.

Another reader writes: "I am simply amazed at my own accomplishments with baskets since the lessons you have given us on our page. All my life I have been a great lover of reed work, and never did I dream that I, too, could weave so well from instructions on a printed page."

Kenyon Cox says, "The highest aim of art is to make some useful thing beautiful." Let us then in planning our work keep that thought uppermost in our minds, whether it be a basket for flowers, a quilt for the guest room, or a play dress for the two-year-old.—G. S. S.

Welcome and Farewell

SOMETIMES we must "Speed the parting and welcome the coming guest." I want to be among the first to welcome the new editor, and to voice the hope of everyone that our Mrs. Harrington will be as much appreciated in her new service as she was on the Home Page of Pennsylvania Farmer.—Clarice Raymond.

A Unique Indoor Garden

Woods Earth in a Sunny Window Quickly Blooms

IF YOU want something that is different for the sunny window during the winter months, get some of the plants that grow wild in the neighboring woods and bring them in. Many of the native woodland plants blossom in the spring between April and the first of July. Nearly all of these can be forced to blossom in February or March in the sunny window.

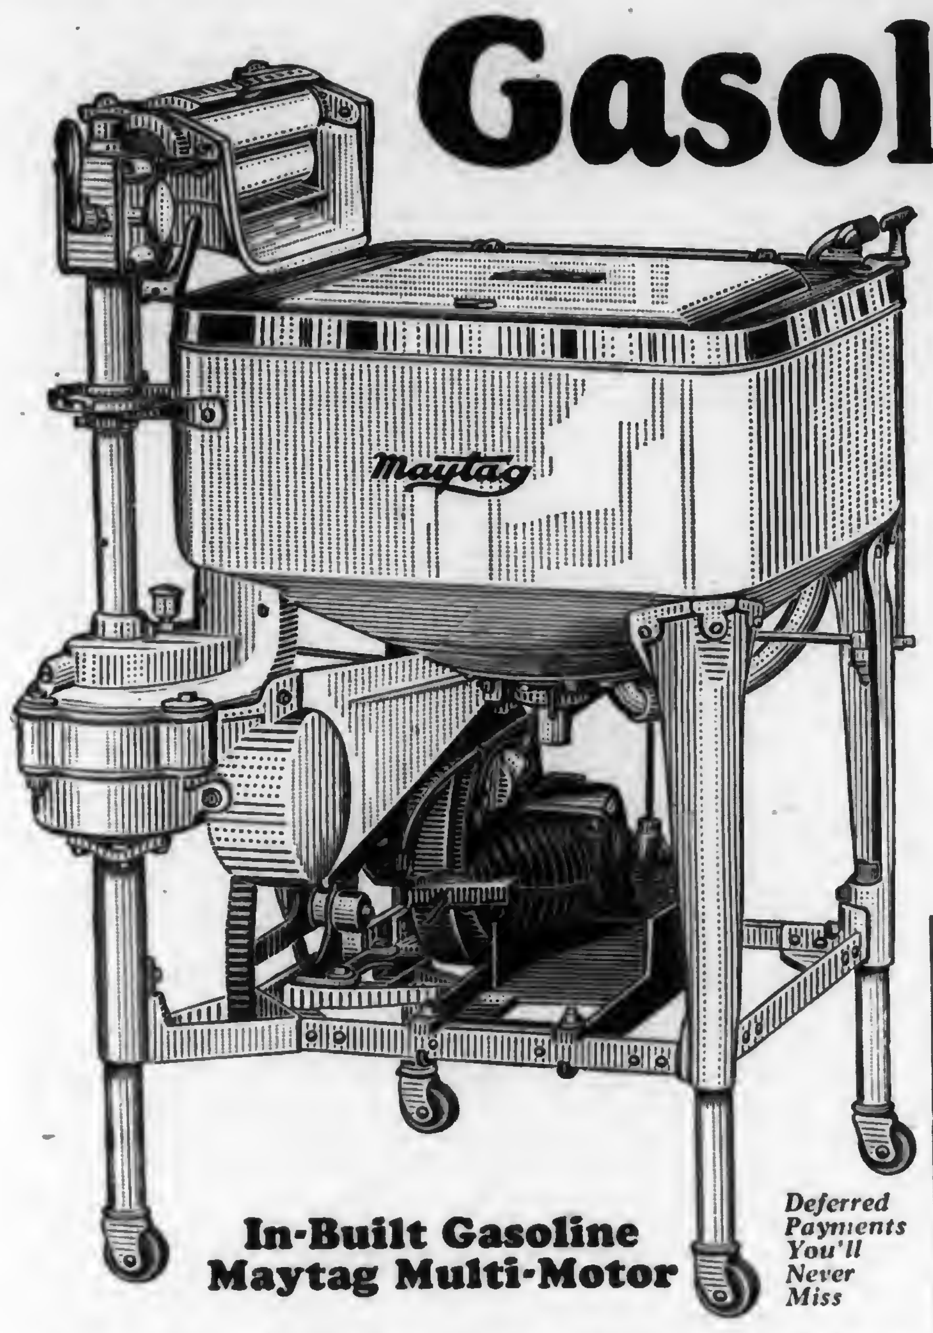
I have had nice plants of Jack-in-the-Pulpit, Dog-tooth Violet, Calopogon which is one of the prettiest of our native orchids and various others of the most delicate flowers of spring. All of these plants must be allowed to remain outside until the roots freeze solid. The freezing starts them into growth.

After cold weather comes on, go out in the woods to a moist place, where there are various grasses, vines and plants growing. Find a place that is not too shady, then, with an old ax, cut out a piece of earth of the size of your window-box. Trim this so it will just fit the box. Put it in a sunny window and give plenty of water.

About a week after the frost comes out of the earth, a growth of various kinds of plants will be seen. In this way you can treat yourself to some pleasing surprises in the matter of varieties. Often the bit of earth a foot square and six inches deep will show five or six kinds of plants and there is sure to be a riot of green if you can manage to get some Partridge Berry in the clump.

If you can locate any particular kind of flower which you desire to have in the window, take up the roots carefully and you may be sure of the blossoms. The wild lilies and plants of that family are particularly desirable.—C. H. Chesley.

Gasoline Power in a genuine MAYTAG



In-Built Gasoline Maytag Multi-Motor

Deferred Payments You'll Never Miss

The Maytag Multi-Motor Aluminum Washer must sell itself by a trial washing in your own home. With the exception of the motor, it is identical with the electrically-operated Maytag that has sold itself to thousands of city housewives—that rose to world leadership in less than two years.

It sells itself on the speed with which the new Gyrafoam principle washes clothes—a big washing in half the time required by other washers. It sells itself on the convenience of the low-set, all-metal, safety wringer, that swings into seven positions and automatically adjusts the tension for a small handkerchief or a heavy blanket. It sells itself on the economy of the life-time, self-cleaning, heat-retaining, big capacity cast-aluminum tub.

9 Outstanding Maytag Features

1 Washes faster.
2 Washes cleaner.
3 Largest hourly capacity. Tub holds 21 gals.
4 Most compact washer made—takes floor space only 25 inches square.
5 Cast aluminum tub—can't warp, rot, swell, split or corrode—cleans itself.
6 Easily adjusted to *your* height.
7 Clothes can be put in or taken out with the washer running.
8 All metal wringer. Self adjusting. Instant tension-release.
9 Electric motor for wired homes—Gasoline motor where no electricity is available.

9 Reasons for World Leadership

Free Trial for a whole Week's Wash

There's no cost, no obligation whatever. Simply call any Maytag dealer listed below and ask him to send you a Maytag Multi-Motor Washer. Then gather the biggest washing you can find, and with no other influence but the performance of the Maytag itself *in service*, make your decision.

Test first your daintiest garments—they are safe in a Maytag. Then test it on heavy rag rugs, or blankets and finally on grimy overalls and work clothes. Don't hand-rub them. Just let the gyrafoamed soapy water in the Maytag tub do the cleaning.

THE MAYTAG COMPANY, Newton, Iowa
EASTERN BRANCH: 1319 Arch Street,
PHILADELPHIA, PA.

Only the Maytag has this powerful, simple, in-built gasoline engine. Runs as smoothly as an electric motor; starts with a turn of the foot lever and does a big washing with a few cents worth of gasoline. Maytag builds it so that homes without electricity can enjoy a genuine Maytag Aluminum Washer. **For homes with electricity it is built with electric motor.**

Funny Animal Cookie Cutters!

HOW delighted the children will be with cookies you can make with these animal cutters! The four—lamb, cat, goose and bunny—will be sent you for just the cost of packing and mailing—only 15c.

We also send you a Davis Cook Book, with many recipes for other good things easy to make with Davis Baking Powder. This pure, sure baking powder raises food twice—once in the cold dough and again in the oven, insuring feathery light baking. In addition, it costs you less and you use no more than of any other high-grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

OK for 47 years

Only one set to a family. Offer expires Apr. 1, 1926

R. B. DAVIS CO.
Dept. K-8 Hoboken, N. J.

Gentlemen: As per your offer, please send me the Cookie Cutters and the Cook Book. I enclose 15c in stamps to cover postage and mailing.

Just Be Foolish Now and Then

It Relaxes Tired Muscles to Have a Bit of Fun

IF ONLY everyone could learn in youth the value of a sense of humor how much healthier and happier the whole world would be. We plod on and on, thinking so seriously about everything and forgetting that just being foolish once in a while relaxes tired nerves, prevents their snapping and the "snapping up" of each other.

One evening a few friends came in and we just naturally started laughing so heartily at our improvised vaudeville show with its impersonations and characterizations that we decided to get together once every month for a "just foolishness" night.

Perhaps the most wholesome and entertaining night is the one when we have our gymnastic singing class. We sing only the funny songs, choosing many of the school and college parodies, and while we sing, our leader, a man of spirit and humor, puts us thru some gymnastics which do not tire us but certainly relax every overworked muscle. It is enough to make the sourest person laugh to see my fat neighbor singing a birdie song, her arms flopping like wings, her little feet hopping and her head going from side to side. There are a lot of little, trifling hurts and misunderstandings among neighbors rubbed out at these sings and any time now one is likely to step into a home and find the mother and daughter laughing as they work or singing over the last night's favorite song.

Little Old Lady Entertains

One evening we were pleasantly surprised by a little old lady of sixty who took it upon herself to give us a fashion show. We did not know what she had planned nor ever dreamed that she could act so well, but when she came parading out in Martha's new cape and my gay hat on her silver hair, there were gasps of admiration as well as laughter.

We have had album nights when the old, old pictures were brought out and laughed at, for they are funny. This naturally becomes a story telling affair at which the young folks listen eagerly.

Sometimes it is just a fudge party or if in winter a "candy pulling" at which we revive the old fun of pouring our candy lakes on pans of packed snow.

Effect on Daily Life

Somehow or other these foolish times have had their effect upon our daily life, making us more tolerant of the children when chores seem a burden to them. I have learned to let the dishes stand an hour longer while I read a story which has just come in the mail or stop to "pillow fight" with the twins. I notice, too, that Dick does not hide his wet head so often after a stolen swim since I understand that it is his way of being foolish. Dad, who never used to think he could leave work unfinished, calls off the boys now and then on hot days. They dig a can of worms and go "cross lots" to the trout brook.

"It's funny that I never knew all these years that a man can work faster and better after he has played awhile!" Dad said the other day as he wiped his hands on the kitchen towel, "I used to think you had to keep everlastingly digging, but I was missing the best—getting acquainted with you and the kids!"

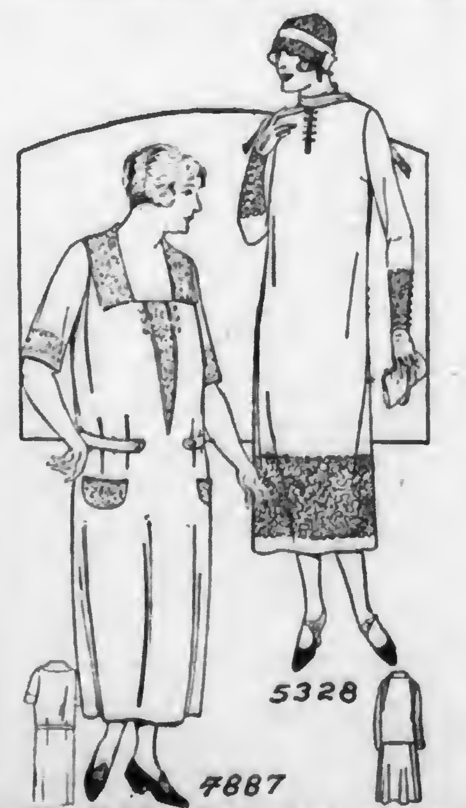
So we have resolved not to let life rush and crowd us so fast that our neighbors, our friends and our children are denied fellowship, and the few hours we spend in foolishness!—E. M. P.

Warning!

ARE your children permitted to absorb all the funnies of all the papers? We hope not. So many are grossly crude, cultivating a sense of humor in the wrong direction. Many in which animals figure are interesting and instructive. Our children need fun, good wholesome fun, and they greatly enjoy a magazine of their very own.—L. M.

When Evenings Are Long

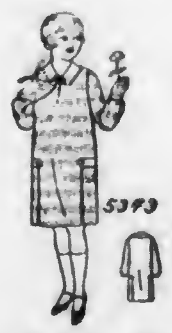
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

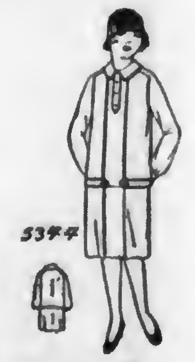


4887.—Morning Frock.—Linen, gingham or crepe could be used for this design. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires 4⅜ yards of one material 32 inches wide. If made as illustrated it will require 3⅜ yards of plain material and ⅝ yard of figured material. The width at the foot is 1¾ yard. Pattern, 10 cents.

5328.—A New Frock.—Faille silk or kasha braided with soutache or decorated with embroidery would be suitable for this design. The back shows the long waist and flare skirt. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2¾ yards of 54-inch material. The width at the lower edge is 2 yards. Pattern, 10 cents.

5313.—A Simple Frock.—Percale, gingham, wool crepe or flannel could be used for this design. Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1⅝ yard of 36-inch material, with ⅜ yard of contrasting material for band cuffs, and facings on collar and belt portions. Pattern, 10 cents.





5344.—A Popular Style.—One could use wool rep for this style or velveteen, balbriggan or jersey. The blouse has the new epaulette sleeve. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅜ yards of 36-inch material. Braid or binding in a contrasting color will form an effective trimming. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1925-1926 Book of Fashions.

Chase Pain Away with Musterole

When winds blow raw and chill and rheumatism tingles in your joints and muscles, get out your good friend Musterole.

Rub this soothing white ointment gently over the sore spot. As Musterole penetrates the skin and goes down to the seat of trouble, you feel a gentle, healing warmth; then comes cooling, welcome relief.

Better than the old-fashioned mustard plaster, Musterole works without the blister Grandma knew.

For croupy colds, sore throat, rheumatism and congestion of all kinds, rub on Musterole. Don't wait for trouble; keep a jar or tube on the bathroom shelf.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia,** is offering to send a lamp on 10-day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

GOOD SEEDS

Grown From Select Stock —None Better—56 years selling good seeds to satisfied customers. Prices below all others. Extra lot free in all orders I fill. **Big free catalogue** has over 700 pictures of vegetables and flowers. Send your and neighbors' addresses.

"U. S." Blue Ribbon boots are made either red or black—with sturdy gray soles—knee to hip lengths.

It's a Brute *for* Wear!

–this "U.S." Blue Ribbon Boot

SLIP on a pair—get them into action—see the stuff that's in them—and you'll understand why we say this "U.S." Blue Ribbon boot is a brute for wear!

Look at that thick, over-sized sole—made from a single piece of the toughest rubber.

Rubber so live and elastic it will stretch five times its length! That's what you get in the uppers. It resists cracking and breaking—stays pliable and waterproof.

These boots have rugged strength—and lots of it. From 4 to 11 separate layers of rubber and fabric go into every pair!

When you get "U. S." Blue Ribbon boots or overshoes you'll find they've got long wear built all through them! And they are as flexible and as comfortable as you could wish.

The "U. S." Blue Ribbon line is the result of 75 years' experience in making waterproof footwear. Every pair is built by master workmen—*and shows it!*

Buy a pair. *It will pay you.*

United States Rubber Company

Five times its length it stretches! That's what a strip of rubber cut from any "U. S." Blue Ribbon boot or overshoe will do. This rubber resists cracking and breaking—stays flexible and waterproof.

The "U. S." Blue Ribbon Walrus—an all rubber arctic that slips right on over your shoes. Its smooth surface washes clean like a boot. Red with gray sole, all red, or black—4 or 6 buckles.

"U.S." BLUE RIBBON

Boots Walrus Arctics Rubbers

To Keep Harness in Repair

Form the Habit of Mending and Oiling Regularly

HARNESS mending is one job that can be done during the winter months when there is no pressing field work on the farm.

With work harness representing a considerable investment, as it does today, it is good business to have it in good condition at all times. A little occasional care and repair will often save major and expensive rebuilding.

Weather is one of the worst enemies of harness. Leather contains certain animal and vegetable oils which act as preservatives and which are washed out and lost in time. If these oils are not replaced, the leather soon deteriorates.

Regular Attention Important

All harness should be given an occasional oiling. Some folks have a specified time and oil their harness regularly which is even better than an occasional oiling. One large Ohio corporation, which operates several hundred wagons and horses, has always had a rule that a driver's work is never finished Saturday evening until his set of harness has been washed and oiled for the following week. He doesn't get his pay envelope at the office until the harness is attended to.

The best preparation for oiling harness is a mixture of neatsfoot oil and castor oil. This may be rubbed on the leather with a rag or sponge after washing the leather thoroly with warm water and castile soap. Or better still, the harness may be dipped right into a tub of oil and allowed to soak. If the oil is heated a little the action can be hastened. I have known farmers who allowed the harness to hang in a tub of oil for several hours, allowing the leather to take up as much oil as it would. Leather in good condition will not take up a great amount of oil but leather which has become dry, and hard and cracked will take up a surprising amount. Oil will improve leather, but it can scarcely be expected to bring back to life a piece that has been neglected for years.

After the harness has been soaked in the oil, it should be taken out and allowed to drain for several hours, hanging in a warm room or in the sun. The excess oil drips back into the tub and can be used again. When all of the oil that will has drained off the harness should be rubbed clean with a rag. This treatment will add years to the life of a set of harness.

When harness is systematically oiled it is possible to discover slight tears and abrasions before they become serious. A little rip in the stitching can be repaired in just a moment while a small rip allowed to remain untouched for months will develop into a serious tear which may let go any moment when a team is pulling a heavy load uphill.

Keep a Supply of Waxed Thread

It is always a good plan to have a supply of waxed thread and a few harness hardware repairs on hand for minor repairs. In this way a badly worn buckle or cock-eye can be replaced at home before it breaks and causes any damage or expensive delays.

Waxed thread can be prepared at home from a ball of number ten linen thread and some cobbler's wax. This wax can be prepared from equal parts of pitch and rosin heated and mixed thoroly. It will give strength and smoothness to the thread. Should it stick when drawing it thru the leather the addition of a little beeswax will make it slide more readily.

Heavier thread should be used for repairing heavier parts of the harness, such as traces and breeching straps. In preparing thread for this use, several plies of the regular number ten thread can be twisted together. Light harness straps can be sewed with three plies of thread while tugs and heavier pieces should be sewed with about five or six.

The common method of making a heavy waxed thread is to break off about five feet of thread, hang it over a hook or nail and then twist the strands open and break the thread off with a ragged end. Place the next thread over the nail and break it in the same manner until the required number of plies have been laid up, being sure that all have uneven and tattered ends. This uneven end will give the finished thread a fine point when finished and twisted.

Now melt a portion of the cobbler's wax on a piece of leather and with the thread over a nail, take hold of the lower end about six inches from the end and twist it by rolling it on the thigh with the palm of the hand, holding it with the thumb and finger after each roll to keep it properly twisted.

Applying the Wax

Wax this twisted end with the wax pad and then twist and wax the other end in a like manner. Now take the thread down and twist it over the thigh and wax until it is all waxed and smooth. The twist can be equalized by drawing the thread over the nail a number of times. Waxing is best done by pulling the waxed pad vigorously back and forth over a small portion of the thread at a time.

Needles may be threaded by drawing the fine end of the thread thru the eye of the needle and folding the end back along the thread and holding it with the thumb and finger while twisting the needle. The wax will cause the fine end of the thread to wrap smoothly around the main thread and thus be secured. If the thread has been twisted too much, it may knot during the work and if it hasn't been twisted enough it will have flat spots. A little practice will make one perfect.

To Mend a Broken Strap

In mending a broken strap, the ends should be beveled with a plane or sharp knife for a distance of about three or four inches. The two beveled sides should be laid together and held securely in place in a vise or clamp.

With a harness awl, punch a hole clear thru both pieces. Take a thread with a needle on each end and run one needle thru this hole until the threads on each side are of even length. Now punch another hole a short distance ahead of the first one, run one needle thru in one direction and the other one in the other direction and draw the thread up tight. Continue in this manner up one side of the break, across the end and down the other side. For absolute security, one or two crisscross rows of stitching may be put in.

To finish the stitching, place the left needle and thread thru the last hole, then place the right needle in the hole and when in this position wind the left thread once or twice around the needle. Then draw both threads up tight. This winding locks the threads in the leather.

Another small hole is then made back on the splice at a point about one-eighth of an inch below the next to the last stitch and the right thread is passed thru, drawn up tight and both threads cut off close to the strap. A neat appearance can be given to the work by running a metal roller or finishing wheel over the stitching. This forces the thread into the leather and gives a more uniform appearance to the stitching.
—F. A. M.

It is Easy to Buy by Mail and Save Money

Ward's New Spring Catalogue Is Yours Free—If you ask for it

The opportunity is yours. The complete Catalogue is to be yours Free. It is now ready for mailing.

You may just as well share in the Savings it offers. You may just as well compare prices, and see what is the low price, the right price for everything you buy.

We offer you the book—free. But your name and address is needed. It is necessary for you to say "Send me the book." And therefore we print the coupon on the next page, for your convenience.

Will you ask for the book? Will you see for yourself the Savings Ward's new Spring Catalogue offers?

Baltimore—near to you, a great center of fast railroad service, where your order goes quickly!

Ward's mammoth new Baltimore building, filled with acres of new fresh merchandise, ready for quick shipment to you!

Therefore you save both time and transportation charges in trading with this near-to-you, complete, fully stocked Baltimore house of Montgomery Ward & Co.

Nearness to You Means Better Service

The seven big plants that together constitute Montgomery Ward & Co. were located for the convenience of our customers. We built this house in Baltimore because we wanted to serve you better, to save you freight charges. It stands as proof of our appreciation of your patronage, proof of our desire to be of better service to you.

And yet together these seven enormous buildings hold a bigger meaning than mere quick delivery of your goods. They mean more than a big neighborhood convenience that carries large stocks of merchandise near to you.

Together they create a vast buying power that brings you lower prices on nearly everything you buy.

$60,000,000 in Cash Was Used in Securing Low Prices

Consider the power of $60,000,000 in cash when used to buy goods *for you!*

Think what it means to place an order for a whole train load of one lawn mower; for all of the stoves one big factory can make; for 200,000 pairs of shoes. And then to pay spot cash for everything bought!

That is the way we bought your Spring needs—for You! That is the way Ward's works for you.

Expert Buyers Search the Markets of the World

A complete organization of expert buyers buy for you. A shoe buyer who has spent his life in studying leather and shoes; a stove buyer with many years experience in stoves; these experts go to the best markets of the world to search for highest quality at lowest prices.

Raw materials are bought. We buy the new live rubber for our tires. We buy raw silk. We buy china at the potteries of Europe. The whole world is our market in our plan of service for you.

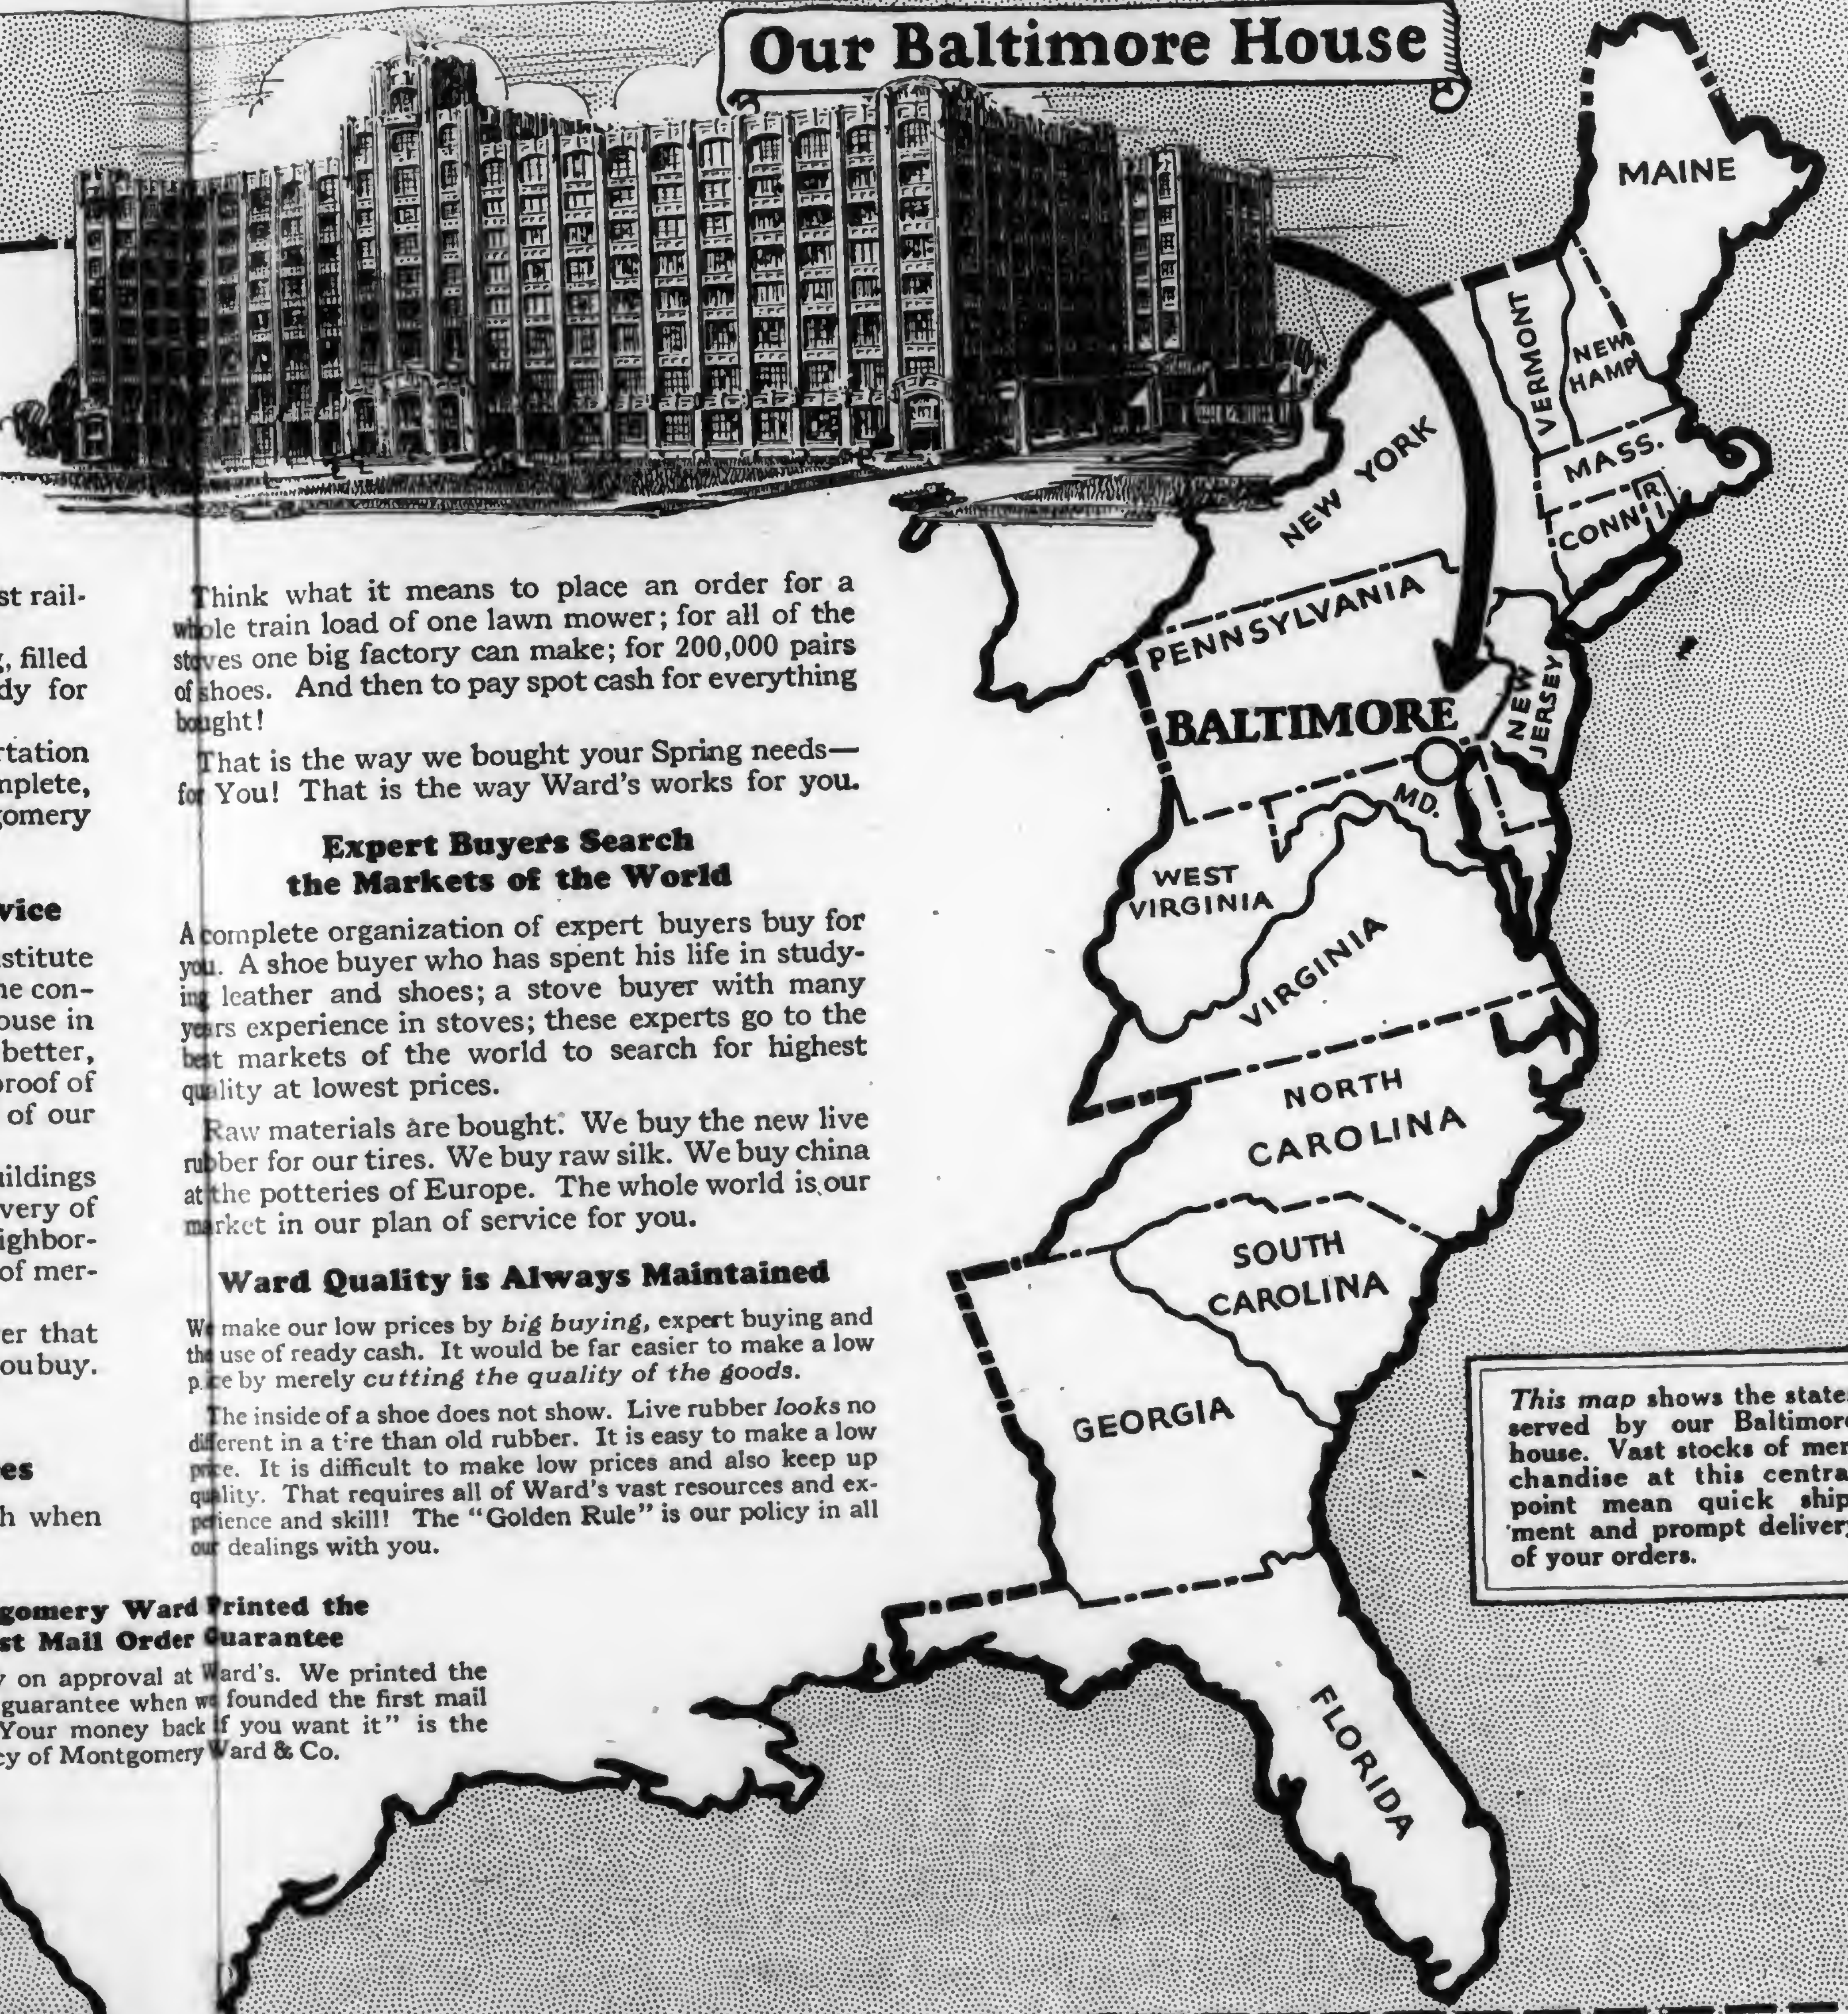
Ward Quality is Always Maintained

We make our low prices by *big buying*, expert buying and the use of ready cash. It would be far easier to make a low price by merely *cutting the quality of the goods.*

The inside of a shoe does not show. Live rubber *looks* no different in a tire than old rubber. It is easy to make a low price. It is difficult to make low prices and also keep up quality. That requires all of Ward's vast resources and experience and skill! The "Golden Rule" is our policy in all our dealings with you.

Montgomery Ward Printed the First Mail Order Guarantee

You always buy on approval at Ward's. We printed the first mail order guarantee when we founded the first mail order house. "Your money back if you want it" is the 54-year-old policy of Montgomery Ward & Co.



This map shows the states served by our Baltimore house. Vast stocks of merchandise at this central point mean quick shipment and prompt delivery of your orders.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

(Continued from last week)

MARVIN'S prowess as a fisherman was assured and the story lost nothing in the retelling when Lame Bill showed the great bass to admiring visitors. Generously Tom had refused to take any credit and had forbidden Marvin from telling that he'd even given advice. "Fought that air fish an hour and fifteen minutes," was the way Lame Bill described the heroic deed. "Didn't have the strength to pull him out. Tom was down fishin' at another hole and when he come up he found that little younker in a dead faint, still holdin' onto the pole. Throwed some water in his face, Tom did, an' he come to and dragged Mister Bass out on the bank. I'll say that younker is a game un!"

"But how did he know that the fight had lasted an hour and fifteen minutes?" an unsuspecting questioner always would inquire. That question was Lame Bill's bait and he set the hook deep and skilfully. "Looked at the 'four-o'clock' flower on the bank," he made answer, "an' told the weight by the scales on the fish's back." By that time it usually was decided Lame Bill was somewhat of a joker but there was no mistaking the size and beauty of Marvin's prize. In the days to come the great fish was to serve as mute reminder of a wondrous day and the friendship that knits the heart of boyhood and holds it fast.

There's truth in the old saying that "All work and no play makes Jack a dull boy." There was new spring in Tom's step, renewed determination in his voice as with Marvin he went down to his project plot the day after their fishing trip. It was heart-warming, too, to hear his friend's praise of his work so far and listen to his exclamations of admiration. Marvin Manning knew corn. He knew, too, when cultivating had been properly done and what good soil meant in yield production. After the first voluble outbreak at sight of the field Tom's visitor perched on a stump nearby and with a degree of seriousness unusual to him proceeded to "lay down the law." It would have been amusing to John Roberts had he heard the pepper-pot's clear cut commands. "Son," was the admonition, "this is your Uncle Fuller speaking to you. Remember what I told you about fishing? Didn't I prove I was right? You've got a sure winner in this field if you do your part. No such soil on our farm or anywhere else in the county that I've seen. Now, doggone you, dig in! Don't let me catch you leaving a weed in this field. Two more cultivations and then the hoe. Now don't stand there looking at me, get to work." With a broad grin Tom saluted in mock humility, then the ponies which were now well trained swung into action.

Surely the gods of moisture were good to the Valley that favored year. With frequent showers and intense heat, Tom's corn grew so rapidly that you could "hear the jints crackin'," according to "Slim." The third cultivation was in progress when John Roberts appeared unannounced. As he stood looking over the noble field there was a song of thankfulness in his heart. Assuredly the boy was doing his part and only misfortune could prevent profitable return. Warm was the teacher's clasp and hearty his words of commendation. "If you can do this well your first year, Tom," Roberts said, "you will make a real farmer in a few years. No boy or man could help being proud of a field like this but the fight isn't won yet. You've got a hard job and a warm one, too, with the hoe after the last cultivation. And remember next time you are just barely to kiss the roots. Better get an old-fashioned double-shovel for that. And don't let me catch you leaving a weed in the field."

FRANKLY glad to see his teacher friend Tom assured him every instruction would be carried out, then told him of Marvin's visit and the dire threats that his friend had made if he failed to make good. Roberts grinned, then reproached Tom for not inviting him to a fishing party. "I heard about Pep catching that big fellow," he announced. "By the reports he must have been a whale. Wouldn't have been a bad idea to have kept it quiet. You may have fellows up here fishing that you'd prefer to stay away." With the teacher's warning again came to Tom the premonition of some unforseen happening but he only answered that the pool was hidden and no one could find the way. Long the friends talked until the descending sun warned Roberts that he must be starting home. Then suddenly Tom pointed to the surrounding trees and with a sharp command "Come on!" was off with the teacher at his heels. For Tom's keen eyes had glimpsed peering faces thru the screening foliage. And folks of the Valley had no reason to conceal their identity.

Into the timber dashed teacher and pupil, to hear in the distance scurry of flying feet and crash of bushes. But strive as they might the pursuers could catch no glimpse of the fugitives who had taken alarm at the first evidence they had been seen. The handicap was too great and breathless and panting Tom and Roberts returned to the team. "It may just have been some fishermen who thought they'd get into trouble," Roberts remarked. "Then again it may have been somebody who just wanted to look at your corn and was afraid you'd resent their bothering you."

But Tom Woodosn had no illusions. "I know well enough who it was," he replied grimly. "Pep, the little fool, has been bragging about my corn and 'rubbing it in' on some of those 'Outside' fellows. They've come up to see for themselves. Well, much good it will do 'em. And the next fellow I find snooping around is going to get a dose of lead. I'll bring the shotgun along after this."

"None of that, Tom," Roberts reproved sharply. "You've got to learn to fight your battles with your hands alone. But keep your eyes open and I'll find out easily enough if any of the boys you suspect were away from home. Keep on digging in and I'm sure you will be mighty well satisfied when the season ends. Next time I come I hope to bring a visitor. His approval of your work will mean as much to you as to me, Tom, for he's my boss in this state. With the state supervisor I hope to get out to see your corn after the ears hang thick on the stalks. Until then, goodbye." Someway, as Roberts left the field for home, Tom felt lonely and in need of the encouragement that contact with those who follow the same line of endeavor gives. How fine it would be if another boy on the next farm as was true with many of his fellows was striving for the same end, eager to share experiences. Here not one of the Valley was engaged in similar work. And then to cheer him came thoughts of the loyalty of the Valley folks, their frank pride in his achievements, their willingness to fight for him. After all it was the honor of Peace Valley he was defending and as he took his slow way homeward Tom again resolved to work as he never had worked before. And he'd watch, too. That the mysterious visitors had some sinister purpose in view he had no doubt. When he told his father of the day's happening, without a word Sam Woodson took down "Old Betsy" the gun which was his favorite and began to jam shells into the magazine. "None of that, dad," Tom had commanded as sharply as the reproof had come to him. "You are going to help me fight but it will be with our hands and brains. The 'Outside' hasn't won over us yet and it never will." And Sam Woodson's heart beat warm as he felt that here was a son of the Valley who still was true to the home he loved.

AS THE days passed and Tom toiled with hands and hoe many the time when it seemed as if the work was unendurable. High rode the sun in a brassy sky and to the lad accustomed at suc htimes to the shade of a rippling stream where lurked hungry fish or at the most to berry picking jaunts the field was almost a torture chamber. But the teacher had said, "not one weed in the field," and Tom proposed to follow that injunction to the last morning glory. No bugle call, no flaunting banner to inspire the disciple of agriculture to heroic deeds, only a promise to one called "friend" and the will to carry on. Yet despite his discomfort and the feeling at times that no reward could be worth such effort unconsciously the field had become a part of Tom's very life, the towering stalks a living emblem of possible achievement. Sometimes when he paused to rest he thought of John Sheldon and again seemed to feel the pressure of that strong, toil-worn hand. "Don't leave nary weed, son," Sheldon had told him, "for every weed is a robber that steals your grain. Just remember that you are fightin' robbers when hoein' corn and it will make the work a lot easier." In his own field the champion would be wielding a hoe. So despite the mild protests of his mother who thought that Tom was overdoing the job and should take more days off for recreation he stuck to his work. When the time came for the promised visit of Roberts and his friend it would have taken a microscope to find a weed. Even Sheldon could have found no fault.

IF THE Woodson field had been beautiful in early summer it was magnificent when the big ears gave promise of rich reward. So nearly had he lived with his contest plot that to Tom the field had become a sentient thing. Now the leaves whispered as they swayed in a gentle breeze or sang a militant march that presaged victory when the wind roared thru that living forest, so deeply rooted that not one stalk would yield. Tom came to love those sturdy stalks as a proud father loves the son who gives promise of lusty manhood. The job was done so far as human endeavor could make it so. And Tom's pride was shared by all the Valley folks who before their eyes beheld a miracle. It became common custom to make Sunday visits to the field and while admiring to engage in speculation as to the possible yield. When squirrels began to take their usual toll the keen-eyed hunters rallied as if to a feud call, wiping out the furred tree dwellers until as Lame Bill plaintively complained it was necessary to "go ten mile to find a squirrel fer seed." But when Zip Coon followed the red and gray invaders it was Lame Bill and his famous hound who led the attack and soon instinct reminded the 'coon family that it was not healthful to visit a certain field, no matter what promise of roasting ears. While other members of the vocational agriculture class bewailed the ravages of bird and beast the protected plot in Peace Valley went unscathed.

Again the visitor stood looking down into Peace Valley and exclaimed over the beauty of the scene. A few years older than John Roberts but the same virile, intelligent type of manhood Herbert Saunders, state supervisor of vocational agriculture, had won promotion thru untiring and constructive effort when in charge of an agricultural class. Farm-reared as Roberts had been he had brought to his new field of endeavor not only experience and technical college training but symphathetic understanding of the problems confronting farm boys. Now Supervisor Saunders was out on a tour of inspection, going direct to the project plots, sharing the joys and hardships of the men who called him chief. The story of Tom Woodson's heredity and environment had been told by Roberts and with lively interest the visitor approached the Woodson's humble home. "I'll bank on one thing, Jack," Saunders remarked as they rambled down the long hill, "and that's the honesty and integrity of folks who live here. They may not be up on the fourth dimension and the chances are that they vote as a mass instead of as individuals but they live clean and think in the terms of our forefathers. And when they fight they give every ounce that's in them. If this young wildcat of yours doesn't give a good account of himself he isn't one of the breed."

"Never fear," Roberts had replied. "Altho Tom is only sired by a mountaineer and his mother a woman of more gentle breeding he's got all the fighting instincts of his father's people, coupled with the trained intelligence that comes from his mother's blood. You won't find anything yellow about Tom. Remember this is his first year to farm and that every summer before he's loafed and fished instead of handling a hoe or cultivator. Wait 'til you see his field; that should prove to you whether he's 'game' or not." And then Sam Woodson was welcoming them with the simple dignity of the mountain born while Tom's mother made them feel that refinement and culture was not unknown even in humble environment. Supervisor Saunders was won by the firm clasp of Tom's hand and the clear glance of his eyes before they had journeyed to the field. But when they had beheld what indeed seemed a miracle after the other unkempt, unthrifty fields which they had passed that morning Saunders gripped the lad's hand and congratulated him sincerely while John Roberts beamed with pride. "Tom," announced the supervisor, "I've looked over thousands of project plots in my visits the last few years but I've never seen one that showed better care than yours. And I know what it means to hoe on a hot day when the other boys have gone swimming and the sun finds the place that's thin on your shirt. You've done a mighty good job here and I'm not forgetting the part Jack Roberts played in helping you. On the farm, rather than in the class room, is where we find the real test of an instructor's ability to teach. I'm not saying you are going to win a prize but I can tell you this; the other fellows will have to scratch gravel or take your dust. Now we'll have to be getting back to look over some of the other fields." Here was encouragement indeed and for the first time Tom began to vision the possibility of winning more than county recognition. But only time would tell. No crop is safe until the last ear or grain is safely cribbed or binned.

THE coming of Roberts and his chief had been made known and one by one the Valley dwellers trooped down to stand in silent admiration as they scanned the field or to briefly acknowledge introductions as they were presented to the visitors. But as they gathered in little groups discussing the continued growth of the lusty ears, Roberts could sense an atmosphere different than that which he first had met with. The field was theirs as well as Tom's. Had they not protected it against depredation, was not the grower one of their own blood? As he stood looking at these people so nearly primitive Roberts found himself harking back to the days of long ago when veneration for the cereal king was part of the religion and simple faith of those who called upon the gods of sun and rain to give them corn that they might live. Never again would those of Peace Valley be but trappers and fishermen. Agriculture had wrought its magic spell and opened eyes to the possibility of food production. Even now Tom was beginning to get requests for a "little of that thar seed" and to gladly promise in event the crop matured. It now seemed more than possible that he could go back to school another term and there was a song in Tom's heart as he expressed his gratitude for the visit and saw his visitors depart. And before that Roberts had called him aside for a bit of friendly information.

"Now that it's all over and the corn is 'laid by'," Roberts had said to Tom, "I don't think it disloyal to give you a quiet tip. Bob Durham had a wonderful prospect but he slighted the cultivation after the job got old for him and failed to give the fourth as instructed. He absolutely refused to hoe, too, and his mother backed him up. Bob's out of the running in competition with your field altho he'll grow a lot of corn. You've got a real chance to win, old man, providing nothing happens. Anyway, you are going to have a lot of good seed to sell and I don't want a bushel disposed of except what your friends here may want until you consult me." Always the provision, "unless something happens." Remembering that Roberts had found proof that Durham and Johnson had been away from home that day when mysterious faces had peered out from surrounding woods Tom again was filled with foreboding. His friends had helped him protect the plot against furred and feathered thieves, could they prevent attack from those more cunning? And would such attack come? He could only wait and watch but it was hard to guard a cornfield. Some of his disquieting thoughts were conveyed to Sam Woodson and again Tom's father took down "Old Betsy" from the wall. Nor would he promise that the ready weapon of a mountaineer would not be used. No dweller "Outside" could "do dirt" to a son of his and get away with it.

A mysterious summons had come to Tom Woodson at his home in Peace Valley. "Come to the corner store in Blanton at eight o'clock tonight," the voice had said, "and you'll hear something that will interest you." Demanding the name Tom found himself talking to a 'phone that gave no answer. Disturbed and perplexed he wondered if he should inform his father and ask help and counsel. Then reflecting that this might merely mean one of the "Grubs" in trouble and that the presence of an older person might mean embarrassment Tom decided he'd tell no one and would go alone. At the worst it could mean only some new scheme of the "Wasps" and Tom had proved abundantly able to look out for himself. Saddling his pony he rode away, thoughts racing faster than pony footfalls as he neared the town.

EIGHT o'clock found him at the corner store, a trysting place of high school students. Ten minutes past and still no happening. Had the whole thing been a hoax and was Durham or one of his pals furtively watching and laughing at the credulity of a "Hill Billy?" Then as if in answer a slouching figure brushed past and Tom caught a muttered "Hello, kid! Follow me but don't let nobody see you." It was "Hard Luck" Joe Grimes. What information could Joe have that would prove valuable? But at a discreet distance Tom followed, to see Grimes turn into an alley, furtively look around then beckon him on. Soon they were in the shack Joe called home and the outcast barred the door. A dirty and menacing figure, and a shock of alarm went thru Tom as he thought of what it might mean were he called to measure strength with this man who held the record of a criminal. But Tom's face was impassive as Grimes turned to him and in a voice husked from drink began to speak. No foe but a friend was Grimes and Tom listened with rapt attention to the latest plot of his enemy.

"KID, I don't want no one to find out that I phoned or you've been here," Grimes began. "Old man Durham has got it in for you and he's got something on me that would put me in jail again. Don't matter what, but he's a hard one and I ain't goin' to take no chance. I was up in the old mill, none of your business why." Tom grinned as he recalled the stories of Joe's hiding there to 'sleep off' a debauch. "Layin' there," Grimes continued, "I heard that smart aleck young Durham they call 'Bull' come in with some of his friends. When they begun talkin' and I found it was about you I just pricked up my ears and listened. There's ten on 'em goin' to raid your corn patch tomorrow night. None downright 'ornery' except Johnson and that 'Bull' I reckon but he's made 'em believe it will be a right smart fun to spoil an acre or so to knock you out of winnin' some prize. Talked about some seed they'd stole from you and hid. Said they'd seen your corn an' believed you'd got the seed back. Ain't aimin' to let no 'Hill Billy' beat 'em and you sure are goin' to lose some corn if you don't head 'em off."

As he listened Tom's anger had risen to white heat. His "hunch" nad oeen right after all and once more he must fight for his own. But ten against one; that was the unfairness of it. "I won't forget you for this Joe," said Tom as he arose to leave, "and right now I'm going down to call 'Bull' out and whip the filling out of him. They may raid my corn tomorrow night but 'Bull' will have to send someone to take his place."

With a cry of protest Grimes sprang to his feet. "Don't be a fool," he roughly advised. "Whippin' Durham won't keep 'em from destroyin' your corn fer you can't watch it night an' day. Let 'em come an' scare the life outen 'em, then they'll stay away. Besides somebody may have seen you come here. Don't get me into trouble, kid. I wanted to help you fer once when the other boys was mean to me you took my part. Joe Grimes doesn't fergit a friend but Old Durham is a hard one and I'm afeared of him."

(To be continued next week)

News and Notes

THERE are twice as many telephones in Pennsylvania now as there were ten years ago. The state now has a telephone for every eight persons.

* * *

A ninety-six-year-old man, the last of those who rode on the first passenger train in the United States in 1834, recently went from his home in Michigan to New York to see once more the crude locomotive that hauled the first train between Albany and Schenectady.

* * *

The cost of generating electricity is only about twenty per cent of the total bill. The other eighty per cent is the cost of delivering service from the power plant to the customer.—Public Service Magazine.

* * *

It is estimated that life insurance companies hold about twenty per cent of all farm mortgages in the United States. In September, 1924, their outstanding farm mortgage loans amounted to $1,781,000,000.

* * *

A single grain of rye sown in the fall on a Clarion County, Pennsylvania, farm produced seventy-four stalks the following year. Another grain on the same farm produced seventy-eight stalks.

* * *

Only one of the eleven railroads delivering freight to New York City has freight tracks running directly onto the island of Manhattan. Other railroads carry their freight cars to the city on car floats. It is estimated that more than 800,000 cars are taken across the river to New York annually from Jersey freight terminals.

* * *

Vegetable growers in Davis County, Utah, sometimes grow as many as 1800 bushels of onions per acre, on trrigated land which sells for as much as $2000 per acre. This territory lies on the eastern border of the Great Salt Lake.

* * *

A full blooded Oneida Indian recently laid 218 tons of bricks in less than seven hours in a brick laying contest in Kansas. The contest was a feature of the celebration of the completion of a brick highway. "Indian Jim" placed 46,644 nine-pound bricks in proper position at the rate of about two a second.

* * *

Helium, the gas used in the ill-fated airship Shenandoah, was discovered in the sun and was named before it was discovered on the earth. The sun is more than ninety-two million miles away from the earth.

* * *

Every three hours Philadelphia opens a new store, says the Real Estate Board. A new house is completed every forty minutes, every nine days a new office building is erected, every three weeks a new school is opened, and three new churches are organized each month.

Did you ever hear this one?—

Rastus and Joe had been accepted by the local board and were talking over the service.

"What you gwine do?" asked Rastus.

"I'se gwine in the infantry. Whah you gwine?"

"I'se gwine in the cavalry."

"Niggah, don't jine the cavalry; come on wif me in the infantry."

"No suh. They gives you a hoss in the cavalry.

"Niggah, when that captain gives the word to retreat, ah don't want to be troubled with no hoss!"

Auntie, sewing in her bedroom, noticed that little Muriel, whom she had left to play in the sitting room below, was unusually quiet.

At last she went downstairs and opened the door. She saw Muriel sitting in an easy chair with her hands folded.

"Well, dear," said auntie, "can't you find anything to do?"

"I can't find anybody to play 'Hide the Thimble' with me," the child replied, "so I've hidden it myself, and now I'm waiting to forget where I put it."—Pittsburgh Gazette Times.

Young Edgar was summering at the Stackpole farm and eagerly sought every opportunity to assist Mr. Greenbury.

One afternoon they had been making hay while the sun shone, and after finishing a high haystack Edgar shouted from the top: "Say, Mr. Greenbury, how am I going to get down?"

The old farmer studied the problem a minute and finally solved it.

"Oh, jest shet yer eyes an' walk round a bit!"

A furrier was selling a coat to a woman customer. "Yes, ma'am," he said. "I guarantee this to be a genuine skunk fur that will wear for years."

"But suppose I get it wet in the rain?" asked the woman. "What will happen to it then? Won't it spoil?"

"Madam," answered the furrier, "did you ever hear of a skunk carrying an umbrella?"—Success.

Two deaf men met on a country road. Dave had a fishing pole in his wagon. When he saw his friend Jim he stopped.

"Goin' fishin'?" shouted Jim.

"No," Dave replied, "I'm goin' fishin'."

"Oh," said Jim. "I thought mebbe you was goin' fishin'."

The Parson (about to improve the golden hour)—When a man reaches your age, Mr. Dodd, he cannot, in the nature of things, expect to live very much longer, and I—"

The Nonagenarian—I dunno, parson. I be stronger on my legs than I were when I started!—London Opinion.

"Sammy, did you kill the rooster for tomorrow's dinner?"

"No, I went out to do it, but I thought it would be better if the poor fellow got a good night's rest first, because he's got such a hard day before him tomorrow."—Life (New York).

Boy—I want to buy some paper.

Dealer—What kind of paper?

Boy—You'd better give me flypaper; I want to make a kite.—Haversack.

"Some defeats are only installments of victory."—Jacob Riis.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—My father died when I was three months old and my mother died when I was three years old. Then I was sent to an orphan home from which my uncle took me.

I am on a farm with him and we have four dogs which are Pointers and Setters. We do not have any stock yet on account of just moving on this farm of sixty-five acres.

We have a six-room house with a furnace and also have water in the house. We have a bank barn and other buildings.

I have a little more than half a mile to walk to school, but I don't mind it. I like it here on the farm and expect to farm some next spring.

My uncle is busy training the dogs. I like to watch them working on birds when my uncle takes them out. He takes them out every day. It's wonderful the amount of intelligence they display.—Frank Seder (X, 12), Allegheny County, Pa.

Dear Cousin Ruth and Forum Friends:—My father started taking Pennsylvania Farmer in the autumn of 1925. I generally go for the mail myself. I can hardly wait till I get the magazine. The first thing I turn to is the Forum page.

I would like to join your circle and do all I can for your page and get all the boys and girls to join that's possible, for I guess you would like more to join.

My father owns a large farm. We have lots of cattle, horses, pigs and chickens. I do most of the milking myself. I have one pet, a dog, his name is Shep and he goes almost every place I go. He is full of fun.

I go to Mt. Philip School. We have lots of fun skating on the creek on the school grounds. I like my teacher very much. At our school the patrons hold a meeting every month. The children prepared a program for the meeting and the teacher helps us. We have fine times at the meetings.

Every Saturday I go with my father to take music lessons in Frederick, for that is where my music teacher lives. I take music lessons on a piano.

Oh, I am so glad that winter has come for then comes sliding, skating and all the winter sports and it is so much fun. I think that winter is the best season of the year. It is getting late and I am geting sleepy so I must go to bed now.—M. Ruth Summers (X), Frederick County, Md.

Join the contest, won't you, and tell about the fun you have skating on the creek with your schoolmates.

Dear Cousin Ruth and Forum Friends:—The church and schoolhouse grounds were donated by Jacob Kimmerling an early settler, in whose honor the place is now named, Kimmerlings. I go to this Sunday school.

The Kimmerling Grange Hall is near our place. I am a member of the Juveniles. In the fall we had a "wienie" roast. Every meeting we have programs by the children.—Mary Kauffman (X, 11), Lebanon County, Pa.

Dear Cousin Ruth:—Why not have some nature riddles? Here is one. These birds are here in winter when the ground is white with snow. They are recognized while on the ground. When flying you can see gray and white plumage and the white tail feathers. They are very common about houses and are very tame, coming into the dooryard to feed upon crumbs thrown out for them.

The song is a sweet thrill which has a beautiful effect when given by a whole flock in unison. Their nest is made of grasses on the ground, beside a stone in a bunch of weeds or under a small shrub, where it is well hidden. They lay three or four eggs that are whitish, sprinkled with reddish brown.—Esther Luse Bell (X, 12), Green County, Pa.

Look for the answer on the page next week.

Dear Cousin Ruth and Forum Friends:—I am going to tell you about our school social. We held it on December eleventh. There are only eleven scholars in our school. We held it in a nearby Grange Hall. Our program consisted of songs, dialogs, recitations and jokes. My sister and I sang a dialog song: "Mister Moon and Miss Sunshine." I was Miss Sunshine. We had yellow and orange dresses and caps on.

I was also in a dialog entitled "The Deaf Grandparents," and gave a recitation entitled "The Night after Christmas." After the boxes were sold we had a guess cake. Each one who wished to guess had to pay five cents. As no one guessed it was auctioned off and brought two dollars. The cake contained a clover leaf. Then we ate our lunch and it wasn't very long before we went home.

The proceeds were $30.35. Our teacher bougth us a ball.—Mary Rebecca Baer (X, 9), Mercer County, Pa.

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—You must be having lots of fun in the out-of-doors this wintry weather. It's been a good while since I last buckled a skate strap or plunged off my sled into an icy snowdrift, tho it doesn't really seem long since I was the proud owner of my first sled, a sled that didn't "live" long.

In the meadow in front of the house was a very steep hill. My uncle learned just how steep one day when we went out together for an afternoon's fun.

We climbed the gentler of the two slopes, dragging the new sled after us. Looking down from the top my courage failed. I was afraid to risk either the sled or myself to that hill, but my uncle, older and braver, took the plunge and a few minutes later I helped pick up the pieces! His short, swift ride had suddenly ended among the tussocks in the meadow below.

I've forgotten into how many pieces that sled splintered or how many bandages uncle needed but I do remember that in a few days uncle gave me a glorious big flier, that I could steer, to take the place of the broken sled.

"Winter Sports" Contest

But now that I can't run out at noon for a skate on the creek or a coast down one of the nearby hills, as you can, I want to hear about your good times. We'll make it a contest and for the best three letters telling of your "Winter Sports" there'll be three prizes—a pair of skates, a fountain pen and a school-box outfit.

Make believe that you're writing to a city child, who doesn't have hills for coasting, or ponds for skating, or snow for sleighing, all about the fun you're having now. Remember to write neatly so that the make-believe city child can read all you want to tell him or her. Spell correctly, you wouldn't want him to see mistakes, and make the letters so interesting that he would enjoy every word—if he were real!

A Few Rules to Remember

In the upper left hand corner write the word "Contest," at the top the title, "Winter Sports," and then the contest letter. At the end sign your name, age and address. If you want to read them over and decide the contest letter write it on a separate sheet of paper then the contest letters can be found easily when I want to read them over and decide which one of you wrote the best letter to his imaginary city friend.

Address all letters to Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa., and have them reach me before February 6th. Don't forget, those who send in interesting, different contributions, of any kind, any week, will receive the Forum membership pin. If you write an especially good letter for the contest you will win both a contest prize and a pin.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Since it has been such a long time since you had a cross-word puzzle, I thought you might like one this week. You will find that I have given you a clew to each word in the sentences which follow.

Adam and Eve lived in the Garden of (14 down).

There are (21 across) dimes in every dollar.

Some people consider (10 down, abbreviation) an unlucky day.

You can learn how to do most things if you try (9 across) enough.

She had an (12 down) in her head all night so she felt sick in the morning and her face was pale and (4 down).

They called Lincoln "Honest (1 across)."

Would you like to eat (1 down) apple?

Some people learn to say (6 across) and some are afraid to say (2 down) to a goose.

The (16 down, abbreviation) Mr. Smith is the new minister at the Baptist church; (18 across) is very popular.

Little (20 across) is the name of the heroine of "Uncle Tom's Cabin."

William Howard Taft is the only living (5 down)-president of the United States.

After the fight the pirates were very badly scared and (15 across) before their captors.

A storm at sea is an (3 across)-inspiring sight.

(19 across) is an old form of "you."

Without (17 down) you could not see and without legs it would be difficult to (7 down).

An (8 across) is used in chopping down trees.

Some people give their old worn-out clothes to the (13 across)-man.

Then hen lays an (11 down) every day.

When you have filled in the puzzle, send the answer to me so that it reaches me by January 30th. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the January 2 issue of Pennsylvania Farmer is: PHILADELPHIA, WILMINGTON, BALTIMORE, TRENTON, WILKES-BARRE, HARRISBURG, ALBANY.

The puzzle prize winners are: Mary Brown, age 12, Bridgeton, Pa.; Margaret L. Dierweckter, age 11, Sheridan, Pa.; Jacob H. Flick, Jr., age 10, Somerset, Pa.; Pauline Lankford, age 10, Hurlock, Md.; Betty Manbeck, age 10, Lewisburg, Pa.; F. Earl Minnick, age 8, Rough and Ready, Pa.; Helen Petrosky, age 10, Whitney, Pa.; Norman Reed, age 11, Hegins, Pa.; Francis Seder, age 12, Tarentum, Pa.; Mary Wallace, age 10, Franklin Springs, N. Y.

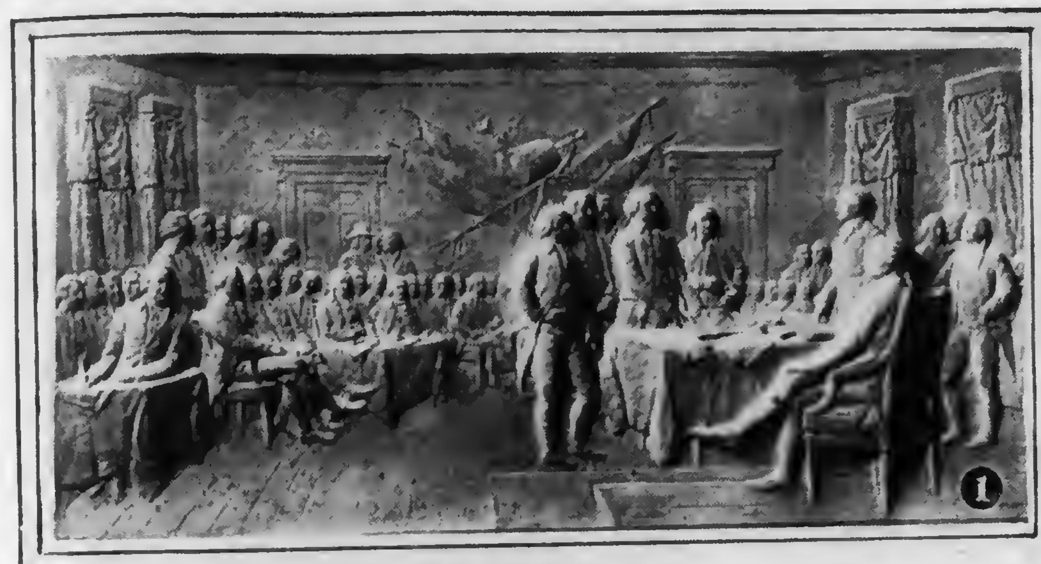
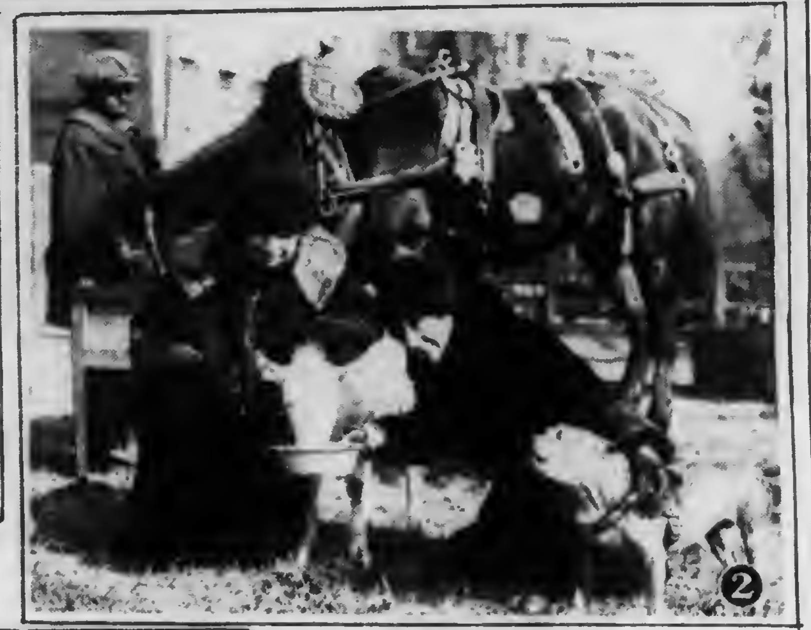
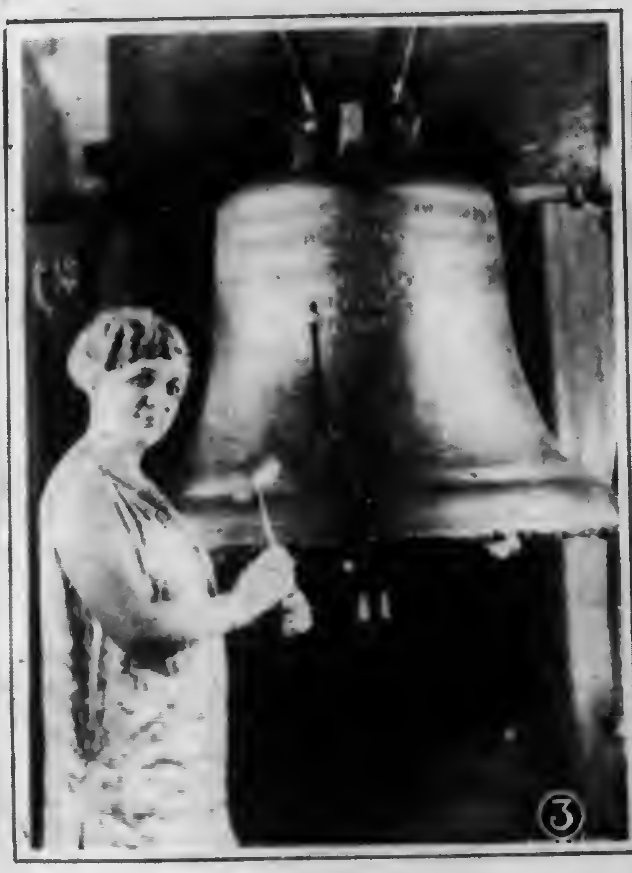
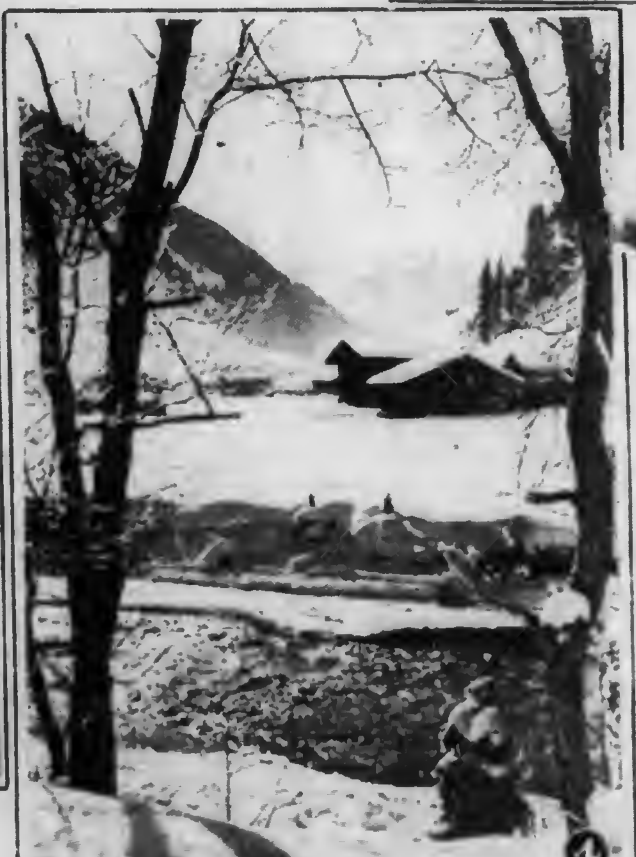
MY HOME IN THE WINTER TIME
Emma R. Rapp, Lehigh County, Pa.

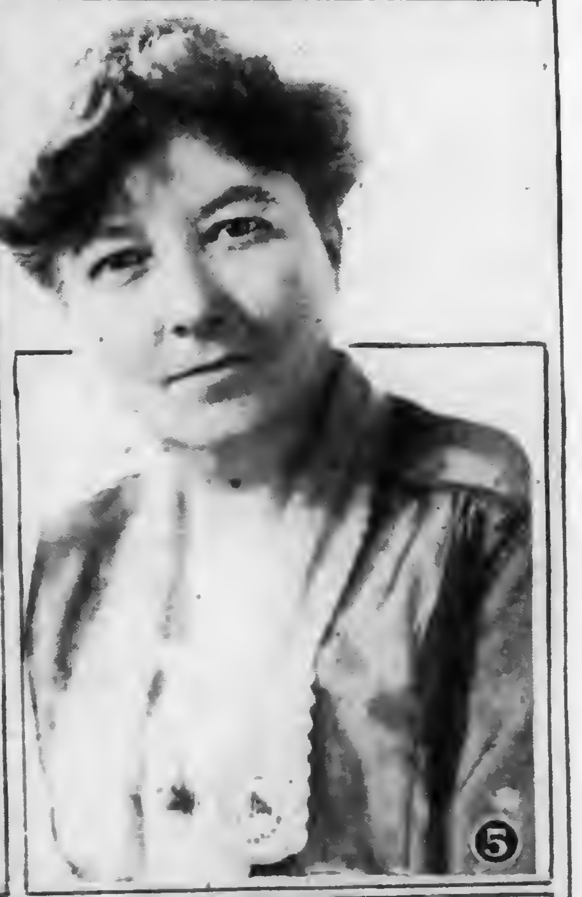
PASSING EVENTS IN PICTURES

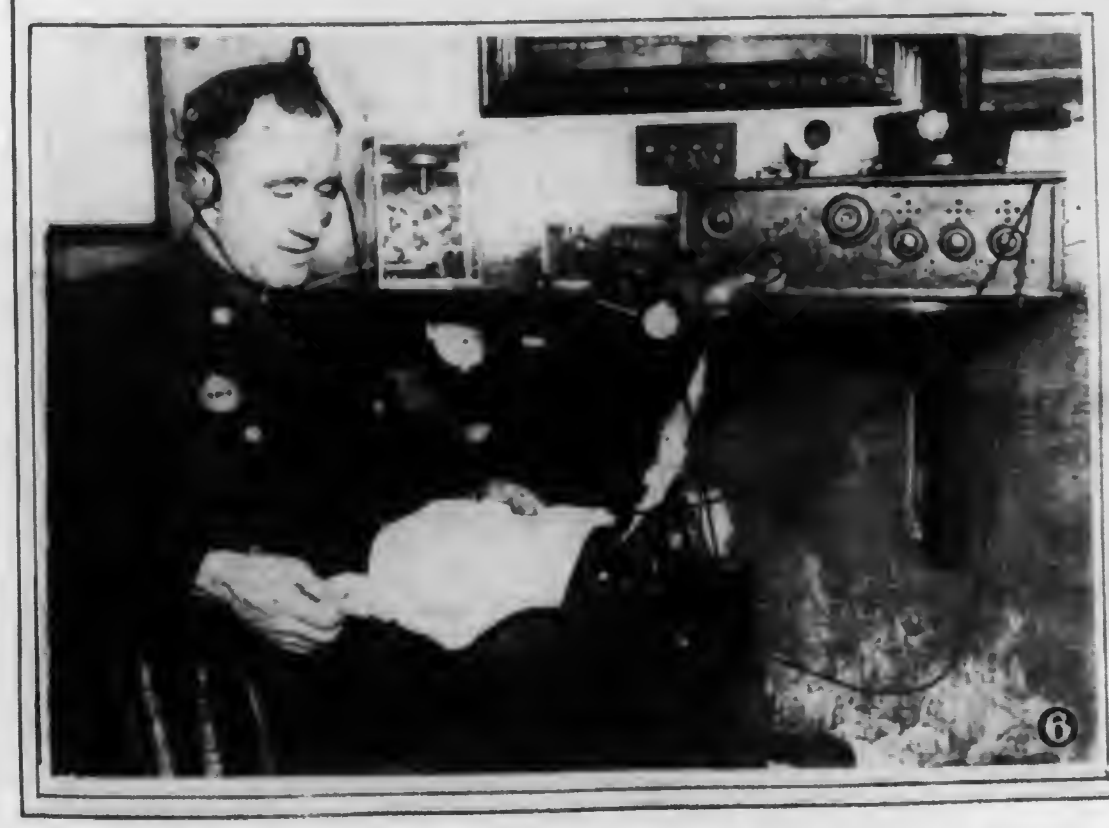


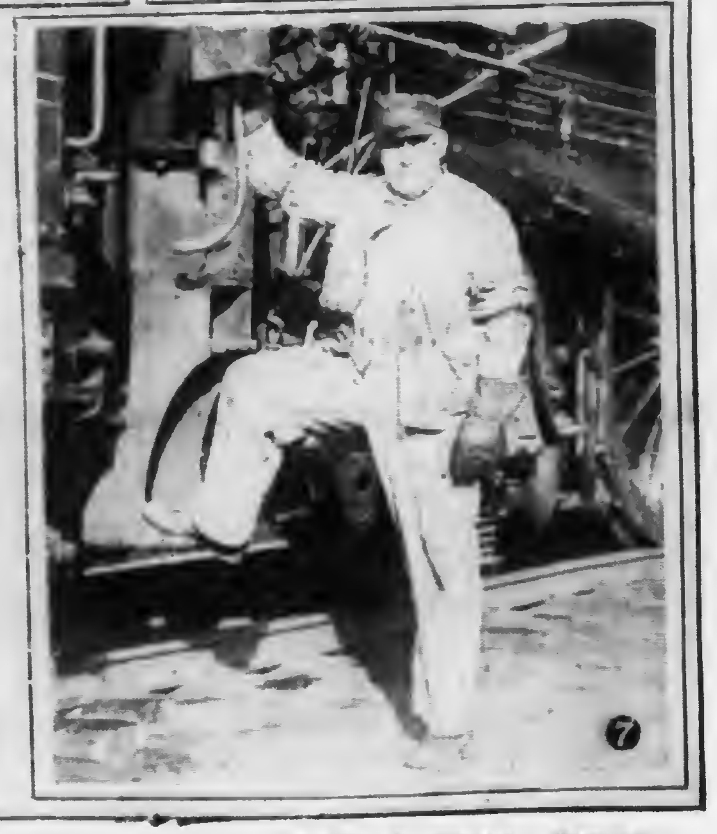












(Copyright by Underwood & Underwood)

1.—This bronze bas-relief of the forty-seven signers of the Declaration of Independence was dedicated in Boston, Mass.

2.—Altho this free holiday dinner was given especially for Washington horses of all kinds and pedigrees, this stray goat and bulldog managed to get a meal, too.

3.—When Mrs. W. Freeland Kendrick, wife of the Mayor of Philadelphia, ushered in the New Year by tapping the Liberty Bell, which had been silent for ninety years, in Independence Hall, it was heard in far off lands over the radio.

4.—A strikingly beautiful photograph of the picturesque Swiss Alps in winter time.

5.—Miss Mary Anderson, director of the Women's Bureau of the Department of Labor, presided at the Women's Industrial Conference in Washington last week.

6.—Old and young, rich and poor, are not the only ones privileged to enjoy the radio. Our mascot, "Bum," of a Chicago engine company, is an ardent radio fan.

7.—William C. Jasper, engineer of the Congressional Limited, leaving his cab for the last time after forty-seven years of faithful service.

The Feed and Service of Greatest Benefit to Feeders

We have already defined TIOGA FEED SERVICE as "a practical application of our belief that the best business policy is in making feed and giving a service that will be of the greatest benefit to the feeders."

We want to tell you more about this policy. We wish we could do that face to face; and by the way, why not? Waverly, N. Y. (and this is one of the strong points of our service) is within an easy day's motor trip from every point we serve. You cannot do yourself a greater service or us a more appreciated favor than to come here, go through our plant and see for yourselves that *every claim we make for Tioga Feed Service is correct,* that this service is not one of theory but a *practical* and *profitable service immediately available.*

If you possibly can, make up a party with your interested neighbors and come and see us. But if you cannot come, watch this space in the coming weeks for a fuller idea of what we mean by TIOGA FEED SERVICE.

TIOGA MILL & ELEVATOR CO., Waverly, N. Y.

Use the TI-O-GA Dairy. Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE

1 year to pay after 30-day trial

Pennsylvania State College

Purebred Holsteins That Must Make a High Te

MR. L. W. VEIT, Erie, Pennsylvania, is aiming to establish a herd of purebred Holsteins with an average test of four per cent butterfat. Evidently he is making good headway on this proposition for his herd of registered Holsteins, including an average of sixteen cows for the year in the Erie County Testing Association, produced 10,906 pounds of milk and 392.5 pounds of butterfat as an average for the year ending September 1, 1925. The average test of the milk was 3.6, which is above that of the Holstein breed as an average.

Mr. Veit's herd led the cow testing association in production for the past year. His two best cows, Bula and Peep, both registered Holsteins five years of age, made exceptionally good records. The first produced 18,830 pounds of milk and 594.6 pounds of butterfat during the year, while the latter produced 10,546 pounds of milk and 492.4 pounds of butterfat.

Now Used as Herd Sires

Both of these good cows were bred when Mr. Veit bought them several years ago and each had a bull calf. These two animals are now being used as the herd sires. The daughters of each of these animals are showing up well and it is quite likely that they will do much better than their dams in milk and butterfat production. The herd is federally accredited and is increasing in numbers at only a moderate rate due to the fact that the senior herd sire had sixteen bull calves in succession.

Home mixed rations consisting of gluten, bran, oil meal, cottonseed meal, and corn meal are fed. Corn silage and clover hay make up the roughage. Exact records are kept for each cow, the grain and the milk being weighed at each milking. This is one of the essentials of impr ing a dairy herd. Some farm think it is too much trouble weigh out the grain and to wei the milk at each milking. Farm who think the keeping of individ records too much trouble must p the penalty in lessened milk prod tion for neglecting one of the sentials in profitable herd devel ment.

Mr. Veit is an enthusiastic me ber of the cow testing associatio and feels that it will be the mea of helping him attain the end has in view—the establishing of herd of purebred Holsteins with average test of four per cent butt fat.—A. A. Borland.

—W. A. L

He Read His Farm Papers

ALONG the county road, in Atlantic County, N. J., is a thrifty looking dairy farm with a large, well-painted barn and an attractive white farmhouse. Mr. James Peterson, the owner, bought the farm about ten years ago. He was then a man of middle age who had never settled down to any permanent business.

Didn't Fulfill Predictions

The farm was bought at a low figure because the former owner had gone to war, and died. Mr. Peterson was able to pay down only one-half of the purchase money, and his friends and neighbors predicted his failure in a very short time. But they were mistaken for he had found the work in life to which he was adapted.

During his first year on the farm a professor from the state agricultural station visited him and asked if he did not want some agricultural literature. Mr. Peterson replied that he had no time to read. But the professor's look at him set him to thinking, and the result was that he subscribed for some of the leading dairy and farm papers.

He was not content to do things in halves. He found he was hungry for the information the papers contained, and to use his own words, "I sat up very late at nights to read after the family were in bed."

As a result of this reading, M Peterson saw that in order to mak his farm pay he must build up a goo working herd of purebred or hig grade cows; that he must make h dairy barn comfortable, sanitary a convenient; that he must produce o the farm the cheapest and best r tion for the cows, and that, besid his dairying, he could use some the land with his manure to rai small fruits and truck which woul be cash crops.

Followed the Suggestions Given

Following the suggestions in h papers, Mr. Peterson tried alfal and clover. One seldom sees in At lantic County over many acres perfect a stand of alfalfa, and suc fine fields of red clover, as are no seen on his farm. He has large ba of clover and alfalfa hay, and sa that these are the only kinds of ha he feeds his cows. When he grow timothy he sells it.

Mr. Peterson believes in goo tools, and has a very complete equi ment, well housed. Nearly all h work is done by machinery; he rid to plant, cultivate and dig his swe potatoes. If a machine is unsati factory, it is discarded at once an a new one bought. No time is los with inferior tools.

His way of getting rid of weeds i effective. He hires a lot of boy who come down to the country t

pick berries, when off. He works with them, and the weeds haven't a chance in the world.

Careful Accounts Showed Savings

Dairymen will be interested to know just how much of the usual grain bill Mr. Peterson saves by growing alfalfa, clover and ensilage corn. His careful farm account shows that the returns in milk sold in 1924 from twenty-five cows were $3000, or $120 per cow. The total amount of grain purchased for the same time cost him $385, which leaves a farm income of $2615, or over $100 per cow. This profit is due first to keeping purebred cows and second to feeding ensilage with clover and alfalfa. The total income of the farm is given in round figures at $9000. The expenses were considerably less than this amount.

Mr. Peterson is making good use of the money he is earning on his farm. He has spent large sums in making his home convenient and comfortable; modern in every way. He is keeping three boys in college and each year he is enlarging the farm. He can do all these things, he says, because the cows pay for it all.—Mrs. J. A. Umoselle.

Feeder Cattle Increase

AN INCREASE of 20,000 head of cattle on feed in eastern Pennsylvania and Maryland is indicated by the annual report of the Lancaster office of the Pennsylvania Bureau of Markets issued January 11th.

It is estimated that there are 125,000 head of feeders on farms in the eighteen counties in this district as compared with 105,000 in 1924. Almost one-third of this number are on the farms of Lancaster County, the estimate of 39,500 head being 4500 more than in 1924.

Returned to the Business Again

Many farmers who stayed out of the cattle feeding business the past two seasons have returned and purchased their usual quantity and, in addition, a number of new buyers of feeder stock have entered the Lancaster market.

There has been a noticeable improvement in the quality of feeders purchased during the fall months with a strong leaning towards Canadian stock of the better grade. This has been caused by the preference of buyers for northern cattle and also by the fact that the quality of animals received from Canadian points has been much improved over preceding years. Prices paid for feeders have been from $1.00 to $1.75 per cwt. higher this season than last year, so the returns to Canadian shippers have been much more satisfactory.

Cause of Gross Weight Decrease

During 1923 and 1924 the tendency to purchase animals of plain quality and light weight resulted in a decrease of fully forty per cent in the estimated gross weight of cattle on feed in this district. It is expected that the gross weight this season will increase from thirty to forty per cent over previous years or approximately the same as in 1922.

The number of head received at the Lancaster market during the year increased about 6000 over 1924 altho the actual number of cars received was slightly smaller. This was largely due to the greater proportion of feeder catle received at the market, there being large increases from the St. Paul and Chicago yards and from Iowa and Canadian shipping points.

Owing to the activities of eastern packers in stimulating shipments of fat stock directly to packing plants, there was a decided decrease in the receipts of livestock from Kentucky, Tennessee, Pennsylvania and Virginia loading points during the year.

Those Who Have Fed it Longest Know its merits Best!

Larro
FOR DAIRY COWS
Larro
THE LARROWE MILLING CO. DETROIT, MICH. U.S.A.
Larro

Among feeders of Larro are many thousands whose experience with it is limited to a few months. To them we might refer you for an opinion of Larro and for proof of its worth as a dairy ration.

You would find these men enthusiastic—for even in their short experience with Larro, it has brought higher yield in their milk pails and improved physical condition in their cows.

But we prefer to put Larro to a severer test—the test of two, three or more years of feeding in the same herds. This, for two reasons—because no one can question results obtained from a test of such duration; and because the successive years of Larro feeding emphasize its advantages for the building of cow condition, the maintenance of health—the profitable production of milk.

Dairymen who have fed Larro continuously for years not only have proved these facts to their satisfaction, but have established Larro superiority on a basis of the profit it earns over feed costs.

Scores of such experience stories are yours for the asking—instances in which records show steadily increased milk yield for several consecutive years until the full capacity has been reached—for entire herds as well as for individual cows; and, what is more important, *profitable* milk production *every* year.

Here lies the real value of Larro—as a producer of profit, the goal of everyone engaged in the business of dairying.

Of course you can best form your own opinion of Larro from an actual test with your own cows. But if the experience of others has weight with you, we invite you to obtain this evidence from Larro dealers. Any merchant selling Larro can give you the names of nearby users—perhaps of neighbors and friends, owners of cows of all breeds—whose testimony your own experience will later bear out.

Extra quarts from every cow by stopping feed waste

AFTER the change from pasturage to the heavier, drier winter feeds four cows out of five fail to fully digest and assimilate all of the milk-making values in the food they consume.

You can stop this waste and add extra quarts daily to the production of your cows by giving them the aid of Kow-Kare in their regular diet. This all-medicine invigorator has a wonderful stimulating and building-up effect on the entire set of milk-making organs. Kow Kare rescues many feed dollars that otherwise would be wasted.

Do not confuse Kow-Kare with highly stimulating concentrates and so-called stock feeds. It is not a food, and provides none of the elements of forced feeding. It is a medicine that the average cow's system urgently needs to convert nature's foods into a paying volume of milk, especially in winter.

A tablespoonful in the feed at intervals, governed by conditions, puts more milk in the pails—and all the while it is building sturdy health into your cows.

FREE BOOK On Cow Diseases

For cows "Off Feed" or suffering from such ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, etc., Kow-Kare is the safe and sure corrective. Used by thousands of dairymen for thirty years. Our free book, "The Home Cow Doctor," filled with dairy information, free on request.

Kow-Kare comes in two sizes, $1.25 and 65c—at feed dealers, general stores, druggists. Sent by mail, postpaid, if your dealer is not supplied.

Good Machines Need Care

Dairymen Who Give Cows Right Care Get Results

MOST farmers think and talk machinery in terms of tractors, plows, milking machines, feed grinders, and other devices made of iron and steel, but the most valuable machinery on the farm is made of flesh, blood, bones, hide and hair, or feathers.

Your livestock and poultry are machines and the proper use of this animal machinery determines your success or failure as a manufacturer, for you surely are a manufacturer if you are running a dairy business, feeding hogs or beef cattle or producing poultry and eggs.

The farmer is the only manufacturer in the world who produces his own raw material and converts it into finished products. When you raise corn, oats, and hay and feed it to your dairy cows or hens you are converting this raw material into food for human beings. Milk, butter and eggs are finished products, ready for immediate consumption.

The Way of the Manufacturer

The manufacturer of shoes, clothing, automobiles or anything else buys the right kind of raw material and he works his machines to their capacity—no more or less. If the machines do not produce up to their rated capacity they are not worth what they cost. If these machines are overloaded they soon wear out and lose their usefulness.

Apply this to your own business of feeding. Your big job is to prepare the raw material in a form that will be most easily converted by your animal machines. This is the biggest and most important job of every farmer and feeder and it is a subject that never grows old or tiresome.

Take your dairy cows for example. They have only the production capacity that they were born with. You cannot take a cow whose natural capacity is only twenty pounds of milk per day and make a thirty-pound cow out of her by overfeeding. You must feed her according to her natural capacity. Then a good, healthful condition will be maintained, her years of usefulness will be extended and she will be a profit maker instead of a profit eater as so many thousands of dairy cows are today.

Feed Must Be Properly Balanced

The feed which you give your cow for milk-making purposes should be properly balanced to supply the bones, muscles, blood and tissues with the elements that first of all must keep the animal in good working order. If you give your cow a ration containing too much starchy matter and too little protein and mineral matter she will eat more than is good for her. Her nature craves the elements which are lacking in the ration and she eats beyond her natural appetite to get these missing elements.

On the other hand, if you give your cows a feed which properly supplies protein and mineral matter as well as starchy material and bulk they will eat much less feed but it will supply everything that they need to produce their capacity amount of milk.

No farmer can grow as much protein as he needs properly to balance his ration. All successful feeders buy one or more protein feeds and some of them have gotten into the habit of figuring the cost of the ration on the cost of the protein alone, but this is wrong. We can illustrate this by a simple example.

Suppose you prepare a grain mixture containing 2000 pounds of different materials. Then suppose that the analysis of the mixture is as follows:

Carbohydrates, 57 per cent; protein, 20 per cent; fat, 2 per cent; fiber, 8 per cent; ash, 3 per cent; moisture, 10 per cent; total 100 per cent.

You have here 2000 pounds of feed, but it contains 200 pounds of water and 160 pounds of indigestible fiber, therefore instead of feeding 2000 pounds of convertible raw material you feed only 1640 pounds.

Consider Total Digestible Nutrients

Now then you should give careful consideration to the total digestible nutrients in your ration and not just protein alone. The total digestible nutrients of this ration amount to 1640 pounds and are divided as follows:

Carbohydrates (starch), 1140 pounds; protein, 400 pounds; fat, 40 pounds; ash (containing minerals), 60 pounds.

If you figure on protein alone for value you are neglecting to give proper consideration to 1240 pounds of other material which play a very important part in making the finished product.

In preparing the raw material for conversion by your animal machines you must pay careful attention to their digestibility. Not only should your ration be prepared in the proper way by grinding, but your protein should be one of the best possible quality. One of the most popular protein feeds for the dairy ration, and in fact all livestock, is corn gluten feed.

Composed of Hard Part of Corn

Corn gluten feed is composed of the hard, flinty portion of corn and the bran of the grain. About fifteen pounds of every bushel of corn is corn gluten feed and it contains 23 per cent or more protein which means that in a ton of corn gluten feed you get the best feeding part of about three tons of whole grain.

Some very good results have been obtained by feeding corn gluten feed as the chief source of protein supply. In the Wisconsin Cow Testing Associations it has been found that when corn gluten feed was substituted in the same amounts for other concentrates costing more money, dairy cows have made large increases in their yield at a lower cost for feed.

In the Kansas City territory the heavy corn gluten feed ration is fed very extensively. The writer recently visited the dairy herd of Gus Olsen of that city. He is milking fifty-eight grade Jerseys and they are producing milk for him at a feed cost of less than six cents per gallon. The feed cost of most of his competitors is nine to eleven cents per gallon. Mr. Olsen is feeding a ration consisting of ground corn, ground oats, wheat bran, corn gluten feed, alfalfa meal and a small quantity of molasses. The only roughage fed is corn silage.

The Grade Cows at National Show

In the National Dairy Show of 1925 a herd of 100 grade cows which were fed on corn gluten feed produced an average profit for their owners amounting to $134.98 per cow above the cost of feed. This is about four times more than the average profit of all dairy cows in the United States.

It is not what a feed may cost but what the animal can do with it that really counts. We need to look more to the health of our animals and feed them first to maintain a natural, healthy condition. Then they will produce according to their natural capacity and the feed cost per gallon of milk will be much less than it has been. This means a larger profit for the producer.

Head of the Department of Animal Husbandry, Pennsylvania State College

Ration for Young Bull

I recently purchased a young Hereford bull weighing about 400 pounds and between six and seven months old. He does not seem to be doing well since I brought him to my farm. I have been feeding him timothy hay, corn stover and oats. How can I keep him growing, and put him in condition for the fall fair?—R. C. O., Somerset County, Pa.

There may be several reasons why the calf is not doing well. In the first place it is quite likely that the calf was getting milk from his dam. In addition to the milk that he was getting he was kept on good pasture up to the time the pasture season closed. He very likely received grain and a better balanced combination than you are feeding.

Not Sufficient Variety

The ration of timothy hay, corn stover and oil meal is not well balanced nor does it have sufficient variety for a growing calf. The roughage should be changed from timothy hay and corn stover to a legume hay such as clover, alfalfa or a good mixed hay. If silage is available he should have a liberal allowance of it in addition to the hay. He may have access to a small amount of corn stover when turned out in the yard for exercise.

The grain ration should be changed from straight oats to a combination of corn thirty parts, oats thirty parts, bran thirty parts, and oil meal ten parts. The calf should have all the roughage he will eat and in addition receive from six to eight pounds of the grain daily. The calf should not be fed a heavier grain ration than the amount suggested even tho he will consume more if offered it.

Keep Him Growing Well

The whole aim should be to keep the calf growing well and not put him off his feed. This grain combination can also be fed during the summer when the calf is on pasture. It will be necessary to increase the amount fed daily as the calf increases in weight. It might be that a small amount of steamed bone meal could be used to advantage. This should be mixed with salt, equal parts, and put in a box where the calf can have access to it at all times.

The calf should have plenty of exercise. He should be turned out every day and be trained to lead so that he will become accustomed to handling. This is a marked advantage when it comes to showing the calf next fall.—W. H. Tomhave.

A Labor Saver

HERE in Lebanon County the people are used to cutting their corn by hand, now labor is scarce and wages are high, so we have to try new methods.

Most farmers use the corn fodder to feed cattle, but I tried something new. I bought a corn binder. Now I husk the corn from the stalks, then I take the binder and cut the corn before I go thru with the team. By doing this I save $75 on fourteen acres.—Samuel A. Herr, Lebanon County, Pa.

Draft Horses in the U. S.

THE recent report of the United States Department of Agriculture estimating the number of horses on farms at the beginning of the year clearly sets forth the results that were anticipated when thousands of farmers discontinued raising colts. It shows a marked decrease especially in the number of young horses. As a result of this report and the scarcity of good horses, prices are increasing quite rapidly.

The horse market at Chicago, which is the largest draft horse market in the United States, is showing more activity during the month of January than any similar period since the war. There are more buyers on the market and prices are ruling strong. The buyers for these horses are largely from the states of Ohio, Pennsylvania, New York and New England. With such early activity in the horse market it will be good business judgment for the eastern farmer to take an inventory of his horse supply and make early plans to buy the horses that he will need.

February the Time to Buy

Present indications are that he will be able to get horses at a more reasonable price during the month of February than at any later period. He will also be in a position to buy thin horses and get them in shape for his work during the spring. It is always possible to buy thin horses at a lower figure than horses that have been fed for market and are in higher condition of flesh. One of the reasons for this situation is the fact that horses in good condition, of good quality and weight, are in demand for the city trade.

Horses weighing from 1500 to 1700 pounds have been selling on the Chicago market at prices ranging from $175 to $200 while some heavy drafters have been selling at prices ranging from $250 to $300. Horses weighing less than 1400 pounds have been selling around $150.

Will Be Ready for Spring Work

Farmers who purchase their horses early not only have the advantage of getting them at a lower figure with an opportunity to put on weight by feeding, but they will also be in a position to get the horses in condition for spring work. Horses that are purchased just when the rush of farm work is about to begin have not become accustomed to new environment and are very often of little value during the first month because of shipping fever or other ailments.

The horse producing states in the Middle West do not have a surplus supply and the farmers are also beginning to appreciate the fact that good horses are becoming more valuable. The scarcity of good horses will force farmers who depend upon the market for their supply of horses to be content with a poorer class of horses than they have been buying in the past and they will pay a higher price for such horses.

The scarcity of good horses and the higher prices secured should stimulate horse breeding on the farms of the country.—W. H. Tomhave.

Thresh Clean and Fast Make Money With a FARQUHAR

Thousands have made money with a Farquhar Threshing Rig. You can do likewise if you go after business with a Farquhar clean and fast threshing rig.

Built in sizes for tractor or steam power—for individual or custom work.

36 per cent cottonseed meal..	38.50@39.50
41 per cent cottonseed meal..	40.75@41.50
43 per cent cottonseed meal..	42.75@43.50
34 per cent linseed meal.....	53.25@53.70

Millfeed in small supply.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

RECEIPTS of fresh fruits and vegetables in Philadelphia during the week ending January 16 have been generally moderate and trading has been fairly active on most lines, according to the State and Federal Bureau of Markets.

Texas spinach has been coming in freely and offerings have been liberal. The great variation in quality and condition resulted in a wide price range and the general trend of the market was downward. Sweet potatoes continued dull thruout the week under a limited demand.

Apples moved slowly with only light supplies of Pennsylvania stock offered. Western boxed apples were slow with the extra large sizes selling at a substantial discount. The market for Pennsylvania mushrooms was quiet with liberal receipts. Prices, however, did not vary greatly.—W. R. W.

Butter Markets

CONTRARY to all indications prevailing on Saturday, January 9, the butter markets for the week ending January 16 opened with a somewhat improved tone on all markets, but this was short lived. Buyers continued to follow the policy of the past few weeks, buying only for immediate needs and speculative interest was conspicuous by its absence.

Receivers put forth considerable effort to keep floors clear and at times found this a rather difficult task, especially in so far as the finer grades were concerned. This combination of free selling on the part of the receivers and ultra conservative buying by the users caused a nervous and unsettled undertone to prevail thruout most of the week under review.

County News and Comment

Armstrong County, Pa.—The concluding week of the old year brought the lowest temperatures of the season, two to nine degrees below zero. The first week of 1926 has been seasonable, ranging from thirty-two to twelve degrees above zero. The majority of farmers laid in a good supply of wood and coal in the late fall so they are now feeding and caring for stock and hauling manure, as made, to those plots intended for potatoes and corn next spring. Some have been pruning orchards, now getting out the brush preparatory to the dormant spraying. Most clover seed has been bought. The conditions have been ideal for breaking corn stalks, a common practice here, either a wide dray or a ten-foot pole about six inches in diameter being used for the job. Not many of last spring seeded meadows give encouraging promise and wheat and rye seeded last fall worse. Potato acreage to be planted will be much below and certified seed from the outside gives promise of being almost prohibitive in price. Then only a few farmers are outfitted for combating the many potato pests. Baled hay, wheat, oats and potatoes have about all been marketed. Of the former, good, bright, medium sized-bales will bring $22 per ton. While wheat has not gone above $1.60, oats are selling at 50c and potatoes at $2. Beef cattle slightly higher than last month so, too, are dressed hogs of medium weight. Poultry in good demand at a ten per cent advance in price. Butter and eggs both disappointing, selling in a retail way at 40c per pound and dozen. Negotiations are now being entered into in regard to fertilizers for spring use. Many farmers are declaring that prices must be lower than last fall or they will lessen or eliminate it entirely for spring crops.—W. M. P., Jan. 7.

Carroll County, Md.—The last week in December was very cold, thermometer staying close to zero. January ushered in milder weather after which it rained, colder weather followed the rain and on January 8 it snowed. The snow brought out several sleighs. The farmers who harvest ice have stored away a crop of fair quality. The cold weather was hard on wheat but snow which has just fallen will be a protection. Wheat looking good. Most of fall plowing finished before ground froze too hard to plow. Before the snow farmers were hauling manure and cutting wood. Most of the slaughtering of hogs for home use about over, temperature and weather have been fine for butchering. Even tho the year 1925 was one of the driest on record the farmer came thru fairly well, the crops which suffered were potatoes, pasture and stand of grass for 1926 hay crop, while there was a good wheat and corn crop. Income from dairying was cut considerable since 1924 corn crop was short and not having pasture farmers were compelled to feed during summer same as winter. Prices: eggs, 36c; old hens and young chickens, 30c; wheat, $1.80; corn, $3.50 bbl. of 350 pounds.—H. I. R., Jan. 11.

Chautauqua County, N. Y.—Chautauqua is giving us a variety of weather: snow, blows and low temperature. Farmers busy cutting wood. Some cellars are freezing and potatoes reported $3 bu. Eggs, 40c; butter, 45@50c. Apples very scarce and high-priced—almost as expensive as oranges.—E. M. A., Jan. 12.

Frederick County, Md.—Weather still cold but not as cold as the last week of the old year. Snow fell on the eighth and ninth and was needed by the grain. Still some corn to be husked and quite a lot of fodder to be hauled in. But little plowing was done this fall. Farmers are busy butchering and curing meat for the coming year, quite a few are killing beeves the usual practice being to keep a quarter and sell the rest to neighbors. No hay in this section to be baled this year as the hay crop was exceptionally short. Prices remain good: beef, 10@15c lb. by the quarter; pork, 14@16c; chickens are high, 30@34c; eggs have dropped from 60c to 30c.—R. J. W., Jan. 11.

Indiana County, Pa.—We have been having real winter lately. Heavy snow and cold waves. There has been enough snow during each cold spell to protect the wheat which looks very well. The poultry show last month met with great success. The Indiana Beef and Provision Market has lately opened its doors under the new management of Nicely Brothers, making a market for which the county has been longing. Milk prices saw a drop during the last month, some parties paying as low as $2.30 for 3.5 milk. Pork is holding its own at 11@12c. Not much hay being sold; oats, 55c; corn, 80c; chickens, 24c.—H. A. N., Jan. 11.

Lycoming County, Pa.—Owing to the recent snow fall about all that is going on is the cleaning of sheds and stables and pressing hay. The present coal situation has been the direct cause for the putting aside of many coal burners and the installation of wood burners. We find the wood lot a valuable and satisfactory investment in connection with the farm when we must depend entirely upon it for fuel. Hay has been priced according to grade, striking an average of about $16.00 to the farmer at the barn, good clean straw about the same. Eggs, 45c butter, 50c; pork, by the side, 22c; by whole hog dressed, 20c; turkeys in good demand, 65c lb. dressed.—C. I. C., Jan. 11.

Monmouth County, N. J.—December came to a close cold and extremely windy yet considerable good weather allowed the fruit growers to do some pruning. Egg production has dropped off with much lower prices prevailing. Wholesale prices of eggs range from 60c to 70c. Baby chick men of the county have organized to advertise Monmouth County baby chicks. Agricultural meetings are being held touching all interests. Many farm groups have met together in cooperation with the county extension service to consider problems to be attacked in 1926. Fewer tenant farmers are seeking to change to other farms, while the usual number of owners are looking for tenants. Only a few farm sales to date. Both livestock and machinery at sales very reasonable. Much interest among dairymen in home-mixing and general improvement in dairy management. County-wide dairy meeting scheduled for late in January.—E. D., Jan. 11.

Passaic County, N. J.—The weather for the past month about normal with quite a bit of northwest wind. The snow fall has been very light so far, January 9 we had the largest of the season, about three inches. The County Board of Agriculture held their annual stag dinner and election of officers January 6th. There was a large attendance, 246 sitting down to dinner. The roads are in good condition, both state and county. There is not a great deal of produce in the markets from around here, mostly root stuff and a small amount of apples, also some soup greens. The price of eggs is going down.—N. D., Jan. 11.

Perry County, Pa.—We have been having some real snappy winter weather by spells. On the morning of the ninth about six inches of snow lay on the ground. Very little thawing since. This morning the mercury had dropped to five below zero. The teachers' local institutes and other school meetings are well under way now and will continue for more than a month yet. A few farmers still buying steers to fatten. Others have their's fat and have trouble to find a market at reasonable advance above feeders. With the exception of eggs most other farm products are moving at a fairly satisfactory price. Wheat, $1.72; corn, 75c; oats, 45c; eggs, 34c; lard, 16c; dressed hogs, 15@17c; capons, 40c live; other chickens 18@30c depending on kind and condition; milk, $2.90, League price for four per cent.—J. L. B., Jan. 11.

Susquehanna County, Pa.—We are having real winter weather. Just as the ground was beginning to freeze hard the farmers got out the road drags or hones and smoothed the ruts down so the roads were fine for autos. Now we have sixteen inches of light snow. The T. B. test for reactors was on last week and they found thirty-three reactors in Silver Lake. The first test there were 165 cows. Farmers are busy drawing lime home for spring use. Alliance and Grange members are active having weekly meetings. As it is impossible to buy coal the men are kept busy cutting and hauling wood. Chickens, 25@29c live, 30c dressed butter, 50c; eggs, 50c; dressed pork, 19c.—J. A. G., Jan. 10.

Tioga County, Pa.—The weather for the past month has been quite comfortable except for a few days when the thermometer hovered around zero. There have been frequent snow flurries but the first real fall of snow, about twelve inches, came the night of January 8th. The snow is too dry for good sleighing. Farmers are cutting wood and filling ice houses between chores. All patrons of one of the large milk companies sending their milk to Tioga County plants expect to qualify to produce grade B milk by April 1st. Several plants are already qualified. Prices: eggs, 35c; veals, 13c; potatoes, $1.50; beef, by quarter, 8@10c; hay, $15.—P. W. L., Jan. 11.

Warren County, Pa.—We experienced extreme cold during the holiday season. Thermometer as low as twelve below zero. Farmers succeeded in getting potatoes out of ground. Price still soaring high; some localities are selling as high as $2.75 per bushel. Over 400 birds entered in the annual show of the Warren County Poultry Association. More Wyandottes seem to be raised in the county than any chicken, as there were sixty-five entered in that class. Poultry doing unusually well. Eggs selling for 50c, while last year at this time they were 60c. Farmers cutting wood, corn all husked but very little fall plowing done. Prices: butter, 55c; veal, 16c; beef, 12c; pork, 18c; chickens, 25c.—H. C. J., Jan. 8.

Washington County, Pa.—Very little snow in November and December. Had some very good weather for the slow ones to finish up corn etc., and get other work out of the way. Roads have been awful. Cold weather hard on wheat as it did not make as much growth as common and but scanty snow covered it at any time. Livestock good, except possibly sheep. Some feeders buying oats straw at $12 or more per ton to save hay which is not for sale. Hogs very high, 12c to 13c at home for 140@150-lb. size. Many sows being bred. Some report poor expectations of a lamb crop. Veal calves in demand at 11c and country beef selling at 11c for a small side. Coal mines working at least part time. Christmas sales reported pretty fair on an average. Farm sales and renting very draggy. Too many people chasing the golden bubble in Florida this winter. The bubble must burst leaving many on thin air. You don't get much for nothing or if you do it won't stay with you.—B. McN., Jan. 8.

Prices and Prospects

THE New York egg market was unsettled during the early part of the week ending January 16th. Fancy nearby eggs were in light supply and in good demand. One factor that had a depressing effect on the market was the fact that storage eggs have been selling at lower prices. Extra firsts were quoted at 39@40c on January 13 and firsts at 37½@38c.

The egg market in Philadelphia opened at 41½c for extra firsts and 39c for firsts but due to increased receipts the market weakened, and prices declined. Extra firsts were quoted at 39c on January 13 and firsts at 39c.

Live Poultry Market

The live poultry market in New York was irregular with live fowl holding steady. Large chickens were dull, while ducks continued scarce and firm. Capons were plentiful and sold slowly. Live poultry was weak in Philadelphia with prices holding steady.

The potato markets have been generally steady during the early part of the week ending January 16, but there has been a rather slow demand. Prices have held firm altho supplies have been moderate at most points. Trading was retarded by zero weather in Chicago on the twelfth, but with milder weather business improved. Pennsylvania round whites ranged generally from $6.50 to $7.25 per 150-pound sack in the eastern markets, with bulk stock selling from $4.50 to $4.75 per hundred weight. This is a contrast to this time in 1924 when Pennsylvania sacked stock brought $2.50 and bulk stock $1.50. Shipments from the leading producing sections increased during the week ending January 9th. This was due partly to milder weather and partly to the higher price levels. Farmers in Upper Lehigh County were receiving $2.50 per bushel for bulk stock at the car, January 14th.

The hay market developed a stronger tone during the week ending January 9, due to more active inquiry. Receipts were moderate at most points and were readily absorbed. Timothy averaged steady at most markets. Quotations were unchanged at Philadelphia but light offerings forced prices about $1.00 higher at Pittsburgh and Cincinnati. The demand was brisk at Chicago and prices held steady.

Grain Market Irregular

The grain market was irregular during the week but there was little change in the general market situation. Uncertainty as to the outcome of the Argentine crop continued to be a disturbing factor. The corn market held steady and the demand was improved by the colder weather. The oats market was firm and the demand continued good with active buying by southwestern concerns. The rye market was less active than wheat but advanced over 1c per bushel during the week.

The market for domestic fleece wools in Boston shows a firm tone and prices are steadier. Ohio Delaines sold at 53c in the grease on January 12th. Some of these wools have been available of late at two cents under this figure. Stocks of spot fleeces in general are considered limited.

Cabbage shipments are increasing due to the higher price levels in the consuming markets. Pennsylvania is forwarding about twenty cars a week while New York shipped 750 during the week ending January 9, or more than double the previous week. The good demand is drawing some supplies from across the Atlantic and an equivalent of fourteen carloads of Holland cabbage was reported in New York last week. The markets continue strong with prices holding firm.

Decline on Ninety-two Score Butter

A three-cent decline on ninety-two score butter featured the Philadelphia market during the week ending January 13th. At the opening 46c was the ruling quotation but on Thursday a half-cent advance was recorded, the result of slightly increased buying. However, the advance was short lived as buyers refused to take on any more butter than actually needed for immediate requirements.

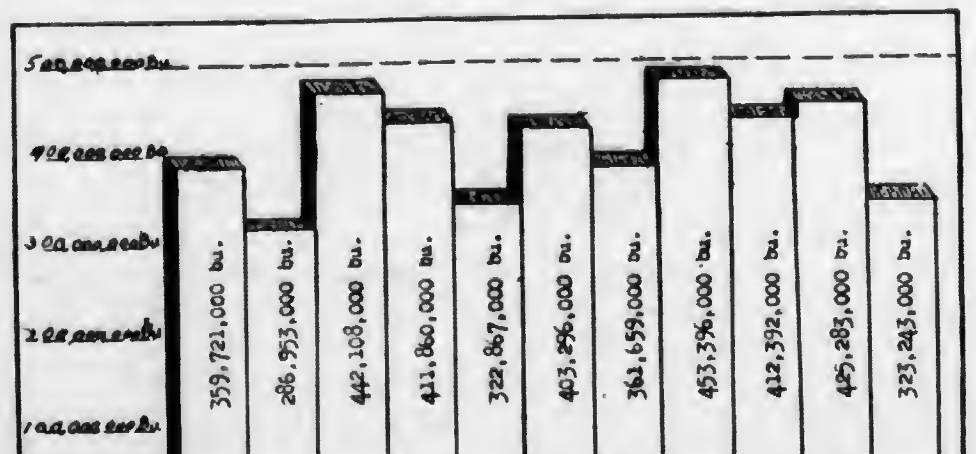
This condition prevailed on all the large markets with the result that receipts failed to show as close clearance as dealers desired and they were forced to offer concessions. Buyers realized that the market was unsettled and in their favor and they took full advantage of the situation. This resulted in successive daily declines until on January 13 the market closed with ninety-two score quoted at 43c at Philadelphia, 42c at New York and 42c at Chicago.

The factor of foreign butter has caused a good deal of the uneasiness at New York and this has naturally affected other markets. During the week 1965 casks of Siberian butter were unloaded at New York, in addition to 6750 boxes of New Zealand butter. At present little of this can be moved at a profit but should the market advance a few cents it will probably come into the market freely and for this reason little hope is expressed for any marked price reaction for the next few weeks at least.—W. R. Whitacre.

Yearly Potato Production

THE accompanying chart shows graphically a comparison of the estimated potato crop in the United States for the eleven years, commencing in 1915. The smallest crop was nine years ago in 1916, when 286,953,000 bushels were produced. The next smallest was in 1919 when 322,867,000 bushels were raised, or about the same as the 1925 crop.

The crop this season is over 100,000,000 bushels under last season and approximately 60,000,000 bushels under the average since 1915.—W.



Big Pay Jobs

THE auto tractor and electrical business offers untold opportunities to the trained mechanic. The automotive industry NEEDS TRAINED MEN and there are thousands of chances to start a business of your own.

My system of practical training has started thousands of men on the road to success during the past twenty years. I can do the same for you. Many of our graduates are now earning from $200 TO $500 A MONTH and many have a flourishing business of their own. You can do the same. Get busy and let me train you for a BIG PAY JOB.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Reserve of Phosphoric Acid in Soil Is Essential

Are we using too much phosphoric acid in our fertilizers?

FROM the standpoint of quantity, phosphoric acid is by far the most important ingredient in commercial fertilizers. The average mixed fertilizer manufactured in the United States contains about eight per cent of phosphoric acid. This means that, in the making of the average ton of mixed fertilizer, 1000 pounds of sixteen per cent acid phosphate are employed.

The range of application of mixed fertilizer in field practice is from 200 to 600 pounds per acre, equivalent to sixteen to forty-eight pounds of available phosphoric acid. Under more intensive conditions, as, for instance, in potato growing, 2000 pounds of a mixed fertilizer per acre may be employed. This is equivalent to 160 pounds of available phosphoric acid per acre. Even larger amounts are occasionally used, as, for instance, in the growing of cauliflower, tobacco, asparagus, etc.

When we consider the amounts of phosphoric acid removed in field crops, we find that the amounts applied often exceed the amounts removed. For instance, a twenty-five bushel crop of corn, including stalks, would remove about twenty-five pounds of phosphoric acid; a twenty-five bushel wheat crop, including straw, would remove about seventeen pounds of phosphoric acid, while a 150-bushel crop of potatoes, including vines, would remove less than twenty pounds of phosphoric acid.

In the Case of Potatoes

In the case of potatoes, it is particularly striking to note that we often apply five to ten times as much phosphoric acid as is removed by the crop. It is for this reason that the question is often asked whether we are not really using much more phosphoric acid than our crops actually need or could utilize to advantage.

The well-established practice of using liberal amounts of phosphoric acid is due largely to the fact that soluble phosphates, when mixed with the soil, become insoluble. To use the expression common among soil chemists, phosphoric acid does not become readily mobilized in the soil. It dissolves more slowly than does potash or lime and, therefore, a relatively large excess of it must be present to assure the plants a sufficient supply during the entire season.

Soil Type Has Important Influence

The soil type itself has an important influence. The lighter the soil, the smaller the reserve of phosphoric acid in the soil required for properly feeding the crop. The heavier the soil, the greater the amount required. Soils containing a large proportion of iron and aluminum cause the phosphoric acid to become insoluble rapidly and hold on to it more firmly. This will apparently account for the fact that a larger reserve of phosphoric acid must be built up in the heavier soils.

Land that has been receiving applications of commercial fertilizers for a number of years will have accumulated a considerable quantity of phosphoric acid in relatively available form. For this reason, the question has been asked whether ultimately a soil may accumulate so large a reserve of phosphoric acid as to make further applications of this ingredient unnecessary, or, at least, to make less liberal applications satisfactory. We have not as yet the data on the basis of which we could definitely answer this question.

Practical experience on the lighter soil types, as, for instance, in the Eastern Shore section of Virginia and Maryland, or in certain areas in South Jersey, would indicate that after a time mixtures containing six or seven per cent of available phosphoric acid would be, everything else being equal, just as effective as mixtures containing eight to ten per cent of available phosphoric acid. Generally speaking, however, we may even now be using more available phosphoric acid than is needed on the lighter soils. On the other hand, we could not safely diminish the amounts of phosphoric acid now applied on the heavier soil types without risking a reduction in crop yields.—J. G. Lipman.

Tobacco Letter

A LARGE number of packers of Pennsylvania tobacco are now holding two and three years' packings of cigar leaf; the great majority are still holding 1924 goods. The tobacco now in the hands of packers is sufficient to last the users of Pennsylvania at least one year.

Two courses are therefore open to the big manufacturing concerns who annually use the bulk of our crop: First, they can buy up all the packed tobacco and leave the growers sit; second, they can buy up the new crop and leave the packets sit. And the prices at which they can buy packed tobacco do not argue that they will pay very much for the new crop.

This estimate of the tobacco situation is not one man's opinion. It has been carefully checked with a number of tobacco men here, and they all agree that this is just where we stand. Growers and packers certainly have no quarrel with each other, as some of both factions seem to think.

Tobacco Association Holds Elections

The Lancaster County Tobacco Growers' Association, at their annual election this week, named Louis Cramer president, L. Ruppin vice president, and re-elected Otto Olson secretary and treasurer. A crop report from growers in all sections revealed the fact that about one-third the 1925 crop was stripped and that the leaf was of very good quality. Buyers have not done business in any section of the county.

Repeated inquiries among members of the buying fraternity have failed to bring forth any information as to the probable trend of events this season. Nobody, apparently, knows anything about what course the market will take. It is a fact that many growers are seriously considering the elimination of tobacco on their farms, and Ruppin, at the growers' meeting, urged a total "cut-out" of the crop until conditions improve.—Garden Spot Farmer, Lancaster, Pa., Jan. 21.

Old Uncle Eben Jones went into a life insurance office and requested a policy.

"Why, uncle," said the president, "you are too old for us to take the risk. How old are you?"

"Ninety-seven come next August," said the old man, and added testily, "If you folks will take the trouble to look up your statistics, you'll find that mighty few men die after they're ninety-seven."—De Laval Monthly.

RADIO DEPARTMENT

Conducted by

BRAINARD FOOTE

hich Connection Best?

I use a combination of two ud speakers and think the und is better when they are nnected in series. A radio man id they should be connected parallel. One is a cone type d the other has a horn.—F. B., Delaware County, Pa.

e series connection is right. If connect them in parallel, the ributed capacity" of the wind- of one speaker may affect the of the other, while with the se- connection each works indepen- ly. You may find improved re- by connecting a fixed con- er of about .06 mfds. capacity s the cone type speaker. This ents high pitched tones from get- into the cone and confines the notes to the horn speaker.—

ard" and "Soft" Tubes

What is the difference be- een "hard" and "soft" tubes? P., Gloucester County, N. J.

hard tube has almost all the air ved, while a "soft" tube con- some gas and is therefore less ly evacuated.—B. F.

ake Frequent Tests

ONE would think of running is car continually without see- hat it had plenty of gas and oil received an examination once in ile to forestall serious accidents. ect will cause damage. The set is not directly harmed by ect, but its tubes and batteries be. The automobile will run, even get you there, with only of its six cylinders firing, but ust one tube in the set go bad it won't even get you out of ! A radio set is just as poor as orst part.

equent tests are needed if one keep his set in perfect condi- These tests apply chiefly to sories like tubes and batteries, out which the set is useless. The valuable instrument one may ss for this purpose is a good eter. There are two kinds of eter—first, the cheap ones that be bought for a dollar or so and are good enough to test batter- and second, the more expensive which are more accurate and wider uses.

The Low-priced Voltmeter

e low-priced voltmeter usually s in a shiny brass or nickel- d case. Some have two scales, l for measuring both "A" and batteries. There's no polarity t them, as they may be connect- ither way and still indicate the ge. An instrument of this char- is highly recommended where does not feel able to afford the er grade of voltmeter.

e two kinds are also known as resistance and high-resistance rs. The cheaper ones are always in resistance and consequently nd a good deal of current to ate them. A high resistance r requires hardly any current may, therefore, be used in check- the operation of the tubes.

has often been explained, mod- radio tubes lose their amplify- abilities, not thru burning out, thru a loss of the element thor- which is embedded in their fila- s. The decrease in sensitivity gradual that it is hardly no- ble. Finally one realizes that his set isn't as good as it used to be.

A new tube should never be lighted more brightly than necessary, as this hastens the decline, nor should it receive too much "B" battery voltage. A "C" battery should always be used when the tube is an audio amplifier, as this reduces the "B" battery current and prolongs the tube's life.

Use Meter of High Resistance

Most of our modern quarter-ampere tubes are intended to be burned at five volts or under. It is a very wise plan to use a high resistance voltmeter to test the voltage of every tube in the set. To do this, light up all the tubes at a normal brilliancy and connect the two voltmeter wires to the filament binding posts of each socket in turn. If the voltmeter jumps backwards, reverse the wires so that the polarity is correct for the meter.

The plus mark shows which terminal of the meter is to be connected with the positive filament wire. Observe the position of the rheostats for the five-volt point and never pass the mark, for fear of burning the tubes too brightly. If possible, keep them below five volts.

Keep New Tubes on Hand

The decrease shows up first in the radio frequency amplifier sockets and next in the detector. Therefore, it's a good stunt to keep one brand new tube on hand. Every few weeks, insert it in one of the radio frequency sockets (usually the left end in a five-tube set) and note whether a certain distant station is louder. If so, leave it there and buy one more new tube.

This practice means economy, since you don't discard a whole set of tubes at once and perhaps throw out some good tubes with it. Tubes that show a decrease as detectors or radio frequency amplifiers can usually be employed in the audio amplifier for a longer time. It often helps to shift tubes around in the sockets if you haven't a new one to substitute and find the poor tubes.—B. F.

As an "A" Battery

IT was last summer in Chester County at the home of W. S. Kennedy, that I first saw the batteries of a farm lighting plant hooked as an "A" battery for the radio. Two holes, properly insulated, had been drilled in the floor above the light battery which was in the basement, and two strands of No. 14 insulated wire dropped thru. To the basement end of each wire spring clips had been attached and the wires were long enough to reach any of the sixteen cells.

Connecting the Cells

In order to give the six-volt current needed for the radio only three cells of the farm lighting plant battery were connected at one time. That is, one wire from the radio set was snapped to the positive pole of say No. 4 cell and the other wire was snapped, in this case, to the negative pole of No. 6 cell.

Every three days, or oftener if the set was being used much, the radio wires were moved to another series of three cells so that there would be no uneven drain on the sixteen cell battery. Mr. Kennedy told me that they had been working this arrangement for nearly two years with satisfactory results.—Thos. H. Wittkorn.

Know All About this NEW Marvellous Feed Supplement

PROTOZYME
REG US PAT OFF

"FED Protozyme in Growing Mash to my entire flock of 3,900 chicks. They show most rapid growth I ever experienced in all my fourteen years of experience. Almost no mortality," writes M. M. Griffiths, Glen Farm, New Hartford, N. Y. Protozyme is indeed wonderful. Increases egg production at big saving in feed. Keeps poultry in perfect condition.

Seasonal Demand for Poultry

The Various Holidays Which Affect the Trade

THE poultry raiser and the farmer who raises a few hens as a sideline are aware that there are times during the year when their product is in particular demand. Thanksgiving, Christmas and New Year are generally considered as the best seasons to sell poultry, but there are twelve other Hebrew and legal holidays when poultry meets a good outlet.

New Years is the first holiday with a demand for turkeys, geese, suckling pigs, fowl and live rabbits. The best market days preceding the holiday are December 26 to 29th.

February 28, Purim—Hen turkeys and fowl are wanted from February 24-26.

March 30, Passover—Turkeys, fat fowl, ducks and geese, March 25-27.

April 4, Easter—Fowl, capon, ducks, geese, rabbits, spring lamb and prime veal calves, March 29-April 1.

April 5, the Last Passover—Fancy poultry of all kinds, April 1-2.

May 19, the Feast of Weeks—Little extra required.

May 30, Decoration Day—Broilers, May 26-28.

July 4, Independence Day—Broilers, June 30-July 2.

September 9, Jewish New Year or Rosh Hashonah—Fat fowl, turkeys, ducks and geese, September 6-7.

September 18, the Day of Atonement—All prime stock and White Leghorn chickens and roosters can be sold to advantage, September 14-16.

September 23, the Feast of Tabernacles—Ducks, fowl and fat geese, September 20-21.

September 30, the Feast of Law or Hanukah — Prime quality of all kinds, September 27-28.

October 12, Columbus Day—Live chickens, fowl and rabbits, October 8-11.

November 25, Thanksgiving—Turkeys, geese, fowl, capons, young pi ducks and rabbits, November 21-

December 25, Christmas—Pr tically the same line as for Than giving, December 19-23.—W. Whitacre.

Maple Sugar Season

(Continued from page 3)

many cases will afford a surp which may be sold at a remunerat price.

The writer knows a man who several years made all the sugar wanted for home use, and some sell, at a trifling expense compar to the old method which he forme used. He had disposed of the equipment except the sap buck so he commenced work by tapp his trees. Then he went to a nea by city and purchased a food cook such as farmers use for cooking st feed. This one had a 100-gallon g vanized tank. The fire box unde neath made of cast iron. The st and tank with cover all came as o complete article.

He placed it in his tool house far from his "sap bush." He us two of the old fashioned large m cans in the place of gathering t The price of the cooker was $ Cookers can be had that will ho from twenty-five to one hundred a sixty gallons. This method requi but little wood, therefore, much l is saved. Cookers may be purcha that burn coal instead of wood if o prefers this type.

In a good season a tree fifte inches in diameter will yield suf cient sap to make from one to quarts of syrup which in turn c be concentrated into two to pounds of sugar. Larger trees und the same conditions will produce co respondingly large yields of syr and sugar.—E. M. L. B.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

ENLARGED UDDER.—I have a heifer that is due to freshen the latter part of February. The last few days her udder began to swell and is rather caked on the back part of hind quarters. Also she is swelled back of naval to size of large cocoanut. She has good appetite and chews her cud altho the udder seems to pain her. I am feeding silage once a day, corn in bundle with soy beans ground with oats once a day, also feed a small amount of dairy feed with clover hay and ground stover for roughage. I have given her one pound of salts and started feeding saltpeter, one tablespoonful daily. Also rubbing with six parts lard, one part turpentine, one part fluid extract of poke root. Can you tell if swelling is due to feeding, cold, blood circulation or some other cause?—J. H. H., Jr., Holtwood, Pa. The increase in size of the udder, accompanied by changes in appearance of vulva, usually indicate that animal is approaching time when she is to give birth to calf. In this case it may be indication of abortion. However, the condition is probably associated with faulty circulation and lack of exercise. I would not advise any additional treatment for this animal but would call attention to the exercise, feed a smaller ration for a few days. This should improve her condition unless the change in the udder is a premonition of abortion.

LOSSES IN YOUNG PIGS.—I bought six pigs eight weeks old and fed them a mixture composed of oats, buckwheat and corn, ratio of same being one bushel corn, one bushel of oats, one bushel of buckwheat, ground. Fed this about three weeks and have lost four so far. These pigs acted as tho very hungry but could not eat, got very thin, seemed as tho they starved. I should have stated that the feed was first scalded and then pure cold water added. They positively got nothing but the feed mentioned and pure water. Would you please let me know whether or not it was the mixture of feed that caused the four of them to die, or what you think?—L. L. R., Hellon, Pa. It is difficult to say what caused the death of these pigs. The diet could have been improved by the addition of milk, tankage or legume hay. Would advise that post mortem be held in future as an aid in diagnosis.

CALF IS WEAK.—I have a heifer seven weeks old. Last week she got sick and could not get up without help. Her legs are very weak, especially the front ones. She eats well and walks after she is helped up but is very weak. Please let me know what I should do with her.—S. S., Dalton, Pa. The diet of this calf should be supplemented with tablespoonful doses of cod liver oil once to twice daily. The calf should have a good, well-bedded stall and should be put on her feet several times daily. See that bowels are kept open using one of the mineral oils or castor oil in ounce to two-ounce doses.

SORE SHOULDERS.—Have a horse with a sore shoulder, have tried different remedies and also have not worked it in order to heal, but it breaks out and gets sore every time I work it. Could you suggest a remedy?—F. K., Cecil County, Md. These are nearly always the result of a badly fitting collar. The first thing to do in the way of treatment, is to secure a collar that fits the shoulders. A collar of the right size, without the use of a pad is preferred. Wash sores with carbolic acid, one tablespoonful to a pint of water. Afterward paint them with a mixture of equal parts of glycerine and compound tincture of benzoin.

POULTRY

WHITE LEGHORN CHICKS from big white eggs. Shipped anywhere C. O. D. Guaranteed to live. Low prepaid prices. Egg contest winners for years. Trapnested, pedigreed foundation stock. Hundreds of cockerels, pullets and hens. Get our prices. Catalog free. Geo. B. Ferris, 980 Union, Grand Rapids, Mich.

300,000 CHICKS FOR 1926—White Leghorn, Barred and White Rock, Rhode Island Red and White Wyandotte. They are bred, hatched, priced right. 100% live arrival guaranteed. Catalog free. L. R. Walck Hatchery, R. F. D. No. 3, Greencastle, Pa.

30,000 CHICKS WEEKLY—Leghorns, Reds, Rocks, Minorcas, Jersey Giants, etc. 9c each and up. 100% live delivery guaranteed. Prepaid. Our 16th year. Catalog free. The Keystone Hatchery, Richfield, Pa.

BABY CHICKS—Beginning March 1 delivery. White Leghorns 13c to 25c; White and Barred Rocks, Reds, Col. Wyandottes, 16c; mixed, 11c. 10% off on orders booked in Jan. G. C. Rhoades, Reedsville, Pa.

PURE Barron and Hollywood breeding cockerels out of dams with records of 272 to 290 eggs in pullet year—$3.50 and $5.00. Pine Hurst Poultry Farm, Port Royal, Pa.

BABY CHICKS—S. C. W. Leghorns, Barron strain. Barred Rocks and Rose Comb White Wyandottes. Send for price list. A. D. Mefler, Twin Brook Farm, Strawberry Ridge, Pa.

QUALITY CHICKS—State accredited. Fourteen standard bred varieties. Best winter laying strains. Free delivery, moderate prices. 64 page catalog free. Missouri Poultry Farms, Columbia, Mo.

BARRON'S White Wyandottes for sale. Cockerels from stock 1 imported direct. Records 262 to 313. Hatching eggs in season. E. E. Lewis, Apalachin, N. Y.

QUALITY CHICKS—White Leghorns, 12c; Reds, Barred Rocks, White Wyandottes, 14c; Mixed, 10c. 10% books order. Plum Creek Poultry Farm, Sunbury, Pa.

CHICKS—11c up postpaid. Twenty breeds, free chicks given on early orders. Circular. Southern Hatcheries, North, S. C.

BABY CHICKS—March delivery White and Barred Rocks, Reds 16c; mixed 11c. M. A. Kuhns, Reedsville, Pa.

MAMMOUTH White Holland Turkeys, Barred Rock Cockerels. Specials for January. K. Hinshelwood, Englishtown, N. J.

WHITE WYANDOTTES—Barron 262, 275 egg strain. Fifteen eggs $2.00. Postpaid. Merrell Pease, Bowmansdale, Pa.

PENNSYLVANIA Certified Barred Plymouth Rock Baby Chicks, Hatching eggs. Marcus A. McKnight, Carlisle, Pa.

EMBDEN GEESE $6.00, pairs $10.00, trios $15.00. Real beauties. Plummer McCullough, Mercer, Pa.

MAMMOTH Bronze Turkeys, best of breeding. Farm raised. Oak Spring Farm, Crystal Springs, Pa.

GOOD, stocky buff Wyandotte cockerels. Minnie M. Jones, Star Route, Pottstown, Pa.

FARM LANDS

137 ACRES northern Maryland; 15 cattle, 5 horses, tools, 100 poultry, gas engine, tools, implements, etc. included; mild winters, 2-crop seasons, $5600 income in year; 121 acres fields, valuable woodlot; 30 apple and pear trees, plums, cherries, peaches; good 8-room house, porch, 60 ft. basement barn, buildings insured $7000. All $6700, to close quickly; less than half cash. Details pg. 29 Illus. Catalog farm bargains in many states. Free. Strout Farm Agency, 1422-BE, Land Title Bldg., Philadelphia, Pa.

TRUCK AND DAIRY FARM—280 Acres. All under cultivation. Located on main Cleveland-Toledo highway. Fine large buildings. City electric power and lights. Traction line handy. Can be divided into two smaller farms. Bargain for quick sale. Terms. Address: Estate, Box 297, Norwalk, Ohio.

WANTED—Poultry or dairy farm. Preferred by year or shares. Geo. Smith, R. 1, Box 24, York Springs, Pa.

MISCELLANEOUS

HALF PRICE—Winter sale. To make room for spring stock we are sacrificing a valuable lot of Gladiolus. Gorgeous mixture of rare kinds 50 for $1.00 or 100 for $1.50. Chrysanthemums, 2 year old, field grown plants, all colors, 12 for $1.00. Assortment of rare Canna Roots 12 for $1.00. Wonder, Dahlia, all giants, all colors, 12 for $11.00. All color Peonies 3 to 5 eyes, 4 for $1.00 or 12 for $2.50. Send for full list of flowers. All orders post paid. Atco Floral Gardens, Atco, N. J.

REGISTERED and certified seed corn and oats. Clement's white cap yellow dent and Duncan's yellow dent. Fire dried, on racks, ear tested and germination guaranteed. From high yielding stock. Registered and certified Worthy oats, a stiff straw and high yielding variety, developed by the Michigan State College. All seeds grown under inspection of the Michigan Crop Improvement Association. Michigan's largest producer of seed corn. Paul C. Clement, Britton, Michigan.

DOUBLE YOUR INCOME by farming on James Ranch, California. No winter there, no drought. Crops growing 365 days in every year and the best of markets offered anywhere. Land is state inspected and state approved. A going proposition for a successful farmer. Write me for details. Herman Janss, San Joaquin, Dept. 1197, Fresno County, California.

BREED-O-HABORIRI will get your cows with calf, or money refunded. Treat them NOW to Freshen Next Fall. $2.00 for 3 head. Breed-O Remedy Co., Box P, Bristol, Conn.

WANTED—Hides, Furs, Wool—write for prices and tags. Top market quotations. Send your name today. S. H. Livingston, Successor to Keystone Hide Co., Lancaster, Pa.

MANAGER of stock, grain or dairy farm. Understands all machinery. Can handle men. Life experience. Open April 1, 1926. Box 90, Pennsylvania Farmer, Phila.

DAHLIAS—All popular varieties, our special cactus and five decorative dahlias $1.00. Postage 15c extra. Catalog. E. R. Hummer, R. No. 1, Frenchtown, N. J.

ALL WOOL knitting yarn for sale from manufacturer at great bargain. Samples free. H. A. Bartlett, Harmony, Maine.

CORN—1,000 bu. of Lancaster Co. Sure Crop. Large or small quantities. Willis G. Kreider, Kinzers, Pa.

HELP WANTED

AGENTS—WRITE FOR FREE SAMPLES. Sell Madison "Better-Made" Shirts for large Manufacturer direct to wearer. No capital or experience required. Many earn $100 weekly and bonus. Madison Shirts, 568 Broadway, New York.

AGENTS—Our new household cleaning device washes and dries windows, sweeps, cleans walls, scrubs, mops. Costs less than brooms. Over half profit. Write Harper Brush Works, 176 3rd St., Fairfield, Iowa.

WE PAY $200 Monthly Salary, furnish car and expenses to introduce our guaranteed poultry and stock powders, cleaner, etc. Bigler Company X-718, Springfield, Ill.

FARMER WANTED—March 1st, 1926, married, experienced, capable man. References required. State wages and full particulars. E. K. Bready, Howard and Huntingdon Sts., Philadelphia.

SALESMEN WANTED everywhere to represent us on liberal commission. The Clyde Nursery, Clyde, Ohio.

WANTED—Single working farm foreman. Experienced. Box 91, Penna. Farmer, Phila.

TOBACCO

HOMESPUN TOBACCO—Chewing five lbs. $1.50; ten, $2.50; smoking five lbs. $1.25; ten $2; cigars $3 for 50, guaranteed, pay when received, pipe free. Roy Carlton, Maxon Mills, Kentucky.

TOBACCO—Kentucky Sweet Leaf guaranteed. Smoking 15 lb. $2.00; chewing $2.50. Pay when received. Ernest Choate, C. 56, Wingo, Ky.

HOMESPUN TOBACCO—Chewing, 5 lbs. $1.50; 10, $2.50. Smoking 5, $1.25; 10, $3. Mild 10, $1.50. Pay when received. F. Gupton, Bardwell, Ky.

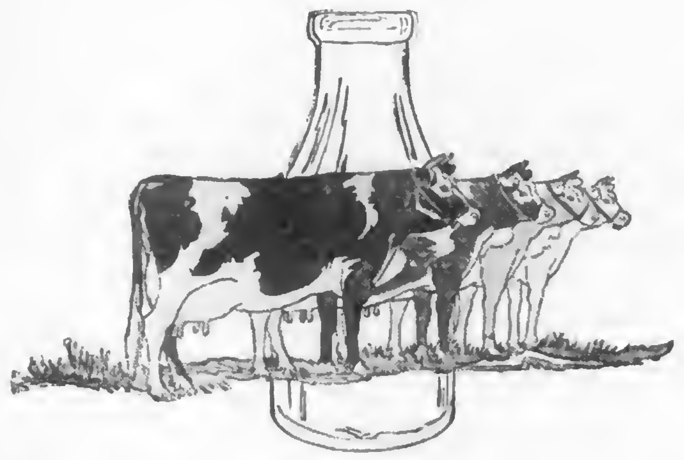
How a state college jumped milk profits 66%



A state agricultural college bought four cows, each of which had been making a net profit of $37.50. Changes were made in feed—slightly raising the feeding cost per cow. *But profits from the increased flow of milk jumped to $62.90—a net gain of 66%.*

How this same economy applies to oil buying

Why are thousands of farmers glad to pay a few cents more per gallon to get Mobiloil?

Because in turning to Mobiloil their oil consumption is frequently reduced from 10% to 50%. That is *real* economy. And Mobiloil gives them marked freedom from carbon, overheating and unexpected repair bills. In short, Mobiloil proves to be the cheapest lubricant to *use*.

No one grade of oil will do

Some farmers still try to make one or two oils do service on their automobile, their motor-truck, their farm tractor and their general farm machinery. This is often a costly mistake. Your automobile travels rapidly under light load. Your tractor labors slowly under heavy load. Your other farm machinery also has its individual lubricating needs.

The Mobiloil engineers have made a careful study of each of your motors. From this study they recommend a grade of Mobiloil for each of your engines. The Mobiloil dealer has the recommendations in Chart form. Through this Chart he is prepared to give you expert advice.

Vacuum Oil Company, branches in principal cities. Address: New York, Chicago, Kansas City or Minneapolis.

Make the CHART *your guide*

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil are indicated by the letters shown below. "Arc" means Gargoyle Mobiloil Arctic.

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed here, see the complete Chart at your dealer's.

Bad weather - - - *never bothers better BUICK owners*

Buick stands out in comparison with any car in its adaptability to weather changes.

The average car is hard to start after a wait out in the cold. But the Better Buick starts immediately and runs smoothly from the go. The *Automatic* Heat Control on the carburetor and a new *high-speeed* starting motor accomplish this desirable result.

No matter how cold it is, a Buick engine always gets oil. A positive, gear type oil pump in the bottom of the crankcase, with an emergency feed for particularly cold days, shoots oil under pressure to *every* part of the engine, *as soon as the engine starts.*

In snow, or mud, or any heavy going, Buick's new 75 horsepower performance supplies power to take you through with a comfortable margin to spare.

And in sloppy, treacherous travel, Buick *mechanical* 4-wheel brakes have a real chance to show their super-safety. Their direct, mechanical action is not affected by temperature changes. There is no liquid in Buick brakes to expand, contract or leak away. Accumulations of ice and snow do not impair their efficiency.

Buick is selling more cars today than ever before in Buick history. The public has found that Buick excels in every essential of safe, comfortable, and dependable motoring, every day in the year.

Pennsylvania Farm Products Show

Finer Exhibits and Larger Attendance Mark Opening of This Year's State Show

WITH no snow to make traveling between buildings difficult, and with enough sunshine to make "Nice day!" the proper salutation, there was little to interfere with the pleasure of visitors as Pennsylvania's Tenth Annual State Farm Products Show opened in Harrisburg on Tuesday, January 18th.

Fine exhibits gathered from all parts of the state kept everybody busy between the sessions of the well attended farm organization meetings. The show management put to good use the additional floor space at its disposal this year, with the result that the show was, in most respects, superior to the exhibitions of former years.

The initial public meeting of the week was held on Tuesday evening in the Chestnut Street Auditorium. No organization meetings were scheduled for this time since it is found to be a good plan to have one general session which all may attend. At least two thousand people attended this session, said by some to have been the largest body of farm people ever gathered together at one time in the state.

Boys and Girls from All Over State Take Part

The first half-hour was devoted to community singing. Several hundred young folks from the different boys' and girls' clubs thruout the state joined in this. The introductory address was made by Secretary of Agriculture Willits. Short talks were given by Professor L. H. Dennis, head of the Vocational Education Department, and H. E. Klugh, general manager of the Products Show. To Mr. Klugh, more than to any other single individual, belongs the credit for the successful arrangements and the steady growth of the institution.

The two thousand people greeted Governor Pinchot enthusiastically when he rose to speak. He spoke specifically on the necessity for honest elections in Pennsylvania and plead with the farmer voters to bestir themselves in this matter if they would preserve to themselves this great principle of democratic government. That we are in danger of losing it thru neglect is evident by the bold actions of certain political gangs in different parts of the state.

Troubles of Middle Western Farmers Presented

The address of Congressman Dickinson, of Iowa, brought to Pennsylvania farmers an understanding of the middle western farmers' troubles such as many did not have before. He charged the eastern city press of either not understanding or grossly misrepresenting the farmers and the farming conditions in the Corn Belt. He reviewed the steady decline of the industry and claimed that only legislation which would put agriculture on the same basis as other industries would save it. He said the Dickinson Bill did not ask for subsidies nor fix prices, but that it would stabilize prices in the interest of both producers and consumers.

Among the important meetings held early in the week were those of the Pennsylvania Dairymen's Association. On Wednesday this body adopted a constitution and by-laws and elected officers for the coming year. A. A. Borland, head of the Dairy Department of the Pennsylvania State College and Dairy Editor of Pennsylvania Farmer, was elected president, and Robert Brinton, of Chester County, was made secretary.

An innovation was the election of three prominent dairymen to fill the three newly-created offices of vice presidents. The three new vice presidents are: Dr. L. M. Thompson, president of the Pennsylvania Federation of Holstein-Friesian Clubs; M. T. Philips, president of the State Council of Agricultural Associations of Pennsylvania, and a well-known Guernsey breeder; W. F. Shrum, president of the Pennsylvania Jersey Cattle Club.

Governor Pinchot was the principal speaker at the dairymen's banquet held in the Masonic Temple on Wednesday evening. He emphasized what action has been taken recently by him and by the Public Service Commission to forward the work of rural electrification in Pennsylvania. The Governor admitted that the power companies have the right to expect a reasonable profit on their rural business. He pointed out, however, that the farmer must use more electricity than the city man if he is going to get it "cheap."

Recent Progress of Dairymen Reviewed

Dean R. L. Watts, of State College, addressed the dairymen on "Fifty Years of Rural Pennsylvania." He reviewed the progress that has been made in the past twenty-five years and tried to look ahead twenty-five years. He stated that the farmers of this state are much more expert in the production of crops than they are in livestock production, altho they are now beginning to make rapid progress in the latter work.

(Continued on page 12)

The Outlook for the Poultryman

A Consideration of the Main Factors Which Determine the Trend of the Market

THE production of both eggs and poultry during 1925 was up to normal volume. Egg prices averaged the highest since 1920 and chicken prices the highest since 1921. The ratio between feed and poultry product prices was favorable for the year as a whole, and the gross income from poultry flocks in 1925 probably exceeded either for the last several years. Consideration of the main factors which determine the market's trend leads to these conclusions:

Six Conclusions Reached

1. Commercial production of eggs is on a "normal" basis based on the long-time trend. While the output during 1926 may exceed last year, there is little danger of serious overproduction.

2. Egg prices during the heavy laying season may show some decline under 1925. The inclination of dealers to pay less for eggs to store will tend to keep prices down, but extremely low prices are not anticipated.

3. If egg prices should be low enough to induce liquidation of flocks, poultry prices may average lower than in 1925.

4. Consumptive demand is at a high rate, and there is nothing to indicate any immediate cessation. The business outlook thru the first half of 1926, which is as far ahead as it can be clearly discerned, is satisfactory. With labor well employed at good wages, there is certain to be an active demand for poultry products.

5. Feed costs are likely to continue moderate unless something goes wrong with the new crop prospects.

6. The trend toward specialized poultry plants and commercialized farm flocks still has some momentum, which means a further increase in supplies of quality eggs as well as more efficient production.

During the past five years, the poultry flock has been more profitable than in any similar period in more than a quarter of a century, yet overproduction has not resulted. Barring the war era of high grain prices, particularly in 1917, the history of the poultry and egg industry does not show the recurrent periods of heavy production and resultant liquidation which are familiar in some phases of agriculture.

The combination of low egg prices early in 1924 and high feed costs late in that year and early 1925, proved the cure for the expansion in the poultry yards which less than two years ago threatened to be disastrous. Production of eggs in 1924 fell short of 1923, the peak year, by ten per cent, and the output in 1925 was only slightly larger than in 1924.

Poultry flocks were cut down by more than forty million fowls during 1924, so that on January 1, 1925, they presented a total of 427 million head. Because of satisfactory egg prices thruout 1925, producers have increased their flocks.

Dressed Poultry Receipts Less

Receipts of dressed poultry last year at the four larger cities were more than ten per cent less than in 1924, altho prices averaged about four cents a pound higher. Producers are believed to have raised a large flock of pullets last spring, and they have not sold as many chickens in the last several months as they did a year previous. It is generally estimated that at the beginning of 1926 there were more chickens on farms than at the corresponding time a year ago.

Cold weather early last fall curtailed egg production, and receipts at the large markets during October and November actually fell short of the corresponding months in the year previous. The increased production capacity of flocks did not begin to show until late in November, when weather conditions became more normal. Since then, production has kept far ahead of last year and practically seventy per cent (to page 12)

Do You Want Your Son to Be a Farmer?

MANY parents refrain from giving their sons advice as to the choice of a career. They feel that the young folks will be better satisfied if they choose for themselves. Nevertheless, parents have very definite ideas on the subject, even tho they don't express them.

Here is an opportunity for you to express some of your ideas where they may prove helpful to some farm boy who is trying to decide upon his future.

Write us a letter on either of these subjects:

Why I Want My Son to Be a Farmer
Why I Do Not Want My Son to Be a Farmer

Pennsylvania Farmer will give a prize of $5.00 for the best letter, and will pay at space rates for all others published. Letters should not be longer than 300 words, and should be in our hands by February 13th. Address them to WEEKLY CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

This is the first of a series of weekly contests. Readers are invited to suggest subjects for future discussion.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

I wish you enough difficulties to keep you well and make you strong and skilful!—Henry Van Dyke

Can Begin at Home

CONGRESS and the farm organization leaders are worrying about the crop surpluses and the small margin of profit in farming. The conflicting ideas of the various experts would make the whole problem seem quite hopeless if it weren't for one thing. That is the fact that the individual farmer has under his own control the principal items entering into the cost of production, which, after all, is the main factor in determining profit or loss.

Cost accounts kept on Lancaster County farms in 1923 showed that sixty-five per cent of the cost of producing corn was the expense of labor and power. The remaining thirty-five per cent covered charges for the use of machinery, rent of land, taxes and insurance, seed, fertilizer, cash expenses and profit.

It is either impossible or inadvisable to do much economizing on land rental, taxes, seed and fertilizer. But the use of efficient machinery makes it possible on the average farm to effect remarkably large reductions in the cost of labor and power, the two items which have the greatest influence in determining whether a crop is profitable or otherwise. Even the most modernly equipped farmer can begin at home in his efforts to increase profits if he is inclined to study out how to use his machinery most effectively and to devise better ways of doing things.

Pennsylvania's Agriculture

THE State Farm Products Show has done more during the ten years of its existence to impress the citizens of the state with the size, quality and importance of agriculture in Pennsylvania than has any other one thing. The great variety as well as the excellence of the products shown there is a revelation to most people. Surely it has been proven sufficiently during these ten years that Pennsylvania could stage a state fair that would be creditable to the entire state. But so far, people have been indifferent to the subject and the cry of "cost" has been enough to retard any move in the direction of providing adequate fair grounds.

The tenth annual exhibit held last week was the best in every way that has yet been held. The quality of the products when compared with the first show indicates the improvements made in production and selection. A large part of this improvement is due to the educational influence of the local and state shows. While the best we can do towards reporting the exhibition will fall far short of giving a fair representation of it to those who were not there, we shall give as full a report as possible in a future issue.

High Grade Fertilizers

FOR years we have been urging the practice of buying high grade fertilizers instead of the low-content goods so often found on farms. There has been a decided improvement in this respect during the past ten years but there are still altogether too many farmers who pay freight on worthless material. The man who buys a 4-10-6 grade pays just half as much freight, half the charge for mixing and bagging, and does half as much work in applying it, as the man who buys the same amount of plant food in a 2-5-3 grade of fertilizer. The manufacture and sale of low grade goods is not the fault of the fertilizer manufacturers. For years they have been urging upon farmers the purchase of higher grade goods. The trade in low grade fertilizers is maintained by the short-sighted farmers who demand them. We have already related, but it is worth repeating, the incident of the man who, after hauling home his season's supply of a 1-7-1 grade of fertilizer, went to his Grange and had passed a resolution demanding lower freight rates. A little figuring showed that he had paid thirty dollars more freight on his fertilizer than he would have done if he had purchased his goods intelligently.

Let's Have a Good Show Place

THE tenth annual Products Show, recently held in Harrisburg, brings emphatically to the front the question of adequate quarters. So large has the exhibit become, and so great is the attendance that the show presents the same difficulties as are experienced by pressing an over-grown ten-year-old boy into a six-year-old's suit. This is no reflection on the willingness and hospitality of the Harrisburg people. They give all they have and do it nobly and they will not deny that their best is not now enough. It is not worth while at this time to go into details. The tens of thousands of visitors to the late show know full well that the accommodations both for the show and the visitors are not sufficient. It is time now for a representative bunch of people to get together to study this question.

Learning by Doing

FARM boys and girls who are being taught modern methods of orcharding, crop production, stock and poultry raising by the learning-by-doing method are getting invaluable training. The technical knowledge imparted by the club leaders and vocational school teachers who are employing the project method of teaching can hardly be called the principal benefit derived by the students and club members, however. It is the initiative and self-reliance developed that counts most. The boy who learns to carry his project thru to completion in the face of discouragements and difficulties is getting training that will be of utmost value to him later, no matter what he takes up as his life work.

About 6000 Pennsylvania boys and girls conducted projects in vocational agriculture during the past year. That is a good showing, but Pennsylvania Farmer believes that it should be made possible for every farm boy or girl in the state to get some training of this kind, either thru the schools or the young people's clubs.

Good Pay for Good Managers

THERE is one principle which the many cooperatives now starting up should keep firmly in mind. That is the absolute necessity of a good business manager if an organization is to be successful. In fact, that in the last analysis is always the difference between success and failure. No difference how great the need for the organization, or how good the by-laws may be, the financial success depends entirely upon the ability of the manager. We have known several failures caused by the unwillingness of the directors to pay sufficient salaries to get capable men. While high salaries do not create ability where it does not exist, adequate pay does attract ability. The one thing which will foredoom many cooperatives to failure at the start is the very general idea among farmers that they can get a $5000 man for $1500.

Return Envelopes

THERE have been several bills, quite uniform in character and phraseology, introduced into Congress which seek to stop the government from printing stamped envelopes. If these bills proceed from any organization of job printing firms it is, indeed, an exhibition of small business. The return card which is printed on the stamped envelopes is a great public convenience and also saves countless thousands of additional letters from going to the dead letter office. The claim that the practice of the government in furnishing the return card envelopes is an unjust competition with private business is unwarranted because the work of printing them is let by the government to private printing firms. Congress should promptly pigeon-hole all such petty propositions. Last year, in spite of these envelopes and the millions of privately printed ones, over twenty-two million pieces of mail went to the dead letter office because they were undeliverable and could not be promptly returned to the sender.

Washington Letter

BILLS FOR THE RELIEF OF AGRICULTURE.—The Haugen bill, generally known as the Jardine cooperative marketing bill, to establish a division of cooperation in the Department of Agriculture, has been approved by the House Agricultural Committee. The committee also moved to get the bill before the House for action as early as possible. It is confidently predicted that it will go thru Congress and receive the President's signature in record time.

Of bills for the relief of agriculture there is apparently no end. The Dickinson bill to establish a Federal Farm Advisory Council and a Federal Farm Board to aid in the disposal of the agricultural surplus thru the cooperative marketing organizations, is just now in the lead. It has the support of the Iowa farm leaders, including John P. Wallace, who appeared before the committee in its behalf.

A bill introduced by Representative Adkins, of Illinois, known as the Equality Farm Export Act, is the most recent addition to the flood of surplus disposal propositions. And it differs widely from all other export schemes.

It is designed to make more effective the operations of the tariff on farm products, so that such commodities will be placed upon an equality under the tariff laws with other commodities.

AMENDMENT TO FEDERAL FARM LOAN ACT.—An amendment to the Federal Farm Loan Act, in which the federal farm loan associations are especially interested, has been introduced by Representative Dickinson, of Iowa. It provides that no loan shall exceed fifty per cent of the value of the land mortgaged and sixty per cent of the value of permanent, insured improvements thereon. It also provides that no loan on buildings shall be greater than the loan on the land. In making the appraisal the value of the land for agricultural and stock-raising purposes shall be the basis of appraisal and the earning power of the land shall be a principal factor.

POSSIBILITY OF MERGER.—A movement is under way, it is said, looking to the merging of the National Cooperative Milk Producers' Federation with the National Council of Farmers' Cooperative Marketing Association. The federation includes in its membership twenty-eight leading milk producers' associations while the National Council reports a net membership of thirty-seven organizations. These organizations together handle the great bulk of the commodity cooperative marketing business of the country, and the combination would make a strong, effective cooperative business organization.

ENEMIES BLOCK ACTION.—The World Court proposition is meeting with unexpected opposition from various sources in the Senate. Its enemies have been able to postpone action, and there is an even chance that they may be able to prevent its passage this session.

BIG CUT IN TAXES.—The tax reduction bill, having passed the House, has been considered by the Senate Finance Committee, and a compromise bill reported out. The Senate bill makes a $350,000,000 cut in income taxes, compared with $330,000,000 in the House bill. The reductions are largely in the surtax rates applying to large incomes. The inheritance tax is repealed.—E. E. Reynolds.

Harrisburg Letter

COURT TEST UNCERTAIN.—While considerable has been heard at the state Capitol the last few days of the possibility of an appeal to court from the action of the Public Service Commission in promulgating the regulations for rural electric service, it is by no means certain the companies will take that step. The commission has given notice of its plans and some steps for cooperation in working out details have been taken which indicate the system may be put into operation with less difficulty than anticipated. The excitement about the commission offices, due to the clash of the Governor with certain commissioners and then with the state Senate has rather interfered with arrangements to get the regulations going. There have already been a number of inquiries coming here as to how the matter will be handled and it is possible in the next month a definite basis will be announced. The elimination of the flat rate proposition did a good bit to abate hostility to the regulations.

LEAGUE TAKING IT EASY.—Members of the legislative league, which cut such a figure in the 1925 session of the legislature, have been watching the parade go by in the special session and taking things easy. The league has arranged to have representatives at all of the hearings scheduled for this week and will then decide upon its course. The fact that February 18 has been set for adjournment and various fancy suggestions for investigations and other things have been junked means there is not going to be much legislation enacted. Just what the league will do about the Giant Power bills, which contain provisions for rural companies and country service, will depend largely on what comes out at the hearings.

NOW WANT THE MONEY.—In the last few days a reversal of form has come about in several counties where authorities failed to send application for shares of state moneys made available for road construction and efforts are being launched to halt the proposed redistribution of moneys not called for. Just what will be done is uncertain, but there are chances some counties will lose out.

KICKING ON PROGRAM.—Protests have been made to the State Highway Department the last week by delegations from several counties against the plan of spending bond money on primary highways as a general rule. More will probably be heard on the proposal soon. However, this year will be the last for a while when proceeds of bond issues will be available for road building. Next winter road work will have to be financed out of revenue.

SPECIAL DEER SEASONS.—According to what state game commission people say there will be no more special seasons on deer in southern Pennsylvania counties for some time, but the next to thin out the herds may be arranged for the central section. Reports on the kill in southern counties did not indicate nearly as many as expected. One of the suggestions heard is for a closed season of a year on bucks.

SENTIMENT FOR FAIR.—Out of the numerous meetings of the Farm Show week in Harrisburg has come a strengthened sentiment for a state fair. Plans for such a project have been in hand for quite a long time and the next legislature will see a renewal of the agitation for an appropriation to start the fair.—Hamilton, Harrisburg.

New Jersey Letter

GLOUCESTER PICNIC ORGANIZES.—The Grange picnic committee of the Gloucester County Grange met recently at Mullica Hill to complete plans for the annual picnic at Alcyon Park in mid-August. Affairs for this year are in the hands of a board consisting of Charles Brown, of Mullica Hill, chairman; E. A. Jones, of Harrisonville, secretary, and Joseph Cheesman, of Woodstown, treasurer. The committee on arrangements is in charge of Almer Clement, of Mickleton; machinery, Elmer Bradshaw, of Mickleton; produce, William Borden, of Mickleton; manual training, Deborah F. Kirby, of Mullica Hill; women's work, Minnie Young, of Swedesboro; and poultry, Carl Schoener, of Woodbury. This event is one of the largest in South Jersey during the fair season.

FINAL REPORT ON DEER KILL.—Revised reports from the New Jersey State Fish and Game Commission show that a total of 1207 bucks was killed in eighteen New Jersey counties during the four-day open season in December. This was the biggest kill with the exception of the five-day open season in 1923 when 1219 deer were taken. Burlington County, as usual, led the state with a total of 470 bucks, while 264 were reported shot in Ocean and 157 in Atlantic Counties. No person was shot during the season in mistake for game altho several accidents of a different nature occurred immediately preceding and during the open season.

MERCER JUNIOR DAIRYMEN.—Five Mercer County animals owned by junior dairy club members made the state honor roll for production last month, according to records just completed by Joseph B. Turpin, county club agent for Mercer. The high records were made by mature animals owned by Howard and Walter Burd, of Pleasant Valley, and by Hazel Atchley, of Harbourton. A three-year-old cow owned by Albert Burd, of Pleasant Valley, and a two-year-old owned by Elmer Atchley, of Harbourton, were the other honor animals. The December records were the largest of any month since Mercer County has been reporting honor roll cows in the junior dairy club work. The standard for honor roll admission is 1200 pounds of milk and forty pounds of butterfat in a month.

TAYLOR RE-APPOINTED SECRETARY.—H. E. Taylor was re-appointed secretary of the New Jersey Federation of County Boards of Agriculture at a meeting of its executive committee following the annual meeting of the Farm Bureau in mid-January. Mr. Taylor, in reporting the year's activities of the Farm Bureau, called attention to the work of the state fruit tree committee which has been studying ways and means for protecting fruit growers against trees untrue to name. A measure, allowing protection under the law with suitable guarantee protected by bond or insurance policy, has been introduced into the state legislature. Mr. Taylor also reported on a number of activities of the organization during the last year which gave the membership an actual return valued at many times the annual membership dues. The Farm Bureau membership checks as deposited by the county boards in early January have been paid to a larger extent than in previous years, indicating the stability of the present membership of the Farm Bureau in the state.—B.

New York Letter

PROHIBITION SUCCESSFUL.—On the sixth anniversary of the dry law the Grange and other temperance agencies, in considering whether prohibition has been a success or not, find that despite the lack of an enforcement code in this state there is no doubt that the law has worked great benefits. Enforcement is growing in strength in the face of a wet state administration. The driest city in the state is Ithaca, where the district attorney, R. G. Adams, has carried out the law under an ordinance which says that any police officer may enforce, tho there be no funds. The churches of this city have contributed hundreds of dollars, aided by the W. C. T. U. and the board of supervisors, backed by a strong public opinion, and the federal officers, formerly very casual in their service here, are now anxious to produce results on each visit. Rural people have set a fine example in furnishing funds to carry out enforcement. One little rural group, at Peruville, Tompkins County, recently volunteered $50.50 to be used in prosecuting violators, and this has fired others of both city and country, to similar efforts. There is little likelihood of an enforcement act from the legislature this year.

STATE LEADS IN EXPORTS.—The Empire State led all others in overseas shipments for the last quarter with sales amounting to more than $207,000,000. This was a gain of $31,387,000 over the same period of last year. Machinery and vehicles accounted for the greater part of these shipments, or $42,000,000 worth. Textiles occupied second place, with $33,658,000 worth. Animals and animal products followed next, with vegetables low down on the list with $1,791,000 worth.—M. G. Feint.

PAPEC
"The Cutter That Does Not Clog"

THE light-running Papec is just the Cutter for home and neighborhood filling. It requires less help and less power than any other cutter of equal capacity.

The entire feeding mechanism is now so nearly human in action that a man is no longer needed at the feeding table. Given suitable power, the Papec never clogs under *any* load or *any* silo.

Simple, rugged construction assures long life with few repairs. Many are giving good service after ten years' heavy use. Every part is easy to get at and adjust. There are no worries and no delays when you get a Papec on the job. Built by men who have specialized in Papec construction for 25 years.

Our 1926 Catalog describes four sizes of Papec Cutters and shows how a Papec will pay for itself in one or two seasons. Write for your copy today.

Massey-Harris Two-Horse Spreader
Low-Down—Tight Botton—Narrow Tread—Wide Spread

Our No. 7 Two-Horse Spreader is specially designed to make work easier on the dairy farm. Being narrow with a short wheel base, it can be taken right into the barn for loading direct from the trenches, if desired. It may also be turned in small yards and is readily handled with a two-horse team. It spreads evenly clear outside both wheel tracks. It's built to endure, with the strongest front bolster found on any spreader. "Good Equipment Makes a Good Farmer Better."

Write for the 1926 Massey-Harris Catalog

It pictures and describes a complete line of tillage, seeding, cultivating and harvesting machinery—all made by skilled workmen in the largest farm implement factory in the East. You can always get extra parts for any Massey-Harris Machine.

There's a Massey-Harris dealer near you.
Let us tell you his name. Write us today.

The Neshaminy Gardens
(OUR FARM)
Where an Editor Works and Thinks

I ALWAYS enjoy a visit to Washington, D. C. I spent three days there two weeks ago in conference with the other fourteen editors of the Standard Farm Paper group. We talked over agricultural conditions in our respective localities and discussed plans and possibilities for making the papers better. We had lunch with Senator Capper in the Capitol and a conference with Secretary Jardine in the Department of Agriculture. We attended a meeting of the Cooperative Marketing Organization and heard some plain speaking by the president of the body, Judge Bingham, of Louisville, Kentucky. We met Vice President Dawes (but did not see his pipe) in his office at the Capitol. Between times I talked with many other prominent men.

✣ ✣ ✣

WASHINGTON is unique in many ways. Politically, it is the nerve center of the United States, and the nerves lie very close to the surface. Just now the farmers and farm leaders of the Middle West are making a drive for legislation which will take care of surpluses. Political Washington is stirred up over it. Many of the officials and politicians don't know just what stand to take. They are as jumpy as a nervous man with a sensitive tooth when the subject is mentioned. Standing with several others in the lobby of a hotel I asked a Congressman in my resonant voice what he thought of the ——— Bill designed to take care of the exportable surplus products. "Ssh-h-h-h-," he said, and led me over to a corner where he talked for ten minutes without saying anything. Of the farm paper editors referred to, about one-fourth were in favor of legislation which would do what was intended by the McNary-Haugen Bill of last year. The other three-fourths did not believe it would be a good thing.

✣ ✣ ✣

I CALLED upon Doctor Atkeson, the representative of the National Grange in Washington. The Doctor has been doing valiant service in this position for a number of years and no representative of the farmers' interests in Washington is held in higher esteem, nor listened to with closer attention when he gives his opinion on proposed legislation. You never hear of his going off at a tangent. Just now he is hunting someone who can give a satisfactory definition of the term surplus.

✣ ✣ ✣

WASHINGTON is essentially different from all other cities of the nation,—physically and socially. I was about to say "morally" also, but I doubt whether the people of Washington are any better or any worse than the people of other cities. Since most of them (except the tradesmen) are there temporarily and are subject to the changing fortunes of politics they are naturally anxious to preserve the status quo. This is why Washington is forever on the anxious seat with its ear close to the ground.

✣ ✣ ✣

THE one place in Washington which changes not is Pennsylvania Avenue. It looks about the same as it did when I visited the city the first time thirty-five years ago. If there is any noticeable difference it is for the worse. Pennsylvania Avenue is the most important thorofare in the city. It connects the White House with the Capitol, two miles away. Over its wide pavement victorious armies have marched. Inaugural parades have impressed countless throngs and foreign potentates in their royal trappings have been applauded along its way for more than a hundred years. But in spite of all this, and in spite of the fact that the city as a whole has become one of the most beautiful cities in the world, Pennsylvania Avenue continues to be the trading place of the Cheap Johns of Washington. Dairy restaurants, second-hand book stores, cheap jewelry stores huddled in ramshackle, old fashioned buildings line this noble thorofare. I suspect this is due to the holding of the land for speculative purposes.

✣ ✣ ✣

SITTING on facing seats opposite me on my way home was a young man, his wife, and their little boy. I gathered that they had gone down to Florida to make their fortune. That they were returning without the fortune was only too evident. They had spent two days and nights on a day coach, and looked it. But for all their discomforts and their disillusionment joy showed in their faces because they were getting back home and had their tickets all the way. They had the good sense to lay that much aside when they got to Florida. The man told me that he could not possibly make enough to feed and shelter his family.—R. P. Kester.

THE CHEERFUL PLOWMAN
Writing to Them

I'M WRITING notes to sister Lil, to sisters Madge and Glenn, to brothers Hank, and Lafe, and Will, to brothers Pudge and Ben. The most of them are creeping up to middle age, at best; they've emptied more than half the cup, they've passed the mountain crest! I have not seen a one of these for twenty years and more, I have not sat beneath their trees, nor tasted of their store. We're scattered in a random way, from Dallas clear to Nome, from Frisco clear to Hudson's Bay, from Tennessee to Rome; half of them I may never see, it's likely that I won't, unless I stage a traveling spree or start a lengthy hunt. But thru the years I've made a point of writing now and then, tho time and tide get out of joint, they do not stop my pen.

I tell them how I'm getting on with horses, cows, and crops, I tell them of old Duke and John, I write about the hops; I tell them of Pauleeny's plans, of Pete's and Mary's, too, I tell them how the weather man's behaving thru and thru! I hear from them from time to time, each one of them is good in telling of his quince or lime, his ash or elderwood. Each tells me of the boys and girls, the neighbors and the cows, the village belles and social whirls, the pumpkins and the plows. Yes, thru the years we've kept in touch and shall until we die, we write and write to beat the Dutch without explaining why, so I am writing notes today to sisters Madge and Lil, to Glenn, and Hank, and Lafe, I say, and Pudge and Ben, and Will! —J. Edw. Tuftt.

Honey for Radiators

DEAR SIRS:—In response to your request for reports from your readers as to their experience with the use of honey in radiators I venture to send you a clipping from the November number of "Gleanings in Bee Culture." This writer, you will note, reports having had considerable trouble with the use of honey for this purpose. Possibly a mixture of one pound of honey to one pint of alcohol—half and half—might be more satisfactory.—H. E. B., Adams County, Pa.

I tried a honey mixture without the alcohol in my radiator, but without very satisfactory results. Last fall I purchased a new car and as everything was new and tight, I decided to try out the honey solution again, especially as I read of the better method of mixing and adding alcohol. So I mixed a gallon of water and ten pounds of honey and then added a quart of alcohol as per the directions given in your journal.

This was apparently a great success, as no leaks showed up anywhere on the outside and the solution functioned perfectly even at ten to fifteen degrees below zero. I had become quite enthusiastic over this new mixture and was heartily recommending it.

Later I was bothered with the valves sticking open. I gave them a good oiling and worked them loose only to be bothered again in the same way in a few days. Then the vacuum feed failed to operate and upon examining it I found it gummed up on the inside. I suspected that it was honey, as it felt and tasted like honey; but how it could get into the vacuum tank was a mystery to me.

Care of Valves

Next I took the cylinder head off and found that the solution had been leaking past the gasket and the valves were more or less charred with honey and the cylinder walls showed signs of the honey on them, but luckily had not been scored or damaged. The intake valves in sticking open had allowed the honey solution to be blown back thru the suction tube into the vacuum tank, and this accounted for the tank being gummed up and the valves not working properly.

So I scraped the charred honey off the valves and ground them, washed out the vacuum tank with hot water, drained all the old honey solution out of the radiator, refilled with water and a gallon of alcohol, paid the garage bill and went home sadder but wiser for this experience.

I have honey to sell but I can not recommend it for radiators. It works beautifully, I must say, as long as it stays in the radiator; but how can anyone know that it is not seeping thru on the inside, as it did in my case, and breeding a repair bill? There were no outside evidences to show it, and since the car was new and tight I took it for granted that everything was fine until the valves and feeding device began to give trouble.—LeRoy F. Baxter, in "Gleanings in Bee Culture."

Avoidable Losses

IN MAKING a survey of wheat marketing in Pennsylvania, it has been found that the Pennsylvania farmer is suffering large discounts which could be corrected on the farm with little effort and expense.

Each year approximately ten per cent of the wheat grown grades below No. 2 because of cockle; approximately fifty per cent grades "garlicky" and during the four years previous to 1925, approximately fifty per cent of the wheat marketed was infested with angoumois grain moth. The losses from these three factors alone amount to three or four million dollars yearly.—G. A. Stuart, Penna. Dept. of Agriculture.

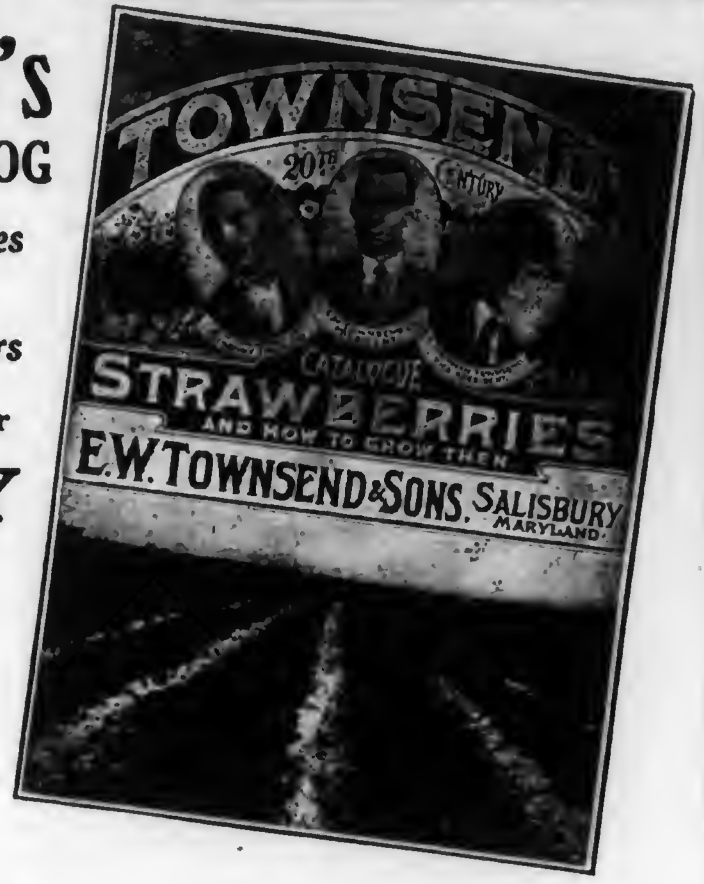
DON'T Give Anyone Your Order for
STRAWBERRY PLANTS
UNTIL YOU SEE THIS BOOK

We Guarantee to sell a Better Grade of Plants at a Lower Price than you can purchase elsewhere at any price.



THOUSANDS of our customers throughout the country will back the statement that there are no better plants grown than Townsend's. In twenty-six years of hard labor and conscientious square dealing, selling the very best plants that it was possible for us to grow in one of the most favored spots on earth for the growing of high-grade nursery stock, at a live and let live price, and a square deal to every one, has made the Townsend's Nurseries the Largest Growers and shippers of Strawberry plants in the world.

OUR PRESENT CROP OF STRAW BERRY PLANTS FOR QUALITY IS JUST A LITTLE BETTER THAN ANY CROP WE HAVE EVER GROWN BEFORE. Hundreds of our customers and zealous growers, who have visited the Townsend's plant farms this season, have been unanimous in the opinion that we had grown the greatest crop of plants they had ever seen.

If the rows of plants were joined together end to end they would reach a distance of over 200 miles long. And if taken up and set out in one row 18 inches apart, they would set a row of plants around the world.

This entire crop of plants is grown on newly cleared land. Thus in itself insuring long fibrous roots and strong healthy plants. This is a 100% crop in quality and quantity. We are in a position to sell you these good plants at the right price.

Furthermore when you send Townsend your order you do not have to wait for your plants until the best planting time is over. As is the case often when you deal with Northern Nurseries. We can give you fresh dug plants any time you are ready to plant from now until May 1st. Plants that have not been mulched but grown in open fields all winter, where they have gotten winter hardened and are guaranteed to be the hardiest plants grown, and that they will suit every climate. DON'T FAIL TO WRITE FOR OUR 20th CENTURY CATALOG TONIGHT. A postal will bring it. And you will be glad you got it.

A Winner in Project Work Tells His Own Story

Editors' Note:—The following article was written by Doyle C. Parker, of Columbia County, winner of the Pennsylvania Farmer Gold Medal in the Pennsylvania Senior Fruit Project Contest for 1925. The medal was presented at the State Farm Products Show, Harrisburg, Wednesday afternoon, January 20th.

The forty-eight trees in the orchard operated by this vocational school student produced a total yield of 406 bushels at a cost of twenty cents a bushel. Each bushel sold for $2.00, giving a marginal profit of $1.80 per bushel. The total costs were $79.30 and the receipts $834.00, leaving a profit on the project of $754.70. The returns for each man hour of work spent on the project were $3.37 and for each dollar invested $3.23. The orchard was not thinned but was sprayed five times. All fruit was marketed at the barn.

The project was carried on under the supervision of H. E. Newcomer.

THE orchard on our farm was a typical apple orchard, as found on the average Pennsylvania farm. The orchard contains forty-eight trees, mostly the older varieties, as Spies, Baldwins, R. I. Greenings, Early Harvest and Sutton. The trees are about fifty to sixty years old; they were very much in need of pruning and spraying; the apples being mostly small and unsound.

The course in fruit culture at school impressed me so strongly that I told my father that I believed it would pay to clean up the old orchard. My father then suggested that I do it and he would lend me the money to buy a power sprayer. In return I was to have the full proceeds from the orchard the first year. The orchard responded so well to the new treatment that my father asked me last spring if I would care to take the orchard on shares for the year of 1925.

After the plans were made with my father, I began pruning immediately so as to get it done before the buds began to swell, for after they begin to swell you are going to damage them more or less by moving around in the tree.

The method of pruning followed was: First, I took out all dead and diseased material. Then I went to the top of the tree, thinning out so that the limbs do not cross each other, or in other words, limbs that try to fill up the same space. Take out where the limbs run out from the tree in the same direction, parallel to each other. It is sometimes a question which one to take but leave the one with the best shape or if both have good shape leave the lower one as to get your tree closer the ground. Remove all water sprouts, except where they are needed to fill up a certain portion of the tree or to help reshape it.

Now it was time to think about spraying. The material was secured from our local dealer at a reasonable cost. The spraying was done according to directions given by the Pennsylvania State College Extension Circular No. 92.

Cultural Method Employed

The cultural method used is a permanent sod. The only fertilizer the orchard gets is from the hogs which are pastured in it from spring until a while before picking.

Immediately before picking, we had a wind storm from which I lost about 100 to 125 bushels of good apples. The most of the apples that blew off were made into cider. The returns from the cider were about one-fourth as much as they would have been if I could have picked the apples. The rest of the apples were picked from an ordinary ladder that could not be reached from the ground. They were hauled into storage almost as fast as they were picked. The apples were sold at the storage house for $2.00 a bushel.—Doyle C. Parker.

The Pruning of Pear Trees

HORTICULTURISTS at the New York State Agricultural Experiment Station at Geneva have been studying for several years how to prune pears to the best advantage. Certain definite recommendations are now believed to be justified by the results of the station tests. The merits of high and low-headed trees have been compared, and a study made of the effect of much and little pruning upon tree growth and fruit production. Low-headed trees receiving little pruning have proved most satisfactory in all respects.

Experiments have been conducted with such well-known varieties as Anjou, Bartlett, Kieffer, Sheldon Seckel, and Lawrence to study the relative value of high and low heading. Certain of these varieties have also been used in tests of much and little pruning for pears. From the results secured in these experiments, it would seem that low heads were best for all varieties of pears, especially for the tall, upright-growing types. Low-headed trees produced larger, broader, and rather more symmetrical tops than did the high-headed ones, and this proved particularly advantageous for unwieldy varieties of the Kieffer type. Careful heading and early training are always desirable.

All varieties respond more satisfactorily to little pruning than when severely pruned and thinned out. Little pruning seems to produce rather more symmetrical tops as well as larger bearing areas. Heavy pruning appears to stimulate a greater wood growth which results in rather bushy growth or sometimes rangy and unwieldy branches and relatively smaller bearing areas.

The Wonder Book

THE WONDER BOOK OF PLANT LIFE is the title of a book by that incomparable observer, J. H. Fabre, the French scientist, and translated by Bernard Miall. It takes a master of a subject as well as a master of language to describe and interpret the minute and common things of life in a style that grips the reader. That is just what Mr. Fabre can do and what he has done in the work mentioned. He begins at the very beginning of plant life and describes the processes of its development so vividly that the reader's interest is held from first to last. The book should appeal in an especial way to rural people who, while they are surrounded by plant life, too frequently know little or nothing about its processes.

The volume contains 410 pages and the text is illumed with over 200 illustrations. The workmanship is good and was done by the J. B. Lippincott Company, Philadelphia.

More Money from Your Crops

You can do it with seeds that are dependable—seeds that are of high germination and adapted to your soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story: added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

47 Years of Better Seeds

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops.

We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

Isbell's Valuable Book—FREE

The 1926 Isbell's Seed Annual tells how to select seeds, how to prepare soil, gives cultural directions, and quotes direct-from-grower prices. The coupon brings it Free.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

The Problem of Saving Plant Food Lost in Sewage

What can we do to save some of the plant food that is lost in city sewage?

SANITATION is the primary concern of those responsible for sewage disposal. It is recognized by sanitarians that typhoid, cholera and paratyphoid are water-borne diseases. The control of these diseases lies, therefore, in the careful watching of our water supplies. It is true that sewage filtering thru a soil gradually becomes purified. There is, however, a limit beyond which a given area of land does not purify polluted water. A soil becomes foul with undecomposed waste matter and ceases then to be effective for eliminating all danger of infection.

Bacteriologists, physicians and sanitarians agree that the so-called water-carriage method is at present the most economical and satisfactory way of getting rid of the waste materials from our households and industrial plants. In accordance with this recognition, our towns and cities have been sewered and provision has been made for removing quickly waste materials in a soluble or suspended condition.

The cities along our seacoast send their sewage directly to the sea. This is true of places like Boston, New York, Baltimore or San Francisco. Others, more or less distant from the coast, sewer into large streams, such as the Mississippi, the Delaware or the Hudson. It happens that the same streams may be used as a source of water supply. For instance, the city of Trenton pours its sewage into the Delaware. Less than thirty miles below Trenton is the intake of the water supply of the city of Philadelphia. The water, polluted at Trenton, is not sufficiently purified by natural processes when it reaches the Philadelphia city intake. Hence, that city must resort to methods of treating the polluted water that would remove not only most of the polluted material, but also the bacteria that might be a menace to the inhabitants of Philadelphia.

The modern methods of water treatment are very effective for this purpose. All told, therefore, the sanitary aspect of sewage disposal has been more or less effectively solved. There are, however, other problems pertaining to sewage treatment and disposal that have not been solved satisfactorily.

Wastes Destroy Attractiveness

We know that domestic and industrial wastes have destroyed the attractiveness of many of our streams. Some of our streams, whose banks were formerly lined with summer homes, boat houses, camps, etc., have practically become open sewers—repellant in their appearance and otherwise offensive. The pollution of the water has destroyed the fish and other aquatic life. Indeed, even the coastal waters have become polluted to a point where our shell fish industry has been seriously damaged and where the income from our fisheries has been materially reduced.

There is one other side of the question which from the economic point of view is extremely important. The modern methods of sewage disposal are based on the recommendations of the sanitarian rather than of the economist and the farmer. These know that many thousands of tons of plant food are constantly being carried to the sea and that the land is losing much available plant food because of our failure to return waste materials to our fields. This fact has led to the study of sewage disposal from the standpoint of soil fertility.

Theoretically, it would be best to use sewage for irrigation purposes. In this manner, we could utilize both the water and the plant food of the sewage for the growing of crops. There are, in fact, places where sewage is used for this purpose. In Europe, the city of Paris is a notable example. However, sewage irrigation, or broad irrigation as it is commonly called, has its limitations.

Land Needed for Effective Disposal

It is estimated, for instance, that Philadelphia, with a population of two million people would require about 60,000 acres for the effective disposal of its sewage by means of broad irrigation. This is due to the fact that the capacity of the land to purify sewage is limited. Few of our towns and cities have enough land available in their vicinity. Hence, in developing modern methods of sewage disposal, it is the aim of the engineer and the sanitarian to utilize the least possible space for the treating and purification of sewage.

A modern sewage plant employs the so-called septic tank, often supplemented by filter beds. The septic tank is usually a large pit, with cemented sides and bottom, wherein bacteria and other microorganisms decompose in an amazingly short time most of the waste material. The city of Plainfield, New Jersey, for example, has a sewage plant occupying only two and a half acres. This effectively takes care of the sewage from a population of 40,000 people. The sewage is digested in a septic tank in such fashion as to leave very little solid residue. This residue is known as "sludge" and has some value as a fertilizer.

Sludge for Use as Fertilizer

The recovery of the sludge for use as a fertilizer is a matter of interest to our agricultural industry. Methods are constantly being improved for handling the sludge and it is believed that in time the material will be converted into a product suitable for fertilizer purposes. A study of the bacteria and of other invisible organisms constituting the so-called flora of septic tanks and filter beds has thrown much light on the mechanism of sewage purification and on practical means that may be used for recovering the largest possible amount of plant food without losing the effectiveness of sewage disposal methods from the sanitarian's point of view.—J. G. Lipman.

Penn State Grange

THE Penn State Grange held an open meeting, January 12 at which Hon. John A. McSparran, trustee of the Pennsylvania State College and past master of the Pennsylvania State Grange installed the officers for 1926. Wayne B. Rentschler, Bernville, succeeded Ford L. Stump, State College, as master of the Penn State Chapter. Following the installation Mr. McSparran gave an interesting address. The Penn State Grange is serving as a leadership training school for the student members, better fitting them to carry on the activities of their local Granges when they return to their homes following graduation. —A. L. B.

Pay for a Harder Out of Your Milk Checks

A silo is almost as necessary as a milk pail on the dairy farm. And if you have one silo, you probably need another—for summer feeding and reserve. Shrewd feeders are using less grain and more silage—they find it pays better under present conditions.

You can't control the price of milk but you can largely control your feeding costs. A Harder Silo will help you show a profit and you can pay for it mostly out of your milk checks.

It's made of the best Spruce or Oregon Fir, cut with beveled edges and square tongues and grooves to make a perfect fit. Then it is doweled and sealed to make it rigid and air-tight. Goes together so easily no skilled labor is needed to put it up. And once up, you have the best silo in the community—with the patented Harder-Victor Front.

Write for our easy-payment plan and free book, "Saving with Silos." Let us show you how to reduce your feed bills, increase your milk flow and add extra dollars to your bank account.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Drying Off the Cow

I am writing to secure information on drying up dairy cows prior to freshening. I want to know when you can dry up a cow safely without taking any chances ot injuring her udder. I understand that six to eight weeks is the right amount of time for a cow to go dry. Can I dry a cow up when she is giving two quarts of milk; that is quit milking her entirely without any injury to the udder?—A. H., Bradford County, Pa.

You are right in your understanding that six to eight weeks is the right amount of time for a cow to dry up. C. H. Eckles, who is one of the foremost dairy authorities in this country gives the following directions concerning drying off a cow. I think they cover the subject so nicely that I will quote them as given.

"The common method of drying a cow is to lengthen the interval between milking by omitting one milking each day. After a few days the milk is drawn only once in two days, until secretion is completely stopped. This may require two weeks or more.

"There is far less danger of injuring the cow's udder in drying her up than is generally believed. After the cow has passed the eighth or ninth month in milk the continuation of milk production depends largely upon the stimulation from the act of milking and she will soon cease to secrete milk if this stimulation is removed. If a cow is producing as little as ten pounds per day, milking can be stopped at any time, and no harm will result. The udder should not be milked out at all. It will fill up for a few days, and then the milk contained is gradually reabsorbed, and no harm will result in any case.

Cut Down Feed

"If a cow is producing more than this amount of milk, it is advisable to first cut down her feed. The grain ration should be all removed and a poor quality of roughage low in protein supplied for a few days. With this treatment the production will decline rapidly, and when it reaches a level of eight to ten pounds daily the milking may be discontinued entirely.

"If, thru some oversight or otherwise, a cow is continued in milk until within about three weeks of the date she is due to freshen, the milk production begins to increase gradually and it is more difficult to dry her up than if it is begun about two months before the date for freshening. It is hardly advisable to attempt to dry up a cow if within ten days or two weeks of freshening—she shows the usual tendency to increase in milk production under these conditions."—A. A. Borland.

Drop in Test

I have a herd of cows which dropped six points in the test in November from October. Up to the month of November the cows were fed sweet cornstalks in the field and picked a little green stuff with a little feed at the barn. The feed is corn and oats ground together and now in the month of November with the same feed and dry clover and timothy hay and ice cold water to drink the test has dropped as I stated. Would you think the change in feed and ice cold water to be the cause?—O. J. A., Steuben County, N. Y.

Corn and oats ground together is not a very good grain mixture for winter feeding. It is too low in protein for most satisfactory results. As a matter of fact, the ration does not affect to any great extent the percentage of fat in the milk, so long as the ration supplies a sufficient amount of nutriment for the cow.

The best way to get more butterfat from a cow is to feed her a ration which will produce a more ample flow of milk and this milk will test as high in butterfat as the small amount of milk produced from a poorly balanced ration. Ice cold water is certainly not very desirable for milk cows. It takes a certain amount of energy to heat up this water in the cow's body which might otherwise be devoted to the making of milk, especially is this the case when the ration is low in quantity.

Many farmers who have put individual water bowls in their cow stables testify to the fact that the increased yield of milk from the cows after they were able to get water as often as they desired and in as great a quantity as they desired, more than paid for the cost of installing of the individual water bowls in the stable.—A. A. Borland.

Old Bossy's Budget

BEING of a logical mind and realizing my dairy practices are not what they should be, I have set aside today to reflect on my year's work and make note of the weak points in my chain of twelve links and I will spend an equal time in trying to figure out a way in which I can make each link as strong as the other.

My twelve links are the twelve months in the year and an ideal condition would be a system of management which would keep my milk production constant so that each month my milk check would be about the same.

September Poorest Month

I will start with September. Two of my cows freshened in September and their milk flow was about half what I felt it should be. I was also milking three cows that freshened in the spring, four that freshened about August 1 and I had three dry cows.

All my cows were a disappointment to me during September and on going over the receipts from my September milk for the past five years, I find September has always been my weakest link.

Feed Soy Beans

In October I had silage to feed. One can always hurry thru reflections which are pleasant. The county agent had persuaded me to plant a couple acres of soy beans for hay and I started feeding them, being anxious to know if he knew what a good feed was.

This combination of roughage, together with a balanced grain ration and my dry cows freshening, made me feel like a real dairyman. In fact I had to buy another milk can or two. But, alas, two acres of soy bean hay will not last twelve cows forever. When it was gone, even tho I had good clover hay, my cows fell off in their milk.

This happened about Christmas time. To keep my cows up I had to increase the percentage of protein in the grain ration.

How was my water for the cows those cold days? Cold enough and I will certainly have to change it. On comparing my milk sheets with the weather I found my daily milk yield went up and down with the thermometer.

Spring came with the freshening of four of my old milkers and I certainly wished for some good soy bean hay.

I had been feeding fodder along with my clover and in that way got thru the winter. My ensilage lasted until June.

How Delighted the Cows Were

How nice it was to have peas and oats to feed. The grateful looks of the cows made me feel as proud as mother after she had had some of the neighbors in to one of her good dinners. I was not worrying so much about September as I had ten acres of soy beans and they certainly looked fine. I knew that after the cows had eaten off the second crop of clover I could cut and feed soy beans and have a lot left for winter.

My reflections make me feel my dairy problem is largely a matter of roughage and I am wondering how a dairy budget will be. My neighbors say a farmer cannot run on a budget system; but how about old bossy?

I think a budget is a plan showing just how much of a thing one needs and I believe the idea is always to have it or it isn't a budget. So, if each cow is to get what is planned for her I must not be overstocked.

What does it require to feed one cow for a year? This is my estimate: Thirty pounds of silage per day for nine months, ten pounds of soy bean hay per day for nine months, five pounds of clover hay per day for nine months, a proper amount of grain in proportion to the milk production, a proper acreage of oats and peas to cut in the summer for feed, second crop clover pasture, and a small amount of drilled corn to cut for green feed.

The Estimate for a Year

This means my twelve cows will require fifty tons of silage, eighteen tons of soy bean hay and nine tons of clover. During ordinary seasons this will require five acres in corn, nine acres in soy beans and six acres in clover.

In figuring my grain I will anticipate a production of 7000 pounds of milk per cow on the average. With the above good roughage I will have to feed them only one pound of grain to every three and one-half pounds of milk. This means each cow will consume a ton of feed per year and twelve cows twelve tons.

Using this figure to start with, I work out the approximate cost of the year's supply of concentrates. Then I estimate my revenue from milk for the year. Charging off the feed cost and such items as depreciation of my cows, and my own depreciation, I have a nice little balance which I shall put in the bank at the end of the year,—if my budget plan works out as well in practice as it does on paper.—John Smeltzer.

Pennsylvania Ayrshire

VANITY of Clover Brook has brought to Clover Brook Farm, Bristol, Pennsylvania, their first silver medal. Vanity qualified for this award on her yield of 10,872 pounds of 3.9 per cent milk, 431.95 pounds of butterfat in 305 days for the Roll of Honor; carrying a living calf 210 days of this period. She thus becomes the ninth junior two-year-old Ayrshire. In the Advanced Registry she is credited with 12,129 pounds of 4.08 per cent milk, 494.18 pounds of butterfat.

Sugared Schumacher Feed
Will Save Money On Your Milk Costs

RIGHT NOW—A real opportunity has developed in the feed market which means a big saving in feed costs and a splendid increase in the milk returns and profits, if dairymen will take advantage of it.

The price of Sugared Schumacher Feed is decidedly low. The price of Cottonseed Meal and Gluten Feed is also low. By using Sugared Schumacher Feed as your grain ration and adding Cottonseed Meal or Gluten Feed to bring the protein content up to your required amount, you will save real money on your feed costs.

You will have a ration which, for palatability, variety of grains, bulk, nutrition, protein, and mineral content, will produce greater milk yields at much lower cost, keep your cows in strong, healthy condition and return bigger profits to you.

Sugared SCHUMACHER FEED is Ready Mixed

It will save on labor of mixing, assembling, and storing a lot of feed ingredients. Its uniform high quality, its exceptional combination of Hominy Feed, Wheat Feed, Oat Feed and Barley Feed, Cottonseed Meal, Linseed Meal, Molasses, Calcium Carbonate, Bone Meal and Salt, provides a variety of the choicest ingredients in the proper proportions to produce the most economical and profitable results.

Since Sugared Schumacher is sweetened with molasses, cattle eat it readily, relish it, and soon begin to show beneficial results. It is also an ideal feed for young stock, growing stock, dry cows, horses, sheep, and swine.

Hillstead Farm's New World's Record

Many of the highest records in all the different breeds of dairy cattle have been made with Schumacher as an important part of the ration. Hillstead Farm, Farmington, Conn., writes:

"We are pleased to tell you that Sugared Schumacher was used continuously as part of the grain ration fed to our Guernsey cow, Anesthesia Faith of Hillstead, during her recent World's Record, 365 day test, as well as during her two previous tests. She produced 19,741.9 lbs. of milk, and 1,112.5 lbs. butter fat."

MILK PRICES ARE BETTER

Now is the time to make bigger profits. Milk prices are higher—feed prices are much lower. It is a REAL opportunity you should not let go by. It is a chance to cut your feed costs considerably. See your feed dealer at once.

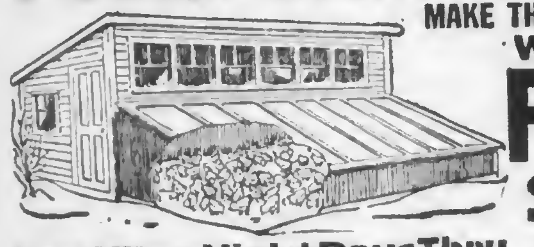
Flex-O-Glass
SCRATCH SHED



Lets Ultra-Violet Rays Thru
Weather-proof—Transparent—Unbreakable

1-8 COST of GLASS

Origination of This Wonderful Discovery!

A startling process was discovered in 1924 that admitted the health producing ULTRA-VIOLET and INFRA-RED rays of the sun in just the right proportions needed to retain health and stimulate growth in all forms of life. The world-wide necessity for this article was realized and FLEX-O-GLASS was put on the market. Today we proudly state that we were the founders of this product that is now sold thruout the world on the merits of its health producing and lasting qualities. That which makes FLEX-O-GLASS so superior is the process by which it is made. This process and formula are the property of the FLEX-O-GLASS MFG. CO. and are registered in the U. S. Pat. Office. Beware of imitations. There is only one FLEX-O-GLASS. Recommended by State Experiment Stations. Your protection. FLEX-O-GLASS is made by treating a strong, durable cloth base with a special process, making a weatherproof, unbreakable product that admits the health producing rays of the sun and holds warmth better than glass at ⅛ the cost. Keeps out cold, rain, snow and storm. Admits only warm diffused sunlight exactly as needed. Easily installed. Comes in roll 35½ inches wide. Cut with shears and tack on.

Utilize sun's valuable Rays!

Chicks develop in ½ regular time if given ULTRA-VIOLET sun's rays in a warm dry place. Don't turn chicks out in slush, snow and cold weather to chill and die. Don't put them under ordinary glass. It doesn't let the ULTRA-VIOLET rays thru that are necessary to keep chicks healthy and growing fast. They huddle together and become droopy. No pep at all. BUT—Put them under FLEX-O-GLASS—give them soft scattered sunlight full of concentrated ULTRA-VIOLET (health rays) and INFRA-RED (heat) rays of the sun where they are safe from rickets (weak legs) and diseases and watch them grow. Every chick will exercise, be full of pep and grow like weeds. Build this scratch shed or brooder-house now, quickly and cheaply. Sunlight is only heat and health producer nature offers, and it's enough. Why not use it?
Let hens scratch and feed in a FLEX-O-GLASS scratch shed and they will lay all winter. Turn hens that are a winter cost into a winter profit. FLEX-O-GLASS makes ideal enclosure for porches and storm windows.

Use Flex-O-Glass at Our Risk

Order your supply today. Use it 10 days. If then you do not find results better than if glass were used or if it isn't stronger and more durable than any other material send it back and we will refund your money without question. Isn't that fair?

PRICES—All Postage Prepaid

Per yd. 35½ inches wide—1 yd. 50c; 5 yds. at 40c; 10 yds. at 35c; 25 yds. at 33c; 100 yds. or more at 32c per yard. Quantity prices F.O.B. on request.

SPECIAL $5 Offer For $5.00 we will send you 15 yds. of Flex-O-Glass 35½ inches wide postpaid (135 sq.ft.) Covers scratch shed 9x15 ft., enough for 200 chicks, or use for hotbed, enclosing porches, storm doors, windows, etc. Order today, you take no risk. Satisfaction guaranteed or your money refunded. Add 3c per yard outside U. S. Free book with every order, contains instructions and information on poultry diseases and remedies. Don't lose our address. Order direct from factory today.

HOT BEDS—RAISE STRONGER PLANTS QUICKER Because Flex-O-Glass admits concentrated Ultra-Violet rays, makes plants grow much faster and stronger than under glass. Quickly pays for itself. Ideal for hot houses because it scatters light exactly as wanted and does not chill as glass does, yet costs only ⅛ as much and far easier installed. Also used in factory, office and school windows to diffuse sunglare. Actually makes room lighter.

Kirby Poultry Farm

The Outlook for the Poultryman

(Continued from page 3)

of the increase in receipts at the big markets for the year over 1924 came in December when arrivals were the largest for that month on record.

Public demand for chickens and eggs is excellent. Both farm and wholesale prices of eggs averaged nearly four cents a dozen higher in 1925 than in 1924. Farm chicken prices were five per cent higher and wholesale prices fifteen per cent higher than in the preceding year. Fresh firsts on the New York wholesale market averaged 39.8 cents a dozen in 1925 compared with 36.2 cents in 1924. Fowls in the same market averaged twenty-nine cents a pound as compared with 25.2 cents in 1924. In spite of these higher prices, however, distribution into consuming channels was only slightly smaller than in 1924.

Since December, when production began to increase so rapidly and receipts of fresh eggs became hard to move, prices have been declining steadily. From bringing sixty-five cents a dozen on December 1, prices have broken twenty-five cents a dozen to forty cents at the end of the first week in January. The break from the winter peak came sooner than last year when prices held up until well into January. Prices during December at New York averaged 49.3 cents compared with 57.1 cents in December, 1924.

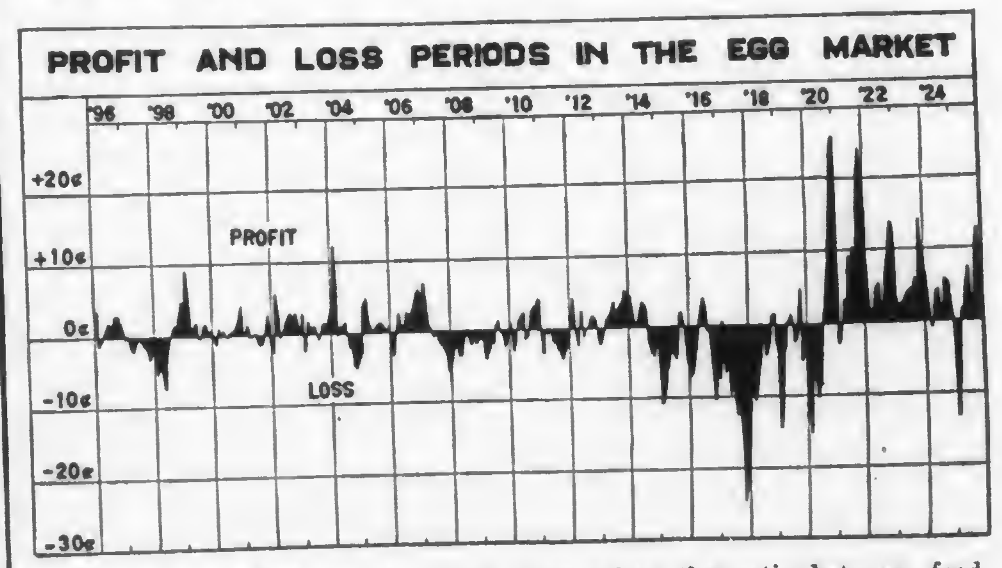
The storage egg deal is winding up less favorably than last season. Dealers paid fully a nickel a dozen more for the eggs they stored last spring than in the spring of 1924. In spite of the higher costs, about 800,000 cases more were put away. The surplus has been very slowly reduced. The trade is already almost entirely on a fresh egg basis, and there is little chance that the entire supply can be moved except at lower prices. It is to be expected, then, that dealers will be more wary of the market this spring and that they will make every effort to buy eggs cheaper.

Trading in eggs for April delivery is already under way on the Chicago market at around 28¾ cents compared with 30¾ cents last year. This price is higher than was paid in the spring of the four years 1921 to 1924. Even tho dealers are looking for more eggs than last year and will insist on buying cheaper than last spring, the indicated April price level is a fairly attractive one.

The abundance of low priced corn and oats will be a contributing factor to a heavier egg production. These grains, as well as wheat, may advance toward spring, but the general situation suggests that the poultryman will have the advantage of low feed costs thruout the year unless the next growing season is unfavorable. It is worth remembering, however, that conditions that affect crops adversely are likely to reduce egg production and lift egg prices.

Prices in the last quarter of 1925 were fully twenty-five per cent higher than in 1924. Demand was maintained at large proportions, however, and distribution into consuming channels from the four leading markets during the last six months was about ten per cent larger than in the corresponding period last year. Should egg prices decline during the spring to a level that would induce closer culling of flocks, then larger receipts of poultry and lower prices are to be expected.

So far as demand during the next few months is concerned, there is nothing discouraging to be found in the outlook. Consumption promises to be satisfactory as far ahead as the business outlook can be safely gauged, which carries us thru the first half of the year.—Marilla Adams.



The black spaces above zero line show when the ratio between feed and egg prices was more favorable than the average, while spaces below the line show times of unfavorable feeding ratio. The war period was unsatisfactory, but the last five years have been highly favorable.

Farm Products Show

(Continued from page 3)

C. L. Burlingham, of the Breeders' Gazette of Chicago, told the banqueting dairymen that too many poor purebreds are being registered for the good of the various breeds. He lauded the new testing system being used by the Ayrshire Breeders' Association and predicted that it would be adopted by the other breeds to correct deficiencies of the testing plan now used.

The new Ayrshire system requires that all the cows in the herd be tested, encourages natural feeding methods during the testing period, provides for surprise tests, and requires the keeping of breeding records so that a breeder may know what all the daughters of a certain sire have done, not having to judge his merit by only a few of his daughters.

Editors' Note:—Special reports covering in details the proceedings of the various organizations which met at Harrisburg during Show Week will be published next week, together with the names of the prize winners in the various contests and show exhibits which are not available as the forms close for this issue.

INTENTIONAL SECOND EXPOSURE

Now great musicians play on every farm

TODAY, raging storms can close the roads that lead away from your house—and still you will not be shut in. With a touch of a finger, you can tune in—to a far off city. And you can listen to music—entertainment — education in world centers. The greatest musical artists are broadcasting, and men who have played only in the concert halls of the greatest cities are playing today in every farm home—where there is a Radiola.

The newest Radiola particularly suited to the farm home is Radiola 20. It tunes in with a single finger! It is so exactly made—with parts matched to the ten thousandth of an inch—that although it has three tuning circuits, all three are operated by a turn of a *single control*. In distance reception, you get extra sensitivity by using the amplification control, too—and the highest degree of refinement in tuning, with the help of two small verniers. But for ordinary use, there is but one control to turn.

Radiola 20 has a new power Radiotron—and gives, with dry batteries, more volume than storage battery sets give today. It is sensitive—and selective. In all these points—and in clear, pure *tone*, this new Radiola is far in advance of any previous five tube set!

If you have a Radiola and an RCA Loudspeaker—matched to each other and to the great broadcasting stations—you can hear Josef Hofmann play—just as vividly as the audience that sits in spellbound rows before him.

Radiola 20, with five Radiotrons $115

RCA Radiola

BRAINARD FOOTE

Choosing the Right Kind of Loud Speaker

THE selection of a radio loud speaker is apparently not a difficult task, yet if it is chosen with care the problem isn't quite so simple. Loud speakers vary a great deal in their performance and, the type of set to which the loud speaker is to be connected has some bearing upon its selection. If the prospective purchaser understands something of the principles of loud speaker operation and the differences between the various forms he is in a better position to buy wisely.

To this end let us think about the basic laws of amplification and reproduction of voice and music received by radio. In the first place, we should realize that air vibrations that we can hear are called sounds—audible vibrations. They are produced by a very rapid succession of impulses that set the air into vibration. If these impulses are extremely fast, a high note is heard, and the frequency is said to be high. On the other hand, if the impulses are fewer in number per second, a low tone is heard—a low frequency. Any vibration that is transmitted to one's brain via the eardrums is called an audio frequency vibration. More rapid ones are called radio frequency and are inaudible.

Tone Variations

Ordinary tones vary all the way from about 100 vibrations per second to about 5000 per second. These are stated, technically, as 100 cycle and 5000 cycle notes. However, when a woman sings a certain note—say 1000 cycles pitch—her voice does not produce solely a vibration at 1000 cycles. It gives forth other tones, too, that are fainter but which are necessary to impart full expression to that voice. Were it not for these overtures or harmonics, as they are termed, it would be impossible to distinguish a violin from a voice, for instance, or a mandolin from a piano.

It is the duty of the amplifier in a radio set to increase the volume of all such radio frequencies without altering them any more than is absolutely necessary. Very few sets really do this. Since most amplifiers employ transformers, it may be well to point out the fact that a low-priced transformer does not amplify the lower tones very successfully. Heavier transformers, of exceptionally good construction, are needed. A set using the impedance system is far better, but ordinarily requires three audio tubes instead of two. The resistance method is perhaps best of all, amplifying as it does all audio tones impartially, but it, too, must have three audio tubes, besides a considerably greater "B" battery voltage than the other two methods.

What the Speaker Does

The loud speaker transforms into speech and music the electrical impulses delivered to it by the amplifier. Where the amplifier is not perfect, one naturally can not expect the speaker to be perfect. The higher grades of loud speaker do not have much opportunity of demonstrating their superiority when connected to an inferior type of receiving set. As mentioned above, the audio amplifier may be able to amplify the low tones and deliver them to the loud speaker, but the speaker may be incapable of reproducing them.

The diaphragm of the loud speaker plays the most important part in setting the air into vibration. If the diaphragm is a small one, it tends to reproduce the high tones better than the low. On the other hand, a large diaphragm gives the lower tones and omits a great deal of the high.

It is almost impossible to construct a loud speaker with a size of diaphragm that will reproduce all audio tones indiscriminately. The size of the actuating unit, which operates the diaphragm either thru a magnetic attraction or by a direct connection to it, plays some part, but chiefly in the way of loudness.—B.F.

(To be continued next week)

Questions Answered

J. R. R., of Westmoreland County, has asked several questions, the nature of which is indicated in the following answers:

"Provided you file off all dirt and galvanizing from the pipe at the point of attachment, the ground clamp usually provides better contact than a soldered joint.

"If you have city water pipes, make connection to them for the ground. A pipe driven into the earth a few feet down does not make a satisfactory ground connection. If you do not have city water, get a six-foot length of heavy copper screening (one-half-inch mesh will do) about two feet wide. Solder a heavy copper wire all along one end for the ground lead. Then dig a suitable trench at least two feet deep, and more if you can, in which to lay the mesh. Preferably place it in a damp spot, such as near the well spout, and thoroly moisten it once in a while.

For Aerial and Ground Wires

"For aerial and ground wires, never use smaller than No. 14 wire, or signals will be weakened. The ground wire may run against the brick wall, but the aerial wire should be spaced five or six feet from it.

"It is best to make the aerial and lead-in all one piece of wire, unless you are able to do a good job of soldering. A connection block is not satisfactory unless taken apart and cleaned frequently.

"You are using the best grade of dry cell tube. The UV-199 usually gives about 750 to 1000 hours of service. It will burn brightly even when exhausted.

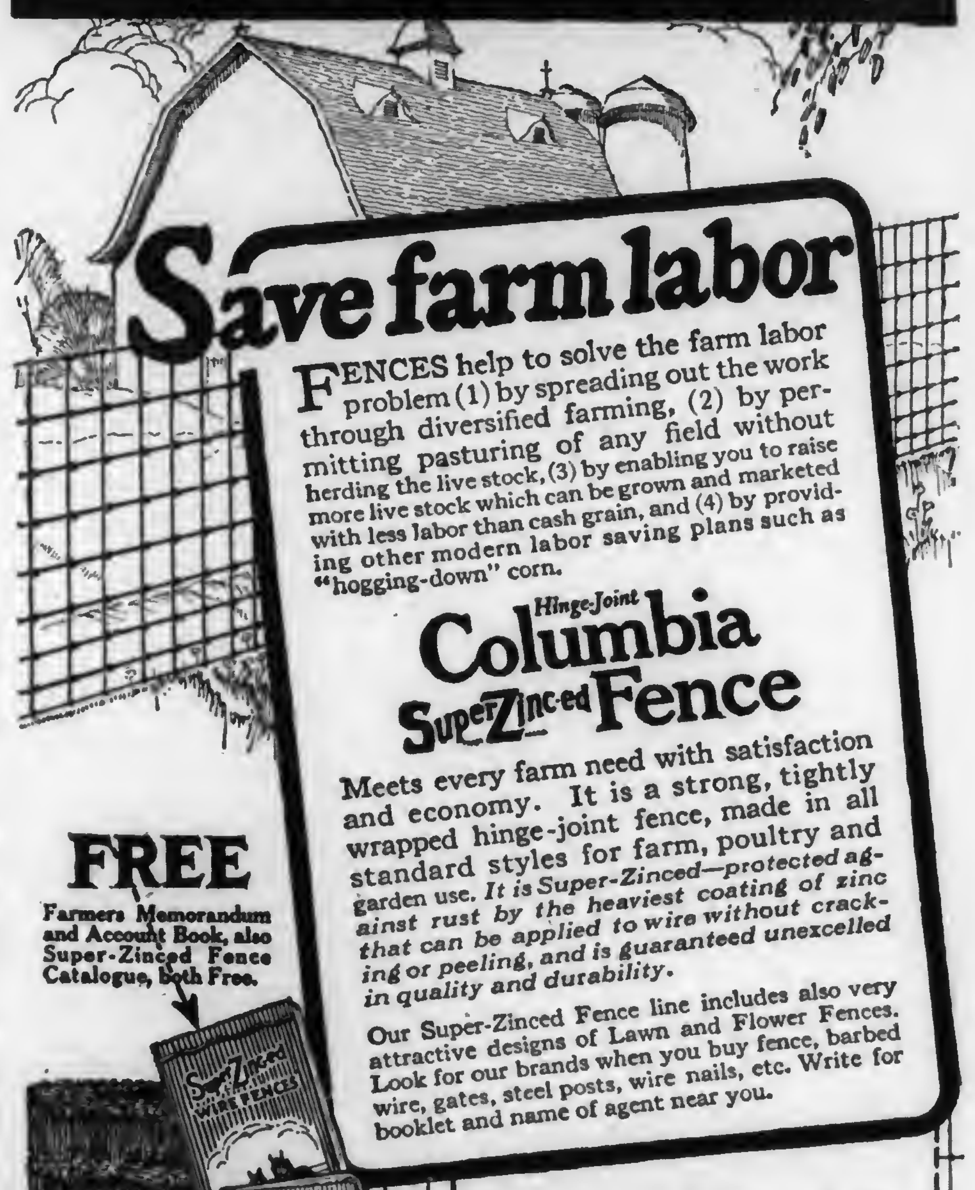
"Do not allow the lead-in or aerial to come nearer than five or six feet to the house or a tree at any point. Place the insulators so that only the guy-wires may touch the house and trees."—B. Foote.

Poor Reception

I am attempting to use a telephone attachment in place of an aerial on my neutrodyne set. I cannot get any distant stations clearly. The attachment consists of a disc on which the 'phone stand is placed.—H. K., Otsego County, N. Y.

You can secure better reception if you will disregard the regular antenna binding post of the set and, instead, run a wire from the attachment to the grid (marked "G") of the first tube in the set (usually at the left end). Use a short wire, if possible, and then try various positions of the 'phone or the disc. Or else insert a magazine between the two until the left-hand dial of the set reads only about five degrees lower than the other two.—B. F.

SuperZinc-ed FENCES



Save farm labor

FENCES help to solve the farm labor problem (1) by spreading out the work through diversified farming, (2) by permitting pasturing of any field without herding the live stock, (3) by enabling you to raise more live stock which can be grown and marketed with less labor than cash grain, and (4) by providing other modern labor saving plans such as "hogging-down" corn.

Hinge-Joint Columbia SuperZinc-ed Fence

Meets every farm need with satisfaction and economy. It is a strong, tightly wrapped hinge-joint fence, made in all standard styles for farm, poultry and garden use. *It is Super-Zinced—protected against rust by the heaviest coating of zinc that can be applied to wire without cracking or peeling, and is guaranteed unexcelled in quality and durability.*

Our Super-Zinced Fence line includes also very attractive designs of Lawn and Flower Fences. Look for our brands when you buy fence, barbed wire, gates, steel posts, wire nails, etc. Write for booklet and name of agent near you.

It takes *only* 8 weeks to get a big job

In the Auto, Tractor and Electrical Business

Read what these men are doing—here is your big chance to get "on easy street." Come to these great shops on the biggest SPECIAL offer ever made.

George W. Smith runs a big Ford Agency and Repair Shop at West Alexandria, Ohio. He says, "I am clearing over $800 per month."

Big Firms Need Trained Men

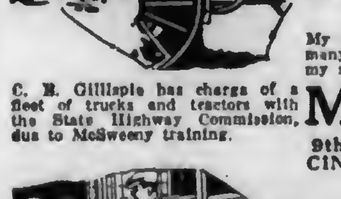
The Auto and Tractor Business is on the boom. Thousands of trained men will be needed during the next few months. I get calls every day from Garages, Battery Stations, Auto Repair, and other successful concerns for McSweeny men. When the big fellows need high grade men they know where to come for them. They want McSweeny trained men.

My Training Unusual

Scientific tool training—that's the secret. You do things here according to the latest engineering standards. Thousands of dollars have been spent in modern tools and equipment. You'll know a motor like a brother. That's why my men are at home with the biggest shops in the country. If you want to succeed the way Smith, Collins and the rest have—qualify by the same method.

I'll Pay Your Railroad Fare and Board You!

In order to fill the openings that now exist, I am making an offer no one has ever made before—FREE RAILROAD FARE, FREE BOARD. But even that is not all. I'll tell you about the rest in my letter.



C. B. Gillispie has charge of a fleet of trucks and tractors with the State Highway Commission, due to McSweeny training.

Send for FREE BOOK

My big illustrated training book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and my short time offer NOW. It soon expires.

City ______________ State ______________

Now great musicians play on every farm

TODAY, raging storms can close the roads that lead away from your house—and still you will not be shut in. With a touch of a finger, you can tune in—to a far off city. And you can listen to music—entertainment — education in world centers. The greatest musical artists are broadcasting, and men who have played only in the concert halls of the greatest cities are playing today in every farm home—where there is a Radiola.

The newest Radiola particularly suited to the farm home is Radiola 20. It tunes in with a single finger! It is so exactly made—with parts matched to the ten thousandth of an inch—that although it has three tuning circuits, all three are operated by a turn of a *single control*. In distance reception, you get extra sensitivity by using the amplification control, too—and the highest degree of refinement in tuning, with the help of two small verniers. But for ordinary use, there is but one control to turn.

Radiola 20 has a new power Radiotron—and gives, with dry batteries, more volume than storage battery sets give today. It is sensitive—and selective. In all these points—and in clear, pure *tone*, this new Radiola is far in advance of any previous five tube set!

If you have a Radiola and an RCA Loudspeaker—matched to each other and to the great broadcasting stations—you can hear Josef Hofmann play—just as vividly as the audience that sits in spellbound rows before him.

Radiola 20, with five Radiotrons $115

Choosing the Right Kind of Loud Speaker

THE selection of a radio loud speaker is apparently not a difficult task, yet if it is chosen with care the problem isn't quite so simple. Loud speakers vary a great deal in their performance and, the type of set to which the loud speaker is to be connected has some bearing upon its selection. If the prospective purchaser understands something of the principles of loud speaker operation and the differences between the various forms he is in a better position to buy wisely.

To this end let us think about the basic laws of amplification and reproduction of voice and music received by radio. In the first place, we should realize that air vibrations that we can hear are called sounds—audible vibrations. They are produced by a very rapid succession of impulses that set the air into vibration. If these impulses are extremely fast, a high note is heard, and the frequency is said to be high. On the other hand, if the impulses are fewer in number per second, a low tone is heard—a low frequency. Any vibration that is transmitted to one's brain via the eardrums is called an audio frequency vibration. More rapid ones are called radio frequency and are inaudible.

Tone Variations

Ordinary tones vary all the way from about 100 vibrations per second to about 5000 per second. These are stated, technically, as 100 cycle and 5000 cycle notes. However, when a woman sings a certain note—say 1000 cycles pitch—her voice does not produce solely a vibration at 1000 cycles. It gives forth other tones, too, that are fainter but which are necessary to impart full expression to that voice. Were it not for these overtures or harmonics, as they are termed, it would be impossible to distinguish a violin from a voice, for instance, or a mandolin from a piano.

It is the duty of the amplifier in a radio set to increase the volume of all such radio frequencies without altering them any more than is absolutely necessary. Very few sets really do this. Since most amplifiers employ transformers, it may be well to point out the fact that a low-priced transformer does not amplify the lower tones very successfully. Heavier transformers, of exceptionally good construction, are needed. A set using the impedance system is far better, but ordinarily requires three audio tubes instead of two. The resistance method is perhaps best of all, amplifying as it does all audio tones impartially, but it, too, must have three audio tubes, besides a considerably greater "B" battery voltage than the other two methods.

What the Speaker Does

The loud speaker transforms into speech and music the electrical impulses delivered to it by the amplifier. Where the amplifier is not perfect, one naturally can not expect the speaker to be perfect. The higher grades of loud speaker do not have much opportunity of demonstrating their superiority when connected to an inferior type of receiving set. As mentioned above, the audio amplifier may be able to amplify the low tones and deliver them to the loud speaker, but the speaker may be incapable of reproducing them.

The diaphragm of the loud speaker plays the most important part in setting the air into vibration. If the diaphragm is a small one, it tends to reproduce the high tones better than the low. On the other hand, a large diaphragm gives the lower tones and omits a great deal of the high.

It is almost impossible to construct a loud speaker with a size of diaphragm that will reproduce all audio tones indiscriminately. The size of the actuating unit, which operates the diaphragm either thru a magnetic attraction or by a direct connection to it, plays some part, but chiefly in the way of loudness.—B.F.

(To be continued next week)

Questions Answered

J. R. R., of Westmoreland County, has asked several questions, the nature of which is indicated in the following answers:

"Provided you file off all dirt and galvanizing from the pipe at the point of attachment, the ground clamp usually provides better contact than a soldered joint.

"If you have city water pipes, make connection to them for the ground. A pipe driven into the earth a few feet down does not make a satisfactory ground connection. If you do not have city water, get a six-foot length of heavy copper screening (one-half-inch mesh will do) about two feet wide. Solder a heavy copper wire all along one end for the ground lead. Then dig a suitable trench at least two feet deep, and more if you can, in which to lay the mesh. Preferably place it in a damp spot, such as near the well spout, and thoroly moisten it once in a while.

For Aerial and Ground Wires

"For aerial and ground wires, never use smaller than No. 14 wire, or signals will be weakened. The ground wire may run against the brick wall, but the aerial wire should be spaced five or six feet from it.

"It is best to make the aerial and lead-in all one piece of wire, unless you are able to do a good job of soldering. A connection block is not satisfactory unless taken apart and cleaned frequently.

"You are using the best grade of dry cell tube. The UV-199 usually gives about 750 to 1000 hours of service. It will burn brightly even when exhausted.

"Do not allow the lead-in or aerial to come nearer than five or six feet to the house or a tree at any point. Place the insulators so that only the guy-wires may touch the house and trees."—B. Foote.

Poor Reception

I am attempting to use a telephone attachment in place of an aerial on my neutrodyne set. I cannot get any distant stations clearly. The attachment consists of a disc on which the 'phone stand is placed.—H. K., Otsego County, N. Y.

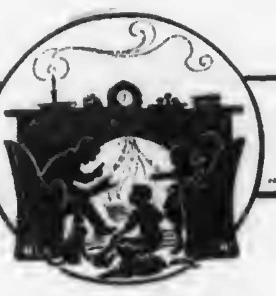
OUR YOUNG PEOPLE'S FORUM.



From Forum Friends

Dear Cousin Ruth and Forum Friends:—I have three baby dolls and one of them says mama. Her name is Josie and the other two are named Elizabeth and Pauline. Pauline can sleep.

My sister and I play house. I have to milk pretty nearly every morning and evening. Pretty soon I'll go sled riding. My sister and I have a big sled.—Bertha D. Maryai (11), Indiana County, Pa.

Dear Cousin Ruth and Forum Friends:—This is my first letter to the Forum page. I live on a small truck farm of seven and one-half acres. During the summer we go to market with vegetables and berries. We have a good many blackberries and raspberries and one-half acre of strawberries.

My brother and I do nearly all the work outside and mother does the work in the house. Our father is not with us; he died in 1915.

I nearly always read the Forum letters and I saw on one of the last pages that the girls want some boys to write, too, so I thought I would write.—Reuben G. Stoltzfus (15), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I have attended school for five years and I am in the eighth grade. I go to Townline School which is two and a quarter miles from my home. I walk to the corner and then ride two miles. We have ridden in a car every day so far but I think now we will go in a sleigh I think it is lots of fun to ride in a sleigh.

We play many games at school like baseball, wood tag, also we make snow forts. I had a happy Christmas this year and received many presents. I hope the Forum friends did also.

I have a pet horse called Dick. He is gray and normal size and about twelve years old. I work with him mostly. We also have two other horses, gray also, but they are bigger. Their names are Maude and Prince.—John Sikora (X), Erie County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending you a picture of our tame woodpecker and will tell you about him. Two years ago two woodpeckers started to come to our house. There is a pole out in the yard and we put suet in the crack and every day they would come and eat of it. Then in the spring they had this young one that is in the picture. They would bring him every day and they fed him so much that he grew twice as big as his mother.

MY TWO SISTERS
Margaret Stout, Cambria County, Pa.

We call him Snip because when he would come he would make that noise. Then he had a baby and he also brought his baby here to eat. They live in our pine grove. There are about five of them but he is the biggest of all that come because his mother took such good care of him.

One day when he was here a friend of mine snapped his picture and here it is.—Esther A. Seaman (X), Wayne County, Pa.

I am sorry that I couldn't use the picture with this interesting letter about your pet woodpecker. By the time the picture was reproduced in the paper, however, I'm afraid it would be a puzzle to find Snip. He's such a tiny fellow in the picture even tho he's so large in real life!

Dear Cousin Ruth and Forum Friends:—Here is a picture of my brothers and sisters and our flock of geese. There are eighty geese in the flock. One of them is a Canadian wild goose. We had nine old geese and seventy-one young geese.—Harold Stenger (X), Fulton County, Pa.

MY BROTHERS AND SISTERS AND OUR GEESE
Harold Stenger, Fulton County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been skating this afternoon on the lake. Have you ever been to Harvey's Lake, Cousin Ruth? I live in Alderson, which is at one end of the lake. I learned to swim this summer and I am learning to skate.

I got a pair of hockey skates on shoes for my birthday. It hasn't come yet but I have to have the skates while the skating is good.

Shall I write and tell you about when I lived in Nebraska and our vacation to the seashore after we came east?—Genevieve York (X, 13), Luzerne County, Pa.

Do write us about your home in Nebraska.

Dear Cousin Ruth:—We had a party at school Wednesday afternoon. We had oranges, nuts, candy, peanuts, etc. We had a good time.

We went to Florida last winter and we certainly had a good time. We started from here and went as far as Orlando. We started the fifth of October and we got there the twenty-seventh of October. Coming back we had an accident. Mother cut her face and had four stitches put in. It happened in Baltimore, Maryland. I certainly was scared and we smashed the car quite badly but we have it yet!—Martha Gray (X), Ulster County, N. Y.

Very few of us who read your letter have been to Florida. Couldn't you tell us about the country?

Hello Everyone:—Just a few lines. If we want this page to be the best this year we must work. Let's send in riddles, stories and games and everything possible to make the page a success. I think the page is very good but let's make it better. Here's a poem I'm sending.

WE WON'T SHIRK

Come on, everybody, let's make this page a success,
Let's all of us do our very, very best;
For this page is ours, for which we work,
May we do our duty and never shirk.

We will make it the best page so folks can hear,
And do our best all thru the new year;
We will send in riddles, also a joke,
And we'll do our best and never mope.

—Ellen S. Pulis (X, 11), Passaic County, N. J.

Dear Cousin Ruth and All:—I got my skates. Say, Cousin Ruth, I wish you could have been here to skate with me. Do you skate? Well, the mill dam on Buffalo Creek was frozen over. The space covered nearly an acre. The ice was thick and smooth. I never saw such good ice for a number of years. I was glad I received my skates in time for it. Everybody that had a pair collected on the ice. They played all kinds of ice games. One day a number of fellows took their cars on. They had great times sliding around. I suppose that will be the next sport.

The ice is covered with snow now and everybody is enjoying the show. Nearly every one in town that owns a sled is sledding tonight. I wish I were with them.—Miriam Emery, nineteen, (X), Union County, Pa.

Answer to Esther Luse Bell's nature riddle printed last week: SNOWBIRD or JUNCO.

Please Read

HOW you must have laughed at the funny mistakes in my letter last week! There I was telling you to be sure to spell correctly and the word "correctly" was misspelled! I spelled it all right when I wrote the letter but someone else didn't spell it all right when it was set in type for the page.

And then in the very next paragraph after this mistake was another! A line that I wrote didn't get in and one that didn't belong there took its place, so now you don't know what I wanted to say. Get out last week's paper, find the line "A FEW RULES TO REMEMBER" and instead of the paragraph that's below it read the following one:

> "In the upper left hand corner write the word "Contest," at the top the title, "Winter Sports," and then the contest letter. At the end sign your name, age and address. If you want to write another letter besides the contest letter write it on a separate sheet of paper then the contest letters can be found easily when I want to read them over and decide which one of you wrote the best letter to his imaginary city friend."

I'm so sorry all this happened. I'll try to see that you aren't mixed up again. Send in lots of letters about your "Winter Sports" to that make-believe friend in the city, won't you?

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You will find that the four tens in this week's puzzle can be made to equal nine if you will use the three signs you see just above the figures. In other words by using "multiplied by," "divided by" and "minus" each just once between the tens, nine is the correct answer—IF (and there is always a big "if" in things, isn't there?) you place those signs in the proper order to bring this answer. When you have found the right order for the signs, send the little arithmetic example to me on a POSTCARD so that it reaches me by February 6th. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the January 9 issue of Pennsylvania Farmer is: X 1 1.

The puzzle prize winners are: Avis Dobson, age 8, Boyers, Pa.; Ralph E. Ebert, age 9, Breinigsville, Pa.; Ethel James, age 7, Pottsgrove, Pa.; Marian I. Kern, age 7, Newside, Pa.; Elizabeth Neff, age 9, Chicora, Pa.; Edith A. Paisley, age 10, Conyngham, Pa.; Mildred Simpson, age 12, Trappe, Md.; Lawrence Tanger, age 10, Carlisle, Pa.; Anna Theiss, age 9, New Paltz, N. Y.; William Wolfgang, age 12, Greensburg, Pa.

Stitches You'll Like to Take

Distinctive Touches That Add So Much to Clothes

JANUARY, and the sewing season is with us. There is scarcely a country household in our land without some variety of sewing bee "buzzing." There are new clothes to be made and old ones to be remade; big clothes to be cut down into middle sized or little clothes, besides the other articles that must be added to one's store now and then.

When there is much sewing to be done, we make use of short cuts whenever possible. Some of us may be so hurried and tired that we neglect doing something distinctive, quaint or beautiful. That something that causes folks to speak admiringly of Sally Smith's blue chambray dress, and never to give a second thought to Ethel Gray's more expensive crepe.

We sewers of today have too much sense to undertake the laborious and time-taking embroideries with which the garments of an earlier day were decorated. But a love of color, a desire for personal adornment persists in the normal human mind, and there never was a time when colorful and quickly made embroideries were more fashionable than now. They take but little of our time, these simple, easily made stitches that add so much to the appearance of a garment and so much to our pleasure in making it.

New Fashion Book

OUR new 1926 spring and summer Book of Fashions is now ready for you. It contains color plates, 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, some points for the needle (illustrating thirty of the various, simple stitches) and costs only ten cents. Send in your order today, with ten cents in silver or stamps, so that this book, full of valuable hints to the home dressmaker, will be sent you at once.

Bias Fold Binding

Most sewers have learned to make use of the handy bias fold binding, which comes in practically every color, and in several washable materials. A real time saver, it is particularly suited to finishing children's wash dresses, aprons and under garments. If you can spare just a wee bit of time, try this extra on little daughter's bias bound dress. If the dress happens to be blue chambray bound in white, use the six strand cotton, or rope floss in red, coral, or orange. Make blanket stitches (a simple, unpurled buttonhole stitch) over the white binding, taking the stitches about one-half inch or less apart. Tan chambray bound in brown, and worked over with orange, is good, and other combinations will suggest themselves to the worker.

Dainty flower pockets will be all the trimming needed for a small wash dress. Left over bits of contrasting material may be used, and you can make your own pattern, or cut a flower of suitable size from a seed catalog. Pansies, wild rose, or other broad petaled flowers are best. Draw around the flower on your material. Baste two pieces of material together for each pocket, then buttonhole closely around the outline. Now, using black, brown, yellow or orange floss, put in sepals, petals, etc., using long stitches, and a few French knots. Merely looking at the picture will make it easy. Butterfly pockets, or those made in the form of animals, are just as cunning.

Running Stitch Effective

Two or three rows of running, or darning stitch, is perhaps the easiest trimming of all. Unless the material is very sheer, use all six of the strands, or at least four. Make your stitches long on the surface, and short underneath, and the three rows of one color, or each of a different shade.

For another effective decoration, make the rows of running stitch in black or other dark color. Above this, away from the edge, make "crow's foot" stitches with thread of contrasting color, placing a "crow's foot" above every long stitch, or every other one, as you prefer. ("Crows' feet" are made of three straight stitches taken together at one end, and with their other ends separated in fan shape. They may be tiny for baby's dress, or as large as one prefers.) Using a third color, a second row may be made above and between the first"c row's feet."

A very "fetching" reseda green linene dress for a grown-up had as trimming two rows of black darning stitch, and just above them a row of fairly large "crow's feet" in alternate red and dark green. Another variety is one row of darning stitches with the "crow's feet" in another color on both sides.

If you like button trimming, try this different one. Use colored or white pearl buttons having four eyes. With black embroidery floss take several stitches from each eye out over the edge of button thru the material, instead of sewing on in the regular way. Then, with green cotton, outline a stem for this flower, with several lazy daisy leaves. A charming little print dress had a row of these flowers above the hem, with the stems, one short the next long.

Bits of bright applique cross-stitch, feather stitching, French knots, and lazy daisy stitches continue in favor. Embroidery cottons have been made color fast, so that one need feel no hesitancy in using those of standard make. The silks, tho, require more careful handling if they are to keep their color.

Even if you aren't "up" in embroidery and haven't as much time as you need, and your fingers aren't very nimble, you'll enjoy some of these simple stitches. The beauty you have added to the garment, as well as the delight of the wearer, will repay you.—H. M.

Envelope for Linen

ONE and one-sixth yard of material twenty-four inches wide will make this envelope which is a great protection for the tablecloths not in use every day. When laid in a drawer, if the space is limited, the folds quite often show soil when the cloth is unfolded, so this case will appeal to the housewife as a protection against streaks on the best tablecloths.

Blue is the one color supposed to keep linen and muslins looking white so I use blue muslin, poplin, madras or any material heavy enough to keep out dust. Fold the material over fourteen inches thus making your pocket, the remaining fourteen inches point or round off to make the lap. Hem and feather stitch in white or bind with white tape. If made for a gift (I have given two of these to brides) the initial may be worked on the lap.

Material thirty-six inches wide will leave a strip from the side which can be made into a napkin case to match.—C. S.

Save the Clippings

HAVE you ever picked up a paper or a magazine and been so inspired by an article, a picture, or a poem, that you felt it worth more than the subscription price of the entire publication? I have, very often. And I preserve them carefully. The longer I keep them the more precious, they become. A professor of mine once said that a learned person was one who had the facts in his mind or knew where to find them. The humble scrap book can be a library of facts in condensed form.

You may not have the time nor space to paste all your gems in a book. Many use stout envelopes, labeling each, and stand them in a handy box. It is so easy to drop the clipping in its proper place. With envelopes of this kind you can often carry cheer to sick or lonely folks with "just clippings."—E. M. W.

Supplementing School Work

Parents Can Help the Child in Countless Ways

IF THE parents keep in close touch with children's progress they will find many things they can do that will be helpful in supplementing the school work.

Abstract numbers are difficult for a child to comprehend, but I have found that a six-year-old learns very quickly and easily to play parchesi, dominoes, and games with flinch cards.

My six-year-old really learned to count and learned numbers playing parchesi.

The child learns other valuable lessons, too, from these games. He learns that rules must be lived up to—or mother puts the board away and there will be no more games for a week. He learns, too, that there can be fun in a game even when he is beaten—if he is a good loser. He learns actually to laugh when mother or daddy or sister comes out ahead.

They Like a Variety

Of course, the child should have his own blackboard, pencils, tablet, drawing paper and crayons at home. He should also have paste and kindergarten scissors.

The blackboard shows mother conclusively what kind of school work is being done.

For the older child by all means have plenty of books and magazines that will supplement the work being done in school. For example my girl in sixth grade was having some work in reading about King Arthur. First we got out our Tennyson at home and read some of the King Arthur poems there. Then I sent to our state library and asked for any children's version of King Arthur that they had.

King Arthur Stories

They sent me Howard Pyle's King Arthur, beautifully printed and illustrated. Daughter was delighted, and the King Arthur stories are familiar to her now in a manner that she will never forget. Quite frequently in her reading she comes across references to the King Arthur stories and always speaks of it.

She asked one day about Grecian mythology, and I dug up a Young Folks' History of Greece that I feared might be a bit old for her, but she read it and discussed it with me.

The other day she asked me if I could get any stories for her about the Lewis and Clark Expedition which they are studying in history in sixth grade. I don't know of any such stories but I immediately wrote to the state librarian asking for help.

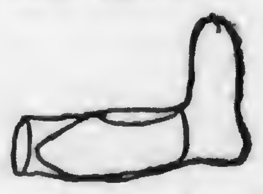
After all, isn't the real education of the child received in the home, and does not the school but supplement the home education?—May H. Mumaw.

Heart-Shaped Cutters

ON YOUR next trip to the village, have your tinsmith make you a few delightful heart-shaped cutters for use on February 14th. You will find them useful in cutting sandwiches, cookies, and biscuits, and they will bring cheer to young and old, as well.—G. S. S.

For Cold Feet

THE man of the house gets cold feet when he wears rubber boots in winter. Use the legs of wool socks when the feet are too far gone, and cut good warm slippers. The illustration will show you how to place your home made pattern.



Cut the heel and toe with generous allowance for the seams. Sew around the heel and toe, using the shortest machine stitch. Turn down the top one-half inch and stitch twice. They cost little, take about ten minutes' time, and are a warm comfort to outdoor workers.—Mrs. M. C. Smith.

NEW INVENTION SAVES MILLIONS

A Lamp that Burns 94% Air.

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

FRUIT TREES

Budded from bearing orchards

This insures the same traits in the young trees as in the parent—growth, sturdiness, and fruiting habit. Send for our booklet and prices on Cortland and other Apples, Peaches, Pears—"Trees Propagated from Bearing Orchards." Write today.

Valentine Fun for Children

Invitations, Decorations and Games You Can Use

WRITE your invitations to a children's Valentine frolic on small red paper hearts, using a white pencil or white ink. Half the fun for little folks is in distributing them, so don't mail them.

Decorate your rooms with red and white crepe paper, making streamers and gay festoons, and be sure to have plenty of various-sized hearts in evidence everywhere. Make your dining room table as attractive as possible, with a large red centerpiece held in place with a plump pink and white ribbon cake. From the centerpiece may radiate tiny ribbons of crepe paper, extending to the various places marked with a red heart bearing the little guests' names.

Start Off with a Hunt

Children dearly love to hunt for something, and since they come to this party directly from school, no game is necessary to enliven the gathering period. Start them off at once with a Valentine hunt. Have a comic Valentine, (not rude or unkind) hidden somewhere about the rooms for each guest. It should be plainly marked with the name for whom intended, and the players must be warned not to molest or disclose the Valentine of another. When the search is over, and the Valentines have all been read and enjoyed, announce the new game.

For Valentine Post Office seat the guests in a circle with one standing in center for the leader. Give each one the name of a city. The leader then calls out, "I am sending a Valentine from Erie to Chicago. Will it arrive safely?" The two cities called must change places, with the leader trying to obtain one of their seats. The player without a chair is the next leader, and so on.

Cupid's Dart will then keep them busy till supper time. Form in a circle and move slowly round while one in the center using a card board arrow-pointed dart is blindfolded. He then points his dart toward someone in the moving circle, and that child goes into the ring with him and tries not to be caught. Cupid calls "Where is my Valentine?" The darted ones replies "Here I am." If not caught after being located three times, start as before. If the called one is caught, she becomes the leader, and is Cupid.

Serve supper at six o'clock, giving the little folks plenty of time to reach home early. Give them cocoa, salmon loaf with peas and creamed potatoes all served piping hot. A nice slice of ribbon cake, heart-shaped cookies and fruit gelatine will complete a long-to-be-remembered party. —Mrs. E. M. Anderson.

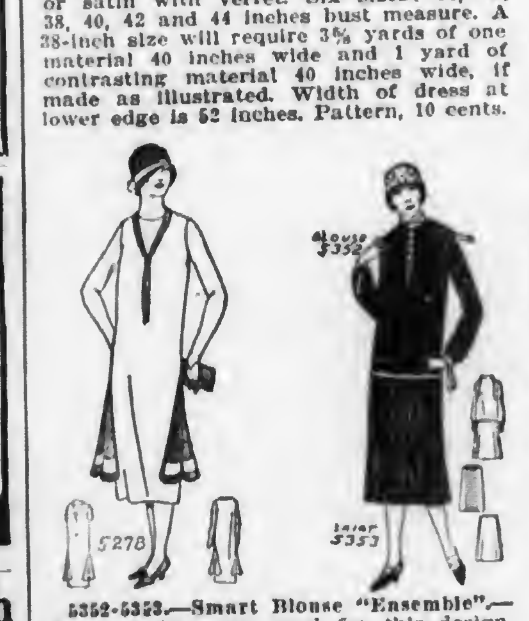
Our Farm Papers

DEAR EDITOR OF THE HOME PAGE:—This is Thanksgiving Day and I am truly thankful for the good things I always find on our Home Page. Our farm papers are such clean inspiring ones, I wish all young people might read them. The trashy novels on many news stands are worse than useless. A fifteen-year-old girl from a carelessly governed home showed me one, and with flashing eyes declared she would never buy another for they were not fit to read. So may God bless the wholesome farm papers, and give them more power.—Mrs. M. S.

Popular Dress-Up Dresses

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

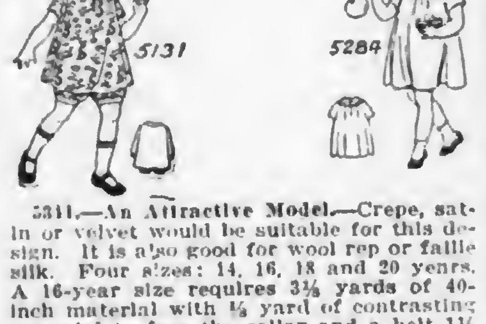
5278.—A Youthful Model.—Crepe satin or kasha would be smart for this design, or one would have broadcloth with velvet or satin with velvet. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 3⅝ yards of one material 40 inches wide and 1 yard of contrasting material 40 inches wide, if made as illustrated. Width of dress at lower edge is 52 inches. Pattern, 10 cents.



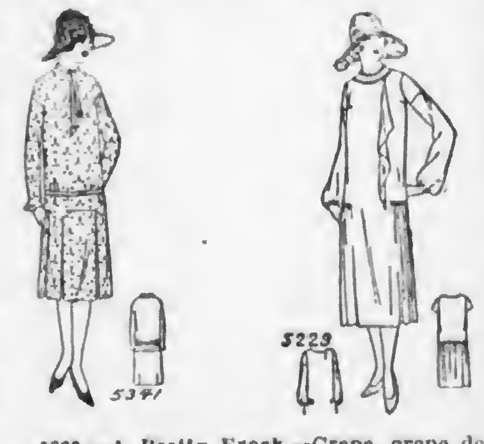
5352-5353.—Smart Blouse "Ensemble".—Brown velvet was used for this design, with facings of satin in a matched shade. Homespun, flannel, faille and linen are also good. Blouse is in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt is in 7 sizes: 25, 27, 29, 31, 33, 35 and 37-inch waist measure with corresponding hip measure, 35, 37, 39, 41, 43, 45 and 47 inches. The width of the skirt at the lower edge is 2⅜ yards. To make this "costume" for a 38-inch size will require 4½ yards of 40-inch material, with ½ yard of contrasting material for facings on collar, cuffs and lower edge of the blouse. Two patterns, 10c each.

5131.—A Popular Dress.—Printed crepe or challis would be good for this design. The bloomers may be joined to an underbody. The smock may be finished with sleeves in short or wrist length. Four sizes: 2, 3, 4 and 5 years. A 4-year size requires 3 yards of 27-inch material with ¾ yard of contrasting material for collar facings and leg bands, if made with long sleeves. With short sleeves ⅛ yard less is required. Pattern, 10 cents.

5284.—A Simple Frock.—Crepe, China silk, lawn or batiste may be used for this little frock. Five sizes: 1, 2, 3, 4 and 5 years. A 2-year size requires 1½ yard of 40-inch material. Pattern, 10 cents.



5311.—An Attractive Model.—Crepe, satin or velvet would be suitable for this design. It is also good for wool rep or faille silk. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 3⅛ yards of 40-inch material with ½ yard of contrasting material to face the collar and a belt 1½ inches wide. Pattern, 10 cents.



5229.—A Pretty Frock.—Crepe, crepe de chine or voile would be very pleasing for this style. It is also attractive in figured silk with crepe or georgette for the cascade and full sleeve portions. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 2½ yards of 54-inch material if made as illustrated in the large view. The width of the dress at the foot is 2 yards. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

What are YOUR WATER NEEDS?

There is a HOOSIER Water Service, with the famous GALVAZINK coating inside and out, for a lifetime of every-hour-in-the-day water service for every farm and home purpose.

FOR lasting satisfaction from a water system, you must have equipment suited to your needs and the nature of your water supply. Our staff of experts is at your service, and a letter stating what you have in mind will bring their best advice and will not obligate you in any way. Let us show you how you can have city water convenience at less than city cost.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

TOM remembered the long forgotten incident when Grimes had fallen in the street and the boys under Johnson's leadership had tormented him. Then Tom, feeling pity for the friendless and besotted creature, not only had commanded them to "cut it out" and backed his words with ready fists, but he had led Grimes home. Bread cast upon strange waters may give strange returns and as he realized the soundness of his informant's advice, Tom thanked him again and promised that no word would be passed which would implicate Joe. And after all what would be gained by whipping "Bull?" Just the satisfaction of paying a debt with interest but the outcome would be that Banker Durham would have him arrested and thrown in jail. And while he lay there the raid could be pulled off. No, as Joe advised, there must be some better way but this time there could be no waiting until after the deed was done. The greatest generals were strategists; they won victories by beating the other fellow to the punch. Here was need for a board of strategy and before he left town that night Tom had talked to Marvin Manning and in a few guarded words given his chum to understand that a visit to Peace Valley next day was necessary. "We're going after another big fellow," Tom had said, "and you must be on hand to help catch him." There was instant response from the keen-witted Marvin. "I'll be there," he had answered. As Tom rode home in the darkness he considered and rejected many a battle plan. How could a field be protected when every ear was precious? The thing seemed impossible. But before he had reached home a plan had come which made Tom smile in anticipation. Not so his father who, pulling on his clothes for instant departure, started out to call the clan. Blood might be spilled in Blanton for Sam Woodson swore that with the men of the Valley at his back he was going to Banker Durham to tell him to his teeth what an evil son was his.

More alarmed than over any previous happening Tom sought to calm his enraged father, then called to enlist the aid of his mother. Well he knew that it would be like match to powder if Sam Woodson spread the news of the impending raid for with many of the Valley men there was smouldering hatred against arrogant Banker Durham and his son. "Hold on, dad," Tom implored, "you'll just make more trouble for all of us. We can lick 'em without guns or men. Now listen until I tell you my plan." Still rumbling threats Sam Woodson sat down and as Tom unfolded his scheme a slow grin replaced the angry frown. "Son," complimented the elder Woodson, "thet's the funniest way to fight I ever heered on—but I'll be doggoned if I don't believe it will work. And if it does nary one of them younkers ever will come back to this Valley again. Now let's get to bed." So possible tragedy was averted and Tom turned in to dream of charge and countercharge as warring hosts fought for possession of a battle ground.

It was past the noon hour and in the Woodson home sat Lame Bill Kidd, Marvin Manning and the redoubtable "Slim," who had begged for an opportunity to fight the foreign foe. Excellent had been the meal and except for their anger directed against what Lame Bill termed the "ornery skunks" all were at peace with the world. The little party had been down and looked over the corn field, deciding from what point the attack would likely come. Now all was in readiness to repel invaders and they waited impatiently for night to come. "Only a few is necessary," had been Sam Woodson's decision. "If we git a passel of boys an' men some dumb fool is as likely as not to start shootin'. And we ain't goin' to have any of that." Tom had grinned at his father's change of front but had readily agreed. Not even Old Trail, hero of that earlier episode, was to share the secret of the coming night. But long like generals planning a campaign they discussed the matter around the dinner table until each knew exactly the part assigned. So now the stage was set and it but remained to be proven whether or not the story told by Joe Grimes was a truthful report or merely the fancy of a drink drugged brain.

NIGHT long before had drawn her sable mantle and not one star peeped out as two cars chugged to the mountain top, then turned from the road to be enshrouded in darkness as lights were turned off. Ten forms, each with a corn knife, slipped stealthily along a trail. Suddenly they stopped, then froze in their tracks as the deep voice of Old Trail broke on the air. "It would beat the devil if that dog is loose," hissed the leader. "If he comes nosing around cut him in two." But Old Trail was only voicing lament for a master who had chained him up and gone away. Now the weird cry of a screech-owl caused one of the party to cry out in alarm and the stocky leader paused to curse his reluctantly following crew. Far different than the planning was execution of the dark night's deed and to the timid town lads every bush held a lurking enemy. More rapidly the figures descended until a sound as of rippling water tells of wind play thru the rustling corn. Like a dense green forest stood the field and as the thin ray of a flash-light played over thick-hung ears the despoilers paused for a moment to admire.

"Some corn," said the first in line.

"Good for a hundred bushels an acre Roberts says," was the low-voiced echo. "It almost seems like a shame to cut it down after Woodson has worked so hard."

"Don't be a chicken-hearted fool," came the savage reply of "Bull" Durham as he gave directions to his band. "Do you want a 'Hill Billy' to show us up? Remember that every stalk down means one less chance for him to win and a few minutes' work will put any yield he has to report behind mine. Spread out now and keep cutting 'til I give the word to stop." Swiftly now the invaders went forward to attack and sharp knives sheared thru stalks. But as the first laden stalks crashed earthward every boy paused to stand with ears strained in listening, knives upraised.

"Mar-r-rough! Mar-r-rough!" Like the cry of a lost soul in torment the unearthly scream quavered and died away. Then, "Mar-r-rough!" to be followed by a savage snarl in answer from the field nearby. "My Gawd, a 'painter!'" shrilled one frightened visitor, "run boys, run for your lives!" In one mad scramble all turned to fly but now, shown by the dim ray of the flash-light in "Bull's" palsied hand, uprose hairy figures from the sheltering stalks and with howls and fiendish screams charged the retreating army. It was a riot then with every man for himself and the devil, apparently, after the hindmost.

"OW-W! Ow-w-w! Help, fellers, he's killin' me!" The largest "painter" had sprung upon "Bull" and was clawing him viciously. "Help! Help!" But those of the retreating rear guard were suffering the same treatment while those in front were tearing recklessly thru the underbrush never stopping to give succor to those less fortunate. Frenzied with fear "Bull" tore loose from his assailant to be hastened in his flight with a most "unpainter" like kick which again sent him sprawling to be set upon by another smaller but fur-clad figure which emitted shrieks of rage as it raked "Bull's" hatless head. But finally bruised and bleeding from many scratches altho not seriously hurt the interpid leader joined his men as they tore thru the woods to their waiting machines. Hatless, many with clothing cut to ribbons by sharp briers or "claws," and with hands and faces bleeding the brave invaders were a sorry spectacle as they tumbled into their flivvers, stepped on the gas and with all effort at secrecy abandoned went roaring down the mountain as lights sprang up in cabin windows, the occupants awakened by the noise. Nor did they slacken speed until safe home again.

Hobbling out of the corn field as rapidly as his "game" leg would permit Lame Bill found the smallest of a fur-clad group rolling in convulsions on the ground. But the convulsions were those of laughter as Pepper Manning went from one shriek to another while his younger companions joined in. "Jiminy Crickets, Tom," howled Marvin wiping tear-filled eyes on one hairy sleeve, "did you hear 'Bull' squall when your dad lit on him? And he squealed like a rabbit when I clawed him last. Lordy, Lordy! Meour-r-rough!" The incorrigible Pepper was off again but Sam Woodson's grim voice cut in, "Reckon it will be some time before them yonkers come to Peace Valley in night time. Lucky Bill and me had them old furs on hand. Bill, you done make a 'painter' ashamed of hisself. If I hadn't known it was you I'd a been skeered myself."

"Doggone it," complained Lame Bill, "It's you who ought to be ashamed of hisself. Didn't you promise to hold them cusses 'til I could git up and take part in the fun. Doggone this leg anyhow. It sure did sound like a herd of cow critters tearin' up the brush," the "painter's" representative concluded. "Tom, you shore are lucky they didn't head thru yore corn. If one on 'em had straddled a row he'd have rode it plumb to the end," and Bill chuckled at memory of the stampede.

"I think dad's right," Tom remarked, "and that we are thru with trouble from that gang. Dad insisted on clawing 'Bull' but I'll bet Johnson will take his meals standing for a long, long time. That currycomb of mine had teeth like a saw and when I got him I just raked the pants off of him." Again they had to stop while Marvin Manning rolled in ecstasy and "marroughed" to his heart's content. But poor "Slim" had no spoils of victory.

"The ornery cusses," complained "Slim" as if he had suffered personal injury. "They wouldn't stop to let me ketch up with 'em. Never got to claw a doggoned one. But," "Slim" emphasized pridefully, "I bet that next to Lame Bill I did the best job of squallin'." So with honors for all and well pleased with a battle won by surprise and strategy the friends went home. Mum was the word and to no one except those of their immediate families would the story be told. Had the Valley dwellers known what those screams and roaring cars portended far worse than scratches and tears might have been the fate of the invaders.

YES, mum, was the word and the Mannings were solicitious as to the saniiy of their son. Marvin's mother was reading a lurid account in the Blanton Globe of adventures which had befallen Robert Durham and other boys while "'coon hunting over toward Peace Valley." As she read the story of savage animals which had set upon the young men and "done them near to death," Mrs. Manning shook a reproving finger at her son. "Marvin," said she, "I knew it wasn't safe for you to go into that wild country and after this your friend must come here. Listen to this," and she continued to read: "Torn clothes and deep scratches corroborate the account of our young men. There seems no doubt that the animals were panthers which it was supposed had long since been driven to their mountain fastnesses. We urge parents to keep their children away from that locality." Demure and innocent, Marvin had sat listening but now his mother handed him the paper and aloud Tom's comrade finished the account.

"Every boy was injured," the story concluded, "the most seriously hurt being Robert Durham, son of our leading citzen, and George Johnson, almost equally well known in our younger social circles. Durham fought off the attack of the biggest panther as it sprang upon one of the smallest boys while Johnson proved equally heroic in fighting the animals back while the younger members of the party escaped. Both were under a doctor's care but now are able to be out again."

With the paper clutched tight in his hand Marvin rolled upon the floor

GREGORY'S HONEST SEEDS

Old Colonial Family Homesteads

No. 33—The Marks Farm

IN 1724 Jacob Morricks decided to leave his home in Switzerland. In company with some Germans he crossed the Atlantic, landed at Philadelphia, and purchased a farm three miles from York. He held the farm until his death in 1752.

In 1753 his son John began farming the same farm. He farmed it until 1780 then in 1781 his son David Marx began farming, and in 1820 David Marx, Jr., took over the farm. The farm was turned over to Jacob Marx in 1836 and at his death in 1862, Joseph Marks, one of his sons, bought the farm and held the deed until his death in 1903.

In 1904 his son Joseph W. Marks bought the farm and held the deed until his death in 1918. In the same year his son D. K. Marks, the present owner, was living on the farm so he bought and received the deed.—D. K. Marks.

D. K. Marks and his family. Eight generations have lived on the farm.

Tom of Peace Valley

(Continued from preceding page)

uttering shrieks of laughter which caused sharp reproof. "Aren't you ashamed of yourself, laughing about those poor boys getting hurt?" his mother wanted to know. "Why, it might have been you."

"I can't help it, mommy," was the gasping answer as the pepper-pot shrieked anew. "I'm thinking how those smart town kids must have looked, tearing thru the timber with those 'panthers' after 'em. But 'Equally Heroic!' Say, that's good," and to his mother's chagrin he was off in new gales of laughter.

"Son," said Father Manning with a shrewd twinkle in his eye, "I was a kid once and I can put two and two together and sometimes make six. You were over visiting that friend of yours about that time and I bet you know something more than you care to tell."

"Mar-r-rough, dad," came back Marvin gratefully, "maybe you are right. But mum's the word and I gotta go out to the barn before I explode." It was going to take superhuman effort to prevent Marvin from "mar-r-roughing" when he went back to school.

(To be continued next week)

C. E., '16—I can tell how much water runs over Niagara Falls to a quart.

Queen—Well, how much?

C. E.—Two pints.—Texas Longhorn.

For Sale: Baker's business; good trade, large oven, present owner been in it for seven years; good reason for selling.

News and Notes

THE Associated Press says that 85 men have applied for the position of state executioner for New York, made vacant by the resignation of the man who was executioner for 20 years. Statistical tables say that 308 persons were murdered in New York City in 1923, and that 387 were murdered in 1924. Other statistical tables say that an almost negligible number of New York's murders made the acquaintance of the executioner.

* * *

According to the official records of the Department of Labor there were 6205 strikes and lockouts in the United States during the time this country was engaged in the World War.

* * *

The United States now has commercial wireless telegraph stations in direct communication with the following countries: England, Italy, France, Germany, Poland, Sweden, Norway, the Argentine. We are also connected by wireless with Japan, Hawaii and the Dutch East Indies.

* * *

Telephone service between New York and Chicago has been perfected until it takes less than five minutes on the average to put thru a call from one city to the other, 900 miles away.

* * *

Enough moving picture films are manufactured in Rochester, New York, in one year to reach nine times around the earth.

* * *

There are no seasons in parts of the Malay Peninsula, a fact which causes many strange things to happen. Of two trees, standing side by side, one may be blossoming while the other of the same variety is ripening fruit. There are places where the temperature hasn't varied more than four degrees for a century. There are fish that can and do climb trees and wink their eyes. A rainfall of six inches in three hours is not uncommon. The truth of these statements is vouched for by noted explorers and scientists.

* * *

A one-pound rat may cause an error of many pounds in the indication of a scale, warns the U. S. D. A. The story is told of a steer that seemed to gain and then lose in weight standing on a scale before the astonished weigher. At one moment he apparently weighed 40 pounds more than a few seconds earlier. It was finally determined that a rat, walking up and down on one of the hidden parts of the scale where the "multiplication" is high, caused the trouble.

A Detroit office building, the largest of its kind in the world, has 30 acres of floor space and four miles of corridors. It is 15 stories high and accommodates 6000 people. It contains restaurants, swimming pools, gymnasiums, bowling alleys, a hospital, a bank, and an auditorium seating 1500 people.

* * *

Pennsylvania has about 13,000,000 acres of forest land, which is almost equal to the combined forest areas of Italy, Switzerland and Belgium. Seven counties, McKean, Potter, Clearfield, Centre, Lycoming, Clinton and Elk, located in a block in the north-central part of the state, contain more than one-fourth of the state's total forest area.

"My Engine Will Do the Work of 6"

Try This Remarkable Engine FREE

The Edwards Farm Engine sells direct to you at low factory price. No other engine like it. 1½ to 6 H. P. in one engine. Change power while running. Efficient at all powers.

Fits Every Farm Job

Pumps, saws, grinds, cuts ensilage, runs spray rig, concrete mixer, washer—anything up to 6 H. P. Portable. Burns kerosene or gasoline. No cranking. All moving parts enclosed. Work it anywhere without fastening down. Endorsed by thousands of users.

Cattle—Receipts, 1000 head. Compared with week ago: Strictly good to choice heavy steers and well conditioned yearlings steady; others 25@40c lower; medium steers in extended supply. Week's extreme top on yearlings, $11.25; mediumweights, $11.10; heavies, $11; too many lower-grade steers sliced 50c off heavy cows and heifers grading good and better; common cows and canners and cutters strong to 25c higher; bulls 35@50c lower; vealers mostly 75c@$1.50 lower; stockers and feeders steady to 25c off. Week's bulk prices follow: Fat steers, $8.65@10.35; stockers and feeders, $7@8; fat cows, $5.25@6.85; heifers, $6.75@7.85; canners and cutters, $4.15@4.75; vealers, $13@14.25.

Hogs—Receipts, 2000 head; uneven; lighter weights 25@50c higher; others strong to 10c higher; bulk good and choice 160@180-lb weights, $13@13.25; practical top on 160-lb up, $13.25; bulk packing sows, $10.85@11.10; desirable killing pigs around $13.25; heavyweight hogs, $11.75@12.15; medium, $11.90@12.80; lights, $11.85@13.25; light lights, $11.75@13.40; packing sows, $10.60@11.30; slaughter pigs, $13@13.50.

Sheep—Receipts, 500 head. Compared with week ago: Fat lambs, 50c@$1 lower; bulk to packers showing full decline; feeding lambs around 25c lower; yearling wethers, 25@50c off; fat sheep and cull native lambs steady. Tops for week: Fat lambs, $15.75; feeding lambs, $15.60; yearling wethers, $13.50; 2-year-old wethers, $11.75; fat ewes, $9.25. Bulk prices follow: Fat lambs, $14.50@15.25; cull natives, $12@13; fat yearling wethers, $12.50@13.25; wethers, $10.50@11; fat ewes, $8@9; feeding lambs, $14.50@15.25.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, January 23, 1925.

Cloverseed, domestic, $19.75; cash, January, February and March, $16; October, $15.60. Alsike, cash, $16.50; March, $16.65. Timothyseed, cash and January, $3.80 asked; March, 3.85 asked.

WOOL MARKET

Domestic—Ohio and Penna fleeces—Delaine, unwashed, 54@55c; ½-blood combing, 53@54c; ⅜-blood combing, 54@55c; fine unwashed, 48c. Michigan and New York fleeces—Delaine, unwashed, 51@52c; ½-blood combing, 51@52c; ⅜-blood combing, 53@54c; ¼-blood combing, 54@55c; fine, unwashed, 46@47c. Wisconsin, Missouri and average New England—½-blood, 48@49c; ⅜-blood, 49@50c; ¼-blood, 50c.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, January 25. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.00@35.50
Spring bran	34.50@35.00
Soft winter wheat bran	36.50@37.00
Hard winter wheat bran	35.50
Standard middlings	34.50@35.00
Soft winter wheat middlings	35.20@36.50
Flour middlings	37.00
Red dog flour	42.00@43.50
White hominy	35.20@35.50
Yellow hominy	34.50
Gluten feed	45.00
36 per cent cottonseed meal	38.50@39.00
41 per cent cottonseed meal	41.00
43 per cent cottonseed meal	43.00@43.50
34 per cent linseed meal	53.25@53.70

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE warm unseasonable weather, during the early part of the week ending January 23 had a rather depressing effect on the Philadelphia produce market, while the sharp drop to low temperatures hampered trading at the close. Supplies were plentiful, and this along with the fact that the market has not fully recovered from the post-holiday dulness, resulted in a draggy condition.

The potato market was weaker during the early part of the week and prices were slightly lower. Toward the close prices showed little variation but trading was very slow. Pennsylvania round whites sold at $6.75@7.15 per 150-pound sack on Monday, January 18, and at $6.85 on Saturday. Both old and new cabbage held steady but trading was not very brisk. Sweet potatoes were dull under a moderate demand.

The quality and condition of the Long Island Brussels sprouts offered is rather irregular since the season is nearly over. Prices, however, have been well maintained. The Long Island stock is gradually being replaced by supplies from California. Strawberries are arriving in larger quantities but the stock is not generally of as fine quality as that received earlier in the season.—W. R. Whitacre.

Butter Markets

THE butter markets for the week ending January 23, opened with the nervous unsettled condition which has prevailed the past several weeks still much in evidence. On Monday and Tuesday the markets were all easy and unsettled with buying interests barely sufficient to take care of the arrivals of fresh butter there appeared to be a general lack of confidence in the condition of the markets among both receivers and jobbers.

After several weeks of sluggishness trading and a general lack of confidence with no definite trend perceivable. The sudden strengthening of the market on Wednesday came as a decided surprise to almost all who have been following the situation. As a matter of fact, while many of the dealers had some confidence in the situation, there was considerable hesitancy about the market going to higher levels. However, buyers for consumptive needs had permitted stocks to reach a minimum and sensing the advancing price began operating more extensively and anticipated future requirements to some extent.

This heavier buying on the part of distributors of butter greatly aided in restoring confidence in the situation and resulted in a certain amount of speculative buying. Stocks of butter on dealers' floors were soon depleted and some rather sharp advances on all markets were noted.

County News and Comment

Cambria County, Pa.—Rain all day today with high temperature. Snow about all gone and the ice went out on the streams. Not much snow on the fields so far this winter. Grain suffering somewhat from lack of coverage. Much T. B. testing being done in individual herds. Two townships have signed up on the area plan and a number of others have campaigns under way. The loss from reactors thus far has been very small. The potato situation shows little signs of improvement. Prices paid to farmers: car lots, delivered at car, $2.25 bu.; at store, mostly $2; at retail, bushel lots, $1.90@2. Eggs, 60c; butter, 50c; live chickens, 30c; honey, 30c section; fresh cows rather scarce and prices good; horses, plentiful and cheap. With business conditions steadily improving the farm looks much better than it did this time last year.—S., Jan. 18.

Erie County, Pa.—Potatoes reached a new high mark for the season on the Erie market Saturday, selling at $2.80@3.40 bu., according to quality. A week ago the price was $2.50 bu. for the best. Dealers predict a price of $4 bu. in the near future. The quality of many of the potatoes is poor. Fresh eggs selling at 45c; butter, 53c; milk, 14c; cream, 20c half-pint bottle; cottage cheese, 15c lb.; lard, 19c lb. The Keystone Cooperative Grape Association closed up its fourth years' business with a net profit of more than $12,000 to be divided among its members in proportion to their patronage during the year. This association led all competitors in the price received for grapes the past season. Its membership now numbers 326, with more than 5000 acres of grapes. The headquarters of the association is at North East.—E. M. F., Jan. 18.

Fayette County, Pa.—Had some very cold weather the first of January for about one week, then plenty of snow. The hay market still very dull. Price running from $25 to $30 per ton. Beef cattle very poor in demand and price. Butter and eggs are scarce and bringing a good price. Some of the public works started up around Christmas but are shut down again for an indefinite time. Most all farmers have killed their hogs for the winter.—E. H. V., Jan. 18.

Lebanon County, Pa.—Seventy dairy herds of the county are registered for the eradication of tuberculosis under state and federal supervision. It is hoped that the minimum number allowed by law be obtained so that this work can go on. Frank Reist's litter which weighed 2560 pounds ranks sixth in the state of Pennsylvania. Our organized threshermen met at Lebanon and selected representatives for the annual threshermen's meeting at Harrisburg. The coal strike is the leading topic of discussion. Hard coal has long been off the market and wood and substitutes are being burned. A number of truck loads of farm products are being taken to Harrisburg for the big show. Many are attending the show this week. Ten days ago we had a fine snow. Wheat and clover got the badly needed protection and sleighing was fine for a week. During this time the thermometer stood at zero some mornings. We have had a thaw and rain at this writing. Lebanon has a new curfew. At 9.15 all youngsters must be off the streets. Prices: corn, 90c; wheat, $1.80; oats, 45c; lard, 20c; eggs, 36c; pork ribs, 20c; straw, $12; prime veal calves, 12c.—R. I. W., Jan. 18.

McKean County, Pa.—We are having winter weather with a good covering of snow. Ground is frozen about one-half inch deep. Butchering nearly done, hogs are scarce and not many cattle slaughtered. A few potatoes have been frozen, which helps to keep up the high price. Some hay being baled, which has a good market. McKean County is to make a large exhibit at the State Products Show. A pen of Shropshire sheep will be shown. At the farm of E. D. Comer and Sons, on December 26, was born a fine purebred. The sire is an association bull, who's dam holds a world record. The dam is out of the ninth highest producer in the United States. Prices: potatoes, $2.75; milk, $2.43 cwt.; butter, 50c; eggs, 60c; pork, $18 cwt.—F. J. H., Jan. 12.

Mifflin County, Pa.—Had very nice winter weather without any snow and not much severe cold till the last week in December when we had a few very cold days. Then after the first of January it got warmer till the frost was all out of the ground, then colder and on the evening of the eighth it began to snow. A foot of snow fell that night. Farmers tending to their stock and keeping up the wood supply. A few beeves are killed by farmers for which they receive 12@14c lb. by the quarter, which is in great demand. Not many beeves fed as most farmers are producing all the milk they can, for which they receive $2.65 cwt. Dealers pay for wheat, $1.75; corn, 75c; oats, 40c; potatoes, $1.50; butter, 50c; eggs, 36c; lard, 17@18c; chickens, 23c.—J. H. B., Jan. 14.

Potter County, Pa.—We are enjoying a mild winter, but because of its early arrival livestock are eating a great deal of fodder and farmers are hoping for an early spring. Scarcity of other fuel has made a woodlot a source of profit and many in town, as well as in the country, are burning wood. The temptation to cut trees is too great. In 1925 there were 69,650 trees planted in the county by twenty-nine planters but timber on private land is rapidly disappearing. A few potatoes are being shipped at $2 bu. Local prices for farm produce vary little from last month's quotations. Eggs, 40c; butter, 50c; cheese, 25c.—M. C. S., Jan. 11.

Somerset County, Pa.—Weather has been cold and stormy, zero and below the first week of January. Not much snow but what there is is drifted. Hard on wheat fields where the wind catches. Not much T. B. testing done yet. Very slow. Some anxious for it to be done. Mud roads in bad condition, very rough. There has not been much plowing done on account of the rainy weather this fall. Quite a few farms for sale and no buyers. Prices too high. Prices for farm produce: buckwheat, $1.50; wheat, $1.50; oats, 50c; potatoes, $1.60; hay, $18; eggs, 40c; butter, 40c; dressed pork, 16c; beef, 10@12c.—H. W. B., Jan. 12.

Union County, Pa.—J. L. Reitz, the potato king of the county, killed two hogs, one of which dressed 600 and the other 602 pounds. He wants to plant eighty acres of potatoes this spring on his two farms. Hon. F. E. Brown was elected president of the county fair association on January 2 and the directors met for organization. Many farmers expect to attend the meetings of the show in Harrisburg and there will be corn and apples on exhibit there from the county. Some corn is being marketed at 70c and several cars of wheat were loaded at $1.75; tho it sold at $1.80 recently. Ice of good thickness is being stored by a few farmers but the weather is too cold to do much more than the chores. Several townships will have their cattle tested by March so as to clean up the county for the first test.—J. N. G., Jan. 15.

Prices and Prospects

NEARBY eggs were in light receipt on the New York market during the early part of the week ending January 23rd. Good stock held firm while the poorer grades sold slowly. Extra firsts were quoted at 39c to 40c on Wednesday and firsts at 37c to 38c. The Philadelphia egg market showed some improvement during the early part of the week and on Wednesday extra firsts sold at 38½c per dozen and firsts at 37c.

Live fowl were dull and weak in New York and chickens met a dull demand. Dressed fowl were in light receipt and the market steady to firm. The Philadelphia market was generally firm with fair trading.

The wheat market was generally weaker during the week ending January 16th. Corn prices declined two to three cents per bushel as the result of increased receipts and the general inactivity of the market. Oats were lower and rye followed the fluctuations of wheat.

Hay Receipts Ample

Hay receipts were ample for buyers' needs in most markets and prices ruled generally steady. Timothy is averaging higher than at this time last year but alfalfa is lower. Timothy receipts were liberal in New York and the demand was slack.

Trading was less active on the Boston wool market during the week ending January 19 than it was the previous week. There was, however, a little more activity toward the close. Domestic fleece wools have been rather quiet but prices have been well maintained except for the medium and lower grades.

A cent and a half advance was recorded on ninety-two score butter on the Philadelphia market during the trading week of January 13 to January 20th. At the close of the market on Wednesday ninety-two score sold at 44½c in Philadelphia, 44c in New York and 42c in Chicago.

Potato prices slumped during the week January 13 to 20th. Conditions were not as serious as in early November but most markets showed a decline of 5c to 25c per hundred pounds. With prices advancing one month and falling the next, the grower wonders whether prices will reach higher levels in the spring.—W. R. Whitacre.

Visitor—What's up? Had a bad day?

Financier—Yes. I lost over $5000, and the worst of it is that $20 of it was my own money!—Passing Show (London).

For Boys and Girls Who Are Fitting Calves

A GREAT many boys and girls in all parts of the country are starting to fit a calf for the baby beef club contest that will be held next fall. They are confronted with a number of problems in undertaking such work. Many have been in a calf club feeding contest in the past and have profited by experience. There are a great many, however, who are entering such a contest for the first time and are handicapped naturally because of the lack of experience. It is with the idea of helping these new beginners, as well as those of experience, that the following suggestions are made.

Selecting the Calf

One of the first essentials in successful calf feeding is that a good calf is secured to start with. Many boys and girls who have entered a contest in the past were defeated before they started feeding because of the fact that the kind of calf placed in their care was not the right type to produce a winner.

The calf that is selected should be a good beef type, of one of three beef breeds. Such calf may be a grade or a purebred, but should by all means be sired by a purebred bull. As an individual the calf should be short-legged and blocky with straight top and bottom lines. The calf should be smooth and well balanced between the front and hind quarters. He should not be too heavy in front nor have the hind quarters well developed and peaked or narrow in front. The shoulders should not be loosely coupled nor should he be narrow or "pinched" in the heart girth. It is quite essential that he be deep in both the front and rear flank.

A high tail head, a drooping rump and a swayed back should be avoided as these defects are more noticeable as the feeding period progresses. A well balanced calf, that is smooth and not outstanding in any one respect, is far more desirable than one that has an outstanding strong loin or spring of ribs but very deficient in some other respect.

An abundance of natural fleshing, namely a smooth or even covering over the entire body, is very desirable as that is usually very good evidence that the calf has a splendid foundation upon which to build. A good coat of hair and a hide of medium thickness, that is mellow and loose is preferred to a hide that is thin or one that is thick and hard. The head of the calf should not be overlooked. It should be short, wide thru the forehead, with large muzzle and nostrils and eyes that are bright instead of dull.

Should Be of a Quiet Disposition

The calf should be of a quiet disposition. Such a calf is usually a much better feeder than a calf that is of a wild and nervous disposition. While it may be possible to train a calf that is wild there is too much valuable time lost in doing this and he will never become as acceptable a feeder as the quiet type of calf.

The type of calf that has been described can only be secured from a good beef herd. Beef cattle breeders should make it a point to help these boys and girls secure the right kind of calves as it is one of the best means of advertising the beef business.

After the calf has been secured and has become accustomed to his new environment the next problem is to get him fat or in condition for the fall round-up. In most clubs, nurse cows are not allowed because of the expense involved and the unfair advantage that such calves have over the ones that do not have a nurse cow. Since such is the case the best calf to secure is one that was calved some time during the period from January to May.

These calves would be classed as junior yearlings at the fall round-up. Baby beef cattle are seldom overdone so there is no danger of getting them too fat.

Every boy or girl must adopt a definite system of feeding. Probably the most important of these rules is regularity. No boy or girl ever fed a winner that did not have a definite and regular schedule for feeding the calf. Carelessness about overfeeding is another thing to watch as it has ruined many calves entered in a feeding contest.

The calf should be fed at the same time every day and should clean up all the grain fed in one-half hour. If the calf does not clean up his grain in that time, remove from the lot what is left and reduce the amount at the next meal. The calf should always be ready for his meal when the boy arrives with the feed bucket.

The selection of the feed is very important. There are a number of combinations that can be used successfully. Variety in the ration is very essential. The calf will do much better on a variety of feeds than on a single feed ration. The ration must be properly balanced. It must be remembered that the calf is growing while he is being fattened. Thus it requires more protein than is necessary for feeding older cattle.

Number of Times to Feed Varies

The number of times to feed the calf each day varies with different feeders. It is a good plan to start by feeding the calf grain twice a day during the first few months and increase it to three times a day along in April or May.

Corn or barley should form the major part of the ration. The amount to use will have to be varied as the feeding period progresses. Cracked or coarse ground corn is more desirable than whole corn or finely ground corn. When barley is fed it should always be ground.

A combination consisting of fifty pounds of corn or barley, twenty pounds of ground or crushed oats, the latter is preferred, twenty pounds of bran and ten pounds of pea size oil meal is a very good mixture to start with. This will have to be changed as the feeding period advances. During the latter part of the feeding period the amount of corn or barley will have to be increased and the oats and bran decreased. The amount of oil meal is seldom changed.

A small amount of feeding molasses can frequently be used to good advantage. It should be diluted in water and mixed with the feed. It should not be fed in excessive amounts. The object in feeding molasses is to stimulate or increase the appetite of the calf and in that way get him to consume more feed.

The calf should have some good clover or alfalfa hay. Timothy hay will not do for the calf. If silage is available it should be fed during the spring months. The calf should receive all the roughage he will clean up in addition to the grain.

It is not a desirable practice to

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

WEAKNESS FOLLOWING FARROWING.—I have a young sow that had eight little pigs on December 25th. She has been sick ever since. The little pigs all died; only lived a couple of days. She is a young sow, not a year old yet. This is her first litter. She is so weak she can hardly stand and will not eat at all. Seems to be so weak when she is on her feet that she staggers. She seems to be feverish and nervous. I also have a little heifer calf that is sick. She was out and ate some frozen grass and she still has a good appetite only she does not seem to have any use of her legs and cannot stand on her feet at all. Please tell me what to do for my sow and calf.—C. G., Prospect, Pa. This sow may have some infection in the uterus or retained placenta, or she may be weak from the lack of certain vitamins in the diet before farrowing. The first cause would be treated by your local veterinarian and would consist in douches to relieve the condition. The diet should be varied and balanced. It might well contain corn, wheat middlings, tankage and ground alfalfa or fine leafy hay. CALF IS WEAK.—You will probably find that your calf will improve more rapidly if you add one tablespoonful of cod liver oil twice daily to the diet. Frequent attempts should be made to get the calf on its feet and to see that it does not lie on one side more than six to eight hours at one time. The bowels may be kept open with castor oil. The calf should improve with this treatment.

HAS SLEEPING SPELLS.—I have a mare fourteen or fifteen years old. She seems well and eats well. Lately when hooked up and standing she seems to go to sleep and almost falls down. She is very fond of rolling when turned loose, but has no trouble in rising. If you can prescribe anything that will keep her awake I will be thankful.—J. H., Adams County, Pa. Occasionally horses that do not lie down in the barn at night, have spells such as you describe. Take two ounces of fluid extract nuxvomica and add enough water to make one pint, and give one ounce three times daily.

Fitting Calves

(Continued from preceding page)

turn the calf out on pasture for his supply of roughage during the summer. It is a good plan to turn him out in a paddock or pasture during the night and keep him in a cool barn or dark stall during the day. In this way he will get exercise and also grass as a succulent feed.

Baby beef calves should have plenty of water and have free access to salt. The salt can be mixed with steam bone meal, equal parts of each, and put in a box where the calves can get at it.

If more than one calf is being fed on the place it is a good plan to put the calves together in the same stall or paddock as they will usually do better when fed together. Calves should be trained to lead when the feeding period begins. This will make it much easier to handle them as they respond to kind treatment.

A little time spent each day with a brush and curry comb is a good investment. It keeps the calves in good condition and it will be much easier to put on the finishing touches before the calf is taken to the show and contest.

There are a number of points about the handling and management of the calves during the summer and in the show ring that will be discussed in a later issue.—W. H. Tomhave.

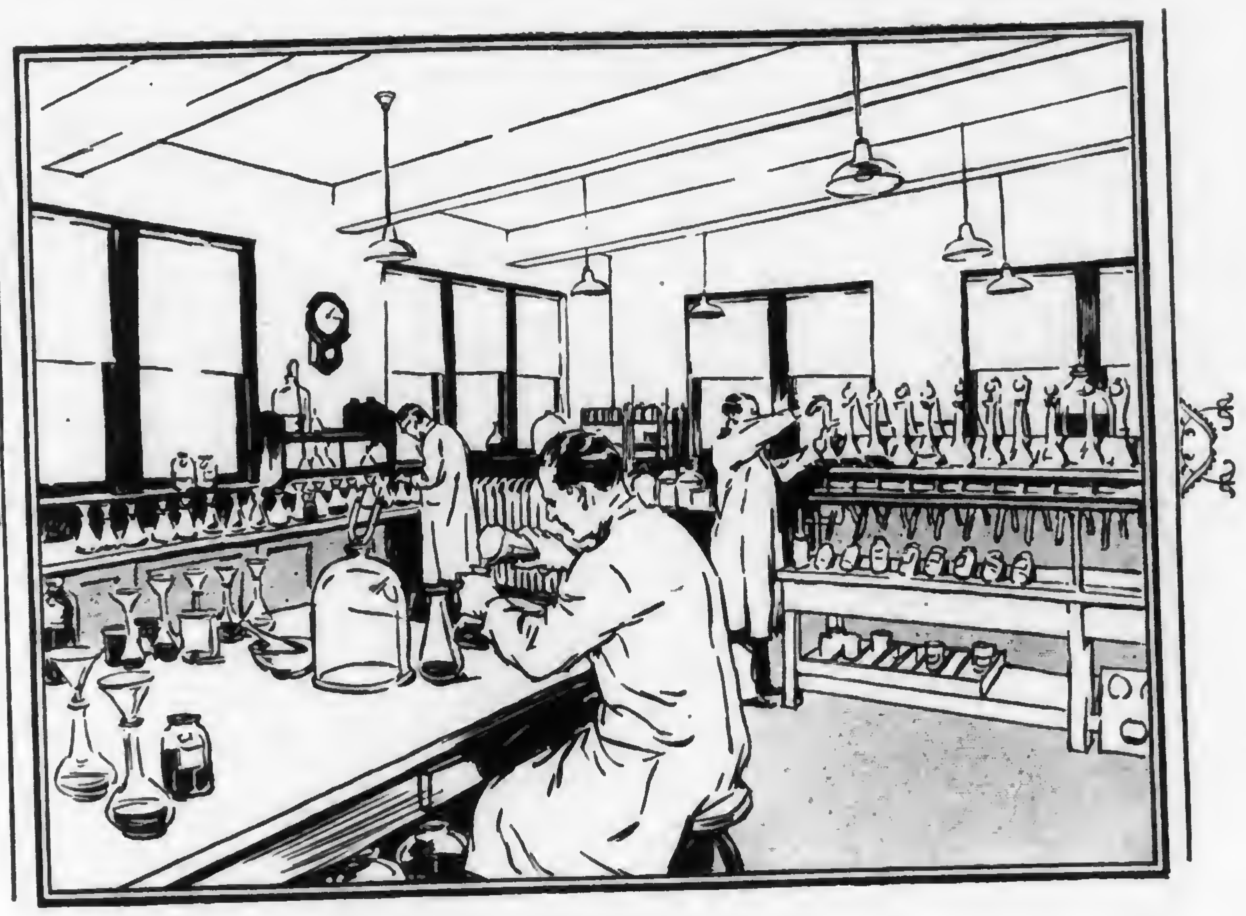
Swift & Company maintains a large staff of expert chemists, practical agriculturists, and experienced factory men to produce fertilizers that will give you the best results in crops and profits



Making fertilizers right

Different crops and soils require different kinds and amounts of plantfood. Fertilizers of the same analysis may differ greatly in the kinds and combinations of plantfood they contain.

How can you be sure that the fertilizers you use are right?

You can be sure by using Swift's Red Steer as recommended by your local A. S. A. (Authorized Swift Agent).

Agricultural Experiment Stations, after years of careful experimenting, have developed valuable information as to the kinds and amounts of plantfood best suited to the soils and crops in their states.

Swift & Company knows these results. Such information, combined with their own knowledge gained through years of research and experience, is used by Swift & Company's large staff of fertilizer experts to arrive at their recommendations.

Red Steer Fertilizers drill easily

Red Steer Fertilizers are made right. They are carefully processed and cured to give you the benefit of every pound of plantfood they contain. They reach you in good drilling condition.

They are right because the Swift factories are equipped with modern laboratory and manufacturing facilities and are operated by experts of long experience.

Such are the care and exactness that go into the making of Red Steer Fertilizer.

See the A. S. A.

Near you is the A. S. A. (Authorized Swift Agent). He can give you valuable information on profitable farming methods and improved fertilizer practices. He can show you how to cut your fertilizer costs by using a more liberal application of Red Steer Fertilizer of high analysis. Go to see him.

Look for the sign that marks his place of business—the sign of Quality and Service.

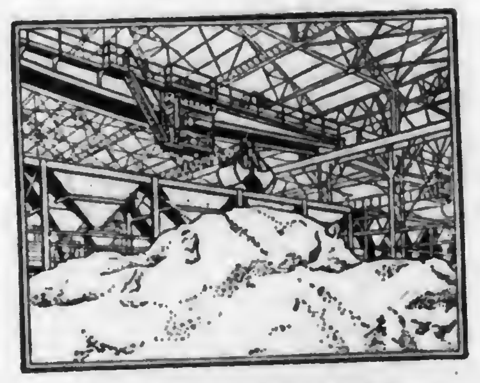
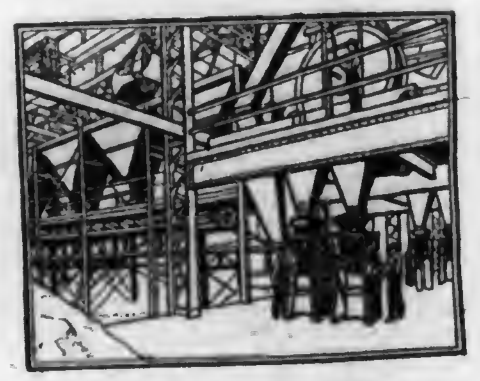
Authorized Swift Agent
SWIFT'S
RED STEER BRAND
FERTILIZERS
IT PAYS TO USE THEM

Swift & Company
Fertilizer Works, Dept. 11
BALTIMORE, MD. CLEVELAND, O.
HAMMOND, IND.



It takes months to cure fertilizers properly. After thoroughly mixing by special machinery, Red Steer Fertilizers are stored in huge piles to cure. They form a hard mass



Months later, all chemical changes that cause caking have taken place. The hard mass is broken up, reground and reprocessed. Only now is it ready for the Red Steer bag

Swift's Red Steer Fertilizers

"It Pays to Use Them"

Fertilizers for Pennsylvania

The Pennsylvania Agricultural Experiment Station, after years of research and actual field experiments, has selected the following analyses of fertilizers for their soils and crops:

Corn. No manure or clover sod, poor soil, 2-12-4, 3-10-6. Medium soil, 0-12-6; rich soil, 0-16-0; with manure or clover sod, poor soil 2-12-4, 0-16-0. Medium or rich soils, 0-16-0.

Potatoes. No manure or clover sod, poor soils, 3-10-6; medium soils 2-12-4, 3-10-6. Rich soils, 2-12-4. With manure or clover sod, poor soils 3-10-6, 2-12-4; medium soils, 2-12-4; rich soils 0-16-0.

Vegetables (leaf crops). No manure or clover sod, medium or rich soils, 6-8-4, 4-8-4; with manure or clover sod, medium soils 4-12-4, 4-12-0; rich soils, 4-12-4, 4-12-0, 0-16-0.

Tomatos, peppers, cucumbers, melons, egg plant. No manure or clover sod, all soils, 6-8-4, 4-8-4; with manure or clover sod, poor or medium soils, 4-12-4, rich soils 4-12-4, 4-12-0, 0-16-0.

Vegetables (root crops). No manure or clover sod, poor soils, 5-10-5, 4-8-6. Medium soils, 4-12-4, 4-8-6; rich soils, 4-12-4. With manure or clover sod, poor soils, 5-10-5, 4-12-4; medium soils 4-12-4, 2-12-4; rich soils 3-8-3, 0-16-0.

Today—Write For Your Catalogue

Will you write for your free copy of Ward's Catalogue? The book is now wrapped and ready for mailing to you. Your name and address is all that is needed.

We print the convenient coupon below for *your* use. Will you send us your name and address just to say the Catalogue is welcome, to say that you are interested in knowing the season's lowest prices.

This map shows the states served by our Baltimore house. Vast stocks of merchandise at this central point mean quick shipment and prompt delivery of your orders.

Quick Service from Baltimore

Imagine room after room, floor after floor filled with bright new merchandise ready for immediate shipment to you.

Almost everything you need for Spring, to wear or to use, for the home, the garden, or the farm is ready almost at your hand. Your order reaches us quicker at Baltimore, your goods reach you quicker and the transportation costs less. That is why our Baltimore House was built—to bring to our customers a nearer, quicker, money-saving service.

Saving You Money Our First Duty to You

Ward's is a house of Saving. It is our first obligation, our greatest work to offer you a money-saving price on everything you buy.

But "How can Ward's prices always be lower?" you ask.

Through the vast buying power of our 8,000,000 customers, and through searching all markets of the world, with millions in ready cash.

$60,000,000 in Cash To Get Low Prices

Back of this Catalogue there is over $60,000,000 worth of merchandise bought for cash in the largest possible quantities. Shoes by the hundred thousand pairs; hosiery, ten thousand dozen at one time, stoves by the train load. Such buying gets lower than wholesale prices. Such buying gets prices close to manufacturing cost.

And this saving is always yours. It is part of our work for you, part of our service to you.

A Complete Organization of Buying Experts

You, and over 8,000,000 customers, enable us to keep a complete organization of experts, working every day in the year, buying goods *for you*.

These experts visit the markets of the world. A permanent buying organization searches Europe. We buy silk in Japan, the new live rubber for our tires comes from the Orient. All Nations, all markets contribute to the vast array of bargains Ward's Catalogue brings to you.

We Never Sacrifice Quality to Make a Low Price

Big buying for cash all over the world is one way to make low prices. That is Ward's way. We never cut quality just to make a price that is attractive.

It is easy to take something out of the inside of a tire or a shoe and get the price lower. It looks the same—the picture is the same. The "wear" isn't the same.

Ward quality is always maintained. We quote low prices, the lowest prices that quantity buying, that skill and experience and millions in ready cash can possibly secure. We do not make low prices by cutting quality.

You Always Buy On Approval at Ward's

Standard Quality, Ward Quality, makes possible our complete guarantee on everything you buy. "Your money back if you want it."

Will you write for the Catalogue? The coupon is printed for your convenience. Your Catalogue is ready for mailing. There is no obligation. Will you write for the book and see for yourself the Service, and Satisfaction and Saving—that may just as well be yours.

IT WAS BETTER THAN EVER

This Year's Farm Products Exhibition Surpassed All Previous Shows

Thos. H. Wittkorn

THE Tenth Annual Pennsylvania State Farm Products Show has come and gone. Each year it gets more difficult to express on paper anything approaching an adequate report of the meetings and exhibits. For one who has visited each of the ten shows I can truly say it was in all ways the "best ever." If you have never attended any of them even that statement means nothing to you.

A poultry show with 600 chickens and 1000 pigeons was one of the marked differences between last and this year's show. A poultry embargo at the last minute last year caused a cancellation of this feature. Practically all the standard breeds were represented and well filled classes made close work for the judges and a credit for the winners. Eggs, poultry and pigeons were staged in the city market-house and the square arrangement of the stalls made an exceedingly pleasing layout for the coops.

The presence of forty-nine Hereford steers averaging about 1000 pounds in weight and each accompanied by the boy or girl member of the Adams County Baby Beef Club who fed it the past several months, was another new feature this year. In the swine show there were thirty Chester Whites, twenty-six Berkshires and twenty-six Durocs. All of the pigs were sold at auction during the week. There were thirty-nine sheep on exhibition, six Guernseys, six Ayrshires and seven Holsteins. It was in the crude housing of the livestock exhibits in a garage that the greatest need was seen for a suitable building to properly take care of all the exhibits under one or at least adjoining roofs.

Larger Educational Exhibits

The educational exhibits this year covered considerably more space than last and if such a thing is possible, seemed to carry their story better. Five departments of the state government, Agriculture, Welfare, Public Instruction, Forests and Waters, and Health, had several attractive booths with specialists in them all the time to explain the exhibits and answer questions. State College and the United States Department of Agriculture also had extensive exhibits. The model kitchen, aptly termed, "The mainspring of the farm," shown by the college was especially noteworthy. Septic tanks were featured by the college and State Department of Health.

A paragraph, indeed even a whole book, could not do justice in describing the commercial exhibits each year at the farm show. The horticultural interests seem to attract the largest number of exhibitors appealing to one particular industry but practically everything needed on the farm from a full size threshing machine to bands for pigeon legs was on display during the week with experienced men to extol the advantages they offered.

Tuesday evening was the great annual get-together meeting for everybody and by official order the six exhibition halls were closed at seven o'clock. Secretary of Agriculture F. P. Willits presided and two thousand, the largest country audience ever assembled in Harrisburg, heard Governor Pinchot make his plea for cleaner elections, the subject, he said, which was nearest his heart. Congressman L. J. Dickinson, of Iowa, was the chief speaker of the evening.

Samples of the work being done by the 7000 boys and girls in the vocational schools thruout the state were arranged in attractive exhibits as in other years. Demonstration teams were working each morning and afternoon and gave those who did not know some idea of the practical nature of this kind of school work. A ten-piece orchestra, composed of boys and girls from the West Lampeter Vocational High School, in Lancaster County, played during two days on the stage of one of the exhibition halls.

The newly organized Mushrooms Growers' Cooperative Association made good use (to page 32)

MEETING OF FRUIT GROWERS

Reports Show That the Keystone State is Forging Ahead in Orcharding

Dr. S. W. Fletcher

THE sixty-seventh annual meeting of the State Horticultural Association of Pennsylvania—the oldest educational agricultural organization in the state except for the time-honored Pennsylvania Horticultural Society, which was organized at Philadelphia in 1823—was held at Harrisburg during the Farm Show January 19-22nd.

The attendance at several of the sessions was well above 400, and there was ample evidence of the spirit that is rapidly making Pennsylvania the foremost horticultural state in the East—second only to New York. While it is true that today over one-third of all the fruit produced in the United States comes from California, with Washington and New York closely competing for a rather bad second place, Pennsylvania is creeping up on the latter two states very rapidly.

The secretary's report showed a paid up membership of 815, over 400 of whom are members of the seventeen county horticulture societies affiliated with the state organization. The treasurer reported a balance of over $1000 of which $800 is in the old life membership fund. The association adopted a revised and simplified constitution and by-laws, which differ from the old instrument chiefly in three respects—that no (to page 10)

DAIRY SESSIONS POPULAR

Speakers Give Much Information of Value to State's Milk Producers

A. A. Borland

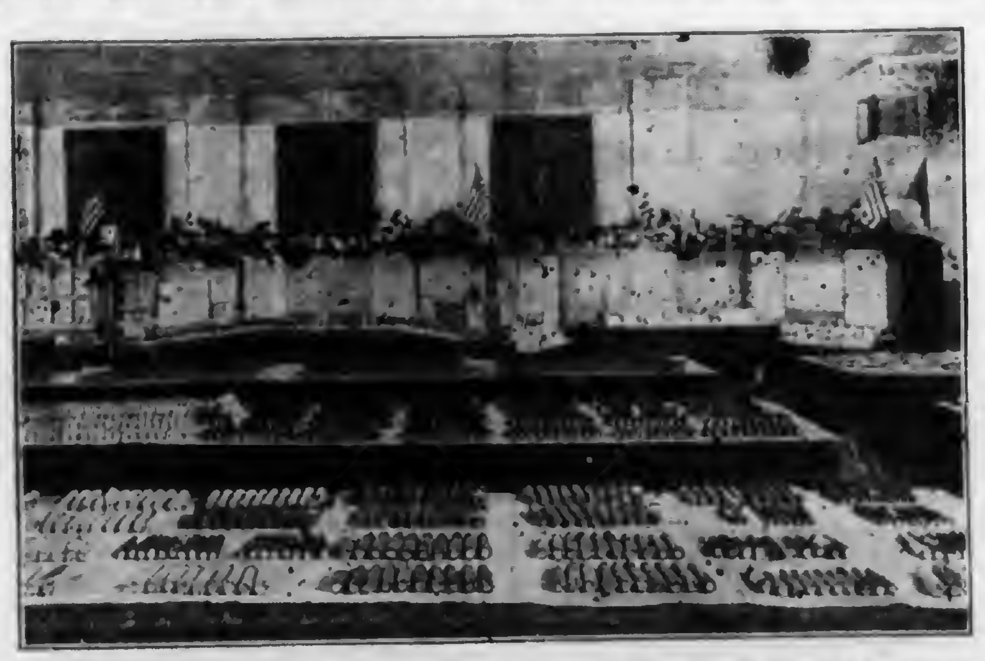
THE meeting of the Pennsylvania Dairymen's Association at Harrisburg on January 20 was attended by nearly 300 persons and was one of the most interesting and helpful meetings that has ever been held. The forenoon session was a joint meeting with the Pennsylvania Veterinary Medical Association. Dr. S. E. Bruner, of the Pennsylvania Bureau of Animal Industry, outlined the "Present and Future Status of the Tuberculosis Prevention and Eradication Work in Pennsylvania." Dr. Bruner's talk was illustrated with a number of maps showing the percentage of tuberculosis in each of the townships in the counties of the state.

By comparing the situation ten years ago with that of the present time it was evident that tremendous strides had been made in clearing tuberculosis from the dairy herds of the state. In several counties there is now less than one per cent of tuberculosis among the dairy cattle of the county. At the rate the work is progressing it will not be many years until Pennsylvania will be a disease-free area.

Hon. E. P. Brown, of Montrose, led the discussion and stated that the tuberculosis eradication work in Susquehanna County was progressing satisfactorily. All the townships in the county but one were signed up for the test. Most of these had been tested once and some of them retested with the average of about two per cent of reactors on retest. The county agricultural agent had made this one of his major projects and was entitled to much of the credit for the success of the campaign.

Cities Help Pay Indemnity

Mr. Brown stated that people from the cities were also entitled to some credit in this matter because they had helped to pay the large expenditures necessary in clearing tuberculosis from the state. He concluded with the recommendation: "See to it that the men from your home districts are heartily in favor of this work, so that the program which has been started will go forward to its logical conclusion and we will have Pennsylvania as clean as our present knowledge of the disease and its eradication can make it." (to page 16)



A glimpse of the corn display and educational exhibits at the 1926 Pennsylvania Farm Products Show.

Give them the hardest work on the farm!

"U. S." Blue Ribbon boots and overshoes are built to stand it

"U.S." Blue Ribbon boots are made with sturdy gray soles. The uppers are either red or black—knee to hip lengths.

RUGGED strength—and plenty of it—that's what farmers want when they buy all-rubber overshoes or boots.

"U.S." Blue Ribbon boots and overshoes are built strong—they're built for farmers and farm wear—made to stand months of kicking through ice, slush or mud in the barnyard and around the farm.

At each of the four points where wear is hardest—ankle, back of the heel, instep, sole—"U.S." Blue Ribbons are reinforced with from 4 to 11 layers of heavy fabric and tough rubber. Strain them—bend them—work them as hard as you please—they stand up!

Seventy-five years' experience in making rubber footwear is back of "U.S." Blue Ribbon boots and overshoes. Every pair is built by master workmen—and built *right*.

Ask for "U.S." Blue Ribbons. It will pay you in comfort and wear!

United States Rubber Company

FIVE TIMES its length it stretches That's what a strip of rubber cut from any "U.S." Blue Ribbon boot or overshoe will do.

(OUR FARM)

Where an Editor Works and Thinks

THE farmers' institutes in Pennsylvania were discontinued about eight years ago. I had dropped out of the work four years before that time, after serving as an institute lecturer for twelve years. During that time I made many close friends among the workers including the county chairmen, of which there was one in each county who was also a member of the State Board of Agriculture. In spite of the questionings and criticism concerning institutes I honestly believe that no body of people has ever been more honestly interested in the advancement and welfare of agriculture than those connected with the old time institute work.

* * *

TWICE a year they all got together, once at the annual meeting of the state board at Harrisburg and once at the "round up" held at various places in the state. These were jolly times but filled with earnest discussions of how farming and rural life might be bettered. Most of the lecturers, and in most instances the state board members, were actual farmers and had intimate, first-hand information about the subjects they discussed. So close was the association that many life-long friendships were cemented, and most of the workers have longed for an opportunity to get together again. To this end a meeting was called during the Products Show and about forty responded.

* * *

THE first session of the old institute workers week before last was largely devoted to reminiscences. We were saddened by the knowledge, or the news, that many had passed on to the Great Beyond. Most of us were surprised that Father Time had been so busy working on the heads and faces of the other fellows. Hairs had been plucked from some heads while in all cases he had sprinkled silver generously. However, Father Time has left the old-time sparkle and twinkle in the eyes of all and, since the eye is the window of the soul, we were able still to see the friend we knew so well years ago. The modest banquet to which we sat down in the evening was a most enjoyable affair and many tales of former experiences were retold.

* * *

I AM in receipt of a letter from a personal friend who asks several pointed questions as to what he should do. He is a comparatively young man with a small family and feels that he should be settling into something that will make for him a permanent business and a permanent home. He was born and brought up on a farm and five years ago bought the old home farm which contains about thirty acres. For several years he has been working at public works, having the farming done on the shares. This is not satisfactory and he feels that he must either take up some line of farming himself, or sell the farm and continue in other business. He would prefer fruit growing or vegetable gardening but he says he knows absolutely nothing about the techincal ends of the business, such as fighting pests and diseases. What shall he do?

* * *

I SYMPATHIZE with this man who has a love for the farm but who realizes the difficulties of making a success of it in a highly specialized line of farming. The acres are too few for general farming and it would be necessary to settle on some line of intensive farming. The question of technical knowledge is a most important one. To successfully grow vegetables or fruit requires a knowledge of many branches,—fertilizing, cultivation, varieties, diseases, insect pests, etc. Then there is the business of disposing of the products to the best advantage. The question for this young man, as well as for all others similarly situated is: Am I willing to work, study and go slow while learning? Am I willing to take infinite pains with a thousand details? Has my experience of having a regular pay check come in spoiled me for standing the privations I must endure while starting and learning?

* * *

IF THE inquirer can answer all these questions to his own satisfaction, and he is sure he can follow them thru to the end, I would say, hold on to the farm and start it along definite lines. He can master the technical problems. There are books and bulletins available on every branch of the subject which will help out. One of the best and most successful truck gardens I ever saw was owned by a man who knew almost nothing of the business twelve years ago. But, Oh, how that man studied and worked! After all, it depends upon the man.—R. P. Kester.

THE CHEERFUL PLOWMAN

Jealous Pals

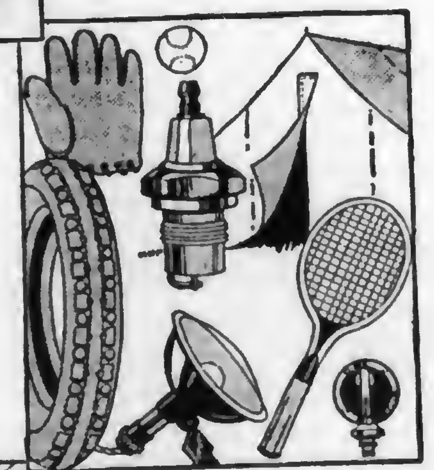
OLD Dutch and Dubb are jealous pals; I dare not pet the one and slight the other, if I do there's trouble when I'm done. If I stroke Dutch upon the neck then turn away from Dubb, that dear old rascal bites his pal and starts a hub-bub-bub! If I rub Dubb upon the nose and fail to greet old Dutch, he chews his pal upon the neck and shows a vicious touch. "I've done as much for you," each says, "as this old pal of mine; I'm always Johnnie on the spot my pull is sure and fine! When you are partial to my pal and cold and drear to me there must be something in the air that I have failed to see! It must be that this pal of mine has worked some subtle scheme to undermine me here and there and spoil this working team! I will not stand for such attempts, I'll take revenge on him! I'll bite a biscuit from his neck and put him out of trim!"

Poor jealous Dutch, poor jealous Dubb, how like they are to men! This buried trait in spite of all is noticed now and then! Good pals they are, and both would die if they should have to part, each holds the other in esteem and closest to the heart, yet each has green-hued streaks beneath the palship love, I know, and each will hurt the one he loves with cruel and selfish blow. Each one will strike before he learns the truth of what he thinks, before he stops to reason out the motives and the kinks! Poor jealous Dutch, poor jealous Dubb, there's time and time again when I wish they were not so much like mere and selfish men!—J. Edw. Tufft.

We are style headquarters. From the designing rooms of New York and Paris come the new modes shown in our catalog. You pay nothing extra for style—but you get it, and quality besides, when your selection is made from the World's Largest Store. We guarantee a saving.

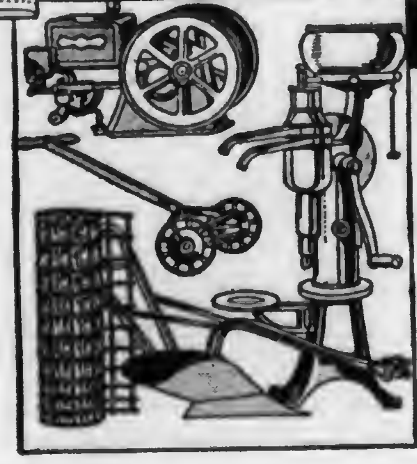
Spring is cleaning time. New rugs; a davenport for the living room; a new vacuum cleaner; a bedroom to be kalsomined. Everything you need to make your home attractive is priced in the Thrifty Book to save you money. And we give Real 24-Hour Service.

Men order from the World's Largest Store because they find it convenient and economical. Style apparel and sturdy work clothing are displayed at attractive prices in our new catalog. Nine million families buy from the book of 35,000 bargains. You should have it, too!



All aboard for Vacationland! A tent, a cooking outfit, a cot, your car—and the open road! Let us help you enjoy your vacation. The things you want are in our new catalog at the lowest prices quality goods can be bought. Guaranteed, of course.

Do you, too, love to sew? Then you need our new catalog. For our display of dress goods, draperies, fabric for every personal or household purpose, is the finest we have ever offered. The prices, of course, mean real economy. It is easy to order from the World's Largest Store.



Farming demands good tools. We have them. Most everything used on the farm is quoted in the Thrift Book and at a price way below that asked elsewhere. Our line of hardware, implements, gas engines, harness and cream separators is most complete. Be sure you have our catalog.

Sears, Roebuck and Co.

The THRIFT BOOK OF A NATION

35,000 *Bargains in this New Spring Book*

With this new catalog—"The Thrift Book of a Nation"—you have access to 35,000 bargains, the greatest store in the world!

So complete is this book that practically every need for the family, the home, the farm and the shop can be supplied from its pages—at prices that insure big savings.

Millions buy from the World's Largest Store because they have found here the quality they prefer; have learned that 99 out of every 100 orders are actually shipped within 24 hours after they are received; have proven to their own satisfaction that they make real savings.

Thrift does not imply self denial. It only means buying right, because if you pay less for the things you need, you can have more of the things you want. Our new catalog is ready. Your copy is waiting for you. Just fill in and mail the coupon.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Be thoro in all you do, and remember that tho ignorance often may be innocent, pretention is despicable.
—William E Gladstone.

A Modest Request

IF YOU have not already filled out the question blank appearing on page five in last week's issue won't you please do so at once and return it to us? We ask this favor of you so that we may be guided in our endeavor to make a still better paper of Pennsylvania Farmer. We are anxious to know which departments or features you like best. We should also be glad to have you write a short letter to enclose with the questionnaire giving any suggestions you may have to offer. We shall publish the results when the returns are in so that you may know how the majority votes on the different features. We earnestly ask you to do us this favor. We want at least ten thousand returns.

Free Education

MODERN salesmanship is generally based upon the sound business principle of fair and honest presentation of facts concerning the articles sold. For this reason catalogs put out by reputable firms are full of information which is easy and profitable to read. Our own experience has taught us this fact. When we wish to study a proposed step in the development of our farm work we study not only the books and papers on the subject, but get as many catalogs on the subject as possible and study them carefully. It frequently happens that more can be learned in this way than in any other. But like listening to the experiences of other people it is best to hear from several and in this way check the claims and statements one against the other.

Slump in Egg Prices

THE price of January eggs was lower last week than at any time since 1917. The higher grades sold fifteen to seventeen cents per dozen less than the same grades brought a year ago. The receipts at New York were heavy in spite of the recent cold spells, the heaviest shipments coming from the Pacific Coast. The fairly high price levels which have continued for the last five years have evidently stimulated the production of poultry, the natural result of which is to lower the price. However, the occasional slumping of the price of a staple product tends to increase production and thus establish the habit of eating more of that commodity. There is no question but that the consumption of eggs and poultry has increased during the last decade to a greater extent than is true of any other food product. If eastern poultrymen want to know why people three thousand miles away are taking away their nearby markets they can easily find out.

The Standard of Living

A MOST interesting book would be one which described the rise of the standard of living in the average family down thru the centuries, beginning at the time when the civilized people were nomads, living in tents and roving from place to place in search of new pastures for their herds, down to the present when the workers of the world are permanently settled in modern homes. Each age, even each generation, has had its "standard of living," and at no time in history has it been so high as it was in American homes in 1924 and since. This is due, according to Secretary Hoover, to "the most astonishing transformation in economic history." In 1924 the worker paid $1.71 for commodities which cost $1 in 1913, but in 1924 he had $2.28 cents in his pay envelope for every dollar found in 1913. The "astonishing change" did not come, however, so fully nor so quickly to farmers. In fact, the move in that direction is still under way and is not yet complete.

The improved conditions, or the higher standards of living, of the working man are not due to any increased ability, knowledge or activity on his part. His higher economic prosperity is due to the unique position in which the industrial leaders of America have found themselves since the war. They were forced by the short labor supply to pay the higher wages in order to produce the luxuries and necessities which were demanded as never before. A large part of our industrial prosperity is caused by the demand on the part of the common people for necessities and luxuries which before the war were obtainable only by the rich. The possession of these modern things by the common people is what is meant when it is said that the standard of living has risen. This has gone on on the farm almost as much as in the city, even tho the farmer's income has not increased so fast nor so much.

In the meantime, the demand for food has not increased in anything like the same proportions as has the demand for the other things which make up our present standard of living. While consumers are more particular and buy a better and more costly kind of food in many cases, the actual food requirements of a human being are not greater today than they were a hundred years ago. The one hundred per cent increase in the worker's pay envelope has gone mostly for other things than food.

Joined the World Court

AFTER three years of hesitation the United States, by action of the Senate, has decided to join the World Court. The final vote was overwhelmingly affirmative, being seventy-six to seventeen. Some of the most extreme bitter-enders have died since the fight started, but it is believed that favorable action was desired by the majority of the Senators as well as the people from the first but the tactics of the opponents have prevented action until now. To get a vote even now it was necessary for the Senate to limit talk on the subject,—an action known as "cloture," something which the Senate rarely adopts.

Senator Borah has declared since the favorable vote that the fight against the World Court has just begun. He proposes to take the matter direct to the people in the belief that they will, possibly by electing senators in opposition, repudiate the late action of the Senate by repealing the motion. Senator Borah evidently does not believe the seventy-six Senators voted the will of the people in this matter. As a matter of fact it is doubtful whether any other question in years has been so generally urged by the general public. It may be a bigger job than the Idaho Senator realizes to start a successful backfire against the Senate's action in joining the Court.

It is altogether possible that some of the other nations will consider us selfish and finnicky in some of the reservations made concerning the jurisdiction of the Court. However, the entrance has been accomplished and it is altogether likely that any necessary changes will be made as time goes on and the need arises. The American people can be counted on to insist upon justice and fair play.

What Is Economy?

IN DISCUSSING the question of economies which farmers may effect we sometimes find advice given in speeches and articles which might better be called "false economy." We have particular reference to advice on feeding farm animals. Any one who advises farmers to depend entirely upon home-grown feeds to feed their livestock and poultry is a false teacher.

Thru selection and breeding, dairy cattle and poultry have been developed far out of their natural production lines. In other words, their ability to produce is many times as great as it was in their native condition. For this reason they need a larger amount of the element which makes those products—protein—than is found in the feeds as they grow naturally. To supply this it is necessary to supply extra protein in the form of protein-carrying by-products from other sources. It is not economy to feed a high producer a ration which is short in any element necessary to best production. The feeder who can grow a large amount of corn and legume crops is fortunate, but these must be supplemented for best results.

Another line of false economy often preached is found in the recommendations often heard advising the universal home mixing of all feeds, fertilizers and spray materials. Men who use large quantities of these things and who have the knowledge and the equipment necessary may do the work at a saving and also make a good product. But the average man or the little fellow who is anxious for best returns will usually find in the long run that the purchase of ready mixed goods of reliable makes is better economy. Experience and observation over a number of years convinces us this advice is sound.

Washington Letter

HOUSE PASSES THE HAUGEN BILL.—The House has passed the Haugen bill to establish a division of cooperative marketing in the Bureau of Agricultural Economics, by a vote of 357 to 3. This bill, which is known as the administration measure, carries an appropriation of $225,000 for the first year's work of the new division. Its friends in the House made plain that it is not an emergency measure. It does not conflict with the surplus disposal scheme. Assurances are had that the Senate will pass the bill at an early date.

IN THE INTEREST OF AGRICULTURE.—The annual agricultural appropriation bill has been reported to the House by the appropriations committee. This measure is of special interest to farmers. It provides for a total expenditure of $126,770,000, of which sum $80,000,000 is for road construction. This is an increase of $1,036,000 over the present year's appropriation. During each session Congress creates some additional work for the Department of Agriculture to do, and this requires larger appropriations. And it may be said in explanation that these new jobs are created and increases in appropriations are made at the request of the farm organizations that are supposed to be carrying out the wishes of the farmers back home.

Not all of the remaining $46,770,000 for the uses of the Department of Agriculture proper is for agriculture, as much of it goes for regulatory work that is mainly of benefit to the consumers.

MORE MONEY FOR T. B. CONTROL.—The appropriations committee evidently has tried to be fair to agriculture. In view of the administration's economy program the allowance for the various agricultural activities are considered liberal.

A total of $1,308,440 for farmers' cooperative demonstrations, an increase of $40,086 in excess of the budget estimate, is allowed.

An appropriation of $975,000 is allowed for eradication of tuberculosis in cattle. For the payment of indemnities the committee has written into the bill the sum of $3,128,000. This is $550,000 in excess of the sum available for the current year and $760,000 more than the Budget estimate. But the dairy people are not satisfied. They will ask for a still larger increase, which may be secured thru an amendment on the floor of the House or Senate.

For eradication of hog cholera the committee recommends $428,263, which is $3100 less than for the current year.

CONTINUE FIGHT ON BORER AND BEETLE.—An appropriation of $485,000 is allowed for the control of the European corn borer. This is $101,370 in excess of the sum available during 1926. Absolute control of the corn borer is declared to be impossible, this appropriation being to confine its spread to as little new territory as possible until effective eradication methods are developed.

For control of the Japanese beetle $280,000 is allowed. The total area now infested by this insect is 6047 square miles, of which 1000 square miles were infested during the past year.

WOULD EXTEND MARKET SERVICE.——For the market news service in the Bureau of Agricultural Economics, $765,150 is allowed, which is $45,402 more than the 1926 appropriation. The increase is to provide for monthly production reports on butter, cheese and condensed milk, and for the extension of the leased wire service to Indianapolis, Cincinnati, Cleveland, Pittsburg and Buffalo, the five big livestock markets in the East. An attempt will be made by the American Farm Bureau Federation to secure a larger appropriation for this service.

TO STUDY COOPERATIVE ASSOCIATIONS.—Last year the Senate directed the Federal Trade Commission to make an inquiry and report regarding the growth and importance of cooperative associations, including comparative costs of marketing and distribution, and the extent of interference with and obstruction to the formation and operation of cooperative marketing associations. This work has been assigned to the legal investigation division of the commission, and is actively proceeding. A series of conferences with large cooperative organizations in the Middle West is being held this month, with Commissioner Thompson taking part.—E. E. Reynolds.

Harrisburg Letter

POWER BILLS IN JAM.—With the special session of the Legislature entering upon its final three weeks it would appear that the Giant Power bills, including those providing for the so-called "farmer" or rural service, have been caught in the general effort to block enactment of legislation of any consequence and that they will be lucky to get out of the state Senate. This year the power program bills were introduced in the upper house instead of the lower branch, where they failed to get anywhere last year, but events have worked so that there is apparently not much hope for them. In event these bills should fail relief for rural communities will have the rural electric regulations of the Public Service Commission to fall back upon and there is a possibility some tests of that method will be made. At the hearings on the power bills considerable stress was laid by speakers for the companies on the plans for expansion of service into the country. Some of these plans are to be made operative this year.

THE SPECIAL SESSION.—Thus far the special session has been marked by hearings and more or less controversy and it is becoming evident from the sidelines mighty little is going to be enacted. Even the election law changes, except in minor particulars, do not seem to have the steam necessary to put them over. The coming fortnight will see proposed additions to the liquor law enforcement statutes hotly contested. Attempts will be made to have studies of the election and banking laws authorized for action by the next session, which has been done before without result.

We never supposed they could be put to bed together.

BRINGING IN WEASELS.—Almost every county in the state is represented in the claims for bounties for weasels being made at the State Game Commission and in some of the interior counties the number of scalps offered runs high in the hundreds. One of the surprises of the law administration is the number of fox scalps coming in.

CERTIFIED POTATOES TAKEN.—According to reports coming here certified seed potatoes have been snapped up in half a dozen counties and the growers have some advance orders on hand for next season's output. The Department of Agriculture is studying results of tests on storage made in laboratories, while arrangements for greenhouse tests are progressing.

DEMANDS FOR AID GROWING.—State highway officials have had more requests for state aid in construction of highways the last month than for a long time, one of the reasons is that attention is being concentrated on improvement of the primary system of roads and county or local authorities finding no other source are going in on the fifty-fifty plan. There will be no redistribution of the money set aside from the bond sale proceeds and not requisitioned by counties. In the last week requests have been made for the building of half a dozen links between main roads, but most of them are on township highways.

BUYING OF TREES.—The State Department of Agriculture is renewing its warning to people to buy only inspected trees and pointing out that the state is certifying establishments which have their stock annually inspected.

TO ENFORCE PENALTIES.—Failure of farmers in the sections of northwestern Pennsylvania included in the corn borer quarantine to burn stalks and parts to prevent spread will be followed by state agents and prosecutions started as soon as weather permits. The quarantine regulations have been widely distributed. Some recent investigations showed very high infestation in Pennsylvania districts, says Director C. H. Hadley, who warns of danger of commercial loss to careless corn growers.—Hamilton, Harrisburg.

New Jersey Letter

SENTENCES TOO LIGHT.—The increasing losses which farmers are sustaining from chicken thieves is blamed upon the lack of severity in administering the law. The state crimes act provides for a penalty up to three years imprisonment or $1000 fine or both in case the amount stolen is valued at under $20 or seven years or $2000 fine or both in case the value of stolen goods is greater than $20. Recent sentences of convicted poultry thieves such as thirty days, $50 and six months with suspended sentence have brought forward considerable complaint by the farmers against the courts. In Burlington, Middlesex and Monmouth Counties, where several cases are now pending against gangs of marauders, efforts are being made to bring the seriousness of the chicken stealing menace to the attention of the county prosecutor.

TRESPASS BILLS INTRODUCED.—The farm organizations of the state as represented thru the joint legislative committee of the New Jersey Federation and the New Jersey State Grange have introduced a trespass bill, drawn along lines of one presented to the state legislature last year. This bill would provide protection to farmers against trespass upon their lands during the hunting season and upon cultivated lands at all times. The opposition of the hunters to the bill in previous years has been unusually strong. Considerable headway was made, however, by the farmers last year, and belief is expressed that there are more converts than previously in the Legislature to the course of protecting farm lands against wilful trespass.

CAPE MAY BOARD MEETS.—At the annual meeting of the Cape May Board of Agriculture at Cape May Court House in late January the following officers were re-elected for 1926: president, D. C. Turod; vice president, Norman Taylor; secretary, C. Newton Schellinger, and treasurer, J. Reid Chambers. The entire executive committee was also re-elected. The principal speaker on the program was H. B. Hancock, president of the New Jersey Farm Bureau Federation. He called attention to the changes in the agricultural situation in New Jersey and emphasized the importance of farm organization and the activity and loyalty of members to their organizations. He advocated a committee to develop a program for improvement.

NOT TO CONTRACT R. F. D.—This winter rumor has been going around that the federal Post Office Department contemplated plans for contracting the rural free delivery of mail, which would affect various parts of the state. Two of the largest New Jersey farmer organizations by resolution requested the United States Post Office Department to make no change that would affect the present efficiency of the system. Last week the post office formally replied to these resolutions stating that there was no immediate intention of the department to contract the rural free delivery of mails, and further stated that any step in this regard would necessarily come about by act of Congress.—B.

New York Letter

ANNUAL FARMERS' WEEK PLANS.—Farmers' Week at Cornell, the biggest event of the year for farm folks, occurs on February 8 to 13, following the second biggest farm event, State Grange at Watertown the preceding week. The usual rich program of events for dairymen, fruit and vegetable growers, poultry and crops, green house and home making activities will be enhanced by special features. These include a child training institute, special daily lectures on rural health topics, a simple theatre and two evenings of free presentations of one-act plays by rural groups. An old fashioned singing school, public prize speaking contests on rural topics, and other varied attractions numbering over 300 in all. Thursday will be Home Bureau day, when leaders of the 33,000 rural women of the state will discuss special problems of home and community.

MILK MENACE.—The state is much stirred by the activities of a huge combine that is said to be planning to take away the eastern milk markets by shipping in milk from the Middle West and West in tank cars. There has been a surplus of eastern milk all winter, besides the 172,000 cans of cream shipped here from the West during the past year. The new competition looms as a big menace, just when the Dairymen's League had closed its best year, and was about to launch out on a very promising year of business for its producers. An average gain had been secured to the extent of forty-three cents a hundred in pooled returns for the year, and no member lacked a market. But half the milk had been controlled, or much better results might have been secured. The big effort all over the state now is aimed at arousing the non-pool or independent producer to the danger that threatens both pool and non-pool interests, thru flooding the market with cheap milk.—M. G. Feint.

By Leaps and Bounds

the use of Nitrate of Soda is increasing.

In 1899, 16,000 tons of Nitrate of Soda were used as fertilizer in the United States.

In 1925, 650,000 tons were used as fertilizer in the United States.

Largely this is due to the growing knowledge of the necessity of using more nitrogen and the realization that no other form of fertilizer nitrogen will produce nearly as good results as

NITRATE OF SODA

Note some brief statements of results in the next column.

Detailed information is given in the Bulletins we issue for farmers who wish to grow their crops more profitably.

There is a sure way of learning definitely just how profitably you can use Nitrate of Soda on your own land. Demonstrate it on one of your own crops.

Mark off two plots of one acre or half an acre each. On one of the plots, use Nitrate of Soda, 200 lbs. per acre for cultivated crops or 100 lbs. per acre for other crops. On the second plot use no Nitrate.

Harvest the plots separately and weigh or measure the results.

The cash value of the increased crop on the Nitrated plot over that on the check plot will show you just what profit comes from the use of the Nitrate.

If you want our Free Bulletins full of truths about Nitrate of Soda, send us your address, name your principal crops and for our information add the number 2321

Agricultural authorities have established by careful experiments that 100 pounds of Nitrate of Soda applied to the following crops under proper conditions produced increased yields as follows:

Apples	50 to 75 bushels
Asparagus	100 bunches
Barley	400 lbs. grain
Beans (white)	225 lbs.
Beets	4000 lbs. tubers
Cabbages	6100 lbs.
Carrots	7800 lbs.
Celery	30%
Corn	280 lbs. grain
Ensilage Corn	2260 lbs.
Grape Fruit	29 boxes
Hay upwards of	1000 lbs. barn cured
Hops	100 lbs.
Mangels	123.7 bushels
Oats	400 lbs. grain
Onions	1800 lbs.
Oranges	22 boxes
Potatoes	3600 lbs.
Raisin Grapes	347 lbs.
Rye	300 lbs. grain
Strawberries	200 quarts
Sugar Beets	1330 lbs.
Sweet Potatoes	3000 lbs.
Tobacco	100 lbs.
Tomatoes	100 baskets
Turnips	37%
Wheat	360 lbs. grain

Tobacco in Pennsylvania fertilized in 1924 with
550 lbs. Nitrate of Soda
1000 lbs. Acid Phosphate
200 lbs. Sulphate Potash
produced 1532 lbs. of leaf tobacco per acre.

An acre in the same field which received the same fertilizer with 200 lbs. of Nitrate of Soda added, produced 2128 lbs. tobacco, while the check receiving no fertilizer produced 976 lbs. per acre.

These same fields in 1925 with no fertilizer of any kind that year produced 40, 53.1 and 25.5 bushels of wheat respectively.

7000 lbs. Potatoes per acre were grown in Ohio in 1924 using 300 lbs. Nitrate of Soda, an increase of 2100 lbs. over the check where no Nitrate was used.

In Missouri 3 different farmers using 300 lbs. Nitrate of Soda per acre increased the yield an average of 32 bushels of potatoes per acre over the check where no Nitrate was used.

Sugar Beet experiments in Michigan in 1924 resulted as follows:

11 unfertilized plots averaged 19,634 pounds Sugar Beets per acre.

9 plots receiving 300 pounds Nitrate of Soda per acre averaged 24,852 lbs.

5 plots receiving 300 pounds each of Nitrate of Soda and acid phosphate averaged 26,784 pounds of beets per acre.

Tomatoes in 1924 on 11 plots receiving 200 pounds Nitrate of Soda per acre showed an increase of 1.83 tons tomatoes per acre over the plots receiving no Nitrate.

46 Years' Experience Put Into Kellys' Trees

Since 1880 Kellys' trees have been propagated on whole root, imported seedlings—not by grafting on piece roots. That is why there are so many thousands of thoroughly satisfied Kelly owners. Write us for the names of your neighbors who have Kellys'. Talk to them and prove for yourself that you will get bigger and better crops from

KELLYS' Certified True-to-Name Fruit Trees

85,000 Kellys' trees have been certified to be "True-to-Name" by the Massachusetts Fruit Growers' Association for the 1926 season. Their Lead Seal stays on the tree until it bears fruit true to name.

Ask About Our New Cortland Apple

Our free catalog contains hundreds of interesting pictures and gives complete information and low prices on Kellys' trees, berry bushes, garden roots, evergreens and ornamental trees, shrubs and hedges. In this book you will find valuable facts and pointers on orchard cultivation helpful to you in your work.

To be fair, we must fill all orders in the rotation received. You should plan to order your selection of guaranteed "True-to Name" stock early and let us hold it for you. So write today for your copy of our catalog. We have no agents—you deal direct with us.

You Can Grow This Prize Winning

Cortland Apple

We guarantee that all these trees grown in our nursery and offered by us are *true Cortland*, that won the highest award possible for new fruits from the American Pomological Society. Combines the sterling qualities of McIntosh and Ben Davis. Crisp, tender, juicy, rich in taste, the Cortland is ideal for family gardens and large orchard.

Caco Grapes

New, wine-red grapes of large size, growing in compact bunches of good size and form. Ripens early. Of Catawba and Concord parentage.

Bosc Pears

Very large pears of distinct gourd shape. Beautiful golden russet color. Juicy, melting, and deliciously flavored. Commands top market prices.

Transportation charges paid by us. See catalog for details.

And Over 800 Varieties of Hardy, Profitable, Growing Things

Green's fruit, shade, and ornamental trees -- bush fruits, roses, shrubs, hedges, perennials, dwarf fruit trees etc., are all carefully bred from selected stock. You get just what you buy when you order from Green's Nursery.

Send for Green's Money Saving Catalog

It describes over 800 varieties of growing things, their low prices, and discounts for early orders. Valuable! Sent FREE on your request.

Medal Winners in Senior Project Work, 1925

SEVERAL thousand vocational school students thruout Pennsylvania carried out farm projects during 1925. The boys and girls who made the highest scores in their projects were awarded medals and ribbons during Farm Products Show Week at Harrisburg.

Doyle C. Parker, winner of the Pennsylvania Farmer gold medal.

The Pennsylvania Farmer gold medal for the best fruit project was won by Doyle C. Parker, of Columbia County.

Following are the gold, silver and bronze medal winners in the senior projects. The gold medal winner is named first, then the silver and bronze medal winners. Following each winner is the name of his school, and the county in which it is located.

Corn.—Clyde S. Jackson, Unionville, Chester; Harold Evans, Orangeville, Columbia; Amos Artman, Centre, Columbia.

Truck.—James M. Glover, Waterford, Erie; Edward Hagel, W. Fallowfield, Chester; Paul F. Pyle, Unionville, Chester.

Dairy.—Lawrence Fleming, Troy, Bradford; Willard Kile, Greenwood, Columbia; Ross Graham, Conneautville, Crawford.

Hog.—Virginia Leigh, Newville, Cumberland; Ross N. Huber, West Lampeter, Lancaster; Claud L. Mellick, Mt. Pleasant, Columbia.

Potato.—Doyle C. Parker, Orangeville, Columbia; Earl J. Boyer, Ontelaunee, Berks; Glen Nicholls, West Newton, Westmoreland.

Poultry.—Sarah Fox, Youngwood, Westmoreland; Martha Wertz, Youngwood, Westmoreland; Wm. M. Markle, West Newton, Westmoreland.

Home Ground.—Stewart C. Hulslander, Troy, Bradford; Martin Rudler, Linesville, Crawford.

Fruit.—Doyle C. Parker, Orangeville, Columbia; Adrian Graver, Ligonier, Westmoreland.

Tobacco.—James R. Landis, West Lampeter, Lancaster.

Beekeeping. — Howard Fleming, Union, Jefferson.

The following junior project winners were awarded silver medals:

Corn.—Lester Shughart, Grahams, Cumberland.

Truck.—Herbert Kress, Sturgeon, Allegheny.

Hog.—Clarence Smith, Rock Vale, Lancaster.

Potato.—Stewart M. Ross, Lightcap, Westmoreland.

Poultry.—Andrew K. Leidy, Hatfield Consolidated, Montgomery.

Flowers.—Ruth Breckbill, Lampeter, Lancaster.

First and Second Apple Awards

TWENTY-THREE of the sixty-seven counties in Pennsylvania were represented by apple exhibits at the State Farm Products Show. Judging of the 419 entries was done by A. Freeman Mason, fruit extension specialist of the New Jersey State College of Agriculture.

The first and second awards were as follows:

CLASS 1—Delicious, 1, E. F. Kauffman Son, York Co., $10; York, 1, same, $10; Jonathan, 1, S. L. Smedley, Jr., Delaware Co., $10; Stayman, 1, same, $10; Rome, 1, same, $10; 2, E. F. Kauffman Son, York Co., $8.

CLASS 2—1, Northern Spy, H. F. Lewis, Luzerne Co., $6; Delicious, 1, E. F. Kauffman Son, York Co., $6; Delicious, 2, Woodbourne Orchard, Susquehanna Co., $4; Jonathan, 1, E. F. Kauffman Son, York Co., $6; Rome, 1, same, $6; 2, S. L. Smedley, Jr., Delaware Co., $4; Smokehouse, 1, E. F. Kauffman Son, York Co., $6; Stayman, 1, same, $6; 2, S. L. Smedley, Jr., $4; Grimes, 1, S. L. Smedley, Jr., Delaware Co., $6; 2, E. F. Kauffman Son, $4.

CLASS 3.—Fallawater, 2, Hays & Wuering, York Co., $4; Winter Banana, 1, Dan Rice, Perry Co., $6.

CLASS 4.—Smokehouse, 1, E. F. Kauffman Son, York Co., $6; Stayman, 1, same, $6; 2, S. L. Smedley, Jr., Delaware Co., $4; York, 1, E. F. Kauffman Son, $6; 2, Beufort Farm, Dauphin Co., $4; Stark, 1, Friends Creek Farm, Adams Co., $6; Delicious, 1, Gillan Bros., Franklin Co., $6; 2, E. F. Kauffman Son, $4; Grimes, 1, S. L. Smedley, Jr., $6; 2, Friends Creek Farm, $4; Rome, 1, S. L. Smedley, Jr., $6; 2, E. F. Kauffman Son, $4; Jonathan, 1, Dan Rice, Perry Co., $6; Baldwin, 1, same, $6.

CLASS 5—Rambo, 1, S. L. Smedley, Jr., Delaware County, $6; Winter Banana, 2, Dan Rice, Perry Co., $4.

CLASS 6—Rome, 1, E. F. Kauffman Son, York Co., $6; 2, S. L. Smedley, Jr., Delaware Co., $4; Delicious, 1, S. L. Smedley, Jr., $6; 2, E. F. Kauffman Son, $4; Grimes, 1, S. L. Smedley, Jr., $6; Smokehouse, 2, S. L. Smedley, Jr., $4; Stayman, 1, same, $6; 2, E. F. Kauffman Son, $4; Jonathan, 2, Dan Rice, Perry Co., $4; Baldwin, 1, same, $6; Smokehouse, 1, same, $6.

CLASS 7—Winesap, 1, S. L. Smedley, Delaware Co., $6; Winter Banana, 2, Dan Rice, Perry Co., $4.

CLASS 8.—Grimes, 1, H. Snolt, Lancaster Co., $4; 2, P. R. Kraybill, Lancaster Co., $2; York, 1, P. R. Kraybill, Lancaster Co., $4; 2, Dan Rice, Perry Co., $2; Jonathan, 1, Masonic Home, Lancaster Co., $4; 2, H. Snolt, $2; Delicious, 1, Simon R. Snyder, Lancaster Co., $4; 2, Dan Rice, $2; Stayman, 1, C. B. Snyder, Lancaster Co., $4; 2, Dan Rice, $2; Northern Spy, 1, Simon Nebauer, Cambria County, $4; 2, Woodbourne Orchard, Susquehanna Co., $2; Stark, 1, Mertz Bros, Northumberland Co., $4; 2, Masonic Home, $2; Rome, 1, S. L. Smedley, Jr., $4; 2, Masonic Home, $2; R. I. Greening, C. G. Close and Son, Tioga Co., $4; 2, Woodbourne Orchard, $2; Wagener, 1, Dan Rice, $4; Baldwin, 1, Dan Rice, $4; 2, Jacob E. Hinkle, Luzerne Co., $2; Smokehouse, 1, Dan Rice, $4; 2, S. L. Smedley, Jr., $2; Winesap, 1, Dan Rice, $4; McIntosh, 1, Geo. H. Lincoln, Lackawanna Co., $4; 2, Woodbourne Orchard, $2.

CLASS 9—King David, 1, H. Snolt, Lancaster Co., $1; 2, McClellan Bros., Washington Co., 75c; Dominie, 1, Masonic Home, $1; 2, C. B. Snyder, Lancaster Co., 75c; Paragon, 1, Masonic Home, $1; Northwest Greening, 1, Masonic Home, $1; 2, Arthur Gay, Luzerne Co., 75c; Arkansas Black, 1, Mt. Breeze Orchard Co., Franklin Co., $1; Opalescent, 1, Ohara D. Brerton, Franklin Co., $1; 2, Ralph S. Pomeroy, Franklin Co., 75c; Delicious, 1, D. M. Wertz, Franklin Co., $1; Paradise, 1, D. M. Wertz, $1; 2, Dan Rice, Perry County, 75c; York Stripe, 1, D. M. Wertz, $1; 2, Ohara D. Brerton, 75c; Gano, 1, D. M. Wertz, $1; 2, Dan Rice, 75c; Ben Davis, 1, D. M. Wertz, $1; B. Twig, 2, same 75c; Winesap, 1, D. M. Wertz, $1; 2, S. L. Smedley, Jr., 75c; Haas, 1, D. M. Wertz, $1; Red Doctor, 1, same, $1; S. Rambo, 1, C. B. Snyder, $1; 2, Masonic Home, 75c; R. and S. Sweet, 1, C. B. Snyder, $1; Sutton, 1, Hays & Wuering, York Co., $1; Gideon, 1, Simon Nebauer, Cambria Co., $1; Twenty Ounce, 1, Simon Nebauer, $1; 2, Ray A. Briggs, Luzerne Co., 75c; Albemarle, 2, Woodbourne Orchard, 75c; Famuese, 1, same, $1; Roxbury R., 2, same, 75c; Tallman S., same, 2, 75c; Wealthy, 1, same, $1; 2, Shaffer Bros., Wayne Co., 75c; Ewalt, 1, Mertz Bros., Northumberland Co., $1; 2, D. Rice, 75c; King, 1, Mertz Bros., $1; 2, Wernersville State Hospital, 75c; Rambo, 1, S. L. Smedley, Jr., $1; 2, Jacob E. Hinkel, Luzerne Co, 75c; Eusee, 1, Wernersville State Hospital, Berks Co., $1; 2, P. R. Kraybill, Lancaster Co., 75c; Senator, 1, McClellan Bros., $1; Pawaukee, 1, Ray A. Briggs, Luzerne Co., $1; Bellflower, 1, same, $1; Courtland, 1, C. G. Close and Son, Tioga Co., $1; Winter Banana, 1, Dan Rice, $1; 2, P. R. Kraybill, 75c; Gilliflower, 1, Dan Rice, $1; 2, Ray Briggs, 75c; Fallawater, 1, Dan Rice, $1; 2, Hays & Wuering, 75c; Beauty of Kent, 1, Dan Rice, $1; Hubbardston, 1, same, $1; 2, McClellan Bros., 75c.

CLASS 10—Grimes, 2, Masonic Home, $3; Stark, 1, same, $5; 2, Ray A Briggs, $3; McIntosh, 1, Woodbourne Orchard, $5; 2, Shaffer Bros., Wayne Co., $3; Northern Spy, 1, Woodbourne Orchard, $5; Baldwin, 1, W. H. Bonear, Wayne Co., $5; 2, Shaffer Bros., $3; Stayman, 1, S. L. Smedley, Jr., $5; 2, Masonic Home, $3; Jonathan, 1, S. L. Smedley, Jr., $5; 2, Masonic Home, $3; York, 1, E. F. Kauffman Son, $5; 2, Ray A. Briggs, Luzerne Co., $3; Rome, 1, E. F. Kauffman Son, $5; 2, S. L. Smedley, Jr., $3; Delicious, 1, E. F. Kauffman Son, $5; 2, Dan Rice, Perry Co., $3; Smokehouse, 1, Dan Rice, $5; 2, S. L. Smedley, Jr., $3; R. I. Greenings, Woodbourne Orchard, $5; 2, same, $3.

CLASS 11—Paragon, 1, Masonic Home, $5; Winesap, 2, S. L. Smedley, Jr., $3; Winter Banana, 1, Dan Rice, $5.

CLASS 12—Stayman, 1, C. B. Snyder, Lancaster Co., $5; 2, S. L. Smedley, Jr., $3; York, 1, E. F. Kauffman Son, $5; 2, Ray A. Briggs, $3; Jonathan, 1, E. F. Kauffman Son, $5; 2, S. L. Smedley, Jr., $3; Delicious, 1, E. F. Kauffman Son, $5; McIntosh, 1, Woodbourne Orchard, $5; Northern Spy, 1, same, $5; Rome, 1, S. L. Smedley, Jr., $5; 2, E. F. Kauffman Son, $3; R. I. Greening, 1, Ray A. Briggs, $5.

CLASS 13.—Winter Banana, 2, P. R. Kraybill, Lancaster Co., $3.

SWEEPSTAKE BUSHEL.—Paragon, Mt. Breeze Orchard Co., Franklin Co., Horticultural Society Cup.

Student Body at State

THE Pennsylvania State College has a student body of 3734 for the first semester, according to the enrolment figures given out by W. S. Hoffman, college registrar. This is the greatest enrolment for any semester in the history of the college. Approximately one-sixth of the total number of students are registered in the School of Agriculture which ranks third in enrolment among the six schools in the college.

Meeting of Fruit Growers

Keystone State Is Forging Ahead in Orcharding

(Continued from page 3)

new life membership will be issued; that the list of standing committees is revised, so as to include new committees, on advertising, plant diseases, insect pests, and fruit statistics; that provision is made for a small executive committee, to have charge of the affairs of the association. The names of elected officers appear on page 31.

The vegetable growers of the state, after having been affiliated with the fruit growers for many years, decided to organize separately as a State Vegetable Growers' Association. Thomas Biddle, of Bustleton, was elected president, and W. B. Nissley, of State College, secretary. The vegetable growers split off from the fruit growers once before, nine years ago, but returned to the fold.

Present indications are that the stimulus of having a separate state-wide organization will result in building up the membership. The fruit growers again wish them good luck in their venture.

Fruit Show Disappointing

The fruit show was a disappointment, both as to quantity and quality, as compared with last year. The chairman of the exhibition committee, Paul Thayer, brought out the fact by a show of hands, that only twenty-six fruit growers in his audience of 400 had fruit on exhibition; also that none of the past presidents of the association were represented on the exhibition tables. This is not right.

The fruit judge, A. F. Mason, of New Jersey, reported that the chief defects were not insect or disease injury, but stem punctures and bruising, which are due to careless handling. He also scored the slack, uneven pack of many exhibits, especially the hampers, baskets and boxes. If the pack at this show is fairly representative of our commercial practice, as it is supposed to be, we have a long way to go before we can compete successfully with western apples. Most of the barrels, however, were packed well.

New features this year were the triangle of ten apples which proved to be a very effective method of display, and the flat or apple box but one layer deep. The exhibit was so dirty, after the first day, that color values were largely lost, and the poor lighting and crowded conditions of the Emerson-Brantingham Building made artistic displays impossible.

The fruit growers appreciate the many courtesies extended by Harrisburg people, and know that the Farm Products Show is staged under the best conditions possible at this time, but the fact remains that present conditions are wholly unsatisfactory and unworthy of the second most important State Horticultural Society in the East. When shall we have a state fair building or some other place in which to stage a really artistic and attractive exhibit?

The most coveted prize of the fruit show was the Sweepstakes Cup, a magnificent silver cup offered by the association to the member having the best bushel of apples in the show, whether in box, basket or hamper. This brought out keen competition. It was won by the Mountain Breeze Orchard, Chambersburg, with a very fine bushel of Paragon, or Mammoth Black Twig.

Franklin County also captured the association banner offered to the county horticultural society whose members took the largest number of premiums in the various classes. Twenty-three counties were represented in the exhibit.

Perhaps the most important action taken at the meeting related to the much discussed subject of true-to-name nursery stock. F. N. Fagan, of State College, reporting for the special committee on variety certification placed before the association two possible plans. One is the bonding plan, now proposed in New Jersey. Under this nurserymen would file a bond with the State Secretary of Agriculture, guaranteeing his stock to be true. The secretary would have a map made of the orchard at planting time and if trees are found untrue when they come into bearing, the nurseryman is liable for damages, under the bond.

The second plan is that now in successful operation under the Massachusetts Fruit Growers' Association which initiated the work several years ago. The services of an expert on identifying varieties of nursery stock are made available to nurserymen and fruit growers alike, for their mutual protection; and improvement is secured not by state regulation, but by the promotion of confidence between the nurseryman and his patrons.

Didn't Favor Bonding Plan

No sentiment at this meeting in favor of the bonding plan developed. It was felt that this method involves too much red tape, and that there are too many opportunities for error to make it fair or practicable. The association adopted the voluntary certification plan. It appointed a committee to secure the cooperation of the State Department of Agriculture, and the Department of Horticulture of State College in inaugurating variety certification in the nurseries from which Pennsylvania growers commonly secure their trees. Two Pennsylvania nurseries already certify their apple trees, and others are interested.

The far greater assurance that the stock is true will be worth the few more cents a tree that the grower will have to pay for this protection. Fruit growers who buy a large quantity of stock will be justified in having it inspected for misfit trees. An Adams County fruit grower, who will plant 50,000 sour cherry trees in the spring, will have the trees inspected by a variety expert before they are shipped from the nursery, to be sure that all of them are Montmorency. The committee of the association will have general charge of the work, but the actual inspection will be done by trained men from the State Bureau of Plant Industry and State College.

(To be continued)

Five Rules for Local Marketing

THE main essentials to success in local marketing are:

First; quality. Sell only first class goods and have the quality always the same

Second: Give good measure.

Third: Back up your products with a guarantee.

Fourth: Use advertising, such as window cards and newspapers.

Fifth: If you cater to wholesale trade you must stick to wholesale and retail prices. Many farmers will sell to a grocery store and then go right across the street and sell to the customers of the same store for exactly the same price. You can not hope to maintain any trade with the stores using this kind of business practice.

A good local market cannot be built up in a day and it means years of constant effort and salesmanship.—E. F. Mitchell.

THE HOME GARDEN

How One Housewife Plans Hers for Convenience and Usefulness

"JUST any old thaw" in midwinter smells of gardens and makes me wish I could begin to plant seeds and plan my garden, for I like to plan it myself. I don't want any one else to plan it for me tho I'm not bigoted enough to suppose that my plan would suit others.

About the only safe way that suits everyone is to estimate about how many feet of row will be needed of each vegetable, and plan accordingly. Two things I am always a little particular about are to have the tall growing stuff, like sweet corn, as near the back of the garden as possible so that I can look out and see everything without going over to it, (it helps in watching for rabbits, skunks and woodchucks, and to have the things that require most attention nearest the house. My mother used to prefer to have her tomato row first but I divide the honor among tomatoes, cucumbers and seed onions.

Planting the More Permanent Things

We usually plant the more permanent things along one side where they won't be in the way of plowing and harrowing but I know some most excellent gardeners who claim that rhubarb, cane berries, and asparagus should be "right in the middle" where they can't help getting well cultivated and fertilized, and I think they do grow very much more luxuriantly in that location.

My strawberries were set last fall and had made a nice start when they were mulched early in the winter so I am hoping to have some berries but they are on one side where they probably won't get cultivated much except with the wheel hoe. By the way, I never should attempt to do much gardening without a wheel hoe and I'm sure anyone that has ever used one never will be without it again.

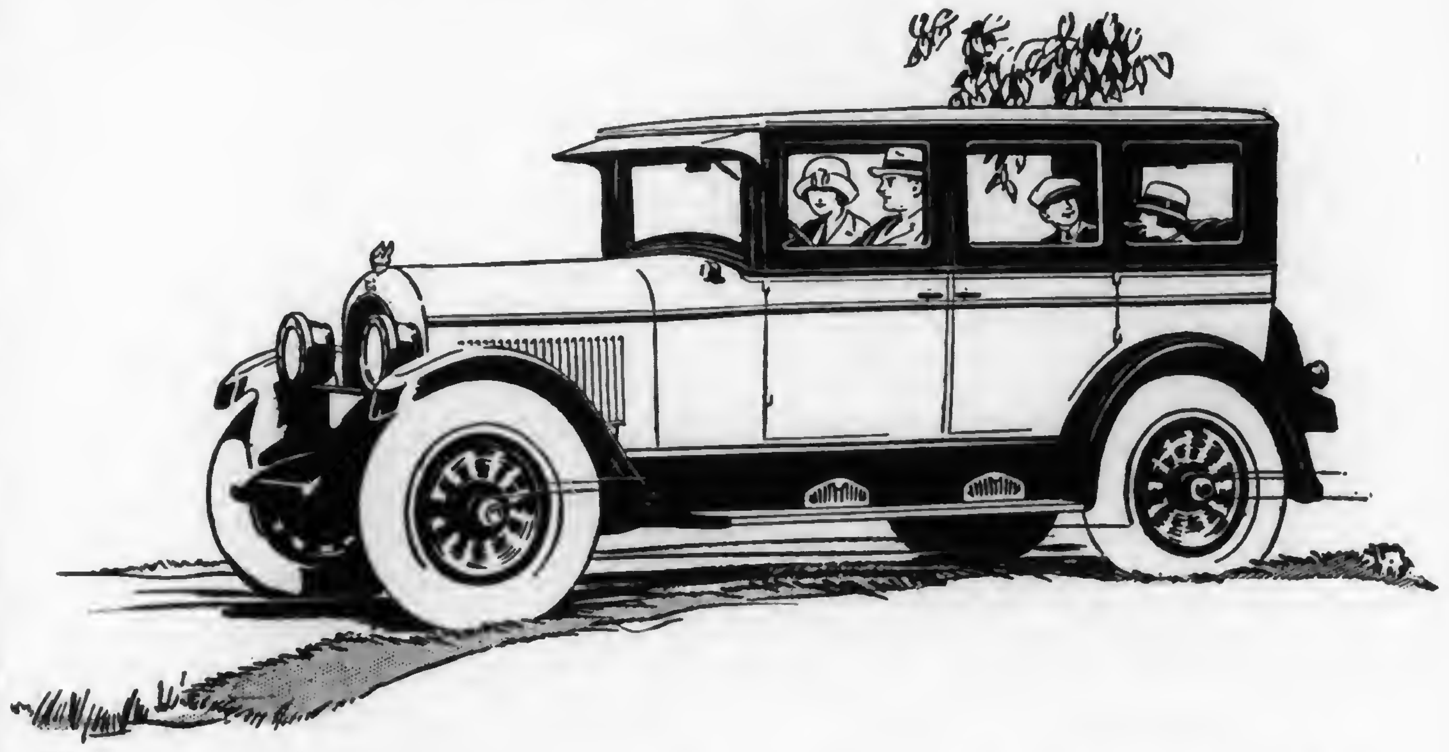
My present plan, based upon last year's experience on the present garden site and my previous knowledge of the tastes of my family, is as follows: Two rows strawberries, three rows early potatoes (nothing but people ever eats potatoes), five rows sweet corn, with squash, one row lima beans, two rows shell beans, one row half beets and half carrots, one mixed row lettuce, spinach, kale, endive and parsley, two rows peas, one row onions, one row tomatoes (after early radish and peas), one row cucumbers.

Crops Adapted to Family Tastes

I am fully aware that many things usually found in gardens are omitted from mine, but there's a reason. Summer squash, for instance. My household might eat a little in case of famine but I'm sure it would be served in the same course with rats and mice at our table! Most people raise peppers and I would if I could but I can't. I don't know why. Some people raise melons but I have succeeded with them but once and our seasons are so short I very seldom try. We don't care for any of the other things not included in my list. Every family must have its own peculiar tastes to which the garden should be adapted. If it is just about right it helps wonderfully and if it isn't, it's a nuisance; tho I love to work in it.

Flowers never do very well for me so I leave them to little daughter.—she has more patience with them than I and they bloom for her in her garden and I don't care for a screen,—rows of nice vegetables are not unsightly according to my idea. —Mrs. E. M. Anderson.

Precisely the Same Chrysler Quality at Electrifying New Lower Prices



Thanks to the swiftly climbing sales and steadily swelling production volume of Chrysler "58", new and greatly lowered prices are made possible which render the "58" more unmistakably than ever the value supreme in its class.

Chrysler "58" sped far away from all possible competition months ago in its own low-priced field; *out-selling everywhere* when it provided such striking performance features as 58 miles an hour, 25 miles to the gallon of gasoline, and a pick-up of 5 to 25 miles in 8 seconds.

Precisely the same quality—precisely the same performance—precisely the same fine appearance—precisely the same beautiful body and chassis at these new prices deal a body-blow to anything even remotely seeking comparison with the "58", which will instantly be recognized, with a thrill of delight, by every student of motor car values.

Touring Car	$845	Club Coupe	$895
Roadster - -	890	Coach - -	935
Sedan - -	$995		

Disc wheels optional. Hydraulic four-wheel brakes at slight extra cost.
All prices F. O. B. Detroit, subject to current Federal excise tax.

Don't Forget Better Farm Equipment Week, March 15 to 20. See the John Deere Quality Line on Display at Your Dealer's

They're Syracuse Chilled

JOHN DEERE-SYRACUSE
1341-1441 SERIES
Penetrate, run steady, are durable. Take either chilled or steel parts—do better work in any soil anywhere. Left-hand and right-hand.

JOHN DEERE-SYRACUSE
NO. 821 SERIES HILLSIDE
The last word in hillside plow design. White iron or tempered steel moldboard adapts them for any soil. Close-fitting joints—no clogging. Beam will not bend or break.

JOHN DEERE-SYRACUSE
NO. 210 SULKY
Lightest draft plow of its type. Rolling landside. All weight carried on wheels.

The Syracuse process of chilling makes the hardest plow metal known and leaves moldboard wearing surface smooth and regular.

The Syracuse share is chilled throughout its cutting edge and point, on the under side as well as top. One Syracuse chilled share will outlast two similar shares of other makes.

Landside is chilled on face and runner, with extra deep chill at heel—the plow runs steady and even for a longer time.

Moldboards intended for severe conditions have detachable shin piece which provides new cutting edge quickly and at small expense.

Die-dropped malleable standard insures a smooth, uniform base for the perfect fitting of all parts.

Syracuse double-beaded, high-carbon steel beams are guaranteed not to bend or break.

John Deere-Syracuse Chilled Plows wear longer in hard, stony ground—in any soil where sand and grit are present. There's a Syracuse for every plowing need. Write for literature. Address John Deere, Moline, Ill., and ask for Folder NO-5 36

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

HILLPOT Quality BABY CHICKS

What is YOUR standard for judging chicks?

Is it sturdiness and vigor, which leads to EASE OF RAISING? O. F. Smith, NEW YORK, writes, "I never before had experience with chickens, yet from 101 Hillpot Chicks I raised 97".

Is it HEAVY LAYING of WINTER EGGS? "My 75 pullets from Hillpot Chicks laid 1548 eggs in January. My record was 70%, while the Vineland Contest in the same month averaged only 30%," states Mrs. Georgianna Gilbert, NEW JERSEY.

Superior Quality of my Chicks is proved not by what I say, but by what my customers know. Decide now on my "PROVED CHICKS for '26". Send for my beautiful new chick book FREE. Contains full page illustration in colors of the famous breeds, shows by customers' letters how to be sure of securing the most profitable strains of

Leghorns, Rocks, Reds, Wyandottes

Since old customers take up so much of my production, it will pay you to ORDER PROMPTLY. Safe delivery of Full Count Guaranteed

COLT LIGHT IS SUNLIGHT

SAFEST AND BEST BY TEST

Include COLT LIGHT in your 1926 Budget!!!

LABOR—fertilizers—equipment—improvements—food—clothing—education.... You've anticipated these things in planning for 1926. But did you remember the really important matter of efficient lighting, that item so necessary to the progressive farmer?

Plan today to install a Colt Lighting and Cooking Plant in your home. Its moderate cost can be financed over a long period of months if you own your own farm. The payments will fit into your budget easily. A certain percentage of the income from poultry, dairy or truck garden each month can take care of them.

In return you will get the safest, most brilliant and most economical light in the world. Unflickering light throughout the home and the barns and outhouses at a finger's touch. Light that actually *pays for itself* by the hours of drudgery it saves you.

Colt Light is produced by Union Carbide, which is obtainable at factory prices from any one of the 175 Union Carbide Sales Company warehouses.

Investigate Colt Light. It is more than a convenience. You use it 365 days every year. It makes home more congenial, entertaining, more pleasant, work easier. It is a *necessity*. Write today for our booklet, "Safest and Best by Test."

GILSON MFG. CO., 504 PARK ST., PORT WASHINGTON, WIS.

(Continued from preceding page)

In Cartons.—1, Towanda Hatchery, Bradford, $4; 2, P. D. Zimmerman, Dauphin Co., $3.50; 3, Henry S. Miller, Lancaster, $1.50.

Duck Eggs.—1, Harry Brubaker, Lancaster Co., $3; 2, Earl Brubaker, Lancaster Co., $2; 3, Harry Brubaker, Lancaster Co., $1.

Silver loving cups were awarded as follows:

Best dozen white eggs in the show, Martin Rush, Lancaster Co.

Best dozen brown eggs in the show, Harold Brenneman, Lancaster Co.

Largest and best county exhibit, Dauphin County.

Second largest and best county exhibit, Lancaster County.

Third largest and best county exhibit, Montgomery County.

County winning the largest number of prizes, Lancaster County.

County sending largest and best display in the backyard class, Dauphin County.

School sending largest and best display of eggs, West Lampeter Vocational High School.

Adult Poultry Association sending largest and best display of eggs, Lititz Poultry Club.

Largest and best individual exhibit, Towanda Hatchery.

First Pigeon Exhibit

TEN hundred and ten birds composed the pigeon exhibit, the first ever staged in connection with the state farm show.

M. B. Kauffman, W. M. Smith, and C. D. Bentley, all of Harrisburg, and A. E. Martin, Newville, were the largest exhibitors. Thomas Ross, Washington, D. C., judged the racing pigeons, and J. J. McAtee, Pittsburgh, placed the awards on toy pigeons and squab breeders.

Quality Potatoes Shown

POTATOES at the State Farm Products Show were judged by **C. F. Noll**, agronomist of Pennsylvania State College, and E. V. Hardenburg, Cornell University, Ithaca, New York.

The exhibits included 175 peck samples in the boys' and girls' classes and 135 peck samples in the adult classes. An innovation of the show this year is the display of one bushel each of field-run potatoes from seventeen of the thirty-eight Four-Hundred-Bushel Club acres in the state. The quality of potatoes on exhibit was better than last year.

Montgomery and Clarion Counties were best represented in the adult classes and Jefferson, Perry, and Clarion Counties in the boys' and girls' classes.

The awards follow:

Class 1—District 1

Irish Cobblers.—2, Ray Briggs, Luzerne Co., $2.

Class 13, County Commercial Exhibit

1, Lebanon; 2, Dauphin.

Potato Prospects

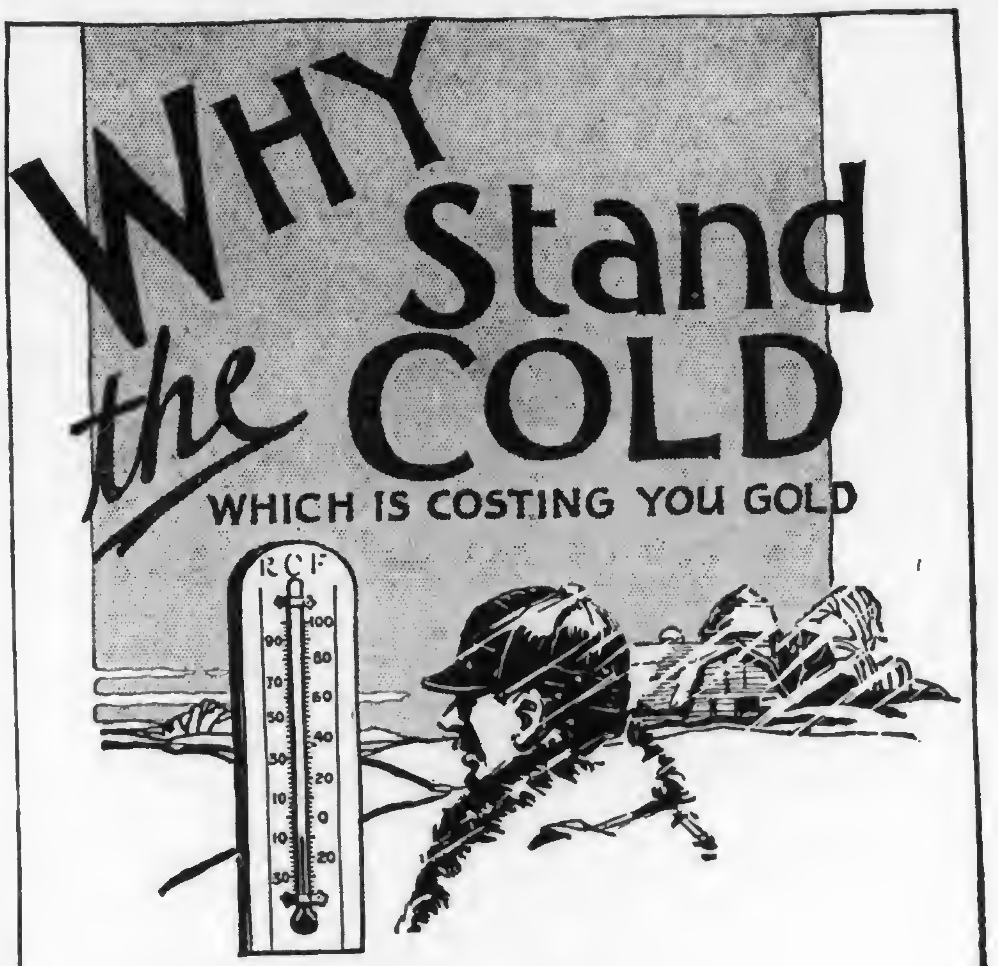
SO MUCH has been said and written about the wonders of Florida and its spectacular real estate boom that it is easy to forget its importance as an early potato producing section. Farmers in Pennsylvania and in the other late potato producing states are chiefly interested in what they are going to get for the potatoes they have on hand. Down in Florida they are thinking of the same thing, only they haven't grown them as yet.

The main planting is done between January 10 and February 1st. In the Hastings section the first plantings are usually made during the latter part of December.

The east coast which plants early and usually harvests sooner than the Hastings section shows a decrease. This is largely due to real estate development, increased land value and scarcity of labor. It is expected that this decrease will be made up in the Okechobee district.—W. R. Whitacre.

Aeroplanes for Dusting

LARGE acreages of tomatoes located near Los Mochis, Mexico, are being dusted by aeroplane. Several large firms have contracted for two planes for this purpose and will combat bugs, worms and other tomato enemies from the air. The Mexican Government has granted permits for this work.—W. R. Whitacre.



WHY Stand the COLD
WHICH IS COSTING YOU GOLD
RCF

GO SOUTH and PROSPER

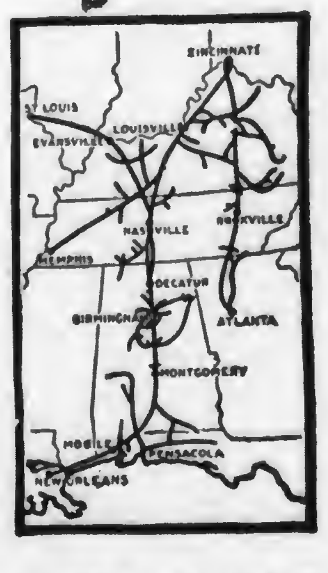
Look at the weather report and see the ideal climatic conditions which are existing today in the Southland. No snow, no ice, no forced idleness from work. Crops are growing, and the live stock is feeding out of doors.

While farmers of the North are housed by blizzard weather, the Southern farmer is getting ready to market, at a splendid profit, his early spring crops. Because of greatly increased population, and splendid transportation facilities, there is an ever-increasing demand for farm and dairy products, with attendant better prices.

Your family will be happier in the South, for the children can play outdoors every day; flowers grow in mid-winter; heating costs are negligible; and good schools, churches of every denomination, good roads and other attractions add to the joy of living.

Find out more about this delightful section of America. Write today, telling us what kind of farming you have indulged in, and we will send you, without cost, now or ever, full information about how our free service will help you to prosper in the territory served by this railroad.

G. A. PARK
General Immigration & Industrial Agent
Louisville & Nashville Railroad
Dept. P-6 Louisville, Ky.



No matter what kind of farming you have indulged in, you can do better in the Southland, because of better living conditions, lower living expenses, lower labor costs, and a practically all-year growing season, making it possible to produce several crops each year.

LOUISVILLE & NASHVILLE R.R

FEEDING LINSEED MEAL *MUST BE* PROFITABLE

When It Is Used In Quantities Varying up to 50% of Grain Rations Used by Successful Feeders Everywhere

Feeding linseed meal to both beef and dairy cattle has often shown a profit of 100%.

Pabst Holstein Farms Sometimes Use 50 Per Cent

Mr. B. L. Cramton, Mgr. Pabst Holstein Farms, Oconomowoc, Wis., writes:

"My opinion of linseed meal in test ration and fitting ration can be expressed in a very few words: 'We cannot get along without it.'

"When we were strong after 7-day records, we fed linseed meal, increasing the amount in the ration gradually daily up to a point at times when they would be getting 50% linseed meal in a grain ration."

For hog feeding linseed meal proved worth $85.00 per ton in certain Wisconsin station rations.

Swift's Head Cattle Buyer Recommends 3 to 5 Pounds Per Head Daily

Mr. Fred Stemm, head cattle buyer of Swift & Co., says:

"From actual experience I have found linseed meal to be a profitable investment in feeding all kinds of cattle from poor quality cows to best grade of steers. I also found that it pays to feed over the entire period starting with a pound or two and gradually increasing to a full feed of 3 to 5 pounds, according to age and weight, during the last sixty or ninety days."

Nebraska experiments showed linseed meal to be worth $13.00 per ton more than its cost in sheep feeding.

Doran Brothers, Ohio, Illinois, Hog Growers, Used 10 Pounds Linseed Meal to a Bushel of Ground Oats

This ration, they say, makes a rich slop. They state further:

"We give yearlings one pound per day at the beginning of the feed and the last 60 days increase the amount to three pounds per day."

They estimated that last year linseed meal was worth $75.00 per ton in feeding hogs.

Let us show you how others have made 10% to 100% on their investment on Linseed Meal. Send the coupon below. Get these booklets—and profit by the experience of others.

Poultry specialists have found linseed meal especially valuable at moulting time.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

The Dairy Sessions Were Well Attended

(Continued from page 3)

"The Pennsylvania Plan for the Prevention and Eradication of Bovine Infectious Abortion," was presented by Dr. M. F. Barnes, of the Pennsylvania Bureau of Animal Industry, Harrisburg. He stated that this disease is caused by a germ called bacillus abortus bang which was discovered in 1896 by Professor Bang of Denmark. Since the discovery of the cause, the disease has been studied quite extensively with the end of finding means of combating it, altho until within recent years no definite effective measures have been recommended for its prevention.

Dairymen cannot afford to maintain herds infected with this disease for which no cure and no successful method of vaccination is known. Yet there are still a few breeders who are willing to increase the maintenance expense of their herd thru the purchase of useless and possibly harmful concoctions, which are purchased at comparatively high cost with the hope that they will rid their herds of the disease.

This disease, however, can be prevented and can be eradicated thru repeated blood testing. Elimination of reactors and the practice of preventative measures to successfully carry out such a system requires considerable patience and perseverance, but is well worth while. The plan adopted by the Bureau of Animal Industry at Harrisburg for the eradication of infectious abortion is based on sanitary practices, blood testing, and the elimination of reactors. It has been successful in eradicating the disease from a number of herds. Anyone interested in this work should communicate directly with the Bureau of Animal Industry at Harrisburg.

Financing Tuberculosis Eradication

"Financing the Tuberculosis and Abortion Eradication work" was discussed by Dr. J. L. Passmore, of the Pennsylvania Bureau of Animal Industry. At the present time that portion of the dog tax not used in paying sheep and poultry claims is used in financing the work. The state also appropriates nearly two million dollars to carry forward the work. A total of 221,000 cattle were tested in 1924; 354,046 during 1925, and approximately half a million cattle will be tested during 1926. The herds in the following counties: Mercer, Crawford, Jefferson, McKean, Butler, and Lawrence have been completely tested. In the first three of these, the disease has been reduced less than one-half of one per cent.

"How Better Bulls Reduce the Cost of Producing Milk," was outlined by S. J. Brownell, dairy extension specialist at State College. In outlining the above topic Mr. Brownell showed that of the three forces which determine the production of an individual, namely, selection, environment, and heredity, heredity is the greatest contributing force.

Mr. Brownell brought out the fact that no animal is greater than its heredity, and that the production of animals can be divided into four different groups according to this element. The first group sired by just an ordinary bull produced butterfat at twenty-five cents a pound more than animals which were sired by the average purebred bull. Animals which were sired by the average purebred bull produced butterfat at a cost of six cents a pound more than animals which were sired by a purebred bull with a history and pedigree of productive ancestors. Bulls of this kind are reasonably assured of producing herds which will be profitable.

However, the only reliable method of producing profitable animals is thru the use of a proven sire. An instance was cited where all the daughters of a proven sire, thirteen in number, averaged 15,134 pounds of milk and 515 pounds of butterfat. The outstanding merits of this sire were determined thru the records kept in a Pennsylvania cow testing association.

"How Shall I Conduct a Five-Year Program to Improve My Dairy Herd," was the subject presented by C. R. Gearhart, dairy extension specialist, State College. Mr. Gearhart mentioned six factors as the essentials in conducting such a campaign:

First, the farmer. He should be in love with his work. A man who is dissatisfied with his calling seldom makes a success of it, but the man who is enthusiastic and believes that his calling is well worth while, has achieved the first great factor in making an eventual success of his work.

Farmer Must Love His Work

Second, the cropping system should be such as to include clover, alfalfa, soy beans, or other leguminous roughage. Such roughage is palatable and appetizing. Is conducive to abundant milk flow, and at the same time cuts down the cost for high protein concentrates which would be necessary were non-leguminous roughage not fed.

Third, purchased concentrates require good judgment in their selection, both as to kinds, amounts, and the time when they should be purchased. Corn and oats are not sufficient to make a well-balanced ration, but they do furnish a good basis with which to start the grain mixture. Corn and oats are too low in protein to give the best results, therefore, some high protein concentrates such as cottonseed meal, linseed meal, gluten meal, or soy bean meal must be added to the ration in order that it be satisfactory for milk production purposes. Cottonseed meal usually furnishes protein at low cost, but should be fed in moderate amounts. Linseed meal is excellent particularly because of its laxative qualities. Gluten meal and peanut meal are also good high protein concentrates which furnish protein at a moderate cost.

High Producing Herd Development

Fourth, the cattle. The development of a high producing herd is essential to ultimate success in the dairy business. Such a herd can only be secured by careful selection, the culling out of low producers, and the use of a good purebred sire, preferably one that is proven for milk production, that is, a sire that has daughters in milk that have made good records. If such a sire cannot be obtained, then it is essential that he be one whose dam and granddams were high producers.

Fifth good care is essential. This should include an ample supply of water, plenty of fresh air, and adequate shelter. Calves should be well

fed in order that they attain rapid growth and thus develop a large framework which is associated with large production.

Sixth, individual records of production on each animal in the herd are necessary if one is to develop a profitable herd. These can be obtained most efficiently and economically thru the cow testing association.

An instance was cited where a man by following the plan outlined above increased the average production of his herd from 248 pounds of butterfat to 413 pounds in a period of eight years. Ten farmers in a Juniata County cow testing association have increased the average production of all the animals in their herds from 227 pounds of butterfat per cow per year to 320 pounds in a period of six years.

"The Factors that Determine the Market Price of Milk," was the subject discussed by Mr. George W. Slocum, president of the Dairymen's League. He mentioned five important factors in this connection:

First, the supply. At the present time the supply of milk for a particular city is not limited to a restricted area. The improved transportation facilities are such that milk may be brought from Chicago and other western cities to New York. While the supply of milk is somewhat seasonable, yet the demand is very constant thruout the year.

The Cost of Production

Second, the cost of production. The aim of every producer is to secure the cost of production, plus a reasonable profit. This, however, is not always possible. The November price of milk in the Dairymen's League for three per cent milk in the 200-mile area was $2.80. According to the Warren formula, the cost of producing this milk would be $2.03. Naturally, however, if the cost of production is considerably beyond the market price, the result is that the producer goes out of business.

Third, unorganized competition. Competition of this sort comes from two sources. First, individual farmers who sell to dealers competing with the organized market. Second, small groups of farmers who change their market from time to time as they can get a little higher price from this or that dealer. Both of these factors have a demoralizing influence on the stability of the market.

Fourth, surplus. The lowest point of production is about Thanksgiving time. Beginning about the first of February, there is a small surplus, and this begins to multiply up until June, when the greatest surplus is at hand. This surplus is worth only its fat value or what it will bring when manufactured into butter. The surplus problem has been a difficult one to handle, and has considerable effect upon the market price of milk.

Fifth, consumer's psychology. It is important to educate the consumer to realize the value of milk. If the consumer realizes that milk at 15c a quart is really an economical food as compared with meat, he will not object so seriously to paying prices commensurate with the value of the product. A milk marketing association must function for the entire industry in order to solve the milk marketing problem effectively. Only by organization can the milk producers in the dairy industry be protected.

Milk Vs. Feed

"A Balanced Pocket-Book—Milk vs. Feed," was the subject of an interesting talk by R. H. Olmstead, dairy extension specialist, State College. He emphasized three very important factors. First, the importance of an adequate supply of fresh clean water. He stated that he had never heard of a dairyman who was dissatisfied with having installed in-

(Continued on following page)

Don't Waste Your Grain

20lbs. Ration of Whole Grain alone
15lbs. Ration containing Corn Gluten Feed

When there is a surplus of grain and the price is low, a vast amount of it is wasted by overfeeding. This burdens both your animals and your pocketbook. Feed a properly balanced ration only in amounts your animals *need*. Then you will save grain which you can sell.

Our $15,000.00 prize contest for feeders will encourage feeders everywhere to study their animals and their feeding materials as never before. The most successful feeders will receive big rewards for their skill in feeding.

122 Prizes--$15,000.00

If you are milking six or more cows, or feeding forty or more beef cattle, you are invited and urged to enter this contest. There is no entrance fee and no stall rent to pay. The prizes are as follows:

14 Prizes for Cow Testing Associations	*$ 3,000.00*
14 Prizes for Individual Dairy Herds	*2,100.00*
7 Prizes for Championship Cows	*1,000.00*
14 Prizes for Beef Cattle Feeders	*2,500.00*
12 Prizes for supervisors or verifiers	*2,650.00*
24 Prizes for herd managers	*1,250.00*
37 Prizes for co-operationg feed dealers	*2,500.00*
122 Prizes, totaling	*$15,000.00*

Feed Less Grain Make More Money By Balancing Home Grown Feeds with

CORN GLUTEN FEED 23% Protein The Protein Product of Corn GERM

You can feed your home grown grains or any ready mixed feed so long as 25% or more of your gain mixture is Corn Gluten Feed—the best of all protein feeds for making milk or meat at low cost. In case of tie each contestant tying will receive full amount of prize.

If you approve your state fair you should be enthusiastic about this contest, because every state fair and livestock show is a contest for feeders. Every feeder who enters his animals in a fair is a contestant against other feeders.

This contest is on the same high plane as our national livestock and dairy shows but on a larger scale. Our great purpose is to promote better feeding and develop rations that produce a larger profit.

All who enter this contest, and thousands of others, are feeding Corn Gluten Feed right along—month after month—regardless of contests, but we have adopted this plan to get feeders together for a better understanding of good rations.

This contest starts April 1 and ends September 30, 1926. You will make more money by coming in than you will by staying out. Fill out and mail the coupon for application blanks so we can enter you in the proper classification.

The very simple rules are fully explained in Bulletin No. 4. The coupon gets it and also our valuable new book, "The Gospel of Good Feeding." Both are free.

THE TORNADO SILO

Oregon Fir Silos Always Best

A FEW DON'TS *DON'T buy knots; DON'T buy poor doors; DON'T buy poor lumber; DON'T buy weak anchors; DON'T waste money.*

If Silos pay, buy the best, just as you buy cows or horses, sheep or hogs, seed corn or fertilizer. Always buy the best, CHEAPEST, but buy the best.

The earlier you order your Silo this year the Cheaper you will buy it.

Write at once for catalog prices. Good, live, farmer agents wanted.

The W. R. HARRISON CO., MASSILLON, O.

"It's great to see the Milk Pails Fill Up"

WHAT a real pleasure to board a stable full of cows that month in and month out fill the pails as you know they should! Good cows and good feed, alone, often fall short of what you expect simply because winter feeding conditions impose a heavier burden than the milk-making organs, without aid, are equipped to meet.

Kow-Kare Takes the Slump Out of Winter Milkings

This wonderful all-medicine tonic offsets the sudden change from green foods to dry, course winter diet. It builds into your cows the power to convert their food into rich yields of milk—does away with the "boarder cow."

Kow-Kare is all medicine. Used sparingly at very slight outlay it brings back your small investment in cow health quickly— and many times over. As little as a tablespoonful twice a day, one week each month, will pay big dividends in added milk and healthier cows. Don't fail to give Kow-Kare a careful test; you'll never get along without it again.

Your Private Veterinary

For the ills common to cows—Barrenness, Retained Afterbirth, Abortion, Scours, Bunches, Milk Fever, etc., your can of Kow-Kare is always the ready remedy. Its re-building, invigorating action on the genital and digestive organs assure a quick return to health and productiveness. Thousands of dairymen would not think of getting out of Kow-Kare.

If you have the least difficulty in getting Kow-Kare from your general store, feed dealer or druggist, order direct from us—by mail, postpaid; $1.25 and 65c sizes.

Valuable FREE Book

Nearly a million dairymen each year use our reliable treatise on cow diseases—"The Home Cow Doctor." We will gladly mail you a copy on request. It contains much general information on the care of cows.

Grateful letters like these come by the hundreds

From Grover Schellinger, Glenwood City, Wis.

"It is difficult to express in words the good results I have obtained by the use of Kow-Kare. I find that by giving cows Kow-Kare, before calving time, brings fine results. I also give my cattle Kow-Kare when off feed and it is no time at all before they are again filling the pails with an extra amount of milk.

From J. O. Elnie Horseheads, N. Y.

"We have used your Kow-Kare with good results. Have used three large sized cans and are on the fourth can. It keeps the cows in good condition, therefore, good flow of milk is the result."

From A. C. Hays Unionport, Ohio

"I have been using your Kow-Kare for five years. Wouldn't do without it. It not only increases the milk but I get a better test in butter fat."

Dairy Sessions Well Attended

Speakers Give Much Valuable Information

(Continued from pag. -1)

dividual water-bowls in his stable. In fact, many of them asserted that these individual water-bowls had paid for themselves in the increased milk returns in a year.

The second important factor is alfalfa hay, clover hay, or other leguminous roughage. Such roughages produce the protein that would ordinarily have to be purchased in high-priced concentrates.

Third, feeding according to milk production. The feeding of the same amount of grain to each cow in the dairy herd regardless of her milk production is wasteful. The cow that produces a large amount of milk needs a large amount of food, while the cow that is nearly dry needs a comparatively small amount.

Many dairymen would get better results from the same amount of grain they are now feeding to their herd if they would distribute it among the cows, giving it to the various animals in proportion to their milk production. A fair allowance for a Jersey or Guernsey cow is one pound of grain for every three to three and one-half pounds of milk she produces. Holsteins, Ayrshires, Shorthorns, and Brown Swiss should have approximately one pound of grain for every four to four and one-half pounds of milk they produce.

Will It Pay?

"Will the Returns for the High Quality of Milk Pay for the Increased Cost of Producing It," was discussed by C. I. Cohee, of the Inter-State Dairy Council, Philadelphia. This question has been in the minds of a great many dairy farmers who have been asked during the past two years to make many changes in their dairy barns looking toward the improvement of the quality of the product.

From the standpoint of holding their market for milk against competitors from outside sources, it is essential first of all that the milk be of high quality. It has been found that the consumer has been willing to pay a higher price for better quality of products, particularly from an ice cream and a butter standpoint. It is also true that the demand for "Grade A" milk which is a higher quality of milk than ordinary market milk has increased rapidly in the past few years. A higher price is paid to the producer of such milk.

If one-fourth of Philadelphia's milk consumption is "Grade A" milk, the added income which the producer receives for this milk, based upon the prevailing figure paid over and above the regular price for ordinary milk, is approximately $600,000.00 per year. This is a definite reason why producers should continue to improve the quality of the product.

Additional Cost Not Necessary

As a matter of fact there is very little additional cost in producing a high quality of milk. It is not necessary to have expensive equipment for this purpose. The producer must, however, exercise great care, good judgment, and clean methods in the production of his milk. The application of clean methods and proper cooling is not a matter of great expense, but these are the two most important factors to be considered in improving quality.

Much improvement is being made in the quality of milk. Four years ago there were times of the year when as much as forty per cent of the milk produced in certain counties in the Philadelphia territory was rejected at the country receiving station because it was below the demand as to quality. In this same territory during 1925, seldom more than one per cent, and never more than ten per cent of the milk was rejected.

A satisfied customer is a good investment, whether he be the consumer who drinks the milk in the city, or the dealer who buys the milk from the producer. Cooperative regulations, together with sound cooperative marketing, point the way to better markets, better prices, and a better appreciation of what the consumer wants, what the dealer must have to satisfy the consumer, and what the farmer needs to produce in order to enjoy a good market and a profit from his dairy.

"Dairy Barn Improvement," was the subject of an interesting paper by Mr. Norman S. Grubbs, of Philadelphia. The barn along the roadside is the storehouse of the nation. Over six million farmers in the United States have buildings in which is stored live stock and farm produce, constituting one of our nation's chief assets. It is of interest to note that in the East, farm buildings constitute a larger investment than the land itself. According to the last census in Pennsylvania, farm lands are valued at $559,861,344.00 while farm buildings are valued at $616,796,204.00. The characteristics of a successful shelter are as follows: 1. Warm, convenient, economical, well-lighted, and well-ventilated barn. 2. A permanent and fire-proof type of structure. 3. Labor-saving equipment. 4. A barn that is adapted to the production of clean milk.

Suggestions for the general improvement of the dairy barn situation are as follows:

A. There should be sufficient window space to admit plenty of light and sunshine and in most cases these windows may be used as part of the ventilation system.

B. If the walls surrounding the cattle are of concrete or stone a concrete slab over the cattle will serve as a fire barrier and at the same time furnish a tight rat-proof floor for the mows above.

C. Concrete floors and mangers are universally accepted as almost essential in any well regulated barn. They should be properly made with good materials.

D. A satisfactory system of ventilation is a big factor in maintaining healthy, profitable herd.

E. A good roof is just as important as any part of the dairy building. Many fires are attributed to leaky roofs and stored crops should be kept from bacterial action due to the presence of moisture.

The president's address brought out some interesting history concerning the Dairymen's Association. The original dairy association in this state was organized in 1871 as the Crawford County Dairy Association. In 1874 this name was changed to the Pennsylvania Dairy Association. However, its officers and members were still mostly citizens of Crawford County and the activities of the Association were largely confined to the welfare of the dairy industry in that county.

Concrete Floors Essential

On March 30, 1898, the association changed its nature to that of a state-wide organization and the name was changed to the Pennsylvania Dairy Union. In 1916, the Pennsylvania Dairy Union united with the Live-Stock Breeders' Association which had been organized in 1899 to represent the live stock breeders of the state. Mr. E. S. Bayard of Pittsburgh who had been secretary of the Live Stock Breeders from 1899-1913 and president from 1913-1916, was elected president of the combined organizations which were henceforth known as the Pennsylvania Live-Stock Breeders' and Dairymen's Association.

In January of 1925 it was felt, in view of the growing importance of the dairy industry in Pennsylvania that there was a need of a dairy organization in which the producers of milk, the distributors of milk, and the the manufacturers of dairy products could unite for the common interest of dairying, since there were many interests in the distribution and manufacture of dairy products which are not closely related to general live stock breeding. Accordingly by mutual consent the breeders of beef cattle, horses, sheep and swine continued as the Pennsylvania Live Stock Breeders' Association and all dairy interests including the producers and distributors of milk, and the manufacturers of dairy products united in the Pennsylvania Dairymen's Association.

The Association of Pennsylvania Testers was organized in June, 1924, and has been taking an active part in promoting cow testing work and instilling into its members the enthusiasm which is so necessary for a good tester.

Two state-wide meetings are held during the year. The one at State College takes place during Farmers' Week in June when officers are elected. The present officers are: President, A. A. Raudabaugh, Carlisle; vice president, Paul E. Roth, Greensburg; secretary-treasurer, C. R. Gearhart, State College.

Round-table Discussion

The second meeting is held during the Farm Products Show when members of the associations are invited to attend. This year the meeting was in the form of a round-table discussion, the members taking an active interest in the topics discussed. The first topic was "Feeding Service of the Tester to the Farmer." Mr. Hund opened this discussion and told how he helped some of his members change their ration and thereby saved enough to pay for all association dues.

One of the dairymen belonging to the association gave his experience in Cow Testing Association work, and told how his tester helped select foundation stock and figure balanced rations. The next discussion was on the subject of "Records Necessary to Analyze a Breeding Program." It was felt that this is an important part of our testing association work and should receive more attention.

Both testers and members gave numerous good reasons why cow testing association work should continue, and what the members are getting out of it.

A Treeless Woodlot

THIRTY-FIVE years ago heavy timber was cut up into lumber on a tract of land beside my farm. This was mostly white oak, chestnut, chestnut oak and poplar. Now there is a very thick stand of white oak, chestnut oak, poplar, all about six inches in diameter. These trees were seedlings which sprang up from acorns and the seeds of trees.

Now these trees are too young to produce seeds to start another growth. The owner is cutting everything away for fire wood and expects it to grow again. Now what happens? He gets only sprouts from these little stumps which will never amount to anything.

These oaks are not what chestnut trees were years ago. It used to be all right to cut down a chestnut tree and expect a bunch of post size trees again in about ten to twelve years, but not so with others. His wood lot has no good future.

This owner ought to thin only, and let the nicest trees mature. Then they would produce seeds again.—C. R. Bashore, Berks County, Pa.

Mention Pennsylvania Farmer when writing to advertisers.

You would fire him quick!

IF you had a hired man who did this to your cream you would fire him quick. Yet your cream separator may be doing the same thing and you don't realize it. You can easily tell, without a cent of cost, whether your old separator is robbing you or not. Ask your De Laval Agent to bring out a new De Laval and try this simple test:

After separating with your old separator, wash its bowl and tinware in the skim-milk. Hold the skim-milk at normal room temperature and run it through a new De Laval. Have the cream thus recovered weighed and tested; then you can tell exactly if your old machine is wasting cream, and what a new De Laval will save.

Thousands have tried this plan and many have found a new De Laval would increase their cream money from $25 to $200 a year.

The new De Laval is the best separator made in 48 years of De Laval manufacture and leadership. It has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is *guaranteed* to skim cleaner. It also runs easier and lasts longer.

Why Do Big Dairies Use Craine Silos More and More?

Dairies like Sheffield Farms, Borden Farms, Walker-Gorden Laboratory Company Farms, Federal, State, County and Township institutions.

They *know what their Craine Silos save them.* Savings in better kept silage. Savings in repairs. Savings in time and work because of absence of attention. Savings in *longer life* and freedom from loss through storm damage.

What a Craine Triple Wall Silo saves for one dairy, the same silo will save for any other dairy. A Craine will *help you make more money year after year.*

Do *you* want such better profits?

Then *decide now*—settle that silo question once and for all—and get your Craine *this season.*

Place your order for delivery before April 1st and have your roof frame without charge. Act *now.* Write us today.

Make your Horses eager for **PLOW TIME**

ROUGHING through the winter means a soft, unready team for spring. When plow time comes, you cannot afford to harness up a rough-in-the-hair, run-down, worm-infested team.

You cannot afford to wait at every furrow end on trembly, panting horses. Remember, the season doesn't wait on you; and it's the early oats that's oats, the early corn that's corn.

Condition your workers right now with a course of

Dr. Hess Stock Tonic

It will give their systems a spring house-cleaning—loosens up the bowels, tones up the liver and kidneys, enriches the blood, drives out the worms. Will help them shed their winter's coat. Then you have a team that can go down one side of the field and up the other without a stop.

Then you get your crops out on time—in the ground, growing. That's what counts at harvest.

Get your pail of Dr. Hess Stock Tonic to-day. Also give it to the mare in foal.

Buy it by the pail

25-lb. pail, $2.25; 100-lb. drum, $8.00
(Except in the far West, South and Canada)

Honest Goods—Honest Price. Why Pay More?

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

The Walsh No-Buckle HARNESS

$5 AFTER 30 DAYS FREE TRIAL

I Will Ship You a Walsh Harness for a 30 day free trial on your own team. See for yourself that my harness is stronger, handsomer, better fitting, handier in every way—a proven success for over ten years. If not convinced that it is the best harness you ever laid eyes on, send it back at my expense.

Three Times Stronger Than Buckle Harness
Buckles weaken and tear straps. Walsh 1½-inch breeching strap holds over 1100 lbs. The same strap with buckles will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles. Easy to see why Walsh is three times stronger than ordinary harness. Packers' Northern Steer Hide leather—best that can be tanned.

SAVES REPAIRS—LASTS TWICE AS LONG
The Walsh Harness costs less because it saves many a dollar in repairs. Users show average repair cost of only 9 cents per year. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Greatest advance in harness making. Easily adjustable to fit any horse. Write today for new reduced prices.

$5.00 AFTER 30 DAYS' FREE TRIAL
Balance easy payments, or cash after trial if you wish. Write today for free book, prices, easy payments and thirty days' trial offer, also how to make money showing Walsh Harness to your neighbors.

Baby Beef Show Followed by Sale of Calves

THE first prize of $50 offered the members of the Adams County Baby Beef Club in their show at Harrisburg in connection with the State Farm Products Show was won by Francis Murren. He also received the silver loving cup awarded by the Gettysburg Rotary Club for the best calf grown by the group sponsored by that organization.

Katherine Durburow won the Pennsylvania Farmer cup awarded for the best fitting and showing.

Donald Curns was awarded the Gettysburg Times cup for having the calf which made the greatest average daily gain. The remarkable gain made by the Curns calf brought him up from sixteenth place judged on individual merit to ninth place after consideration of individual merit plus daily gain plus record book.

The first ten prizes and the money awarded went to the following: Francis Murren, $50; Esther Hostetter, $40; Thomas Raffensperger, $30; Robert Lott, $25; Clifford Shriver, $20; Martha Durburow, $15; Donald Helges, $10; Donald Curns, $10; Norman Shriver, $10.

The Awards

From eleventh to twenty-third place the award was $10 each. From twenty-fourth to forty-ninth place the award was $5 each. Of the $500 purse offered, $300 was provided by the State Farm Products Show Committee, $100 by eleven banks in Adams County, and $100 by the American Hereford Breeders' Association. Forty-nine calves were shown and sold.

In the sale which followed the show the first prize calf shown by Francis Murren topped the auction at twenty-five cents a pound. The calf weighed 1066 pounds and sold for $266.50.

The total weight of the forty-nine baby beeves was 44,282 pounds, an average weight of 903.7 pounds. The total sum received for all the calves was $5969.54, an average price of $13.48 per hundred pounds.

One of the first fifteen calves, belonging to Nadine Garrett, was bought by E. F. Strausbaugh. Part of this beef will be used to feed the boys and the girls in the Baby Beef Club at a luncheon of Gettysburg business men, parents of the boys and girls, and members of the Adams County Agricultural Extension Association at the annual meeting of the association, February 3rd.

R. E. Underwood, county agent of Adams County, directed the work of the baby beef club members.

Sheep Exhibit

SHEEP at the State Farm Products Show were judged by P. C. MacKenzie, of the Pennsylvania State College. The prize winners were:

Pen of three lambs sired by purebred Hampshire ram—1, Fred McDowell, Mercer Co., $25; 2 Raymond Cox, $15.

Pen of three lambs sired by purebred Shropshire ram.—1, James Marquis, Washington Co., $25; 2, Harry Huise, Jr., Mercer Co., $20; 3, Guy Fullerton, Lawrence Co., $20; 4, Merrill P. Tait, Mercer Co., $20; 5, John Carlson, McKean Co., $15.

Pen of three lambs sired by purebred Southdam ram.—1, C. E. Mathers, Chester Co., $25; 2, C. E. Mathers, Chester Co., $15; 3, Herbert Brown, Indiana Co., $10.

Pen of three lambs sired by purebred Dorset ram.—1, W. H. Conyngham, Luzerne Co., $25; 2, J. B. Henderson, Washington Co., $15.

Grand champion pen, won over all breeds, by pen of three lambs sired by purebred Shropshire ram entered by James Marquis, Washington Co.

Placings, Prizes and Prices

Duroc Jersey Show and Sale

PLACINGS in the Duroc Jersey swine classes of the State Farm Products Show are announced as follows by H. G. Niesley, secretary of the Pennsylvania Duroc Jersey Breeders' Association.

First prize senior yearling, Lehman Zeager, Elizabethtown; first prize junior yearling, G. C. Souftey, Hummelstown; second prize junior yearling, Niesley Brothers, Mechanicsburg.

First prize senior pig, C. L. Miller, Lewisburg; second prize senior pig, C. K. Fertig, Dauphin.

First prize junior sow pig, E. W. Kline, Orangeville; second prize pig, Arthur E. Brown, Nottingham; third prize pig, Hockersville Stock Farms, Hershey; fourth prize pig, C. E. Frommeyer and Sons, Chambersburg.

The champion sow was consigned by E. W. Kline, Orangeville.

The highest priced sow sold in the sale for $107. She was consigned by the Hockersville Stock Farm, Hershey, and was purchased by Stanley F. Gable, Newport.

Berkshire Show and Sale

THE highest priced Berkshire in the sale at Harrisburg changed hands at $172, and the average price paid for the twenty-two pigs sold was $97.58.

The grand champion of the Berkshire show was a junior yearling consigned by the Sycamore Farms, Douglassville. Other awards were as follows:

Junior sow pigs. First, Pennsylvania State College; second and third, George Neff, Doylestown.

Senior sow pigs. First, second and third, Sycamore Farms; fourth, W. F. Rischel, Center Hall.

Junior yearlings. First and second, Sycamore Farms; third, W. W. Williamson, New Market, Va.; fourth, Pennsylvania State College.

Senior Sows. First, Charles L. Wilkinson, Rushland; second, Penshurst Farms, Narberth.

Gold medals for ton litter accomplishments were awarded by the association to Harold K. Benner, Vicksburg, and Donald T. Smith, Falls Creek, who grew the heaviest ton litter in the state in 1925. It was composed of thirteen pigs and weighed 3182 pounds at 180 days of age.

Chester White Show and Sale

THIRTY Chester Whites were exhibited and sold at Harrisburg during Show Week.

In the aged sow class, Big Belle and Princess Lady 3rd consigned by M. E. Knouse, Peach Glen, won first and second prizes, respectively.

Senior pig placings were: first to Bear Mt. Queen 3rd, and third to Bear Mt. Queen 4th, consigned by A. Dale Knouse, Biglerville.

In the junior pig classes first place went to Bear Mt. Queen 2nd and third to Captola May 3rd, consigned by A. Dale Knouse, Biglerville; second to High Top Girl, consigned by John Dietz, Ridgway; and fourth to Princess Lady 3rd, consigned by C. E. Cassell, Hershey.

Bear Mt. Queen 3rd, consigned by A. Dale Knouse, Biglerville, was grand champion of the Chester White show and the top of the sale at $125. The average price was $80 a pig.

Milder Musterole for Small Children

Thousands of mothers tell us they would not be without *Children's Musterole,* the new, milder form of good old Musterole especially prepared for babies and small children.

At night, when awakened by the warning, croupy cough, rub the clean, white ointment gently over the child's throat and chest.

Children's Musterole, like regular Musterole, penetrates the skin with a warming tingle and goes quickly to the seat of the trouble.

It does not blister like the old-fashioned mustard plaster and it is not messy to apply.

Made from pure oil of mustard, it takes the kink out of stiff necks, makes sore throats well, stops croupy coughs and colds.

The Musterole Co., Cleveland, Ohio

At the Wool Show

THIS year's wool show at Harrisburg was the largest and best ever staged as a part of the State Farm Products Show, according to W. B. Connell, Pennsylvania State College wool specialist, who judged the exhibits. There were 170 fleeces in the display, fifteen counties were represented. The awards are as follows:

Purebred ram medium wool: 1, Tioga County Wool Growers; 2, J. N. Marquis, Hickory; 3 and 4, Fred McDowell, Mercer.

Purebred ewe medium wool: 1, Fred McDowell, Mercer; 2, Mercer County Wool Growers; 3, J. M. Marquis, Hickory; 4, Fred McDowell, Mercer.

Half-blood medium wool: 1, J. N. Stewart, Jefferson; 2, 3, and 4, Lawrence County Wool Growers.

Three-eighths blood ewe fleeces: 1 and 2, Lawrence County Wool Growers; 3, Tioga County Wool Growers; 4, McKean County Wool Growers.

One-fourth blood ewe fleece: 1 and 2, Mercer County Wool Growers; 3, C. E. Crothers, Taylorstown; 4, McKean County Wool Growers.

Purebred Merino ram fine wool: 1, C. B. Day, Dunn Station; 2, George West, Waynesburg; 3, Rufus Patterson and Son, Kirby; 4, John Reynolds, Carmichaels.

Purebred Merino ewe fine wool: 1, Charles Orndorf, Waynesburg; 2, R. D. Hamilton, Canonsburg; 3, Charles Orndorf, Waynesburg; 4, Rufus Patterson, Kirby.

Merino wether fleece fine wool: 1 and 2, Lawrence County Wool Growers; 3 and 4, John Parson, Wind Ridge.

Merino lamb fine wool: 1 and 2, R. D. Hamilton Canonsburg; 3, J. W. Stewart, Jefferson; 4, J. H. Orndorf, Waynesburg.

Merino ewe commercial fleece: 1, William McGreevy, Deer Lick; 2, J. S. Stewart, Jefferson; 3, Mercer County Wool Growers; 4, John Parson, Wind Ridge.

Special county fine wool, six fleeces per exhibit: 1, Greene County Wool Growers; 2, Washington County Wool Growers; 3, Mercer County Wool Growers; 4, Lawrence County Wool Growers.

Special County medium wool, six fleeces per exhibit: 1, McKean County Wool Growers; 2, Mercer County Wool Growers; 3, Washington County Wool Growers; 4, Lawrence County Wool Growers.

Champion ram fleece: R. D. Hamilton, Canonsburg.

Champion ewe fleece: Charles Orndorf, Waynesburg.

Cups offered by the "More Sheep—More Wool Association" went to the first prize winners in each of the county classes in addition to the money awards.

Farmers' Filler.—1, Hayes Dorey, Clinton Co., $3; 2, Irwin Brown, Clinton Co., $2; 3, R. J. Miller, Clinton Co., $1.

Count me in on that!

Time was, as the elder generation will remember—and as the younger generation never will—when farm life seemed more than all work and less than no play. Today nobody with young ideas stays home when a few miles by the speedometer takes you to the motion picture theatre.

The farmer of years gone by might have been content to wear himself and his family out with all work and no play, but 1926 is a different story!

The motor car is part of that story, and good roads leading to better theatres showing Paramount Pictures are another—and the telephone, and radio, all bringing hints that there's a time to quit chores and come out of the kitchen.

Some families get away to Florida or California in winter, but it's a question whether they travel farther or get more excitement than those who see such motion pictures as The Ten Commandments, A Kiss for Cinderella, Seven Keys to Baldpate, The Trouble with Wives, The Pony Express, The Ancient Highway and the wonderful Zane Grey productions, Wild Horse Mesa, The Vanishing American, and many others.

By daylight or moonlight the road is open to the nearest theatre. There all the members of the family may sit together under the same spell of enchantment, refreshed by the wholesome flood of make-believe, light, music and laughter that not so very long ago was part of a world so very far away.

Jersey Home Bureau Meeting

Home-Makers Gather to Discuss Their Problems

THE Annual State Home Bureau Meeting at Trenton, January 15, was an outstanding event of Agricultural Week. One hundred and seventy-five home-makers attended, meeting together to discuss problems of the day as related to their own homes and the homes of our nation.

Business claimed the morning period and the following officers were elected for the ensuing year: president, Mrs. J. W. Ziskeu, Bergen County; vice president, Mrs. T. W. Bebout, Morris County; treasurer, Mrs. W. H. Hamilton, Mercer County.

Project leaders and county representatives left statistical data from their reports and gave splendid human interest talks. From Massachusetts came a friendly and loyal message from our former president, Mrs. Ida S. Harrington. Cooperation with all organizations working for the same end, was the keynote of her letter, the goal set for Home Bureau members being a new member each day.

Reports from the Counties

Sussex County suggested that the Home Bureau and Extension Service work hand in hand during 1926 to reach women on isolated farms, so that they may enjoy the beauty of creation as it applies to clothing, flower making and lamp-shade making.

Morris County's representative called attention to the importance of each mother's full duty in teaching her boys and girls sex knowledge, rather than imposing it on school or sunday school teachers. One of this county's accomplishments is the complete supervision of the Domestic Art Department of the County Fair.

In Essex County, the aim of the Home Bureau and Extension Service is to put home-making on a par with other professions. Luncheons are popular there, and foods served are prepared according to the recipes distributed at food selection classes.

Girls in Mercer County are eating spinach to make clear skins and rosy cheeks, and their mothers attend gatherings wearing dresses they made in group meetings with the home demonstration agent. Follow-up meetings are held to complete clothing work started by the agent, and local women are in charge.

Have Started Women's Exchange

Middlesex County has incorporated and is running a women's exchange. Social gatherings are the means of advertising the Home Bureau. Reed craft and lamp-shade making is the work of many county groups at this time.

Down in Monmouth County the women interest the men in home management by having them raise their work tables, equipping them with an under shelf and rollers. They also make a home made silver polish which is popular the county over. As for millinery, one grateful woman says she never enjoyed hat-comfort until she learned to make her own hats.

Many leaders mentioned girls' club work as a splendid encouragement for home work. In one county two members of the same group make all the wearing apparel for a little sister.

From Paterson City came the real message of Extension Service, "From me to you, then on," whether it be thru social gatherings, philanthropy or home economics exhibits.

Sociability was the main feature of the luncheon, after which the speakers were introduced. Mrs. Young, president of the New York State Home Bureau, mentioned outstanding features of their program, such as a scholarship fund, the Home Bureau in the movies and in book form. She expressed thoughts close to her own heart, urging that wealth of character be put above wealth in dollars. According to Mrs. Young the very best rejuvenator and beautifier is "service for others." She also stated that the home centers about Mother, but all the members of the family should have a share in being unselfish by helping her.

Mr. Chas. Tuck, of the Dairymen's League, took us for a peep into the homes of Japan and Russia, noting their domestic qualities, and their cooperative instincts as applied to commercial affairs. Then he brought us back to Jersey, warning us of the necessity to protect our markets by demanding home products.

Miss Vera T. McCrea, also of the Dairymen's League, continued the discussion of international home-making, stating that by a study of other homes, the views of others might be better understood and international relationships fostered.—Mrs. E. R. Dilts.

What Sewing Short-Cuts Will You Share?

WE ARE offering a pair of scissors, sharp and shiny, to the contributors writing the most original, most unusual hints helpful in the sewing room. All women who sew have individuality, and the genuine spirit of altruism is to share your good ideas with others. What worth while short-cuts has experience taught you in the children's sewing? What about making household linens up to par? Perhaps you know some machine tricks you never saw a neighbor use! Are you expert in re-making garments? It may be a little time-saving idea you could lend us, or a cloth-saving one. Whatever it is, write us about it. Your Editor is ever grateful to the wise mother who taught her to use tailor's shears and cut several pairs of little rompers at one time.

Starting with an early issue and continuing for several weeks we shall publish weekly a prize-winning article. Whose will appear first?

A Few Rules to Remember

1. Limit your story to 200 words.
2. Type your story if possible, otherwise write plainly, with ink, on one side of paper.
3. Let originality be the keynote.
4. Send your letters promptly to Home Page Editor, Pennsylvania Farmer, 261-263 S. Third St., Philadelphia, Pa.

Did you notice that the four prize-winning letters in our last contest were written by Pennsylvania women? May this contest call out meritable responses from the other states as well. Send us your ideas.—Gertrude S. Stewart.

For Better Babies

IN PREGNANCY eating meat more than once a day may be injurious to health. The physician may advise cutting meat out of the diet; if so, an egg dish may be substituted. Beef, mutton, lamb, poultry, and fish are more digestible than pork.

Overeating is dangerous in pregnancy, and it will not increase nor even help maintain the milk supply. The average woman of normal weight should not gain more than twenty pounds during pregnancy; the overweight woman may be better for gaining less or not at all.

Breads and cereals should be made of whole grain because of its high mineral and vitamin content. Whole wheat, oats, corn, and other grains can be obtained in flour or cereal form. Cereals may be used for breakfast foods and in mush, muffins, puddings, and soup. Butter or cream served on food adds greatly to the vitamin as well as the fuel value of the diet.

Green Leafy Vegetables Valuable

The green leafy vegetables such as spinach, chard, lettuce, endive, cress, cabbage, kale, collards, cauliflower, Brussels sprouts, string beans, dandelion greens, turnip tops, and beet tops have a value in the diet far greater than tubers, such as potatoes, or root vegetables, such as carrots, or legumes, such as peas and beans. The leafy vegetables, and fruit, either fresh or dried, should be used freely by every mother. They are not fattening. The overweight woman should reduce her use of sugar, potato, bread, and cereal.

Plenty of fruit and vegetables, with the help of whole-grain breads and cereals, make the diet laxative.

After the Holidays

NOW the holidays are past, children back in school, I will relax. We mothers live strenuous days thru December, making all around us happy thru the festive days. However, we who are no longer young may need a jolt, lest we are tempted to enjoy our rest beyond its rightful limit, and feel we are getting too old to enjoy work. Work keeps us young.

The seed catalogs will begin to come thru the mail. Thanks to Uncle Sam for jolt one. We get interested at once in seeds. Select some new things to experiment with this year if for no other reason than to create a greater interest in growing things. We will discard some of which we have grown tired, but the old reliable standbys we will never give up for something new.

Then we will wake up some morning feeling spring is near. The pussy willow buds will tell us. The warm rays of sun will tell us. The birds and the something within us that cannot be explained with words, will tell us the all wise Ruler of our beautiful old world wants us to wake up. I thank Him for this last jolt out of winter's languor into the way of willing, useful service to those around me.—Kate.

What of Jazz?

WHILE jazz is being so much discussed, we wonder "Will our grandchildren rock their babies to sleep, singing, "It ain't gonna rain no more?" Will the good standbys be forgotten: nothing left but jazz? No! No! The music of a nation has so strong a bearing on its moral calibre that it demands far more than the average jazz melody can provide. Some of the songs in daughter's song book are pretty and catchy, and even tho they are distinctly jazzy, sometimes we really enjoy hearing her sing them for they are so exhilarating.

Some folks claim to be able to work faster while listening to jazz on the radio or phonograph, and if they keep time with the music I do not doubt it. Do you suppose they ever make two sleeves for the same arm, or bake the luncheon broth?

The Rollicking Tunes

We have always had the rollicking songs, and how happily we recall them at times. Many of them have lived thru one generation. Elderly folks often are caught singing just a few words of an old jingle, and when we beg for more they cannot recall enough to satisfy us or them. Was it not an echo of the jazz of their youth? Yet it had not lived as long as they. Only worth while things live thru the ages, and are loved by many generations.—Mrs. E. M. Anderson.

Pantry Conveniences

PANTRY shelves no longer reach to the ceiling, the housewife having learned these upper shelves are used only as a storeroom for everything from paint to insect powder, that they are dear to the average mouse, furnishing an ideal nesting place and that a stepladder is needed if one wishes to find anything stored there.

Four by seven feet is ample size for the modern pantry and it should have a window thru which fresh air and sunshine can be admitted. Foodstuffs, staple groceries, in fact everything kept in a pantry, becomes stale and moldy unless there is plenty of ventilation.

Shelves for Jars and Canned Fruit

On one side it is well to have three deep shelves on which to keep jars, cans of fruit and vegetables, spices, etc. Under them there is room for a built-in cupboard for tin and enamel ware and under this cupboard, hooks on which skillets, pans, etc., can be hung. Under these hooks nail oilcloth, taking it out, or at least washing it with warm soapy water at frequent intervals.

On the opposite side of the pantry there should be shelves for towels, napkins and table linen. If you can't have the protection of a sliding door purchase an ordinary wide, white window shade, put the fixtures in place so that the shade reaches from top to bottom of these shelves, and except when taking out or putting away linen keep it lowered. This will keep out dust that seeps into even the best regulated pantry.—L. M. Thornton.

The Appreciation of Beauty

Training Children to See the Many Lovely Things

"OH, OH, pretty," breathed little Loretta, pausing before a lovely vase filled with flowers. The vase, a costly one, stood well within the little girl's reach and her hostess stirred uneasily as the child put out her hand and almost touched it.

"She does so love everything that is beautiful," said Loretta's aunt. "But you need not feel alarmed, she wouldn't think of touching it."

"Love of beauty is a wonderful heritage," said the hostess, "but isn't it rather unusual in so small a child? And almost any child of her age wishes to handle whatever attracts."

"Both due to training, I feel sure," answered the aunt. "There are four little folks in Loretta's family and they are alike. I remember that when the oldest was a baby their mother said to me: 'I am going to try and teach this baby to love beauty. So many people go thru this lovely world without really seeing the beauty surrounding them and it seems such a pity.

Don't Emphasize the Ugly Things

"'We emphasize the ugly things and learn to look for them—the neighbor's housepaint which we do not admire, the trash pile that we abhor, those old sheds that we wish might be torn down. And some of it is all right, I suppose, because we never should get rid of the trash and the unsightly things if we did not learn to see and to dislike them, but at the same time, why not give equal emphasis to some of the lovely things—the hills, the clump of pines on the ridge, the gorgeous clouds at sunset? I'm going to teach my children to appreciate beauty'!"

"That is an excellent idea," said a young mother who had been listening earnestly. "But what if a mother has nothing beautiful with which to surround her little ones? What if her house furnishings are cheap, and unlovely buildings shut out the hills, the pines, and the sunsets?"

"Loretta's mother has had almost nothing except absolute necessities for her little ones," said the child's aunt. "But there have always been a few lovely things that could be looked at and admired but which must not be handled.

"One Christmas an old uncle presented the children with a beautiful ship-model. It has been placed on a shelf where it can be looked at and admired; but for all practical purposes, shingles and pieces of bark floated in the washtub have been more useful for everyday boat toys.

"They have a nice little library started that will be fine for them in a few years. They know it is theirs and admire the lovely books but they play with their home made cloth scrapbooks. This training seems to have been good for the children. They respect lovely things and can admire without wishing to touch them."—Alice Margaret Ashton.

Rubber Door Mat

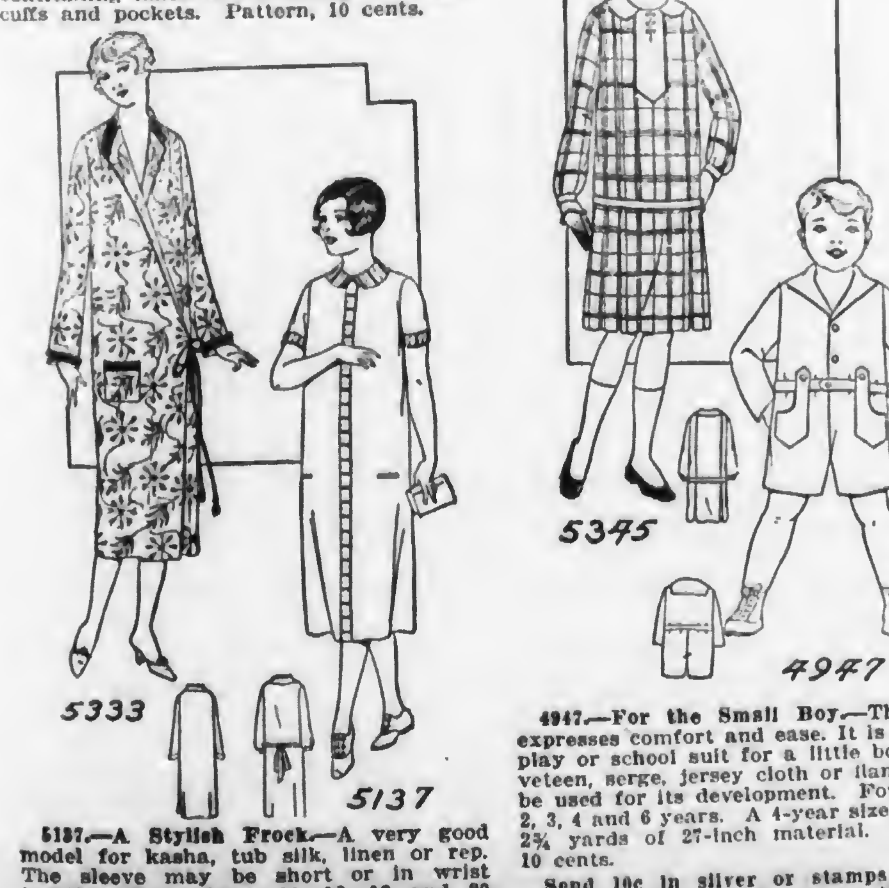
LATELY, I have been stopping in a farmhouse where a rubber mat was in front of the kitchen sink. I noticed that by the time the farmer and his helpers had "washed up" the rubber mat was full of dirt. All the housekeeper had to do was to carry the mat out and drop it bottom side up, when, presto, the mat was perfectly clean with no shaking. Neither did it get grimy or filled with dust.

Another virtue in cold weather—it keeps the feet of the dishwasher warm. If two other rugs like it were placed at each outside door the feet of the thoughtless would be automatically cleaned.—A. F.

When Winter Shuts You In

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5333.—A Comfortable Bath Robe.—Flannel, quilted satin, elderdown or blanket cloth could be used for this model. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4⅝ yards of 40-inch material and ¼ yard of contrasting material for facing on collar, cuffs and pockets. Pattern, 10 cents.



5137.—A Stylish Frock.—A very good model for kasha, tub silk, linen or rep. The sleeve may be short or in wrist length. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires three yards of 40-inch material, with ½ yard of contrasting material for collar, cuffs, plait and pocket facings, if made as illustrated. Pattern, 10 cents.

5345.—A Pretty Dress.—Plaid woolen, rep, crepe or velveteen would be attractive for this model. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 32-inch plaid or other material and ⅜ yard of contrasting material for vestee, cuffs, facings for collar and a belt as illustrated. If the entire dress is made of one material 3 yards will be required. Pattern, 10 cents.

4947.—For the Small Boy.—This style expresses comfort and ease. It is an ideal play or school suit for a little boy. Velveteen, serge, jersey cloth or flannel may be used for its development. Four sizes: 2, 3, 4 and 6 years. A 4-year size requires 2¾ yards of 27-inch material. Pattern, 10 cents.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth:—I want to tell you about my pets. I have a dog and a big tom cat. Our goat whose name is Sam will shake hands and play. He does quite a few tricks. I go in a kid wagon to school at Guy's Mills about two miles from our place. I have lots of fun in the kid wagon. —Grace Childs, eleven, Crawford County, Pa.

Dear Cousin Ruth and Forum Friends:—We have about six inches of snow on the ground and I always think this is a hard time for the little birds to get food. I like to throw bits of bread on the snow for the birds. When we took our Christmas tree out we put it in the yard and fastened it to the fence. Then we tied bits of bread on the limbs and called it the birds' Christmas tree.

How many Forum friends like coasting? I believe all boys and girls like coasting.—Ruth Louise Beegle, nine, (X), Bedford County, Pa.

I am glad you shared your Christmas tree with the birds. If they could speak I'm sure they'd thank you for giving them a Merry Christmas.

COUSIN RUTH.

Dear Cousin Ruth:—We had an entertainment at school the 23rd of December. We had pieces to speak and sang songs and had a good time. We are going to use the money to get an organ for the school.

I am writing this letter while I am out of school. I had the grippe and I haven't gone back to school yet. I spent my Christmas vacation at my aunt's; I had a good time.

We went down in a pasture field where there was ice and we took some bushel baskets along and then we would get in them and they would go along on the ice. Some times we would go the whole length of the ice without tipping over and some times we would tip over before we got to the end.

Cousin Ruth, did you hear the old Liberty Bell New Years eve? We heard it over the radio.—Philura Klipple (X), Lackawanna County, Pa.

No, I didn't hear the Liberty Bell New Years eve. We have a radio that doesn't work!

COUSIN RUTH.

Dear Cousin Ruth:—My brother has a four-tube radio set which he put together himself. I like to listen to the station from Atlanta, Georgia. Do you often listen on a radio, Cousin Ruth?

I have five brothers and three sisters, and I am the youngest of them.

CALVES FROM OUR TWIN COWS
Pauline Trimmer, Cumberland Co., Pa.

This is a picture of me with calves from our twin cows, Nancy and Fancy.

We have a large meadow thru which there is a stream of running water. The ducks and geese like to swim on the water. We raise lots of poultry. At present we have about 500 white chickens. When they are all out together they look very pretty. We also have a number of pigeons.

There are some long hills on our farm and I am waiting anxiously for the snow, so that I can go sledding. I think it is fine sport when there is a hard crust on the snow.—Pauline Trimmer, twelve, (x), Cumberland County, Pa.

Dear Cousin Ruth:—I take piano lessons in the summer. I don't take music lessons in the winter because I have to go to school. I have two brothers and two sisters.

We each have a bicycle and have good times in summer. I have two dogs and five cats.

I like to draw and I will send you one of my drawings some time.—Mary L. Heller, eleven, Lancaster County, Pa.

HERE WE ARE, SISTER AND I, WITH OUR PETS
Mary L. Heller, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a little dog, her name is Nellie. I also have a pet rooster. It is a full bred rooster. I have lived on a farm almost six years now.

I go to school in the Blue Mountain Valley where I live, and I am in the seventh grade. There are only ten scholars in our school, but we have lots of fun snowballing each other. I enjoy trapping for muskrats, skunks, foxes, opossum and other fur animals.

Wow! Winter is here and we go sledding down the hills. But sometimes it is too cold to go sledding.

I help my father work at the barn, before I go to school and after I come home from school. I have two brothers and one sister.—Lester Dewald, twelve (x), Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm in New Germany. In the summer I help make hay. In the fall of the year I help to dig potatoes, pick apples, thresh and many other things.

My three sisters and I are taking piano lessons from my aunt. My sister and I play a duet. My mother can play the piano also. My father plays a violin and a mandolin, so you may be sure we have lots of music.

We have four young pigs. They are pure white and are the cutest little things you ever saw. We had five large pigs, but we butchered two of them, and intend to butcher the other ones soon.

It has been quite cold here and we have had lots of snow. When the snow gets real deep my brothers and sisters and I, make snow houses, and snow men, and also dig tunnels thru the high banks of snow.

We also go skating and sled riding together. We skate on McCall's dam, which is close to our home. Cousin Ruth, I would just love to have you here to go skating with me. Wouldn't we have loads of fun?—Genevieve Shrift, eleven (X), Cambria County, Pa.

I'd like to go skating with you. I hope you joined the "Winter Sports" Contest and told more about your winter fun.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I live on a sixty-acre farm and I feed the horses and cattle in the evenings when I come from school. For my pets I have eight rabbits and a dog. We are going to move on a 150-acre farm in the spring. I have one mile to walk to school, but when we move I will only have one-half a mile to walk. My brother and I go together. I am in the eighth grade.—Clayton H. Martin, twelve, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—I am in the ninth grade. Altho I am getting along nicely I find my lessons are much harder than they were in grammar school. I go to Frankford High and live about a mile from school. I go to school every day and walk with my brother most of the time. On stormy days our father takes us.

We live on a farm of fifty-five acres and raise strawberries, corn and potatoes. When vacation comes we help our father on the farm. We have two mules and a horse, also a cow. We raise a few chickens and have three hogs. I have as pets three dogs.

On Saturdays and vacation times I go hunting with my dogs. I like rabbit hunting best. I sent in the answers to the last contest. A pair of skates or fountain pen would be nice now. Especially the former if it keeps on getting cold.—Elias Tingle (11), Sussex County, Del.

Sorry you didn't win the skates this time. Try again.

COUSIN RUTH.

Dear Cousins:—I like to read the other letters so I wanted to write. I am six years old. I went to school last year. It was a summer school. I will be in the third grade next year.

I have a little brother. I made a poem about him:

There was a little boy and his name
was Kent,
He jumped on a pole and down he
went.

I have a dog. His name is Jack. Kent has a rabbit. It is white. I had a black one but it died. Kent has a little fiddle. Kent and I have some goldfish. One is black and gold and the other is silver and gold. Kent found a butterfly upstairs and put it on the flowers in the bay window. It likes to live there.—Eleanor McNoughton, six (x), Potter County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Now that the groundhog has decided that he thinks of the possibility of an early spring, you may find it convenient to know the answer to the question in the puzzle this week. If you will look at the black and threatening cloud at the right of the puzzle, you will find six white odd-shaped pieces with lettering on them. Piece these little white clouds together so that they may a big sun-shaped circle, and you will know what you can do if the thermometer goes back on you. When you have found the answer, send it to me on a POSTCARD so that it reaches me by February 13th. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the January 16 issue of Pennsylvania Farmer is: VENTILATION.

The puzzle prize winners are: Lester K. Beam, age 11, Goodyear, Pa.; Bettie Buzard, age 9, Edenburg, Pa.; Beatrice Carl, age 10, Spring Glen, Pa.; Helen Elizabeth Edgar, age 9, Laurel, Pa.; Isabel Emery, age 9, Lewisburg, Pa.; Doris Faulstich, age 9, New Freedom, Pa.; Grabill Kulp, age 10, Ephrata, Pa.; George Piker, age 12, Newville, Pa.; Russell L. Rook, age 11, Ivyland, Pa.; Walter Stine, age 9, Port Matilda, Pa.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

(Continued from last week)

RAPIDLY passed the days until the early frosts made the hills of Peace Valley a riot of color, far more beautiful than artist could portray. School would begin again soon and of Tom's $14 left at the end of the term one solitary dime jingled against its lesser nickel brother. Altho he had "worked out" a few days the money earned had gone for necessities and not one dollar in ready cash was possessed by the Woodson family. True, Sam's credit was good at the stores for his word was good and bills would be paid when furs were sold but cash for schooling was another thing. Moreover, there was the $60 to repay John Roberts. The early promise of the contest field had ripened into fruition and without question there would be corn enough to pay the rental and some beside. It seemed impossible that from one small field enough income could be realized to pay a boy's expenses and tuition another year and the Woodsons held family council. But in Tom's heart had been implanted the seed of desire to carry on and that seed had flowered into vigorous life. His parents, too, were just as determined that their son should fulfil the high expectations of his teacher. But how to go ahead; that was the question. Sam Woodson in his usual positive manner settled the question.

"Reckon I'll sell the black pony," he announced, "I done been offered $75 for her. An' I can git along this winter with Bess and Ring. Ranny Simpson's just waiting to give me $25 fer that pup outen Old Trail. That will make a hundred, son, an' you can make out on that 'til I can earn some money trappin'."

But Tom would not listen to the sale of Trailer, pride of his father's heart. "I won't have to study so hard this term," he said, "so I can get a job out of school hours and help pay my way." But Sam wouldn't hear of that. He wanted his boy to have every hour needed for study lest he get lower grades than "them 'Outside' smart alecks." So despite Tom's protests the sacrifice was decided and the black pup, apple of the hunter's eye, soon would travel over the hills to a new master. Small sacrifice it may seem but to the mountain born none greater could be afforded. So it was decided upon that Tom was to go back to school and soon at a farm home telephone an excited youngster was hurling back rapid fire inquiries. "Sure we'll be room mates again," and Pepper Manning was turning handsprings to the imminent danger of all things breakable. But altho in Tom Woodson's heart there was rejoicing there was a pang at thought of the sacrifice his expense and his absence would entail. Some way, tho, he'd make it up to dad and mother and with that comforting assurance he was content.

Again a "flivver" climbed the long hill and the occupants paused at the crest to look down. With John Roberts was State Supervisor Saunders and a bronzed young man whom the teacher referred to affectionately as "Jum." At home he was County Agent James Farnham but on the college football team where Roberts had won the sobriquet of "Fighting Jack," Farnham had been the ponderous guard whose weight and courage had brought victory in many a hard fought game. "Some picture," remarked Farnham. "I'll bank on the honesty of the people here. Now if the corn is as good as you say it is, Jack, I'm sure that I've come to the right place. Anyway, the trip has been worth while."

Tom Woodson had shown many visitors his field and with due pride of possession he escorted the three friends. Nor was he lacking in ready answer as Supervisor Saunders questioned him about his record keeping and the total charge to date. Thru the field they went, stripping an occasional shuck and inspecting ear and grain. Finally at the field's edge they paused while in evident and smiling enjoyment Agent Farnham made a most astounding proposition.

What Would You Do with $1000?

LET us suppose that you have $1000 in cash which you can spend, give away or invest. What will you do with it? There are no strings attached to this money. You can use it as you please. The only condition is that you do SOMETHING with it.

Pennsylvania Farmer will give a prize of $5.00 for the best letter on this subject:

What I Would Do with $1000

Other letters which are published will be paid for at space rates. Writers may sign a pen name if they do not care to have their real name published. Letters should not be longer than 300 words, and should be in our hands by February 20th. Address them to WEEKLY CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

"Young man," began Farnham as he measured Tom with frank brown eyes, "I'm out on a tour of inspection—boys as well as corn. Mr. Saunders told me about your work and vouched for your honesty. I want 100 bushels of good seed corn for the farmers of my county and for a vocational agriculture friend whose students will have crop projects next year. You have the quality and I'm not afraid but that I'll get a square deal. I'll pay you $300 for that seed, selected and shipped at gathering time and here's $100 cash to bind the bargain. What do you say?"

SPEECHLESSLY Tom looked at his visitors and the tendered bills. Why, here alone was guarantee of a year's schooling and no sacrifice of his parents' necessary. Then, quickly came remembrance that half was to belong to his teacher friend and Tom rejoiced that his investment would prove so profitable. "Of course I'll take it, Mr. Farnham," he replied, "and I'll never forget your kindness for coming here. But half of the corn crop belongs to Mr. Roberts, give him the money you have offered me."

"Not a dime over what the land cost," smiled Roberts as he gripped Tom's shoulder with the clasp that always thrilled. "You've made good on the Sheldon recipe, old man, and the corn is yours. This hundred bushels won't make a good dent in your yield and you'll have more good seed for your friends at home. You've won, Tom, and you needn't thank me and yourself alone. Thank Mr. Saunders who in his travels over this great state thinks always of a boy's future as well as his present work. He's the man who brought Farnham here."

Then as Tom stammered his broken words of thanks the men found it necessary to go into the field again for the winning of victory often brings tears as well as joy.

Swift followed the days until a committee approved by the state association had measured fields entered in the yield contest, had taken samples for the moisture tests and called for the final reports. In company with his teacher Tom had gone carefully over the plot, selecting seed from the stalk as Roberts pointed out why one ear was desirable while its fellow on a stalk nearby would do only for feeding corn. The great ears had been hung up to dry in a vacant cabin where yawning cracks provided ventilation and where at gathering time more seed would be stored. It had been found that the clover field had contained six full acres instead of five and had Durham's plans for destruction gone thru ample acreage for the contest would have been left. Then came the days when frost had seared leaf and vine and Tom excused from school duties had gathered his crop, carefully selecting those ears which were best for seed. Weighed out, the field had yielded the magnificent total of almost 750 bushels of corn and not only was there the hundred bushels of seed bought by Farnham but an added fifty equally as good. With sound feeding corn selling at eighty cents a bushel and $3 a bushel for all good seed assured, Tom's crop project had returned more than $700 above all expense. It was almost unbelievable in the Valley, a remarkable altho not unheard of performance elsewhere. No matter what the contest's outcome a great victory had been won.

In his second year at school Tom Woodson had found a new atmosphere. He had won a place on the football team and his fleetness of foot and courage matched the weight and bulldog determination of Durham who was a co-star. With smashing attack and impregnable defense the Blanton team had lost but one game and was tied with another for the inter-county championship. In parting when the deal had been closed, "Jum" Farnham had remarked to Tom, half in earnest, half in jest, "There's just one condition about this sale. Jack here tells me that you have the speed and fight to make a great football player. Every old grad is a scout for Cardwell U. Promise me that when Jack gets thru with you at Blanton you'll go on to college and try for the team. Help beat Belleville, our ancient enemy, one game and if this seed corn purchase helps make your going and doing that possible I'll call it the best investment I ever made." Tom had laughingly promised but then college had seemed very far away. Now nothing seemed impossible.

There never could be real friendship between boys of such different temperament and ideals as Woodson and Durham but in the friendly intimacy that comes to a winning football team barriers are broken down and between the rivals there was no open antagonism. Durham was winning his full share of applause and repeated victory had softened resentment. Then, too, Woodson no longer was a friendless outcast. He had money in the bank, new clothing, the recognition that achievement ever brings to boy or man. Slowly but surely factionalism was disappearing and Blanton High was being welded into one fighting unit whether it be on the football field or in the school room. No teacher but sensed the change and rejoiced. Robert Durham could not help but absorb some of the school spirit and now faithfully he followed Coach Roberts' instructions and was part of a machine, not the individual player who had tried to win applause in basketball. Altho no word was spoken it was evident that a truce had been declared but until by word or deed Durham and his followers acknowledged wrongs done and offered apology, Tom Woodson, son of his father, never would call one who had been "dirty," friend.

AS THE months had passed, in the heart of Robert Durham had been awakened a deep and abiding respect and admiration for the manly man who combined pluck and fighting spirit with patience and forbearance. Every boy must have his hero and as with Tom, John Roberts had come to typify all that was admirable. Nor had Roberts failed to sense the change and to put forth effort to win confidence and to impress upon Durham what it means to play the game of life as well as the game of football, hard but clean. Knowing the inherent ability of the boy and that as the spoiled son of doting parents Durham had been in some respects unfairly handicapped, John Roberts strove in the building of character as well as in training for agriculture. Deep in the heart of Robert Durham budded a passionate resolve to show this man that he, too was worthy of affection and friendship. Alone he made secret acknowledgment that almost from the beginning his opposition to Tom Woodson had been founded upon desire to remove a rival that he might stand at the right hand of his teacher friend. But unfair methods had failed and now to himself Durham admitted a great wrong had been done. Pride held him back from public acknowledgement or private apology but with the least encourage-

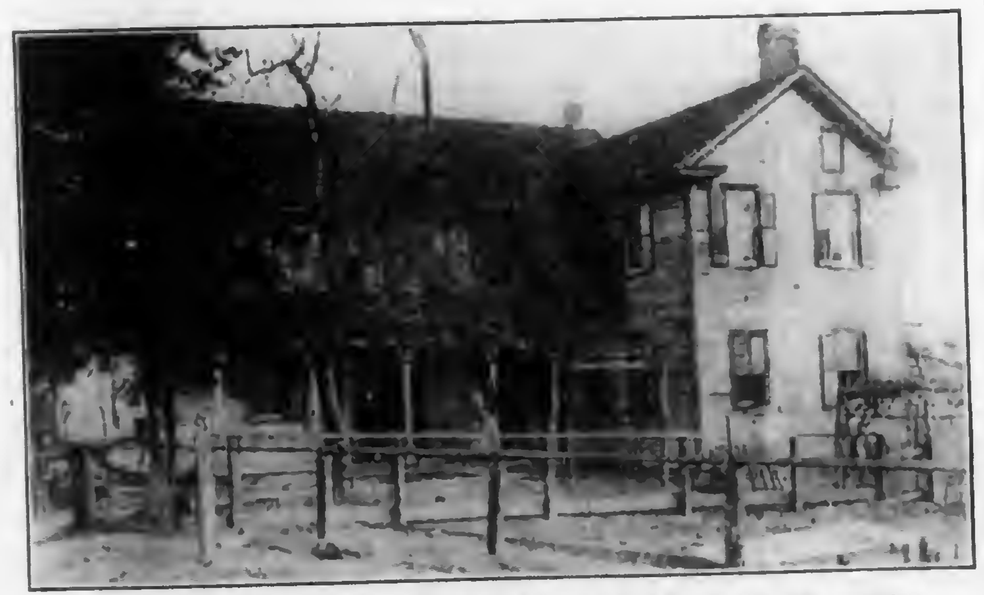
Old Colonial Family Homesteads

No. 34—The Mauser Farm

DEAR Editor of Pennsylvania Farmer:—The farm which I am writing about is in Cooper Township, Montour County, and joins the land of the insane institution. Nicholus Mauser was born January 12, 1750 and died September 12, 1826. He purchased this farm from George Miller. Christian Mauser, the next owner, died May 27, 1866, then Jacob Mauser became owner. After his death in 1869 Aaron C. Mauser, who was twenty years old the day his father died, became owner. He farmed the farm for fifty-three years. Four years ago he plowed fifty-six acres during the season but since that time he has been unable to work.

Having no sons to keep the place in the Mauser name, Aaron Mauser sold the place to his daughter, Mrs. Charles Krum, in September, 1922 and is still living with her and her husband at the old home. The old log house is still standing and is used for a wash and butcher house. A large thirteen-room house has been built on the farm to take the place of the log cabin. It is ninety-nine years since Nicholus Mauser died in the log house.



The large house which took the place of the old log cabin.

The deed, which is written on parchment, bears the date of 1773 and is in excellent condition, every line being clearly legible. The reading runs as follows: "Thomas Penn and John Penn, Esquires, True and Absolute Proprietors and Governors-in-Chief of the Province of Pennsylvania, etc., etc.

When Land Was Cheap

The consideration named for the 315 acres was "fifteen pounds, fifteen shillings" or about $65 of United States money. The Mauser farm was presumably in this tract for in the batch is another deed bearing the date 1795, which transfers the same tract from George Miller to Nicholus Mauser. By this time, however, land was increasing in value and the consideration was "seventy-five pounds."—Mrs. Aaron C. Mauser.

Tom of Peace Valley

(Continued from preceding page)

ment from his followers Durham would have "come clean." Something of this he conveyed to the "Wasps" at what was now an infrequent gathering.

"Fellows," Durham had remarked after they had lived over again a great game in which Tom Woodson had scored two touchdowns and made victory possible, "it's lucky for Old Blanton that we didn't drive Woodson out of school. Sometimes I think we should tell the 'prof' just what we tried to do about that corn and take our medicine. What do you think about it?"

At the words Johnson had been on his feet, alarm and distrust upon his face, "Trying to throw us down, are you?" he had demanded. "Think that Roberts wouldn't have us all thrown out of school if he knew we'd been picking on 'teacher's pet?' You can kiss your chance to play football goodbye, 'Bull,' the minute Roberts hears what we've been up to. Keep a stiff upper lip and play the game. What the 'prof' doesn't know won't hurt him and what Woodson can't prove won't hurt us." Yellow to the core was George Johnson as Marvin Manning had remarked in the beginning and with his words died the half-formed purpose of Durham to tell all. Nor was Johnson willing to let the feud die out. Afraid of the wrath of Tom Woodson he contented himself with petty irritation of Tom's small chum knowing well that every word would be passed on. Excitable, easily aroused to anger, Pepper Manning seethed with desire for revenge upon his enemy and but for Tom's steadying influence long before would have "told the world" what had happened one dark night in Peace Valley.

(To be continued next week)

They were making a drive to raise funds for an addition to the First African Baptist Church of Campbell Courthouse, Va. Two colored sisters called on old Uncle Berry, an aged negro who lived on the outskirts of the village, and explained the purpose of their visit and asked the aged darky to give something toward the cause.

"Lawsy, sisters, I sho would like to help you-all along," he said, "but I just ain't got it. Why, I has the hardest time to keep paying a little something on what I already owe round here."

"But," said one of the collectors, "you know you owe the Lord something, too."

"Yes, dat's right, sister," said the old man, "but he ain't pushing me like my other creditors is."—De Laval Monthly.

A son of Erin, Tim by name, boarded a street car. All seats were occupied except one, in which a quite grouchy appearing man had seated a pet monkey next to him. Finally Tim walked up and pointing to the monkey, said:

"Beg pardon, sir, but has this gent paid his fare?"

Without a word the grouch picked up the monkey, sat him on his knee and Tim took the seat. After a few blocks Tim asked:

"Beg pardon, sor, but what nationality is your friend?"

"Half Irish an half ape," snapped the grouch.

Tim smiled genially. "Begorra and he's related to both of us, ain't he?"

GOLD SEAL

Look for the Gold Seal

GOODYEAR RUBBER CO. GOLD SEAL 1872 TRADE MARK

Gold Seal Short Boot for all-'round service. Extra-heavy sole of tough gray rubber. Men's and boys' sizes.

Over Fifty Years of Top Value

NO matter what you buy, you base your purchase on *value*—what you get for your dollar in terms of *service* or some other worth-while consideration. *Price alone* does not determine value—nor does *quality* alone decide it. The two combined, make value. When you get the best quality goods possible to buy, at the price you pay, then you are getting *top value*.

For over fifty years the Goodyear "Gold Seal" trade-mark has stood for *top value* in rubber footwear. No better rubber footwear *at any price* is obtainable than "Gold Seal." Yet "Gold Seal" goods are not high-priced.

If you want *top value* for your money, insist on getting "Gold Seal" rubber footwear. Look for the trade-mark on the goods. It is your assurance of *extra-quality*. *"Gold Seal" boots, rubbers and overshoes are made for the entire family.*

FARQUHAR STAR
Hillside Corn Planter

This is an ideal two-row planter with separate adjustment for each row. Complete description reveals its extreme adaptability for all kinds of soil.

The most easily adapted planter for all kinds of grain—corn, beans, peas, beets, etc. Very superior for hillside planting. Built with or without fertilizer attachment. Double Disc, Runner or Shovel Openers and with Disc or scraper coverers.

Write for catalog 725. It describes our One-row Planter also. Ask for a Memo book.

A. B. FARQUHAR CO., Limited, Box 746, York, Pa.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

What the Farmer Gains from Soil Analysis

What advantage would a farmer gain in having his soil analyzed?

THE chemist is expected to tell us when he analyzes a sample of soil how much plant food there is contained in the land from which the sample had been taken. A soil analysis may, therefore, be considered an inventory of the lime, phosphoric acid, potash, nitrogen, sulphur, etc., present in the soil. An inventory is apparently desirable for the reason that every ton of grain, hay, potatoes or other crop products would contain more or less definite quantities of these ingredients.

In a sense, the farmer is a manufacturer who uses up a certain quantity of raw material in producing the finished article. An analysis of a soil will, therefore, show the farmer whether he has a large or small supply of raw materials.

Also of Importance to Nation

The matter is also of importance from the national point of view. The federal government and the different states are engaged in the classifying and mapping of different types of soils. Samples of these are analyzed and a record made of the plant food contained in them. This work, when ultimately completed, will give us an inventory on a national scale of the present and future capacity of our soils to produce crops. It is understood, of course, that rainfall, temperature, topography and other factors will be considered together with the chemical composition of soils in establishing a proper basis for measuring the agricultural value of land. A like study of our forests, mines and water resources should contribute toward the development of a broad national policy for dealing with our national resources.

The above statement would indicate that the farmer's interest in the composition of the soil is a part of a larger and more general interest. The farmer might care to inquire not only as to the total amount of plant food present in his land, but also as to the amount which he could use in one or more seasons for the growing of crops. He recognizes, therefore, that there is a difference between quantity and quality of plant food. One soil, for example, might contain twice as much phosphoric acid as another soil and yet be unable to furnish as much available phosphoric acid to the growing corn.

There are what might be called internal as well as external factors which influence the feeding of plants. The nitrogen, phosphoric acid, potash and other plant food ingredients are found in the soil in different chemical combinations. Some of these combinations are more readily soluble than others. This means that they are more valuable for supplying the needs of plants than are other combinations not so readily soluble.

Internal Differences in Soil Itself

The differences which lie in the soil itself may be designated as internal. On the other hand, the rate at which the soil ingredients become soluble will be determined largely by the amount and distribution of rainfall, the range and variations in temperature and the aeration or ventilation of the soil as influenced by its texture and structure. In addition to this, the quantity of vegetable matter in the soil, the amounts and kinds of fertilizer and lime used and the extent and thoroness of soil tillage will affect the rate at which soil materials will become soluble.

It is possible for chemists in analyzing soil samples to determine the total as well as the so-called available plant food. The figures representing the total plant food are exact. On the other hand, the figures representing the available plant food are approximate. The chemist is able to measure availability as indicated by the internal conditions. He cannot estimate as accurately the effect of the external factors. It is evident that seasons, tillage, crops and other external factors vary to a point where exact measurements are impossible.

Must Interpret the Analysis, Too

Any good chemist can make an accurate analysis of a soil sample. But, if he has not had a thoro training in soils and soil fertility, he would be unable to interpret the analysis so as to make it helpful to the farmer. In the writer's experience, owners on land have paid commercial chemists for the analysis of samples of soil and were later obliged to send these analyses to soil specialists for interpretation.

In the long run, it is the student of soils who must interpret soil analyses for the benefit of the farmer as well as for benefit of those concerned with the framing of national policies of land utilization. In accordance with this view, trained men are being employed to draw representative samples of soil for proper study in the laboratories of the experiment stations and of the Department of Agriculture. Many millions of acres of land have been surveyed, mapped and representative samples analyzed.

This work, in turn, is used as a basis for chemical and bacteriological studies and for greenhouse and field experiments whose aim it is to develop practical applications and concrete directions for the treatment of the land and for the growing of crops that would give the most economical returns.

Essential to Have Trained Workers

The facts just noted would seem to show that the analysis of samples of soil is worth while. However, the sampling and analysis should be done by trained workers who represent a part of a well organized effort to inventory our soil resources. Within any given type or group of soils there are minor and temporary differences, such as variation in the content of vegetable matter, or the quality of the vegetable matter, the degree of acidity and the structure and texture of the soil that might be determined to advantage.

The more general study of soil types and of their composition, taken together with the temporary and local variations, supplies the means for giving to the farmer definite recommendations concerning such methods of treating his soil as would give him the best returns from the land.—J. G. Lipman.

"Did you fall?" asked a man, rushing to the rescue of a woman who slipped on an icy pavement.

"Oh, no," she said. "I just sat down here to see if I could find any four-leaf clovers."—The Way.

Are mine the only lips you ever kissed?"

"Yes dear, and the nicest."

RADIO DEPARTMENT

BRAINARD FOOTE

Choosing the Right Kind of Loud Speaker

(Continued from last week)

THE horn of the speaker may affect the quality of tone slightly. A wooden or fibrous horn gives a mellow effect—usually not quite as distinct on speech as a metal horn but preferred by music lovers as a rule.

Of loud speakers the phonograph type is the simplest. Here an ordinary headphone unit is attached to the tone arm of the phonograph in place of the usual reproducer and needle. Having a good sound chamber, this system works out fairly well even tho the phone unit employed is seldom of very high quality. It is suitable for moderate volume, but, like the small phonograph and small loud speaker, does not do justice to low tones.

A small horn type speaker is comparable to the phonograph attachment in results, is suitable for moderate volume—for a small room—and is very satisfactory for the reproduction of the speaking voice.

Horn and Cone Type Speakers

Of larger loud speakers, which are in the class above $15 or $20, the horn type and the cone type are the present outstanding examples. In the horn type, the diaphragm is two to four inches in diameter and the unit more powerful. It is a more satisfactory musical instrument than either the phonograph attachment or the low-priced speaker. It reproduces the higher notes best, but does sufficient justice to the lower tones to reproduce an orchestral program, with its accompanying harmony of bass notes, very pleasingly. The extent to which the low notes are heard, depends also upon the degree with which the set amplifies them.

Having a very much larger diaphragm than any other type of loud speaker, the cone speaker is undoubtedly the best when it comes to the full reproduction of low tones. Of course, the smaller sizes of cone are very little different from a large horn speaker in the reproduction of low tone, and a small cone is usually incapable of as great volume as the horn speaker. But the large cone brings out the depth and richness of music in a manner most satisfactory to the lover of music. The large cone, however, is somewhat deficient in its treatment of high tones, so that a soprano voice, violin in a solo, flute, etc., are almost always played to better advantage on a large horn speaker than on a large cone type instrument.

Ask for a Demonstration

For these reasons, it is essential that the prospective buyer ask for a demonstration, preferably on his own set or one just like it, or equipped with the same make of audio amplifying transformers.

Some may question the statement that a small cone speaker does not deliver low tones more satisfactorily than a large horn type speaker, but they should realize that the diaphragm of the horn speaker is heavier and may, therefore, have about the same natural frequency of vibration as that of the small cone type speaker, whose diaphragm is made of light paper or parchment.

Some folks, particular about musical points, have been pleased to find that it is possible to combine a high grade cone speaker and a high grade horn speaker, connecting them in series, so as to reproduce the entire musical scale with excellent uniformity. This combination is expensive and takes up a good deal of room, so that such an arrangement will not be of general interest. We may, however, look forward confidently to the day when the radio inventors and manufacturers will either solve the problem of making one instrument for the entire range of high and low tones, or else will combine in one instrument, two reproducers that will share the high and low range between them.—B. F.

Dictionary of Radio Terms

VARIOMETER—The variometer is a tuning instrument that is practically obsolete today for receiving sets on broadcast waves. The variometer is so named because it varies the meters or tunes to different wave lengths. It consists of two coils of wire of about the same size, one of which can be rotated inside of the other. The coils are usually constructed in the shape of a ball, so that they may be placed very close. Each coil sets up its own magnetic field when radio current is going thru it.

The coils are connected in series so that the current goes thru one and then thru the other. When the coils are in a certain position the two magnetic fields aid one another and the highest wave length is reached. With one coil reversed, the magnetic fields oppose each other and a minimum wave is tuned in.

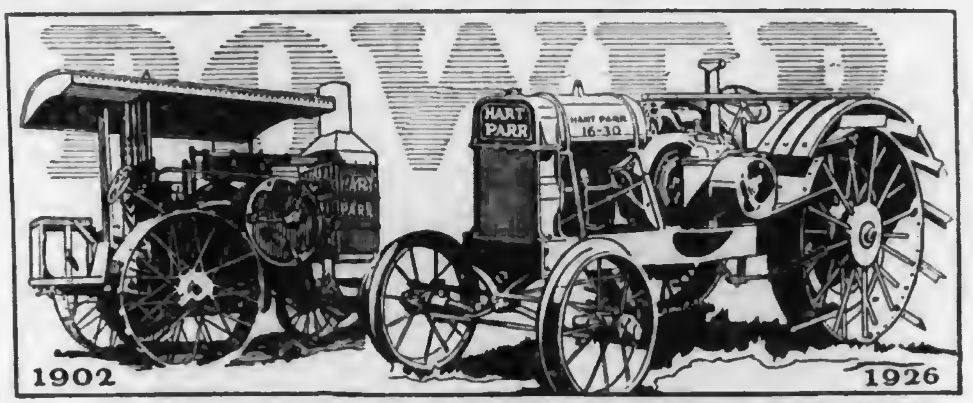
The variometer is not approved for broadcast receivers in the tuning circuits, unless of very small range, because it requires too much wire for a given wave length. Added wire means added resistance. A small variometer may be successfully employed as a vernier or to cover only a short range of waves.

* * *

GRID LEAK—This little instrument, located at the most critical spot in the whole radio set, is a very important bit of apparatus. The grid of the detector tube is separated from the tuning coil by a small condenser, thru which the signal impulses are conveyed. Were it not for the grid leak, the electrical charges would gradually pile up at the grid until finally, the grid would collect so heavy a charge that it would almost stop the flow of electrons. The tube is then said to choke.

The grid leak takes care of excess electrical charges when necessary by permitting them to leak off to the filament. The resistance of the leak is very high—usually 2,000,000 to 5,000,000 ohms—so that the signal impulses do not leak away before they have had an opportunity to affect the detector tube.

One may easily learn the value of the grid leak by removing it from its clip and tuning in a strong station. The signals will be loud at first but will quickly die away, to start up again with a bang, perhaps. Sometimes they are scarcely heard until the excess charge is taken off the grid by replacing the leak or touching the grid with the finger. The leak should be well made and permanent in its resistance, or it may make the set noisy. A resistance of two to three million ohms—two to three megohms—is correct for most detector tubes.—B. F.



1901 TWENTY-FIFTH ANNIVERSARY 1926
A Quarter Century of Service to Farmers

"My Hart-Parr is giving perfect satisfaction. When threshing with my 26-inch separator I also run a hay baler which bales the straw at the same time. The farmers in this neighborhood would make more money if they all had Hart-Parr tractors."
Graybille H. Zimmerman, Lititz, Pennsylvania

HART-PARR
DURABILITY
insures long life and few repairs

Do you want a tractor that will serve you for about two years, or one that will work with high efficieacy five or ten times as long as that? There are Hart-Parrs still operating after more than twenty years of farm work. Hart-Parr tractors are famous for their bulldog endurance. Every engine is made of big, strong parts; the crank shaft, main bearings, and connecting rod bearings are built for abuse—for brute force. Moreover, fresh oil is pumped to all working parts of the motor constantly—transmission gears run in a bath of oil. These are reasons why Hart-Parr tractors will do more work for a longer time than any in the market. And Hart-Parrs operate at a lower cost than other tractors, which is proved by hundreds of testimonials from Hart-Parr owners.

A Lighter Draft Plow
for your Fordson

For all-'round, every day service, you couldn't get a better plow than this E-B product. It will give you more plowed acres per gallon of fuel and an even depth of penetration, regardless of land surface. Extra clearance means light draft and trash covering ability. The rope control power lift will also save you both time and labor.

Another special feature—the E-B Q-D plow shares are the only really quick-detachable shares on the market, unequalled for efficiency. Only a few seconds required to remove and replace—and no tools.

If you want a real quality plow for your Fordson—one that will outlast ordinary plows and do better work—see this E-B model *at once*.

Lem Patnode, of Clinton Co., N. Y., is one of those dairymen who put cow-health first.

He says he feeds Unicorn because he can keep his cows in good condition the year around and at the same time get the milk at the lowest grain cost.

Lem Patnode
is the man

Miss Kelly, Gr. H.
is the cow

UNICORN MAKES MILK AT LOWEST GRAIN COST

But what Lem Patnode wants to show by this picture is this:

1. Unicorn-fed cows keep healthy.
2. Freshen normally.
3. Drop healthy calves.
4. Keep free from udder troubles.
5. Start lactation period in good flesh.
6. Produce to limit of natural capacity.
7. Maintain milk-flow for longer lactation period.

How about the health of *your* cows? Can they pass the above 7-point test?

If not—feed Unicorn Dairy Ration. Keep your cows healthy and at the same time cut from 20 to 50 cents from your present cost of making 100 pounds of milk.

Coating Alone tells the Life of Your Fence—

Test for Yourself

Take your knife and shave off the coating of a piece of LEADCLAD wire. Note the unusual thickness of this coating. Note also that this coating is not hard and brittle like galvanizing; that it cuts off in long shavings. This is why you can bend and twist LEADCLAD wire without cracking off the protecting coat of lead. Write for samples of LEADCLAD wire.

Bare steel wire cannot live. It must have a rust resisting coat. And how long your fence will last depends on two things.

1. The thickness of that coating.
2. The material of which that coating is made.

The coating of LEADCLAD fences is 7 times as heavy as that on ordinary galvanized fences; the coating of LEADCLAD fences is pure lead, the oldest and most satisfactory rust resisting metal. That's why LEADCLAD fence outlasts ordinary galvanized fence 3 times over. It saves buying and putting up new fence every few years.

Ask us for samples of LEADCLAD fence for reports of tests and full information.

New Organization Officers

FOLLOWING are the officers elected at meetings of Pennsylvania agricultural associations which held elections in Harrisburg during the week of the State Farm Products Show:

Pennsylvania Dairymen's Association.—President, A. A. Borland, State College; first vice president, Dr. Lynn Thompson, Montrose; second vice president, M. T. Phillips, Pomeroy; third vice president, W. S. Shrum, Jeanette; secretary-treasurer, Robert Brinton, West Chester.

Association of Pennsylvania Testers.—President, A. A. Raudabaugh, Carlisle; vice president, Paul E. Roth, Greensburg; secretary-treasurer, C. R. Gearhart, State College.

Dairy and Milk Inspectors.—President, Thomas W. Henderson, Secretary Board of Health and Milk, Washington, Pa.; vice president, J. W. Rice, M. D., President Board of Health, Lewisburg; second vice president, W. F. Davison, M. D., President Board of Health, Kingston, Pa.; secretary-treasurer, W. W. White, State Health Department, Harrisburg.

Pennsylvania Federation Holstein-Friesian Clubs.—President, Dr. L. M. Thompson, Montrose; vice president, J. G. Kerrick Towanda; secretary, H. E. Robertson, York; treasurer, H. E. Jones, Jr., West Chester.

Pennsylvania Hereford Cattle Breeders' Association. — President, Geo. L. Ball, Pittsburgh; vice presidents, R. J. Cunningham, Turtle Creek; F. A. Dohrman, Pittsburgh; Geo. G. Cochran, Dawson; E. V. Heffly, Somerset; directors, MacMillan Hoopes, Wilmington, Del.; Fred Brown, DuBois, Pa.; L. R. Sprowls, Turtle Creek, Pa.; Fred Huyler, Gladstone, N. J.; secretary-treasurer, F. L. Bentley, State College, Pa.

Pennsylvania Duroc Jersey Breeders' Association.—President, A. S. Frommeyer, Chambersburg; vice president, Ira Shank, Hershey; secretary, H. G. Niesley, State College.; treasurer, W. H. Mertz, Northumberland.

Poland China Breeders' Association.—President, R. A. Bowerson, McClure; vice president, Chas. Schaffer, York; secretary, C. L. Romberger, Uniontown; W. J. Treaster, McClure.

Pennsylvania Chester White Breeders' Association.—President, R. L. Munce, Washington, Pa.; secretary, C. E. Cassell, Hershey; executive committee, Pusey Cloud, Kennett Square; Russell P. Hileman, Annville; A. Dale Knouse, Biglerville.

Pennsylvania Berkshire Breeders' Association.—President, Mrs. E. R. Fritsche, Douglassville; vice president, W. F. Rischel, Centre Hall; secretary-treasurer, J. P. Winslow, Brookville; directors, Harold K. Benner, Vicksburg; George A. Neff, Doylestown; G. E. Tanger, York Springs.

Pennsylvania State Poultry Association.—President, W. W. Livingood, Robesonia; vice president, Joseph W. Parks, Altoona; secretary, J. F. Mickey, Alexandria, and treasurer, H. D. Munroe, State College. Directors elected include W. O. Gatchell, Rutledge, and Joseph W. Parks, Altoona.

Pennsylvania State Beekeepers' Association.—President, George H. Rea, State College, Pa.; vice president, Albert T. Keil, Mars; secretary-treasurer, Charles N. Greene, Harrisburg.

State Horticultural Association of Pennsylvania. — President, H. C. Brinton, Hanover; vice president, S. L. Smedley, Jr., Newtown Square; treasurer, E. W. Thomas, King of Prussia; secretary, R. E. Atkinson, Wrightstown; executive committee, above officers and Sheldon Funk, Boyertown; F. G. Reiter, Mars; G. B. Pollock, Wyoming.

Vegetable Growers' Association of Pennsylvania.—President, T. E. Biddle, Bustleton; vice president, W. H. Weinschenk, New Castle; secretary-treasurer, W. B. Nissley, State College.

Pennsylvania Society of Farm Women.—President, Mrs. John F. Hice; secretary, Mrs. Charles F. Knapper, Somerset Co.

The Small Grains

GEORGE A. STUART, State Department of Agriculture, and C. O. Cromer, Pennsylvania State College, judged the small grains at the Farm Products Show. There were eighty samples including wheat, oats, barley, rye, timothy, and buckwheat. Among the largest exhibitors were A. H. Wright, Lebanon County; A. M. Bates, Cumberland County; D. D. Fritch, Lehigh County.

The list of awards follows:

WHEAT

District No. 1.—1, Masonic Home, Lancaster Co., $3; 2, D. D. Fritch, Lehigh Co., $2; 3, B. L. Hindenach, Northampton Co., $1.

District No. 2.—1, J. S. Lyons, Fayette Co., $3; 2, Clyde Houch, Indiana Co., $2; 3, C. H. Esaman, Westmoreland Co., $1.

District No. 3.—1, H. C. Heilman, Lycoming Co., $3; 2, C. L. Miller, Union Co., $2; 3, Leroy Rovenolt, Northumberland Co., $1.

Grand Champion Prize.—H. C. Heilman, Lycoming Co., $3.

OATS

Patterson Type.—1, Glass Bros., Westmoreland Co., $3; 2, Fred J. Slezak, Westmoreland Co., $2; 3, Henry Heiland, York Co., $1.

Victory Type. — 1, Russel W. Evans, Cambria Co., $3; 2, Clyde Houck, Indiana Co., $2; 3, A. L. Shaffer, Jefferson Co., $1.

Grand Champion Prize.—Russel W. Evans, Cambria Co., $3.

BARLEY

1. J. A. Fraser, Susq. Co., $3.

RYE

1, W. D. Fairman, Indiana Co., $3; 2, W. E. Soft, Carbon Co., $2; 3, Harrison Jones, Cambria Co., $1.

TIMOTHY

1, John F. Zook, Mifflin Co., $3.

BUCKWHEAT

Silver Hull and Common Gray.—1, Elmer McHenry, Indiana Co., $3; 2, Ed. McHenry, Indiana Co., $2; 3, A. H. Hickok and Sons, Brad. Co., $1.

Japanese.—1, A. A. Shetler, Wesmoreland Co., $3; 2, Ed. McHenry, Indiana Co., $2; 3, J. D. McCurdy, Westmoreland Co., $1.

The approved method of milking goats in Belgium.

Riverside Tires
OVERSIZE CORD - BALLOON & TUBES

$11.95
30 x 3½
For Fords
($12.45 West of Rockies)

"I have a pair of Oversize Cord Tires that have been used more than 12,000 miles and show very little wear and still have the original air in them."—K. K. Kimberly, Torrington, Conn., Star Rt. 2.

"The reason I ordered the Riverside Cord tire was that a friend of mine bought four of them over four years ago and has driven them over 17,000 miles and is still using them. I know this to be a fact, for I saw all four on his car which he drove over from Davenport to visit me."
A. D. Dickinson, 1202—32nd Street, Rock Island, Illinois.

The Greatest Tire Value in the Whole World

You might buy a tire of equal quality, with just as long a guarantee—*if you pay more money!*

But you cannot buy more tire satisfaction, more mileage, for each penny of the price, than you get in a Riverside.

12,000 miles guaranteed
Your Saving is One-third

Riverside Cords are guaranteed for 12,000 miles; Riverside Balloons for 10,000 miles. And back of this guarantee is a 54 year old name—Montgomery Ward & Co. A name that has always been known to stand for reliability and square dealing.

Our customers know we live up to our guarantee. We could not possibly put our liberal guarantee on a tire unless exceptional quality was built into the tire. You take absolutely no risk whatever in buying a Riverside Tire.

RIVERSIDE OVERSIZE CORD

Why Ward's Tire Prices Are So Low

We believe we are the largest retailers of tires in the world. This vast buying power enables us to save on everything that goes into a tire. For example, we buy our own crude rubber in enormous quantities—and always for cash.

Riverside Tires are made in our own moulds under our personal supervision. The workmanship is the most accurate. No better materials can be found in any tire regardless of price.

Bigger — Heavier — Stronger
Your Saving is One-third

Pound for pound Riverside Tires contain the most new live rubber—they are bigger, heavier, stronger. And yet the price is one-third less than other quality tires. Last year twice as many people bought Riversides. There is the proof of quality, of service.

You cannot buy better quality. So why pay more? Riverside Tires will give you the last yard of mileage possible in a tire — they will give you the utmost in satisfactory service. Buy where you can be sure of quality and a saving.

I Learned this Priceless HARNESS SECRET From a Pail Handle

John C. Nichols, President

Made in all Styles

Quickly Adjusted

$5 Down after 30 Days' Trial; Balance Easy Monthly Payments

This Strap was Short-Snubbed

To prove my claim that Wear-More is the strongest harness made, let me send you any style you select for 30 days' free service on your own team. Test it in every way. I take your word for it if not then convinced. Simply return it at my expense. Write today for big, free book, with new reduced prices. See how I've done away with rubbing and see-sawing between leather and metal. Doubled wear right here! Learn how short-snubbing of leather under buckle edge or around narrow metal units costs you money in breakdowns and repairs. See how I overcome this—how I learned this priceless harness secret from a pail handle. I believe you owe it to your pocketbook to investigate, at once, this marvelous advance in harness-making and harness value.

JOHN C. NICHOLS, *Pres.*
John C. Nichols Co., 1537 Erie Ave., Sheboygan, Wis. Established 1909. Also Originators and Makers of FitZall Collars.

See above how oil is squeezed out, fibers packed, and strap cracked. Like carrying pail with wire handle. None of this in Wear-More Harness! Patented protecting buckles let leather pull against big, broad surface, just as well protected as your hand around the large, comfortable wooden handle on a pail bail.

Crop Insurance

Just as you insure your building against loss from fire, insure your crops against loss through fungous diseases.

TRIANGLE BRAND COPPER SULPHATE
(Blue Vitriol)

in Bordeaux Mixture will give you this protection.

Nichols Triangle Brand is the standard and can be had in large crystals, small crystals, and pulverized. Packed in new strong containers.

NICHOLS COPPER CO.

25 Broad St. TRIANGLE BRAND New York

You can prevent this!

Root rot . . and the heavy toll it takes out of the corn crop . . can be prevented!

LIKE every plant disease . . it has a cause . . a symptom . . and a cure.

Lack of available potash is the primary cause. Some growers call it "potash hunger."

There are several symptoms! In some cases, stalks reach normal size . . but the yield is low . . the ears are chaffy, starchy, and undeveloped. These symptoms show lack of potash.

In other cases the plants are dwarfed and generally die prematurely. This shows lack of phosphoric acid and potash combined.

In dwarfed plants root rot is easily detected. In plants of normal growth . . by splitting the stalk lengthwise you can detect the purplish-brown accumulations of iron and aluminum compounds which appear in the joints.

To prevent root rot . . many growers and authorities agree that available potash must be applied. So far as is known, root rot has never occurred where sufficient potash was available in the soil.

This disease is widespread throughout the corn belt, especially east of the Mississippi River. You can prevent it by using the *right* fertilizer . . preferably a high analysis mixture containing a good percentage of potash.

FREE. You will find helpful and useful information in the booklet "Hints for Profitable Corn Growing." You can obtain your copy by sending your name and address to the office below. Do it now while you think of it.

Better Than Ever

(Continued from page 3)

of the show and the crowds it attracted to gain publicity for itself. A team of boys from the Unionville Consolidated Vocational School, which is located in the heart of the mushroom district, demonstrated with a model of a mushroom house, quart bottles of spawn and shipping baskets, the essentials of how these fungi are produced. A team of girls from the same school cooked mushrooms in several ways and served them in sample portions to the onlookers. Attractive four-page circulars telling in detail fourteen different ways of cooking mushrooms were distributed.

The display of dairy products was nearly three times greater than last year. One hundred and thirty-one samples of milk, twenty of farm butter and two of creamery butter, were on the tables and made plenty of close work for the judges. Ninety samples of the milk shown scored over ninety points. In grade B raw market milk first place went to Chester H. Long, Ivyland, with a score of 98.10. Ninety-six of the milk samples came from the southeastern part of the state, the inter-state territory, and spoke well for the quality control work being carried out by that organization.

Beekeeper's Meetings Well Attended

In proportion to the importance of the product of their industry the beekeepers thru their state organization, seem to have more get-up and go than any other, represented at Harrisburg during show week. All of their meetings are well attended and a full program of practical talks given each year. Seventy was their record attendance this year with an average of sixty for four sessions. The honey exhibits this year were fifty per cent larger than last and showed the usual continued improvement especially in the attractiveness of the containers.

Wayne Dinsmore, Secretary of the Horse Association of America, with headquarters in Chicago, who knows more about the horse situation in this country than possibly anybody else, spoke on Tuesday morning. Twice as many horses in this country are now dying in a year, he said, as there are colts being born and during the next five years this rate will increase. He does not advise a general swing to horse breeding by eastern farmers but believes they should grow enough horses for their needs and sell them at seven years of age. Horses are returning for many uses in the cities, Mr. Dinsmore said. Those which have already been displaced by tractors and trucks would have in a year eaten more corn than is now exported in the same period.

There were 13,000 dozen eggs in the show which was a slight increase over last year. Silver cups for the best dozen brown and best dozen white eggs in the whole show went to Lancaster County poultrymen at Lampeter, Harold Brennerman winning for his brown eggs and Martin Rush, for his white entry. Dauphin County won for the largest and best county exhibit with Lancaster County second and Montgomery County third, altho Lancaster County had the largest number of prize winners.

Lancaster County Poultrymen Lead

The four sessions of the Society of Farm Women were well attended and a great deal of interest taken in the subjects presented. Theirs were the only ones, except one session of the Horticultural Society, opened in old Farmer's Institute style, with an invocation. It made me realize the true backbone of Pennsylvania's agriculture to stand with 200 farm women and repeat the Lord's prayer and feel a little out of place, maybe, being one of two men in the audience. Wednesday evening seventy-five of the members attended a banquet at the Harrisburg Women's Club where Mrs. Martha Megee, of the State Welfare Department addressed them. At the Thursday session Mrs. Hice was re-elected president and Mrs. Charles F. Knepper, Somerset County, secretary.

A fine new automobile truck with a specially built body to carry books into the rural districts, attracted a great deal of attention in the hallway of one of the exhibition buildings. It belonged to the Harrisburg city library and is the second one in the state to make regular trips into the country with books. The Dauphin County Library Association which is doing this work has been alloted $2500 for its first six months' activities by the county commissioners, who I understand under the law, can appropriate up to $5000 a year for this work. Clinton, Susquehanna and Lancaster Counties each have some appropriation for rural work and are circulating thousands of books.

Individual Potato Exhibits

There were nearly 400 individual exhibits of potatoes and they showed more uniformity than last year. Three counties were in the county contest and first honors went to Lebanon, second to Dauphin and third to Lehigh. The tubers which seemed to attract the most attention were the seventeen lots from as many members of the famous 400 Bushel Club. Each pile represented what was produced in forty feet of row and as big, little and odd shapes were all there they made an interesting exhibit. The meetings of the Potato Growers' Association was exceedingly interesting and well attended. Daniel Dean, the noted New York grower, was there and added his experiences to the many expressed by the local men.

These random paragraphs about the show would not be complete without one about the man who worked harder than anybody else to make it possible. Henry E. Klugh, of the Department of Agriculture, is the one who really puts the show across each year by attending to the multiplicity of details concerning it. When everybody else was tired and gone home this year he was the fellow who uncrated and cooped the thousand pigeons. For the first time he was given a place on the platform and program this year at the Tuesday evening mass meeting and told what was there to be seen by the visitors but not that his untiring efforts were largely responsible for it.

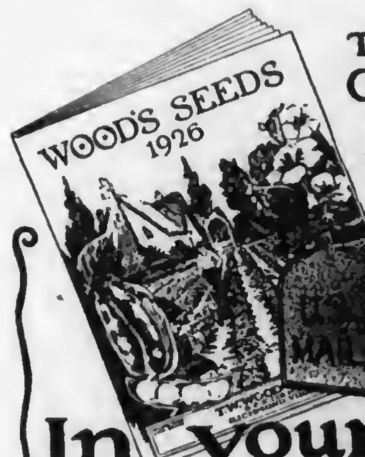
Prune Peaches Now

THORO winter pruning of mature, bearing peach trees will save some summer thinning of fruit and will stimulate a good growth of vigorous new wood, which bears the buds for the following year's crop. Both topping back and severe thinning out are essential in maintaining vigor of tree growth and high quality of fruit on old peach trees, states A. Freeman Mason, specialist in fruit growing, New Jersey State College of Agriculture.

A low-headed, vase-shaped, or open-center peach tree is always desirable for it permits ample light to reach the lower portions of the tree causing a growth of new wood on all branches. The low head also makes harvesting easier. The peach crop should be harvested in not less than three or four pickings, especially when the fruit is sold in nearby markets, and much expense is saved if most of the harvesting can be done without the use of ladders.

To keep the head of the tree open and low, all heavy branches growing into the center of the tree should be removed, and the upright vigorous growth, so often present in the upper portions of peach trees, should be cut back to a convenient height. Rangy side branches should also be headed back.

After these heavier cuts are made, the smaller wood should be thoroly thinned out.



They Grow and Yield

In your Mail Box Free

This better book of Wood's, about seeds and crops, that has helped thousands of farmers to better their yields.

John Wade Bondurant, of the famous Lanier Farms, says: "I do not know of another that gives so much valuable and easily accessible information as you give in your splendid catalog."

Tioga Feed Service—Fresh Feeds

Especially Adapted for Every Farm Animal

WE renew our invitation to make that little trip to Waverly. It will be a pleasure for us to meet you and it will be profitable for you, and, perhaps pleasant, too.

We've spent a lot of money on our plant during the past three years,—made many important additions which guarantee an even higher character of service for the future than has been possible in the past, and we are offering to present and prospective users of Tioga Feeds all the facilities which we have used ourselves in building up a successful and growing business. See for yourselves how you can use Tioga Feed Service for your benefit.

TIOGA FEED SERVICE makes available for you *right on the spot a large, constantly changing,* therefore *fresh, stock of feed* especially adapted for every animal on the farm. An increasing number of feeders are seeing the full value of having feed where they can get it when they need it.

TIOGA FEED SERVICE makes available for you, *free,* the advice, counsel and suggestions of an Animal Nutrition Expert in solving your feeding problems. "Hit or Miss" feeding was probably all right in the old days when feed and cattle both cost little money and milk prices were low. But, that kind of feeding is not profitable now and more and more feeders are seeing the real advantages offered by the Tioga service.

These are mere suggestions of what we offer in the way of service; we will say more about it later.

Write, or call and see us.

Butter steady; creamery, higher than extras, 47@47½c; do, extras, 92 score, 46½c; do, firsts, 88@91 score, 44@48c; packing stock, current make, No 2, 31c.

Eggs steady; fresh gathered, extra firsts, 36½@38c; fresh gathered firsts, 34½@35½c; do, storage, 26@28c; fresh gathered, seconds, 33@34c; do, storage, 17@25c; nearby hennery whites, closely selected, extras, 43@44c; nearby and nearby western hennery whites, firsts to average extras, 40@42c; nearby pullets, 37@38c; nearby hennery browns, extras, 41@44c; Pacific Coast whites, extras, 42@42½c; do, firsts to extra, 39½@41½c.

Cheese steady; state, whole milk flats, held, fancy to fancy specials, 28@29½c; do, average run, 26½@27½c.

Live Poultry steady; no freight quotations; chickens, by express, 29@35c; broilers, by express, 50c; fowls, by express, 28@31c; turkeys, by express, 40@45c.

Dressed Poultry steady; chickens, fresh 26@32c; do, frozen, 26@49c; fowls, 22@34c; old roosters, 18@27c; turkeys, fresh, western, spring, 44@55c; do, southwestern, 46@59c; do, frozen, 44@45c.

Beans—Market dull; marrow, fair to choice, lb, 8¾@9c; pea beans, lb, 5½c; red kidney, lb, 9½c; white kidney, lb, 8¼@8½c.

LIVESTOCK

Cattle—Steers, $7@10.90; state bulls, $3.25@6; cows, $2.50@5.50.

Calves—Steady; veals, common to prime, $9@17.50; culls and little calves, $8@12; buttermilks and grassers, $5@5.50; fed calves, $7@9.

Sheep and Lambs—Sheep, $3@8; culls, $2@3; lambs, common to prime, $11@16; culls, $10@11.

Hogs—Light to medium weights, $13.50@14.50; pigs, $14@14.75; heavy hogs, $13@13.75; roughs, $10@11.

HAY AND GRAIN

Feed—Quotations were as follows (all prompt shipment); City bran, $36; middlings, $36, in 100-lb sacks; red dog, $45, nominal, in 100-lb sacks; western spring bran, $34.25@35.50; standard middlings, $39.60; red dog, spot, $44.60, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $35.25, all in 100-lb sacks; cottonseed meal, 36 per cent protein, $39.50; prompt shipment linseed oil meal, $52.50, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $28; No 2, $26@27; No 3, $23@25; sample, $14@17. Straw, large bales, rye, $19@20.

Grain—WHEAT, No 2 red, c i f, dom, $2.06⅛; No 1 dark spring, c i f, domestic, $2.02⅛; No 2 hard winter, f o b, export, $1.99⅛; No 1 North Manitoba, in bond, f o b, export, $1.83⅛. CORN, No 2 yellow, 97¼c; No 3 yellow, 94¼c. OATS, No 2 white, 53c; No 3 white, 52c; No 4 white, 50½c; ordinary white, clipped, 52@54½c; fancy white, clipped, 55½@57c.

CHICAGO LIVESTOCK MARKET

Hogs—Steady to 10c higher; bulk, 250@300-lb butchers, $12.45@12.75; majority desirable, 200@225-lb averages, $12.95@13.35; bulk better grades, 190 lbs down, $13.50@13.75; tops all weights, $13.75; packing sows, largely $11.20@11.40; heavyweight hogs, $12.15@12.85; medium, $12.45@13.45; light, $12.40@13.75; light lights, $12.25@13.75; packing sows, $11@11.60; slaughter pigs, $13.25@13.85.

Cattle—Compared with week ago: better grade fed steers 25@50c higher; good to choice heavies fully 50c up; extreme top on heavy steers in load lots, $11.60; part load, $11.75; 1000-lb yearlings upward to $12; few yearlings above $10.75; numerous loads heavies, $10.75@11.50; stockers and feeders, 25c lower; edge off canners and cutters and common cows; better grades of fat she stock 25@50c up; bulls about steady; vealers, 25@75c lower; weeks' bulk prices follow; steers $8.75@10.75; fat cows, $5.35@6.85; heifers, $7@8.25; canners and cutters, $4.25@4.75; vealers, $11.75@13; stockers and feeders, $7.25@8.25.

Sheep—Compared with week ago: fat classes generally steady; top fat lambs, $15.75; feeding lambs, $15.60; yearling wethers, $13.75; two-year-olds, $14; ewes, 9.50. Week's bulk prices follow: Fat lambs $14.50@15.25; feeding lambs, $14.50@15.25; cull natives, $12@13.50; yearling wethers, $12@13.25; wethers, $10.50@11.50; fat ewes, $8@9.

WOOL MARKET

Boston, January 30, 1926.

Domestic—Ohio and Penna fleeces: Delaine unwashed, 54@55c; ½-blood combing, 53@54c; ⅜-blood combing, 54@55c; fine unwashed, 48c. Michigan and New York fleeces—Delaine unwashed, 51@52c; ½-blood combing, 51@52c; ⅜-blood combing, 53@54c; ¼-blood combing, 54@55c; fine unwashed, 46@47c. Wisconsin, Missouri and average New England—½-blood 48@49c; ⅜-blood, 49@50c; ¼-blood, 50c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, January 30, 1926.

Cloverseed, cash, domestic, $20; cash, imported, January and February, $15.45 bid; March, $15.50; October, $15.90. Alsike, cash, $16.50; March, $16.75. Timothyseed, 16.50; March, $16.75. Timothyseed, cash and January, $3.75 asked; March, $3.80 asked.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, February 1. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran .... $	35.00
Spring bran	34.50
Soft winter wheat bran	36.50@37.00
Hard winter wheat bran	35.00
Standard middlings	34.75@35.00
Soft winter wheat middlings.	34.50@39.50
Flour middlings	35.50@39.50
Red dog flour	43.00@45.00
White hominy	35.20@35.50
Yellow hominy	35.00
Gluten feed	45.00
36 per cent cottonseed meal..	38.50@39.50
41 per cent cottonseed meal..	41.00
43 per cent cottonseed meal..	43.00@43.50
34 per cent linseed meal.....	52.75@53.20

Millfeed in larger supply, market easier. For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Butter Markets

THE factor principally responsible for the firm condition of the butter markets and the advance in prices during the week ending January 30 was an excellent consuming demand resulting in a restoration of confidence. For several weeks past the demand has been good enough to take care of the current receipts and also good sized blocks of storage butter. Supplies seemed sufficient to meet the demand and any attempt to push prices higher was met with freer offerings.

During the week previous to that under review stocks began to clean better and demand was improved to such an extent during the week under review that receivers on the larger markets faced a shortage of butter and began raising their asking prices. The higher prices failed to check the demand and all week stocks were barely sufficient to take care of buyers' needs.

County News and Comment

Bradford County, Pa.—Weather very changeable of late. We had a heavy fall of snow in early January and some good sleighing. About a week ago a spell of warm weather took all of snow, then in one day temperature dropped to zero and below. Changeable weather is very hard on poultry but no bad effects on health of birds show yet, but production in some flocks has dropped nearly fifty per cent. Flocks under artificial illumination do not generally show such a decrease in production. Egg prices are sixteen cents lower now than at this time last year. Butter market seems rather dull. Apples very scarce. Recent thaw has been very hard on winter grains. Many fields covered with ice. Hay baling about completed. Market dull but small mounts moving slowly. The anthracite strike affects it somewhat. Practically all being sold to local buyers. Farmers' busy doing chores, cutting wood, and filling ice houses. The recent retest for T. B. in the once tested townships took out only a very low percentage and left them practically clean. Prices: clover hay, $14; timothy, $16; potatoes, $2.10.—G. E. E., Jan. 25.

Clinton County, Pa.—We experienced real winter weather the first two weeks of January, the thermometer going as low as sixteen degrees. Farmers stored a good quality of ice. Snow fell to the depth of twelve inches on January 8, but warm weather and rain melted about all so that only a thin covering remains to protect the wheat. The Clinton County Farm Bureau met on January 7 and elected officers and directors. A goodly number of farmers were in attendance. Some wheat being sold at $1.75@1.85. Some farmers holding for higher prices. Cloverseed, uncleaned, selling at $14 bu. Prime cattle scarce and high in price. Prices on butter and eggs declining. Butter 45c; eggs, 35c; chickens, live, 25c; wheat, $1.75; oats, 60c; corn, 75c; potatoes, $2.—W. C. W., Jan. 25.

Dauphin County, Pa.—We had a snowfall of about six inches on January 9th. This has all melted leaving wheat and grass fields unprotected. Ice houses have been filled with ice of excellent quality. Much interest was shown by the local community in the State Farm Products Show at Harrisburg. Boys and girls of local vocational high schools were successful in winning many premiums. Prices: potatoes about $2.25; wheat, $1.65; corn, 80c; oats, 50c; hay, $18@20; eggs, 45c; good country butter, 60c.—I. F. M., Jan. 23.

Fulton County, Pa.—We have had some intensely cold weather during the past month but enough warm days with it to be hard on the winter grain which has had but two weeks of snow protection. Much of the small clover which escaped in the drought of last summer is being frozen out. A very fine crop of ice has been harvested altho not as many farm homes provide their own supply of summer ice as formerly. Farm animals are wintering well. Potatoes are scarce and selling at $3 per bushel, clover seed is very scarce and most farmers will get seed from the seed house. More baby chicks than formerly will be bought in this vicinity. Roads are fine for the time of year. Market quotations: eggs, 32c; butter, 40c; veal calves, 13c; beef, 12@14c; lard, 18c; chickens, 25c.—T. H. T., Jan. 27.

Lancaster County, Pa.—Nice spring weather after a two days' thaw. Snow all gone. Roads bad. Some frost in ground yet. Getting tobacco down off poles nd stripping is in full swing. Some have finished. Quality is the best for several years. The buyers are out buying at a lower price than former years. Price eight and two to twelve and two. A large per cent of 1924 tobacco is still in farmers' hands. The local packers have not sold as yet. Potatoes scarce, going at $2.25@2.50. Some large growers are holding for higher prices. Cabbage scarce and high. Apples plenty and going at $1.25 bu. to $7 bbl. for best Staymen. Fat hogs scarce at 13@14c lb.; wheat, $1.70; corn, 80c@$1; chickens, 24c; eggs, 36c for best white.—C. R. E., Jan. 20.

Lehigh County, Pa. (Upper).—January has brought many cold days but little snow. Last week rain flooded the meadows and low lands. Grain fields have wintered well thus far and are looking well. During recent cold spells ice froze nine to ten inches thick and farmers and dairymen filled their ice houses. Very little farm work is to be done at present. Many farmers are installing radios. Many potatoes have been shipped during the earlier part of the month but the market last week was not good and prices dropped from $2.50 to $2.25 per bu. There are farmers who have lots of potatoes but the bulk is on the market. Chickens have been laying well during winter and prices are lower than for many a year at this season. Prices paid farmers for eggs are from 36c to 40c per dozen, way below production cost at present. Prices: wheat, $1.75; rye, $1.15; potatoes, $2.25; butter, 48c; eggs, 38c.—G. J. R., Jan. 25.

Monroe County, Pa.—Severe cold weather has come. The coldest point in county was at Stokes Mills on January 14 when the thermometer registered thirteen degrees below zero. Ice harvest has begun with thirteen-inch ice. Several inches on the ground. Good skating. The Farm Bureau has changed its name to the Monroe County Agricultural Extension Association which held a grain, corn and potato show in Stroudsburg from January 5 to 7. Products receiving prizes were shipped to the State Show at State College. The Monroe County Agricultural Extension Association, of which County Agent R. M. Decker is the head has planned to hold a farmers' community meeting in every township in the county during this year. Many subjects will be discussed. Several fox hunts will also be conducted by the county agent when snow falls for there have been many poultry losses from foxes. At the annual Farm Bureau meeting on January 6 Homer Shupp was elected president, John Felker secretary and C. B. Ellenberger treasurer.—G. E. S., Jan. 18.

Northumberland County, Pa.—Winter here in earnest now, temperature going fifteen degrees below zero last week. About every ten days the cold is broken by a thaw which is hard on the wheat. Wheat made little growth during the fall and prospects are not promising. Most of wheat crop has been sold, tho some farmers are holding for $2. Much corn was shipped during the late fall and winter. The annual Farm Bureau meeting, held December 17, was the most successful from the standpoint of attendance and interest in the history of the organization. Local prices: wheat, $1.80; corn, 80c; hay, $17; potatoes, $2; poultry, 25c; eggs, 38c; milk, $2.20 for 3 per cent; dairy cattle, $1.25@2.—W. C. G., Jan. 25.

Snyder County, Pa.—The anthracite coal strike has left its dire effects upon all classes adjoining the regions. Much sawed firewood is being retailed by farmers and owners of wooded tracts, at a good and ready figure. Truck loads of about a cord or one and one-half cords bring as high as $12. Snow has covered fields since Christmas. Good demand for all farm products. State highways are being promptly dragged and cleared of snows after a fall, yet some sleighs are doing business on the highways. The hog distemper, which last fall destroyed hundreds of animals, has been exterminated. Veterinarians pronounced it as species of "flu." Farmers hauling manure to fields, sawing logs and giving attention to farm stock. Wheat, $1.75; corn, 75c; oats, 50c; mill and dairy feeds high as usual, tho the prevailing high prices appear not to lessen active purchase by farmers and dairymen. Many farm sales billed for the spring season. Few houses for rent. Rents abnormally high. Farmers are interested in Governor Pinchot's Giant Power legislation. Much satisfaction expressed that the special session of Pennsylvania's legislature will come to an end after a month's duration.—W., Jan. 27.

Warren County, N. J.—Nine nights during January the ground was not chilled. A great deal of rain but not much snow. One week of good solid winter weather, the thermometer registering zero for two successive nights. Preparations were made to fill the ice houses but warm rains changed the program. Wood piles are growing and barn yards are being kept clean—a great winter for outdoor work. Cows are doing remarkably well but egg production is still very low. Those who have incubators are getting ready for early chicks. Potatoes are advancing and are now $3 bu. in the cellar. Eggs have dropped to 48c, and dressed pork to 18c lb. Wheat has advanced to $1.60; oats, 50c; rye, $1; buckwheat, $1; corn, $20 ton.—A. S. P., Jan. 22.

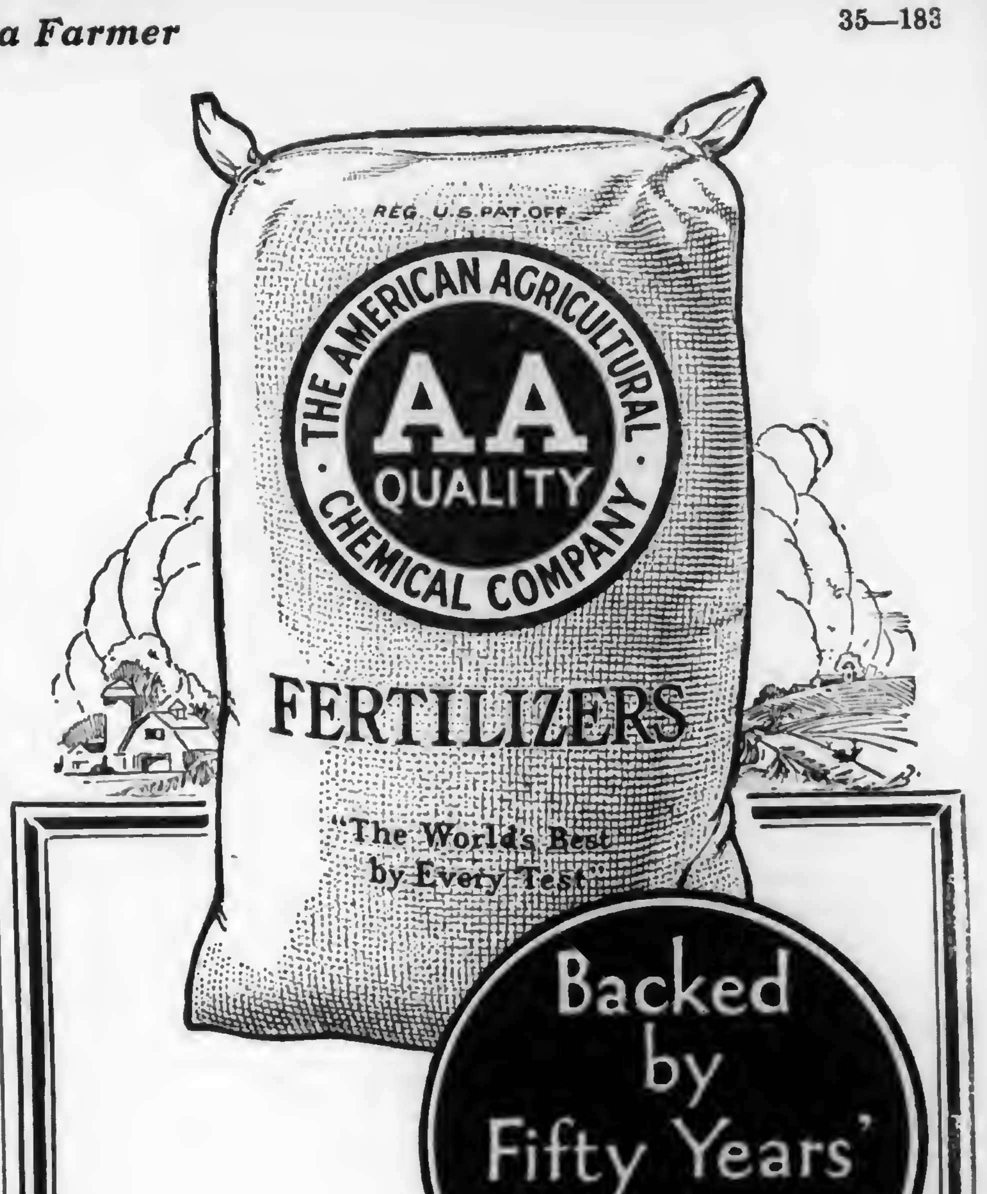
Prices and Prospects

NEARBY eggs were generally limited in supply in New York during the week January 20 to 27th. Toward the close of the week receipts were heavier, particularly from New Jersey. Better grades were fairly active and sold well while poorer stock moved slowly. Extra firsts closed at 38@39½c per dozen and firsts at 36@37c. Egg receipts increased in Philadelphia during the week and a total of 32,294 cases were received. Pennsylvania supplied 2547 of this number. Toward the close fine fresh eggs were fairly active with the market ruling steady. Extra firsts closed at 39c and firsts in new cases at 39c.

Grains Lower

Larger shipments of wheat from Australia and Argentina resulted in a decline in foreign markets which was reflected in lower wheat prices in the United States. The movement of corn was heavier and prices for feed grains were generally lower.

Arrivals of hay were ample and prices averaged easier. Timothy receipts continued light at Boston and the tone was firmer with top grades working a little higher. Offerings decreased at New York toward the close of the week ending January 23 and prices advanced. The Philadelphia market was quiet but increased offerings forced prices lower at Pittsburgh and Cincinnati.—W. R. Whitaere.



REG. U.S. PAT. OFF.
THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
AA
QUALITY
FERTILIZERS
"The World's Best by Every Test"

Backed by Fifty Years' Experience

While no great degree of skill is required in merely combining materials to meet certain analyses, *accurate scientific knowledge* and *experience* are absolutely essential in manufacturing fertilizers of the highest crop-producing value.

It is due to advanced methods of manufacture, developed by scientific research and years of practical fertilizer experience, that "AA QUALITY" Fertilizers have the greatest crop-producing powers and excel other fertilizers by producing larger yields and better quality crops.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Potato Prices and Prospects

Southeastern Growers Plan Larger Acreage

THE cold wave that has swept the country has hampered trading in practically all of the large markets. On January 29 the temperature in Philadelphia was eight degrees and this was the highest recorded in any of the eastern markets. Shipments have been running lighter during the past week but most cities report liberal supplies. Offerings in Philadelphia, however, have been light with Pennsylvania stock selling at $7 to $7.15 per 150-pound sack. Many dealers predict that light supplies and cold weather will cause another advance.

Growers in some producing areas are holding for an advance, despite the fact that prices have been fluctuating. Most of the trade feels confident that new high levels will be reached, but if everyone holds this opinion there is danger that consumption may be retarded and prices forced down in order to move the crop.

Prospects for 1926 Crop

Potato men are vitally interested in the prospects for the 1926 crop. In some sections of the country potatoes are being planted and in other seed is being purchased. Altho these early potatoes will not come into direct competition with the late producing states still they have an effect on the price of late stock during the early part of the movement. If acreage and production of early potatoes should be very heavy, price levels will be low at the time the late stock starts to move.

Planting in the Hastings section of Florida was well under way by the second week of January. This is about ten to twenty days late, on account of unfavorable weather. The acreage in the state is expected to be about the same as last year.

It is stated that twenty-five per cent more seed potatoes have been purchased by North Carolina growers up to this date than had been purchased during the entire season of 1923-24 or 1924-25. Dealers estimate an average increase in North Carolina of fifty per cent over last year. They believe that seed stock will be purchased up to planting time despite the high prices.

Seed of Exceptional Quality

Reports from Texas indicate a cut of about twenty per cent as compared with last year. Growers are very optimistic about the outlook for the year both from a market and crop standpoint. A letter states, "Seed is costing more than twice what it did a year ago, but it is of exceptional quality. If anything like the yields of a year ago are secured, on the present market outlook this will be one of the most remunerative deals in the Valley."

It is thought from present indications that the 1926 acreage in Norfolk and the lower Eastern Shore districts will be about the same as in 1924, and an increase of fifteen to twenty per cent over 1925, while the acreage north of Eastville and especially in Accomac County, may run around ten to fifteen per cent less than in 1925.—W. R. Whitacre.

Tobacco Letter

TOBACCO buying on a big scale started in Lancaster County January 20 when representatives from the two concerns which buy more of the local crop than all other buyers combined, came into the field.

The prices paid by these two buyers averaged twelve cents per pound for wrappers, and two cents per pound for fillers. It is to be expected that few of the other big buyers and independent packers will top this mark in their buying operations.

Earlier in the week several sales at eight cents a pound were reported. An investigation by the Farm Bureau disclosed the fact that the tobacco sold at this price was below the general run of this year's crop in quality.

Average Yield and Production Cost

H. S. Sloat, farm cost accountant of the extension service, released figures recently which gave the average yield for the 1924 tobacco crop as 1073 pounds per acre. The production cost was reckoned at $130.43 per acre while the return to the grower was shown to be only $128.76. This data was secured by Mr. Sloat from actual records kept during the year by representative growers. The labor return per hour on the tobacco crop was placed at 60.3 cents per hour for the 1923 crop, and at 29.3 cents for the 1924 crop.

Growers claim that the 1925 crop cost more to produce than that grown in 1924, and as the prices appear to be about the same, growers logically expect to lose more on this year's leaf than they did last year. Threats of a "cut-out" of the crop are heard on every side, and it may be expected that the acreage will be greatly reduced on the 1926 crop.—Garden Spot Farmer.

Somebody said a waffle was a non-skid pancake. We call it a baked crossword puzzle.

Visitors to the Farm Products Show saw a display of fine fruit and an exhibit of the kind of orchard machinery used in producing it.

NEW LAMP BURNS 94% AIR
Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia,** is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

SEEDS THAT SUCCEED

Our Soldering Outfit

LAST year I got tired of throwing buckets, cans, and tanks away because of small leaks. At one time I had $20 worth of such equipment in the junkpile. My neighbors had the same problem, and since the tinshop was eight miles distant, we decided to buy a soldering outfit and do the repair work ourselves.

Six families agreed to the plan, and a blow torch was bought for $4. Soldering copper, two bars of solder, and a tube of flux completed the outfit, and brought the total cost to $5.65.

Each member paid an equal share of the expense, and a farmer, conveniently located, was then appointed to keep the outfit. It could not be removed without the consent of the ring, but any member could take his repair work there, and use the outfit whenever he desired at no additional cost, except for the materials used. In this way we solved our repair problems, and brought many articles back into usefulness, at a cost of only a few cents.

Will Do a Variety of Jobs

And it is surprising to see what the little outfit will do. Aside from common mending, we repair leaks in galvanized tanks, watering troughs, feed containers, sheet metal, and auto or tractor radiators. We mend cracks in fuel pipes, close joints, fit eavespouting, fix leaks in the spray pump, repair burners in gas stoves, and keep dairy utensils in serviceable condition. There is always something in the community for the outfit to do.

Anyone, after a little practice, can do first-class soldering work. The part to be mended must be cleaned of rust and oil, and the copper heated to a dull red. Afterwards, smear a small quantity of paste around the leak, then by taking the copper in one hand, and bar of solder in the other, bring the two together just above the leak. A few drops of solder will melt off, and this must be worked around, and in the leak. A job can be completed in a very few minutes, for it is necessary to work quickly.

Be Ready, Then Begin

Have everything in readiness before a job is started, and there will be but little danger of failure. Instruction books, that come with each outfit, explain the work in detail, but like other repairing, the worker will soon find short-cuts to suit his particular job.

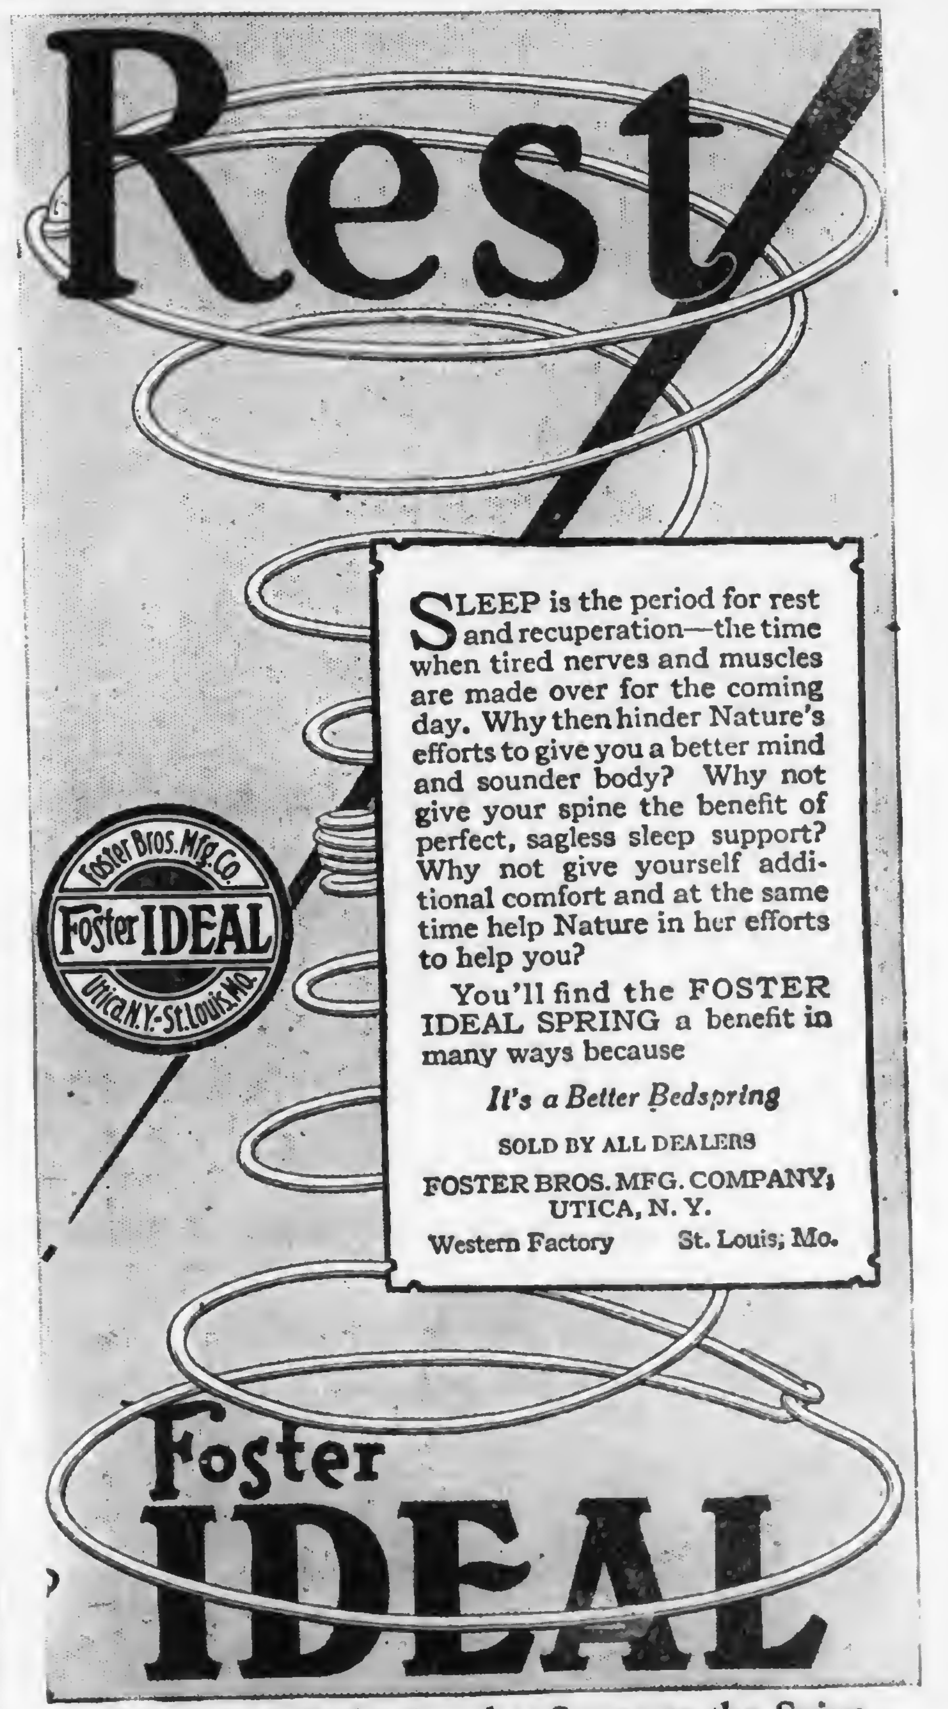
Soldering jobs can be done at any season, and it is a profitable way to spend a rainy day. One outfit can be made to serve any community and the cost per member will be less than the expense of one trip to the town tin-shop.—F. R. Cozzens.

The Heart of the Earth

THE tree's relation to the earth is much the same as the heart's function to the body. It is thru circulation that the body is kept alive, healthy and growing, and when the heart action stops in any human body it inevitably results in death and decay.

Just so with the face of the earth—the soil. Its fertility and continued productiveness depends upon the physical action of the tree, which absorbs the moisture from the ground and picks it up thru the thousands of fine hair-like roots, pumps it up thru the trunk, then to the branches, and finally to the leaves, where—thru a process of transpiration—moisture is thrown into the air and returned to the ground, completing the circulation.

Thru this process the air is purified, soil is created, fertility maintained, water conserved and distributed and the underground water supply kept intact.—Pennsylvania Department of Forests and Waters.



SLEEP is the period for rest and recuperation—the time when tired nerves and muscles are made over for the coming day. Why then hinder Nature's efforts to give you a better mind and sounder body? Why not give your spine the benefit of perfect, sagless sleep support? Why not give yourself additional comfort and at the same time help Nature in her efforts to help you?

You'll find the FOSTER IDEAL SPRING a benefit in many ways because

GLECKNER 1000 Thousan 1000 HARNESS

12 Wear Resisting Improvements

Improved 1926 Model now on dsiplay.

Style "P" Penn'a, N. Y., Ohio & West
GLECKNER

$68 for 1½" traces. Add $2.65 for 1¾" traces (without collar)

When You Buy Harness

The three most important things to consider are: **Quality, Price and Service.**

"GLECKNER" QUALITY—is well known and our reputation for making the best harness has been earned by forty-seven (47) years experience in the Harness business. Only best selection of hides, thoroughly tanned; genuine linen thread and tested hardware are used in GLECKNER Harness. •Every operation is under the direction of a member of the GLECKNER family (father and four sons).

"GLECKNER" PRICE—is lower than any other high quality harness. Standardization and quantity production have reduced the cost. Hence the name 1000 "Thousan" 1000 Harness illustrated above, (Thousand of one kind).

"GLECKNER" SERVICE— is given by the GLECKNER dealer nearest to you. He will let you examine the Harness, explain the easy adjustments, fit it to your horses if you so wish, see that you receive the red Guarantee Tag that goes with each set and arrange time payments if desired. He always keeps in stock extra parts for your convenience. No letters to write, no red tape, no delay.

Berlin, N. H., Feb'ry 14, 1924.
"We have handled your team Harness for several years. We have sold most of them to Lumbering Companies and they have given the best of satisfaction." J. F. BELL & SONS COMPANY.

Dairy Products

FOLLOWING are the principal prize winners among exhibitors of milk and butter at the State Farm Products Show. The number following the exhibitor's name indicates the score made by his milk or butter.

Class 1—Milk

A—Raw Market Milk (from tuberculosis-free cows).—1, Lardner Howell, Chester Co., 98.40; $14; 2, Chester H. Pownall, Chester Co., 98.10, $12; 3, Allen R. Eshleman, Bedford Co., 98.00, $10.

B—Raw Market Milk.—1, Chester H. Long, Bucks Co., 98.10; $10; 2nd and 3rd prizes split between Howard Reburn, Chester Co., and Amos Ryan, Berks Co. Both scored 97.80 and received a prize of $9.

C—Certified Milk. — 1, Lindenbrook Dairy Farm, Dauphin Co., 98.55, $14; 2, International Correspondence School, Lackawanna Co., 97.50, $12; 3, London Hill Farm, Susquehanna Co., 96.20, $10.

C—Pasteurized Milk.—1, Woodlawn Farm Dairy Co., Lackawanna Co., 97.20; $12; 2, Geo. N. Greenwalt, Cumberland Co., 96.90, $10; 3, Kano Dairy Co., McKean Co., 83.80, $8.

Class 2—Butter

A—Farm Butter—1, J. F. Dieter, McKean Co., 95, $10; 2, Willow Brook Farm, Lehigh Co., 94.5, $7; 3, Ralph Hosler, Columbia Co., 94, $5.

B—Creamery Butter.—1, Hershey Creamery Co., Dauphin Co., 95, $10; 2, The Silverdale Creamery Co., Bradford Co., 94, $7.

Shake Off the Snow

THE accompanying illustration is very pretty, but at the same time, it shows a condition that will injure the tree if allowed to continue.

After every storm, if the trees and shrubs about the grounds are laden with snow, they should be relieved of their burden as soon as possible. Shaking will do the trick with low shrubs, while a pole will serve to lighten the trees by knocking off the snow.

If allowed to remain, the weight of the snow will probably bend the branches out of shape, or may break them. Evergreens suffer more from this than deciduous shrubs and trees.—R. L. Scharring-Hausen.

The freshman was spending Saturday afternoon on the farm owned by his sweetie's papa and the scenery filled him with romance. They were walking thru the pasture when he noted a cow and a calf rubbing noses. He stopped and smiled.

"Such a loving sight," he said to the girl, "makes me want to do the same thing."

"Go ahead," the girl said, "it's pa's cow and he won't care."

Why spend good money for feed and proper housing of your dairy, only to let quart after quart of milk be held back by your cows because of some discomfort of their udder or teats?

Go after the extra quarts by giving constant care to even the "little" hurts of the tender udder tissues. Bag Balm has wonderful healing power, remarkable ability to penetrate and restore the injured parts that make your cows nervous and hard to milk.

For all sorts of hurts, cracked teats, chaps, teats stepped on, inflammation of the udder, caked bag, bunches, cow pox, etc., Bag Balm brings relief with the first application. Complete healing is quickly brought about.

Bag Balm is sanitary, clean, pleasant to use and cannot taint the milk. It is good for any sort of skin trouble or animal sore—ought to be in every barn constantly.

Feed dealers, general stores, druggists sell Bag Balm. Big 10-ounce can only 60c. If your dealer does not have it, we will supply you by mail, postpaid.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

FITS IN PIGS.—On November 26 I poured about one-half bushel of charcoal and ashes in my hog lot where I had two hogs and five shoats. These seven hogs were very thrifty and very hearty. Their appetite got poor immediately. They refused to eat, but would drink a little water or swill every day. These hogs would have fits and would fall on their sides and kick and pant until exhausted. I now have one living but think it will die. I drenched shoats with copperas for worms when they began showing fits. Their bowels got very loose and the discharge was black and thin as water. I drenched the sow then with castor oil and lard which got her bowels open. I opened every hog when it died. One shoat had charcoal and some worms in the intestines. Another had charcoal in large intestines. Did charcoal and ashes do the damage?—L. G. B., Clarksburg, Md. Fits in pigs are usually a symptom of intestinal parasites. When this symptom is evident, the use of worm capsules is indicated. You can secure good reliable capsules from your veterinarian or have your veterinarian administer capsules to all hogs when the symptoms are evident in the herd. We have found on post mortem that charcoal may injure the walls of the intestinal tract resulting in sores, hemorrhages and sometimes death of the animal. The practice of throwing coal in the hog lot is not a desirable one. The charcoal may have been the cause of your losses. In general, the rotation of lots, clean quarters and worming with capsules will result in better animals for the parasites will be few in number.

FITS IN PIGS AT TIME OF EATING.—I have six pigs about ten weeks old. They were weaned at about four weeks, when I bought them. Have been feeding the six about six quarts of skimmilk (warmed) and about two quarts of middlings three times a day. About a week ago, when starting to eat, one of them squealed, fell over and started to tremble all over. Breathing was very hard. After about two or three minutes she got up and started to eat and was all right. Since then every time it starts to eat on the first swallow it acts the same and three days ago two more got the same thing. I called the local veterinarian and he said it was "stomach staggers," the same as a horse has and was caused by overfeeding. I have raised hundreds of pigs and never saw or heard of such a thing before. If you can advise as to the cause and cure I will be greatly obliged.—W. S. F., Canandaigua, N. Y. A temporary relaxation of muscles with other symptoms of epilepsy may be due to the presence of intestinal worms, or feeding too warm feed. This pig is probably infested with worms. One may give the pig a teaspoonful of turpentine in a pint and a half of milk for three consecutive mornings. The pig should not be fed the night before so as to be hungry enough to drink the mixture readily. The most efficient method is the capsule method. Either secure from your veterinarian reliable capsules or have the veterinarian administer these to the hogs and you will see an improvement promptly. Clean quarters and rotation of lots are important in prevention of parasites, supplemented by use of worm capsules. A satisfactory growing mixture for young pigs can be mixed of four parts corn meal, three parts of wheat middlings and one part tankage supplemented with fine leafy hay or ground alfalfa.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 60,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

300,000 Housewives and These Local Dealers Recommend OTHELLO Ranges

FOR forty years it has meant comfort in the home, and has become famous thru merit.

OTHELLO RANGES are beautiful. Richly enameled, with nickel trimmings and gunmetal top.

Renowned for cooking and baking. The heat is distributed evenly, and the handy thermometer on the oven door helps you keep it "just right". The roomy warming oven will hold the whole meal if there is delay.

as easy to clean as a china dish

and eliminates the tedious hours of scrubbing and "blacking". Simply wash with a damp cloth and it is as fresh as new.

The entire range will hold its beauty for years, for the enamel will not discolor, the nickel will not tarnish and the gunmetal top cannot rust or turn gray.

These Dealers will gladly show you the many styles of Othello Ranges or write to us for Catalog

You can't beat a Buick
• for Value •

Never have so many Buicks been sold as are being sold today. The Better Buick strengthens Buick leadership in public preference because it offers still finer transportation at lower cost.

This better motor car has more power; 75 horsepower in Master sixes, 60 horsepower in Standard sixes. Hills are easier to climb. Deep snow or mud does not stop Better Buick owners.

The Better Buick provides still more protection for Buick performance. "Triple Seals" (air cleaner, gasoline filter and oil filter) are now added to the "Sealed Chassis" to keep all dirt and grit out of the Buick Valve-in-Head engine.

There is added safety in the new Controllable Beam Headlights on the Better Buick. They do away with dimming, and make night driving a pleasure.

The Better Buick starts easier because of a new *high-speed* starting motor. It runs smoothly, immediately, because of Buick's exclusive Automatic Heat Control. It is safer to ride in because of the great security of Buick *mechanical* 4-wheel brakes. There is no liquid in them to expand and contract in changing temperatures. Snow and ice will not impair their efficiency.

You can look over any motor car built today and never find as much for your money as you get in the Better Buick.

Pennsylvania's Agricultural Progress

The Passing Years See Constant Improvement in the State's Farming Industry

FORTY years ago when I started farming in Delaware County, Pennsylvania, land around there was worth about $100 an acre. Wheat sold for as low as eighty cents a bushel, corn from forty to sixty cents a bushel, dressed hogs for five to eight cents a pound, and milk brought from eighty cents to $1.20 a hundred pounds delivered at the creamery. For a decade or more, the great western boom had been on and the advice of Horace Greely,—"Go West, young man, go West," was still ringing in the ears of everybody.

What has happened since those early days, would have sounded like a fairy tale if prophesied then. Industry has spread over the entire state until Pennsylvania has more centers of 10,000 or more population than any other state. Where the chief industries in many communities of forty years ago were blacksmithing, milling and general merchandising, there have come factories of many descriptions, garages and large specialty stores. Coal, oil and gas stimulated the industrial activity in many sections of the state, often in mountainous sections not well suited to agriculture. Centers of population have grown and as a result additional local markets for farm products have opened up.

The Farm Is No Longer Isolated

What has happened on the farm during these forty years? Two great lines of advancement have taken place. First, the progress in transportation and communication has brought far-reaching changes in every Pennsylvania farm community. One needs only to mention the automobile and motor truck and to contrast the conditions existing today with the "horse and wagon" period a generation ago to gain an idea of the tremendous advancements. In communication, we have the R. F. D., the telephone and more recently the radio,—all of which have played an important role in both the business and social life of farmers. All have served a place in breaking down the isolation, so long regarded as a serious handicap to a satisfactory social condition in the country.

Within the farm itself, the most noticeable change to come about has been the application of scientific principles with a resulting increase in productiveness per animal unit, per acre and per man. The combination of scientific ideas with improved machinery has brought about a type of agriculture in Pennsylvania which has fully proven its permanency in the face of increasing competition from other agricultural states.

Home Markets a Great Asset

Too much credit can not be given the agricultural extension activities of this state for the valuable work done in disseminating scientific information among farmers. This work has played a most important role in placing our agriculture on its present basis. Pennsylvania agriculture can and will continue to compete successfully with other states in such enterprises as dairying, vegetable gardening, fruit growing, sheep and swine raising, wheat production and tobacco growing.

One of the important factors favoring Pennsylvania farmers in their successful competition with other producing areas is the nearness to markets and consequently the lower freight costs. Taking potatoes for example, the southeastern part of the state has an advantage in lower freight rates of over twenty cents per bushel as compared with Maine or Michigan shipments into Philadelphia. Western Pennsylvania points have an advantage of almost ten cents per bushel over Michigan shipping districts. These lower transportation costs alone contribute greatly to the permanence of the potato industry of the state. In a way quite similar, the fruit industry continues its sound economic development in the sections of the state favorable to fruit growing.

By F. P. WILLITS
Secretary of Agriculture
Commonwealth of Pennsylvania

When looking into the future, the importance of continued research, designed to make both production and marketing more efficient and profitable, must be emphasized. In agriculture, the same as any other industry, conditions are always changing. They get either better or worse. We want our agriculture to be always in a healthful condition. To enjoy this condition, it is necessary to develop new plans and new methods. Our present ways may seem good enough but the day will come when they will be just as out-of-date as the methods followed a generation ago seem to us now.

One point always must be kept in mind by Pennsylvania farmers. Their future depends more and more upon the adaption of their production to the needs of the local markets which abound on every hand. This means the constant improvement of the quality of the products produced, proper grading, and at all times catering to the demands of the consumers. In order to have a product of the best quality, it is necessary to wage a relentless war on the ever increasing number of pests and diseases. A generation ago, we did not have the Japanese beetle, the Oriental fruit moth, the European corn borer, potato wart and a dozen other pests and diseases to fight. Today, they are on every hand and only those producers who are alert to the absolute necessity of vigorous control measures can expect to produce quality products, and enjoy the most remunerative market.

Secretary of Agriculture Willits

In the eradication of bovine tuberculosis and the improvement of the quality of milk, which have taken definite form during recent years, can be found one of the best examples of what is being done to meet market demands to the fullest possible extent.

The dairy cow is one of our greatest farm assets. According to the 1925 federal census, there were 861,013 dairy cows in the state two years old or over, making Pennsylvania rank fourth among all the states. I am delighted to be able to add that the time is rapidly nearing when the health of our dairy herds will also give Pennsylvania a very topmost place among all the states. The eradication of bovine tuberculosis in Pennsylvania made the most rapid progress during 1925 in the history of the state. A total of 384,046 cattle were tested as compared to 221,000 in 1924. With the demand, the personnel and the indemnity money available during 1926, approximately half a million cattle will be given the test.

The Benefits of Tuberculosis Eradication

Testing on an area basis has progressed to a point where the herds in six counties and 191 townships in other counties have been completely tested and in three of these counties the disease has been reduced to less than one-half of one per cent. The rate at which other counties can be cleaned up, and eventually the whole state, depends upon the amount of indemnity money made available in future years. If we assume that at least the same amount of money will be made available for the next four fiscal periods that was made available during the present fiscal period, the disease will be reduced to less than one-half of one per cent by 1933.

Tuberculosis eradication has already developed to a place where its benefits to the dairy industry are apparent on every hand. It is resulting in the more efficient production of milk: first, because of freedom from disease, and second, because of the greater number of purebreds, especially sires, which are introduced into disease-free herds. It means a more healthful product for the public as well as a better market outlet for the producer; the market is expanded for the breeding stock as well as the dairy products. This is shown in counties where all herds have been tested by the active demand for dairy products, grade dairy cows and foundation purebred breeding stock.

Tuberculosis eradication is but one of many examples of improvement in quality of product in order to command the most favorable market. The elimination of garlic, cockle and grain moth damage in our wheat, the control of foulbrood disease of bees, the inspection of nurseries and imported nursery stock to guard against the spread of serious fruit pests and diseases, the shipping point inspection of fruit and the accrediting of poultry flocks in order to insure a higher standard of baby chicks, are all designed to insure greater profits for farmers and a better product for the consumer.

A Higher Standard of Living

In the midst of the rapid advancements that are taking place on every hand, there is always need for reflecting on the place of the home in farm life. The home and the farm business are closely associated, more so than in most industries, and it is a source of great encouragement to note that our modern agricultural progress as manifested in cooperative marketing, tuberculosis eradication, improvement in cropping methods, etc., is bringing to the farm community a higher standard of living.

Nothing can do more in the immediate future than to bring about a continued increase in rural living standards than the general extension of electric service to farmers. The recent work of the Pennsylvania Public Service Commission in hearing the problems of rural electrification and issuing Order 27 which requires that rural extensions must be made at company expense into all rural territory where there are three or more pledged consumers per mile, subject to certain stipulations, limitations, etc., are most encouraging. This accomplishment is the result of painstaking effort on the part of the Rural Electric Service Committee of the State Council of Agricultural Associations and the Giant Power Survey Board.

The insistent need for electric light and power upon the farm is obvious. The increasing shortage of labor and the physical hardships of rural life demand electricity to light houses and barns, pump water, milk cows, grind feed, saw wood, wash clothes and perform a dozen other services in the house and barn and field. It will be impossible under any regulation to reach every farm or every region. Order 27, however, furnishes a method for the beginning of widespread rural electrification. Copies of this (to page 31)

Plow Extra Profits from Your Fields!

EXTRA PROFITS—that's what every farmer can "bank on" when he puts a Cletrac Crawler Tractor in his fields. Pulling two fourteen inch plows with ease, this perfectly balanced tractor gets spring plowing, discing and seeding over with in record time. Its broad tracks and light pressure enable it to get into action two weeks before teams or wheel tractors could be used. And it does a thorough, "business-like" job that insures healthier crops, greater yields, larger profits.

Cletrac
Crawler Tractors

When the spring work is finished the Cletrac is ready to help with mowing, harvesting and other summer jobs. In fall, it is a big time and labor-saver for plowing, shredding, silo-filling, feed grinding, etc. And during the winter months it cleans up all the odd jobs and chores around the place. Sawing wood, pulling stumps, hauling stones—ever "on the job" to save time, trouble and expense.

The Cletrac uses less fuel and oil than any other tractor in its class. Pulls practically its own weight and *delivers 90% power efficiency*—an achievement not equalled by any other tractor! Turns easily within its own radius—both tracks moving—*and it cannot tip over.* Cletrac "K" is the only tractor made with the "Snap-Shot" instant oiling system that oils lower track wheels at the push of a plunger.

The coupon below will bring you all the facts by return mail.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

A WOMAN with whom I was conversing at the Harrisburg Show referred pleasantly (or maybe it was courteously) to this column, but said she was always uncertain as to how to pronounce Neshaminy and wanted to know the origin of the name There may be others also. It is pronounced Ne-sham-i-ny, with the accent on the "sham." It is the Indian name of a beautiful creek which runs thru the neighborhood and which has been a source of pride to the people of southeastern Pennsylvania for more than two hundred years.

✣ ✣ ✣

REPORTS of the wonderful performance of a new everbearing strawberry interest me. I had hoped to have some in bearing the coming summer, but an accident to the plants prevented. Twelve very fine plants of the Mastodon strawberry were heeled in last spring to await permanent planting later but they were accidently cultivated out and the sun killed them. We plan to get a few more this spring. If the variety is as good as it is claimed it is, the Mastodon will be a worthy addition to the fall bearing strawberry family.

✣ ✣ ✣

WE SET one hundred currant bushes last spring. They started and grew well until about the last of August, when the leaves turned dark and dropped off. Having never had any like experience with currants before I was at a loss to know the cause. I have been looking up the matter this winter and find it was anthracnose. This disease will also spot the fruit. The remedy is to spray with Bordeaux as the leaves unfold. This should be repeated every two weeks until the fruit begins to ripen. The increasing necessity for thoroly combating insects and diseases in every line of agriculture is apparent to all who strive to produce high quality stuff. Part of the difficulty the eastern grower has in getting and keeping nearby markets is due to the fact that uncontrolled insects and diseases injure his products. This fact, together with his failure to properly grade, has enabled producers hundreds of miles away to compete successfully. Spray machinery and spray materials are as necessary as seeds and plants.

✣ ✣ ✣

IN THE light of the above paragraph it is worth while to inquire into the correctness of the statement we sometimes hear that, "the cities are drawing all the best brains away from the farms, leaving the less ambitious and intelligent in the country." If that statement were true why is it that the farmers are able to make more progress in increasing the production per man than is any other class of producers? Of course, there are many living on farms who are not as good farmers as they might be. A great deal of the low income on many farms is due to the farmer's failure to keep up in the application of methods which will meet modern needs. He lets the bugs, worms, and diseases curtail or ruin his crops because he will not learn and use methods for combating them. Farming in these days means infinitely more than planting, sowing and harvesting—the chief concerns of our grandfathers.

✣ ✣ ✣

THIS is Groundhog day. I hope it is his last day. Next to rats, mice, rabbits, Japanese beetles, Oriental moths and a few other pests he is the most useless animal I know of. I would rather have a whole regiment of skunks on Neshaminy Gardens than one groundhog. I said something disparaging about them last year after twelve fine young apple trees had been ringed and ruined by them. At once two or three people came to his defense by writing in to say how good they are to eat. Well, they are too expensive to raise, hence they are disqualified at the start.

THE CHEERFUL PLOWMAN

Moving the Pups

I'M MOVING Cubby's pups today from manger box to mow, and that is why she says her say in that peculiar "wow!" Those pups must have a safer place or some fair winter morn they'll find their happy hunting space and Cub will be forlorn. "It's better, Cubby," I exclaim, "to move these pups from here or they will show up dead or lame, or spoiled for life, I fear. So to the mow they must be moved, it's warm and cozy there, and you have often, often proved that you can climb the stair! So come along, old Cubby lass, don't make so much ado, your small chagrin is sure to pass, and you will thank me, too!"

But strange to say old Cubby feels that I am butting in, intruding in her private deals, displaying "cheek" and "chin;" she feels that I should saw my wood and mind my own affairs, she figures that her plans are good in picking nests and lairs; she seems to think she knows her game from A at least to Z and so resents a hint or claim that emanates from me!

Well, Cub is like a thousand gents whom I have met or known, who have positions, jobs, or bents, which they believe their own; they will not take a hint or word from any other source, and they become unduly stirred at all advice of course! "This is my job," such fellows say, "so you may saw your wood, I know my job from Z to A, like any fellow should! You can not hand advice to me, so don't disturb me, please; I know I know my task, you see, in all its q's and t's!" Yes, Cub is like such gents as those, yet I am certain now that manger box is full of woes, but not the cozy mow!—J. Edw. Tufft.

This Catalogue Is Yours FREE —if you ask for it

Ward's New Spring Catalogue Is Now Ready for You

We say your Catalogue is now ready for YOU. And we mean exactly that.

Because this page is printed to offer you this book—and to give you Five Good Reasons why Ward's new Catalogue with its wonderful money-saving opportunities should be in your home this Spring.

Reason No. 1
A $50 Saving in Cash May Just as Well be Yours

This year, yes, even in the first six months, there can be a cash saving of $50.00 for you—if you write for this book—if you use this book—if you send all your orders to Ward's. Because—Every Ward price is a Money-Saving Price.

We used over $60,000,000 in cash to secure these low prices *for you*. Cash always gets the *lowest* price. And buying in the largest quantities, by the car load, by the train load, yes, even contracting for the entire output of a factory, we are always able to secure a price that means a saving for you.

Reason No. 2
We Search the Markets of the Whole World

Our complete organization of buyers, our experts in all kinds of merchandise, go to every market in their search for the new thing, the new pattern or design, for bigger bargains, or for better quality at the price.

All the year round we have buyers in Europe—the rubber for our tires comes direct from the Orient, we buy silk in Japan—we buy wherever and whenever we can secure the best bargains for you.

Reason No. 3
We never sacrifice Quality to make a low Price

At Ward's your satisfaction is our first thought always. Will this shoe, or this chair, or this stove give our customers complete satisfaction? That is the first thing. We never "cheapen" an article to make the price seem lower.

A low price at Ward's always is a *genuine* low price because it is never a low price made at the sacrifice of quality.

Reason No. 4
You Always Buy On Approval—at Ward's

Montgomery Ward & Co. published the first mail order guarantee: "Your money back if you ask for it." That was the Golden Rule policy upon which this business was established and which we have lived up to for fifty-four years.

This "deal as you would be dealt by" policy will govern every transaction with you. And furthermore, when you write to us or order from us, you can be sure that your orders and letters, your confidence and your patronage are always appreciated at Montgomery Ward & Co.

Reason No. 5
The Proof of the Saving and Service we offer You

In the last four years twice as many families have commenced sending their orders to Ward's. The growth of Ward's, our success in pleasing our customers, in giving them sterling values, has made us hundreds of thousands of new friends.

The same opportunity for saving and satisfaction is now yours. We say to you—this new Spring Catalogue is yours free. But the next step must be yours. Send us your name on the coupon below and our complete Spring Catalogue will be sent you free.

Your orders are shipped within 24 hours

Your orders will be given immediate attention and shipped within 24 hours. That saves time. But besides, one of our seven big houses is near to you. Your letter reaches us quicker. Your goods go to you quicker. It is quicker and cheaper, and more satisfactory to send all your orders to Ward's.

To Teach Cooperation

SO WIDESPREAD has the agitation for greater cooperation among farmers become that the National Education Association has declared it to be a proper subject to be added to the educational curriculum. The plan is to teach the subject to city and country child alike, believing that the underlying principles of cooperative work should be a part of the education of all children. The leaders of the association feel that the ability to work in harmony with others requires early training and practice, and that this work should be started in the public schools. A lack of the spirit of loyalty to such an organization, as well as lack of knowledge concerning the work, is thought to be the reason for the failure of many cooperative enterprises.

The Business Outlook

IT USED to be considered the natural thing for business to slacken up for a time after New Year's. This year, according to industrial reports, no noticeable drop has appeared. With the single exception of anthracite coal and the communities in which it is produced, business is continuing its satisfactory pace. The steel trade has been working almost to capacity and trade in steel has increased for four consecutive months. A favorable sign of industrial stability is seen in the level at which prices have been maintained, and also the uniformity of production along practically all lines. There are none of the usual signs of an early collapse, such as uneven production, inflated prices, huge supplies, scarcity of money, etc. As long as a fair equilibrium is maintained in all lines there is little danger of a sudden or sharp depression.

A Plea for Caution

THIS office is in receipt of a chain letter which the writer asks us to copy and send to nine people, asking them to do the same. Great success and good luck are promised as a result. We shall not write the letters, but are glad to pass along the burden of the lay. The letter starts out by saying: "It might have been your father, your brother, your wife, your sister, your friend, who was the one killed in that latest automobile accident, . . ." etc., and pleads for the exercise of greater caution in driving upon the public highways. The writer urges everyone to observe safety first, preacn safety first, until every driver shall be safe for himself and others.

After all, some such education is the only way safe driving will become universal. Laws are helpful, but the most drastic legislation will not stop foolhardy actions. Even when murderous drivers are arrested and punished the dead are not brought back nor the crippled restored. Reckless driving must be made unpopular and the reckless driver should be stung by public censure until he realizes that it is not "smart" to play the fool.

Philadelphia's Food

FEW people have any conception of the amount of food it takes to supply a great city. Philadelphia with its two million people requires, besides the untold truck loads of produce, 140 carloads every day in the year. These cars come from thirty-six states and six foreign countries. Philadelphians ate 8698 carloads of potatoes last year, or twenty-six carloads and unnumbered truck loads every day. Strange as it may seem, only one-fourth of the cars of potatoes came from Pennsylvania farms.

This is but a suggestion of the amount of food required in this territory. New York City is three times as large, and in addition we have hundreds of smaller cities and towns so that the total urban population requiring daily supplies of food is between twelve and fifteen million. Is it not self evident that the farmers in the North Atlantic states have the best opportunity in the United States to make a success of farming?

Abraham Lincoln—A Tribute

This tribute to Lincoln is taken from "Lincoln and Slavery," by Hon. Albert E. Pillsbury.

WHEN the conflict between Freedom and Slavery in this nation was approaching its crisis, in the struggle for possession of the Nebraska territory, a new and singular figure appeared at the front of the political battle in the West, moved to the head of events, passed across the world's stage, and in the short space of seven years had vanished from the sight of man.

Within such narrow bounds of time lies a career the like of which is not to be found in history. In the elements of wonder and marvel, the story of Abraham Lincoln's life and death is without parallel or example. From the mean cabin in the Kentucky woods to the final peak of transfiguration, it moves in the successive acts of a great tragic drama, reaching the high-water mark of human achievement and sounding every note in the gamut of human emotion.

This plain American citizen was one of the most complex and inscrutable of all the great historic characters. He was full of the oddest incongruities. By turns a man of jest and laughter, and again "dripping," as a friend said, with melancholy; ranging in thought and speech from unquotable plainness to the heights of the human intellect; a shrewd, practical lawyer and politician dwelling among shadows, dreaming dreams, seeing portents and feeling mysterious influences that affected his conduct; the most unpretentious of men, set in the homeliest framework, thinking with the power of Plato, seeing with the eye of the Sibyl, speaking like the Hebrew prophets.

The forlorn backwoods boy turns out to be the appointed head of a great nation, in a crisis affecting the fate of the world. The obscure country lawyer reveals in a phrase what a people is waiting to hear, and becomes in a day the prophet of the cause. The uncouth westerner from the prairies, unpractised in arms or in statecraft, outmasters the statesmen, outwits the diplomatists, gives the generals their plan of campaign. The unlettered man of the people speaks lofty eloquence, soon to become classic. The raw politician, who never held public power for a day, takes the helm of state when the ship is already on the rocks, when all the pilots and captains stand helpless and appalled, to bring her in safety and triumph thru the storm.

Without origin, without training, without an external attraction, without a worldly advantage, the meanly-born child of a poor and shiftless emigrant makes his way out of the wilderness to fix for all time the eyes of the world as leader of a people, liberator of the slave, deliverer of his country, and in another turn of the kaleidoscope, to be numbered with martyrs and saints in glory everlasting.

Farmers and the Tariff

FROM some farm quarters of the United States comes a demand to revise or abolish the tariff laws. These farmers claim that our tariff laws against foreign goods cause other nations to discriminate against our agricultural products and thus accentuate the surplus troubles. On the other hand, some lines of farm products are distinctly benefited by the tariff and the farmers producing them favor retaining the present law.

In connection with this subject it is in place to call attention to one phase of the matter which is seen when we take a long view ahead. The per capita production in nearly every line of farm produce has been gradually declining for a number of years. Economists declare that it will be only a few years if the present decline continues until America will not produce enough to feed itself. Then what will happen? The consumers who are in the large majority will demand cheaper food and a drive will be made to take the tariff off food products. This would be only human nature running true to form. There are several obvious ways in which farmers may avoid such a condition.

Washington Letter

DICKINSON BILL ENDORSED.—The Middle West farm organization leaders have centered their indorsement upon the Dickinson bill. Their representatives are coming to Washington in full force in support of the principles of this bill. It is now certain that it will monopolize most of the House Agricultural Committee's attention, and equally certain that it will be reported out favorably by the committee.

The Dickinson bill provides for the creation of a Federal Farm Advisory Council and a Federal Farm Board to handle the surplus farm products produced in the Middle West, and an equalization fee to make up the difference in the domestic and foreign prices. Only $200,000 is asked for in the bill to pay salaries and incidental expenses during the first year's operation of the Federal Farm Board.

The promoters claim that this combination is inspired by altruistic motives; that it will be able to maintain prices at a lower level than prevails at the present time, while it will also be able to stabilize the price of farm products.

OLEO SCORES A POINT.—The Cummins bill legalizing the use of corn and fruit sugars in canning and preserving products without labeling has passed the Senate. And now Senator Smith, of South Carolina, using the corn sugar promoters' arguments, announces that he will introduce a bill that would permit the sale of butter substitutes made from cottonseed products without the present tax and labeling requirements. The South Carolina Senator claims there is just as much justification in the oleo proposition as in that of corn sugar. Nevertheless, the dairy organizations are prepared to put up an effective fight against any such proposal. They can find no justification in the corn sugar proposal, saying that it will mean the practical nullification of the pure-food law.

SUBSTITUTES AFFECT BUTTER MARKETS.—The production of oleomargarine is increasing. In 1925 the production of colored and uncolored oleomargarine aggregated 237,374,545 pounds compared with 229,873,266 pounds in 1924. The increase in November and December was especially heavy. A .M. Loomis, secretary of the National Dairy Federation, says that these figures taken in connection with the erratic movement of the butter markets for December and January are sufficient to emphasize anew the influence on the dairy industry of this competition.

SAVED SIX MILLION DOLLARS.—That the administration is making an effective effort to cut down expenses of the government is plainly evident. The federal payroll at the beginning of this year carried 114,696 fewer employes than it carried on the same date last year. The Interior Department let out 1963 employes, and the Veterans' Bureau reduced its force by 2094 people. These two reductions represent an annual saving in excess of $6,000,000.

HOOVER ADVOCATES INLAND WATERWAYS.—A complete system of inland waterways as an aid to agriculture was advocated by Secretary of Commerce Hoover before the House Rivers and Harbors Committee. This system would include 3000 miles of main waterway and 6000 miles of lateral lines. The present waterways were compared to a great railroad system with occasional stretches of narrow-gauge track. In the system Secretary Hoover would have the Great Lakes as the most important link between the eastern seaboard and the Mississippi Valley.

WANT MEXICAN AND CANADIAN LABOR.—Spokesmen for several western farm organizations have appeared before the House Immigration Committee, urging legislation to remove the restrictions on importations of labor from Mexico and Canada. The sugar beet growers of Colorado and Utah are especially interested in having cheap labor from Mexico, and the wheat growers of the Northwest want Canadian labor in their harvest-fields. The committee is considering efforts from many angles to break down the effective provisions of the immigration restriction law.

BULK OF INCOME FROM LIVESTOCK.—Referring to the prominence of livestock in our agricultural production, H. R. Smalley, of the Soil Improvement Committee, says that except in sections of Iowa, Illinois, Indiana, Ohio and a few other states, the bulk of the farm income is derived from livestock feeding or from dairying, and only to a limited extent from the sale of corn as such. The majority of farmers in these states are the consumers of their own corn, and many of them, especially in the dairy sections, normally buy corn or its equivalent in commercial feeds. The majority of Middle Western farmers are not nearly so interested in the price of corn as they are in the prices of livestock and of dairy products.—E. E. Reynolds.

Harrisburg Letter

THE FINAL TEN DAYS.—More politics than legislation is in the air at the State Capitol as the special session of the Pennsylvania General Assembly enters upon its final ten days and the acts of 1926 will probably be the smallest book of laws issued in generations. Indications favor less than half a dozen enactments. The gasoline tax amendments are now listed to pass and will provide every station must have a state license and highway patrolmen may inspect and report gasoline sellers failing to display a certificate. The Delaware River Bridge tolls bill, which would reimburse state and city for outlay in building the bridge, is also on a fair way and there may be bills for opening of ballot boxes or naming of overseers at elections. The matter of cost is much discussed, but it will not touch $750,000.

POWER BILLS HALTED.—The Giant Power bills appear to have been halted in a Senate committee with a division of opinion raging as a result of two hearings. One of the interesting statements brought out at the last hearing was that 28,000 farms in Pennsylvania have electric connections and there has been a marked increase in five years. One of the big problems to meet in giving such service, however, is cost of connecting individual farms with transmission lines.

WANT REGULATIONS RECALLED.—The Public Service Commission is now faced with a demand that the electric regulations recently promulgated for rural service be recalled after rehearing. Just what the proceeding will result in is a matter of speculation at the Capitol as the set of rules was the cause of a division in the commission itself. Pending the appeal to the commission for recall there will be no applications tested out, altho numerous inquiries have been made.

FEW SECONDARY CONTRACTS.—The State Highway Department is bent on improving highways on the primary system. Outside of one or two projects on secondary roads which have been listed for contracts there will be no bids asked on the numerous proposals submitted by committees the last three months. The department is gathering in all the dollars possible for construction this year to add to about $10,000,000 of road bond proceeds for the 1926 program. The coming two years will be thrown largely upon appropriations. It is officially announced redistribution of money not requisitioned by counties has ended. Shares will be paid as allotted last fall. Nineteen counties lost nearly $2,000,000.

GENERAL STORE
PERSONAL ITEM
Caleb Skinflint who used to say he couldn't afford a blanket for his horse, is the proud owner of a new flivver

Do you know this fellow?

SUPERVISORS' IDEAS.—State Highway officials are listening this week to the suggestions of supervisors of many townships gathered here for a convention and among the subjects are road improvements for market and postal purposes.

AWAIT APPEALS.—State legal authorities have let it be known they are prepared to defend in the appellate courts any cases appealed as a result of convictions of violation of the quarantines against beetles, borers and other pests last year. Plans are now being made for making the Japanese beetle quarantine stiffer next summer owing to the danger of spread into some highly specialized agricultural townships. The corn borer quarantine regulations have been issued in pamphlet form with the warning the pest is becoming a menace and all corn stalks should be burned by May 15. Cooperation in battling the borer is urgently recommended.

ANIMALS WORTH MORE.—State agricultural authorities will make analysis of reports on values of livestock in Pennsylvania just compiled and showing a total value of $144,688,000 for draft animals, cattle, sheep, swine, etc., on Pennsylvania farms. The cows are put down as worth over $63,000,000. A ten per cent general increase in value is announced for 1925.—Hamilton, Harrisburg.

New Jersey Letter

STATE LEGISLATURE SLOW.—Altho it takes some time for the Legislature to get well under way in its season's business, it is slower in disposing of matters to date than in several years. Up to late January 175 bills had been introduced in the Assembly out of which only four had been reported unamended out of committees. One of these bills has been passed while the Senate was passing some nine of its batch of measures. Organization of both branches of the Legislature is now in good shape and February will probably see rapid disposal of matters pending. Very little strictly agricultural matter has been introduced this year, altho there are various measures of general interest in which the farmers are taking part. In this latter class are measures pertaining to appropriations, general taxes and road and administrative amendments.

AUTO LIABILITY BILL.—Among the matters pending in the House is a bill which would make automobile liability insurance compulsory in New Jersey, beginning in 1927. The measure comes as a result of the work of a commission created in 1924 to investigate the desirability of such compulsory insurance. Its principal provision is that no motor vehicle shall be registered and licensed until the owner has satisfied the Motor Vehicle Department as financially able to meet damages of $5000 for one person injured or killed, $10,000 for any number of persons and at least $1000 for property damage. Those seeking licenses for their automobiles can satisfy the requirements of the measure by insurance, by a surety bond or by personal certificates from the State Commissioner of Banking and Insurance. The general provisions of the bill have been approved and recommended for several years by the farm organizations.

SEED CORN GOOD.—In decided contrast to the supply and condition of seed corn in New Jersey last year, the farm supply at present is in good condition and in quantity practically sufficient for spring planting. Favorable weather during the fall permitted the corn to dry in the field without much damage for seed purposes.

SPRING HATCHES UNDER WAY.—The general run of farmers and poultrymen in central and southern New Jersey are starting their hatches earlier than formerly. The baby chick business is thriving and optimism prevails. The real estate situation has affected poultrymen less than general farm producers and the business is gaining, particularly in the extremely southern part of the state.

AFTER BOUND BROOK STATION.—The general complaint against the super-power station of WJZ at Bound Brook has found its way into the state Legislature. Farmers and others have complained seriously that the dominance of the air by this station has made it impossible for them to tune in upon any other station. The Legislature has received a joint resolution, which would authorize the state Attorney General to appear before Secretary Hoover of the Department of Commerce to oppose the granting of an operating license to a receiving station regarded as a general annoyance by owners of receiving sets. Municipalities would also be authorized to request such action by the Attorney General.—B.

New York Letter

SHEEP BREEDERS ELIMINATE MENACE.—About fifty-six of the leading sheep breeders of Tompkins County and others from several other counties where damage to flocks by dogs has been a menace, have had a personal consultation with the board of supervisors of Tompkins County, and have demanded a year round night and day quarantine on dogs. A dog law enforcement officer was recommended and it was shown that the salary of such an officer would mean money saved for the taxpayers. Both measures will be asked of the state Department of Farms and Markets. In the county three years ago a night quarantine was enforced and losses were kept down to $900. The cost of enforcing the quarantine amounted to $2000. This year, with no quarantine, the county has had to pay for about $5000 worth of sheep killed by dogs. If the state department backs this other breeders may secure similar protection.

MARKET CONDITIONS.—Cabbage is still going out at unusually high figures, tho this month will bring southern cabbage onto the market. Open weather has stimulated egg production and the cities have purchased more fresh eggs than usual. Poultry is very high. Fowls retail at forty-two cents a pound, dressed. The New York potato crop is expected to return fifty-two million dollars against twenty-five million of a year ago for twice the potatoes. There is a twenty per cent decrease in dairy heifers in the state, and a twelve per cent decrease in dairy cows. Much of this is due to tuberculosis eradication. The menace of cheap western milk continues to be the big topic in the state among dairymen. Farmers are determined to protect their markets. The chambers of commerce of Watertown and Norwich are already back of the farmers' fight for a protective tariff. Thru their own organization eastern milk producers hope to bring metropolitan dealers to see the necessity of buying New York state milk in preference to western milk.—M. G. Feint.

Every 200-pound bag of V-C Fertilizer used per acre, on Corn will produce under good cultural conditions, an increase of 10 bushels of grain, equivalent to 100 pounds of pork.

Fertilize For a Full Ear Well Matured

Back of every fully matured ear was a stalk that was well supplied with plant food during the growing season.

Make more bushels of sound ears by selecting a fertilizer for your Corn that will feed it at every stage of growth and mature it early.

V-C Fertilizers for Corn not only nourish the plant while small, but when it is forming and filling the ear. They give the corn a quick start in the spring, grow it rapidly, uniformly, and mature large, heavy, well-developed ears before frost.

V-C Fertilizers have an established reputation among leading Corn growers for producing heavy yields of sound grain.

Ask your dealer for V-C Fertilizers made for Corn, or write

VIRGINIA-CAROLINA CHEMICAL CO. Home Office: RICHMOND, VIRGINIA

SCOTT'S Soy Beans

A valuable general farm crop. For soil improvement alone they pay for themselves. Any farmer—anywhere—can grow Scott's Soybeans with profit. They make rich hay, pasture and nutritious silage and build up soil fertility. Will grow in poor soils.

We Handle More Early Varieties Than Any Other Distributor

We handle Soybeans in large quantities—know of the best producing sections—are familiar with the many different kinds for their best adaptation—and can render intelligent service. Scott's Soybeans are of highest quality and cost no more than the ordinary kind; and besides, WE PAY THE FREIGHT. Write today for your free copy of our new Seed Guide.

Garden and Truck Crops

Iceberg Lettuce—What It Is and Where It Grows

There is coming into Philadelphia markets a lettuce, Iceberg, which brings a better price than Big Boston. It comes mostly from Arizona and California. All the seed catalogs have many kinds of lettuce but only one makes much fuss over Iceberg or New York seed. I would like to know what seed is sown to grow the Iceberg coming to Philadelphia from the West, and where the best seed can be obtained. Are western growing conditions so much better than here that we cannot compete in the summer? I grew some twenty-five or thirty thousand cabbages last year. I bought Jersey Wakefield, Early Summer and Golden Acre Seed. Some Jersey Wakefield grew pointed solid heads and some flat when left long enough to become solid. What about Winningstadt? Would it be better than Jersey Wakefield and can I get seed that will run true to description? Do you know of any textbook on garden truck better than Henderson and Watts? I have these, they are good but there may be better, especially in helping on varieties.—W. H., Bucks, Co., Pa.

When lettuce was first grown commercially in this country its culture was restricted to areas close to the larger cities, because of the perishable nature of the crop. Improved refrigeration and development of more rapid transportation have greatly assisted in extending the producing area. Lettuce now travels across the continent and arrives in good condition.

What is Iceberg lettuce? The following statement is from the publication on lettuce, issued by the California Vegetable Union:

"The standard variety which is commonly shipped from the far western states is called by seedsmen New York, Wonderful, and Los Angeles. These names are used interchangeably. Certain strains of this variety have a tendency to produce a large percentage of pointed heads, while others produce more flat or rounded heads. The type of head is also influenced in some cases by the weather conditions.

They Aren't the Same

"The produce trade often refers to the standard variety as Iceberg, but it is not the variety known to seedsmen as Iceberg. The latter is grown in a limited way for summer shipment and its foliage is tinted with splashes of russet coloring which are quite distinctive."

There is a variety listed by seedsmen called Iceberg. This is a distinct variety altho it closely resembles New York. The head is slightly smaller, color light green, excepting faint brown along extreme border and occasionally barely tinged in other parts. It will stand hot weather better than New York but is more easily injured by frost.

Either New York or Iceberg is difficult to produce under eastern or southern climatic conditions. Lettuce requires moderately cool weather for its proper development. Hot weather can cause one or all of the following conditions: (1) the production of large, soft, bunches instead of hard heads; (2) a bitter taste; (3) burning of the edges of the leaves; (4) darkening of parts of the leaves in tight heads; and (5) the formation of seed stalks. A short spell of hot weather occurring during the last half of its development will always spoil the quality and sometimes ruin the crop.

Good head-lettuce of the butterhead type can be grown in New York, New Jersey and Pennsylvania. The quality produced in the South and West is constantly increasing. There are new areas being opened up each year. Watch the development of the peat lands in the state of Minnesota.

The quality of Big Boston is better than New York. New York has better keeping qualities than Big Boston and therefore is a better variety for shipping qualities. Big Boston can be produced locally for the eastern market. Effort should be made to merchandise this crop more efficiently. Better packing, better grading, better distribution and advertising should greatly increase the market for home-grown lettuce.

Early Jersey Wakefield and Winningstadt are quite similar, both being early and forming small pointed heads.

The horizontal cross-section of Wakefield is angular while that of Winningstadt is round. Strains of Early Jersey Wakefield have been perfected which are from ten to fifteen days earlier than Winningstadt. For commercial production of cabbage where earliness is important a good strain of Early Jersey Wakefield will give the best satisfaction.

Experiments with Varieties

The difference between the seeds in two packages that bear the same variety name on their labels may make the difference between success and failure in a crop. Experiments and trials of varieties and strains of vegetable varieties have been conducted at the state agricultural colleges and under the direction of the United States Department of Agriculture since the establishment of these public agencies for promoting agriculture. Conditions change constantly.

Thru trial on his own farm, a grower can eliminate strains which are not true to description. Thru trial, a grower can gradually eliminate seed houses which sell seeds not up to standard. Do not let price become too great a factor in the purchase of seed. Take time to read the catalogs of the seed houses in your locality and any others that attract you thru advertising. Become familiar with their methods of doing business and try out a few new strains each year.

There is no one text book that describes all vegetable varieties. Most of this information is found in experiment station bulletins.—W. T. Tapley.

Peach Leaf Curl

WILLIAM H. BULLOCK, orchardist and pest crop inspector, of Honesdale, Pa., has the following to say concerning peach leaf-curl:

"Peach leaf-curl is a serious disease of one of our choicest fruits. Plant pathologists are almost unanimous in their assertion that this fungous disease is not prevalent and destructive when the spring is damp and cold.

"The loss from leaf-curl may not be so readily estimated as from many other fungous diseases, for the injury to the fruit is usually indirect thru the loss of the leaves and general impaired vitality of the tree. Before the adoption of any preventive measures the loss in the United States was estimated at $3,000,000 annually.

"The idea generally prevails that the leaf-curl occurs only on the trees and young branches, but the flowers and young fruit are also subject to the attack. The appearance of this disease may be detected as soon as the leaf buds have become slightly

(Continued on page 11)

Better than ever *with* COD LIVER MEAL!

That's what Poultry Raisers Everywhere are Saying About Ful-O-Pep Chick Starter, Which Now Contains This Invigorating Ingredient

No wonder poultry raisers the country over are talking about Ful-O-Pep Chick Starter this season! After more than two years' experimenting, we decided to add *cod liver meal* to the other time-tested ingredients of this popular feed.

A *Weather-Proof Feed*

You know how Cod Liver Oil (which is in Ful-O-Pep Chick Starter) has proved its value, how it provides that "sunlight" substance that insures the chicks a firm hold on life. Cod Liver *Meal* gives some additional oil, but more than that the *meal itself* enables chicks to get all the benefit out of the good oatmeal, and other ingredients of the mash. Chicks have better digestion so that they assimilate their food. These profitable results are directly aided by the Cod Liver *Meal:*

1. Better digestive condition; relief from constipation and diarrhea
2. Smoother, tighter feathers
3. Decreased mortality
4. More rapid growth
5. Stronger bones

These advantages, combined with the results Ful-O-Pep Chick Starter has always obtained, fortify chicks against unfavorable weather. They go forward to maturity in spite of cold, or rainy dark days, because they are fortified with extra stamina. Many poultrymen are hatching earlier than usual because Ful-O-Pep Chick Starter is a "weather-proof" feed.

Ful-O-Pep Chick Starter has always been a good feed. Now, it is even better than before. You certainly want to enjoy the pleasure and profit of seeing your chicks off to a real start.

Some good dealer near you sells the Ful-O-Pep line of feeds. He can supply you.

Write for the new Ful-O-Pep poultry book. Tear off and mail the coupon now.

Bred for Earlier and Larger Crops

The great popularity of the new Cortland apple is well deserved. Bred from the McIntosh and the Ben Davis, it has all the flavor and color of the McIntosh together with the well-known keeping qualities of the Ben Davis.

The Cortland apple is as large or larger than the famed McIntosh, bright red in general color and its flesh is fine and crisp, yet tender and juicy.

The Cortland's strength of stem withstands the attacks of winds and storms. Result, more apples on the trees and a bigger, salable crop.

And the Cortland fruits early and keeps like a late apple, which is another decided advantage.

To be fair, we must fill all orders in the rotation received. You should plan to order your selection of guaranteed "True-to-Name" stock early and let us hold it for you. So write today for your copy of our catalog. We have no agents—you deal direct with us.

Write at once for your copy of this Catalog and order early.

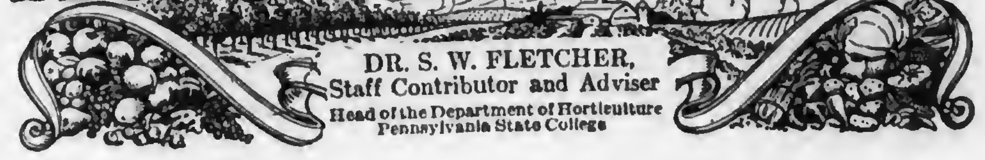
HORTICULTURE



DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Annual Meeting of State Horticulturists

(Continued from last week)

FRUIT growers will not soon forget the storm of last October 10, when a wind velocity of thirty-six miles an hour was reached in southwestern Pennsylvania, blowing off hundreds of thousands of bushels of apples.

Discussing the question raised by this experience, "Should we pick apples earlier?" Samuel Dickey, of Oxford, concluded "this would not be wise, 'not only' because early picking would reduce size and color, which are so important an asset in sale value and in storage but also because this was an exceptional storm and fruit growers can afford to take the risk."

He quoted from weather bureau records in support of the last contention, showing that since 1871 velocities of as high as thirty-six miles an hour have occurred so early in October but four times, or one year in fourteen. Moreover, the records show that winds of thirty-six miles or over have occurred in the Philadelphia district any time in the month of October but twenty-seven of the fifty-five years. The average date upon which such velocities might be expected is October 22nd. Hence, fruit growers will continue to let their apples hang until they are well blushed and hope for good luck.

Apple By-products Pay

Discussing the practicability of farm by-products plants, F. G. Reiter, of Mars, Butler County, reported very satisfactory results, after a three years' trial. He has an outfit for making pasteurized cider, and put up 5000 gallons last year. No specked, wormy or dirty apples are used; the fruit is washed clean with a spray of water before being pressed. It is heated to 160 degrees before being filtered.

Filtering is one of the biggest problems in making apple juice; it must be perfectly clear, and this is possible only when the juice is heated before filtering. It is then sterilized, at a higher temperature.

This "refined apple juice"—which is a much more attractive name than pasteurized cider, sells for $1 a gallon. At the same time he sells twice as much ordinary cider as of the sterilized juice. It will be only a question of time, and of publicity, until people will prefer this healthful pure fruit juice to the chemical concoctions of the soda fountain.

Mr. Reiter also makes apple butter, using steam coils fitted into cider barrels. He finds that having these by-products helps the sale of fresh fruit at his roadside market.

W. W. Oley, of Bridgeton, N. J., who has charge of one of the largest peach orchards of that state, spoke of the problems he has met in recent years. Foremost of these is the change in market demand for varieties.

White-fleshed Peaches Falling Off

Ten years ago early white-fleshed peaches sold well; now they cannot compete, except in local markets, with Elbertas from North Carolina that are on the market at the same time. Several of the new varieties of yellow freestone peaches ripening about with Carmen, developed by the New Jersey Experiment Station, seem destined to supplant the white-fleshed sorts that mature before Elberta. The Pioneer is one of the best of these; also the Eclipse, a high-colored yellow freestone ripening with Hiley, and one that hangs well.

Emphasizing the necessity for reducing the cost of production, Mr. Oley has been able to cut the cost of pruning seven-year-old trees from thirteen cents to ten cents each by a redistribution of labor.

The usual method has been to send in a gang of men, each man taking a row, and doing all the work on his row. He now divides the force into two gangs. In the first group are the more experienced pruners, the men with the best judgment. These more expert pruners go ahead with saw and lopping shears and do the main or framework pruning. They decide what limbs shall come out or be headed back.

Successful Pruning Method

The other men follow with hand shears and do the somewhat less important work of cutting out surplus bearing wood. This method of pruning has been used successfully in the vineyards of Erie County for many years.

The cost of tillage has been reduced by using a special cultivator that takes a strip sixteen feet wide at a round, once to a row. This would not be practicable except on light soil.

Were it not for the Oriental moth, Mr. Oley would dust his peaches, since dusting is more economical and equally effective against rot, scab, curçulio and codling moth worms; but three per cent nicotine dust has not given as good results as the nicotine spray. He gets fair results, but not control, by spraying four times, beginning with the shuck fall, using New Jersey dry-mix with arsenate of lead and nicotine. This reduces the infested fruit so that about one-half of the crop can be shipped.

It is very expensive but he figures that he gets two dollars for every dollar spent. Some Pennsylvania growers doubt the practicability of this nicotine treatment, because of its expense.

The cost of harvesting has been reduced by having a map of the orchard, numbering every row, and painting the number on every fourth tree. The map hangs in the packing house. The manager can tell the truck driver to go to a certain row and tree; and the foreman of the picking gang sends with each load a slip stating where the fruit was picked.

Federal Inspection a Great Help

Federal inspection at shipping points has been a great help the last two years, especially in 1925, when 280 cars were shipped from this orchard. The problem of disposing of the culls and softs has been solved to a considerable extent by the roadside market. Last year 18,000 bushels of culls and softs were sold in this way.

A contract also has been made with a Philadelphia concern to take most of the soft yellow peaches. This firm cold-packs them and makes preserves.

The cost of producing a bushel of Elberta peaches in New Jersey is about $1.25. Carmens can be raised for seventy-five cents. This by way of comparison with cost of production figures coming from North Carolina, which range from eighty-five cents to $1.12 for Elberta. The J. H. Hale peach, in the experience of Mr. Oley, averages twenty-five per cent lower production than the Elberta, possibly better pollination of the Hale will make it produce more.

F. R. Cope, of Dimock, Susquehanna County, has found the western apple box satisfactory for the wholesale market but not in direct marketing by mail, which is his specialty. Here he has tried all types of packages but none are entirely satisfactory.

The bushel hamper is good for local trade but cannot be dressed up well for fancy fruit. The corrugated bushel box will not stand the careless handling of the common carrier. In mail order sales, the chief objective is to be able to guarantee the customer that the fruit will arrive in good shape. This cannot be done under present conditions.

It is a severe indictment of postal and express employes that a large proportion of the packages are opened en route, and six to twelve apples taken out. It is impossible to keep the trade, and mail order sales will continue to be unsatisfactory under these conditions.—S. W. Fletcher.

(To be continued)

Peach Leaf Curl

(Continued from page 8)

unfolded. The coloring of the young leaves has become somewhat heightened and as they unfold a curling and arching of the blades become prominent. The distortion may be confined to a small portion of one leaf, or it may occur on all leaves and petioles. Later the leaves turn brown and finally drop off. When defoliation is extensive the fruit crop will be stunted or lost entirely.

"In order to control this disease it is necessary to spray with a fungicide. The standard formula is Bordeaux mixture, 4-4-50. Spray early, before any warm spells in late winter or early spring come, which might cause the buds on the peach tree to start a trifle and start the disease. This is very important—spray early and spray thoroly—by so doing you will get ahead of the disease.

Preparation of Bordeaux Mixture

"The standard Bordeaux mixture is made by using the following formula: Four pounds copper sulphate (bluestone), four pounds fresh stone lime and fifty gallons of water. Dissolve the copper sulphate separately in a wooden vessel. Slake the lime in another vessel. Each of these solutions should be diluted before mixing; otherwise undue chemical action results. This should be carefully strained and used within twenty-four hours after mixing the two solutions, since it deteriorates quickly.

"A weaker solution, 3-4-50, is made in the same way as the above. It is cheaper and is a very desirable spray for potatoes. Another weaker solution, 2-3-50, is made as the above and cannot be excelled for spraying grape vines and other tender plants."

Mr. Bullock has been very successful as an orchardist. As the result of a recent experiment, that of grafting quince shoots upon a thornapple tree to overcome the quince borer, he now harvests a fine crop of quinces annually. The borer does not attack the thornapple tree and Mr. Bullock believes he has made a wonderful discovery. The fruit has a better flavor and the tree needs little attention.—E. B. Callaway.

Note:—Very few growers use Bordeaux mixture for the control of leaf curl. Standard lime sulphur spray, winter strength, 1.03, is preferable since it kills the scale as well as the leaf curl.—S. W. F.

"Oh, John!" she cried. "Norah made a mistake and tried to start the fire with gasoline!"

"Gasoline, eh?" said John calmly. "Did she get it started?"

"Get it started!" cried Mrs. Jones. "Why, it blew her out the window!"

"Oh, well," remarked the philosophic John, "it was her afternoon out, anyhow."

Grow 'Em

Here's the Best Chick Starter Money Can Buy
DICKINSON'S
GLOBE CHICK STARTER
MANUFACTURED BY ALBERT DICKINSON CO. CHICAGO

Read this Letter

Dear Sirs:—I am writing you to tell you of the results I have obtained through the use of Globe Feeds. I have been using Globe Feeds for the past 18 years and my results seem to increase from year to year. I raise from 1,500 to 2,000 Chicks every year and I raised 96% of them this year, (the Globe Way) and of 107 Goslings, I raised every one of them, and my Turkeys I raised 78%.

I find with my 18 years of feeding Globe Feeds, there is nothing better for rearing Baby Chicks than Globe Chick Starter and Globe Growing Mash for growing young stock and Globe Egg Mash to stimulate egg production and health; it also improves vitality and fertility in eggs is increased. More power to Globe Feeds. Very sincerely, CHAS. F. PETERS, White Feather Farm Milan, Mich.

GLOBE CHICK STARTER

"Yes sir, that's the best Chick Starter I ever had in my store. I've sold all kinds of Chick Feeds in my time, but I have never sold one that gives such universal satisfaction to my customers as Globe Chick Starter." The reason is simply this:

The manufacturers of this feed are one of the oldest in the business. They have learned through years of experience and intensive experimentation in their own poultry yards, just what ingredients are BEST for baby chicks; to keep them healthy; to give them a vigorous vitality, and to avoid the customary heavy death losses.

Globe Chick Starter has no equal. It not only contains the RIGHT ingredients, but every ingredient is the HIGHEST in Quality. That's what counts. Every bag is always the same. You can buy a bag today and another next month or next year, and KNOW that it is the same, uniform, high quality for which GLOBE FEEDS have stood for 23 years.

Why Take Chances

with other feeds when you can feed GLOBE CHICK STARTER and KNOW that you have a feed you can DEPEND on—one that will make chicks grow faster, keep them healthier, make you more money?

FREE Write today for our free Baby Chick Folder, which gives you simple, practical advice on the care of your baby chicks—it will help you to make a lot more money from your chicks this year. If you will obtain good chicks and feed according to the Globe method, you will obtain the best possible results. Mail coupon—today. (7)

This Troubles Me

Here is something that troubles me—in making home made chick mash, the directions generally call, I believe, for one-half to one pint (or lb) of cod liver oil to 100 lbs. of mash.

I want to know the method of mixing to obtain good and even distribution, as this would seem very essential, and the exact amount of cod liver oil to add to 100 lbs. mash.

Is there a powder cod liver oil on the market that you know of? It would doubtless be easy to mix, if its potency is not destroyed in preparing.—W. A. B., York Co., Pa.

The method is to pour one pound or a pint of the cod liver oil over 100 pounds of the chick mash. Empty the 100 pounds of mash in a bin or on the floor where it can be spread out to a shallow depth. Spread it out in a light place where you can see the oil, then pour the oil slowly over the mash giving the pint as wide a distribution as possible. Work over the mash with a small scoop or flat paddle until the oil has been worked in as thoroly as possible.

When cod liver oil and starchy feeds are mixed their power to prevent leg weakness is reduced after a short time. If the flock consists of only a few chicks it may be best to mix only twenty-five pounds of mash at a time.

Cod liver oil in powder form is now being used in many commercial mixtures.—R. G. Kirby.

Chicken Brooder

Gentlemen: Kindly give me advice on building a chicken brooder to hold 300 chicks. How big shall I make it? Which kind of brooder stove do you advise, oil or coal? Have been told the coal stoves all burn low by morning and are more liable to chill the chicks.—W. McK., Bedford Co., Pa.

A brooder house of the shed roof type built on skids will be all right for 300 chicks. Make it ten feet wide, eight feet deep, six feet high in front and four feet in the rear. The front should have a window covered with glass or one of the glass substitutes. Have a small opening over the window covered with burlap for ventilation.

If you use sliding glass windows like dwelling house windows the sashes can be raised or lowered, depending on the wind and weather, to permit as much pure raw sunshine as possible to strike the chicks on the colony house floor.

We have had the best success with the coal burning brooder stoves burning chestnut hard coal. If the ashes are properly removed and the fire left in good condition at night there is little danger of chilling the chicks. It is possible to keep these coal burning brooder stoves burning properly from the day the chicks are hatched until they are weaned without having the fire go out once.—R. G. Kirby.

To Buy or to Hatch?

HERE are three questions being asked by poultrymen at this time of year, with the answers given by John C. Taylor, poultry specialist of the Pennsylvania State College.

Shall I hatch or buy chicks?

This question has two answers: "Yes" and "No." The problem is: Which answer applies to your condition. Where the flock is composed of one purebred breed, and has been culled thruout the year, so the best birds in respect to egg production and breed type are left for breeders; and provided there are enough breeders, it would be advisable to hatch your chicks. On the other hand, if the flock is not a purebred breed, and nothing is known of their egg production, and no culling has been done, you should buy your chicks from some reliable breeder or hatchery.

How many chicks will I need?

In answering this question, it is necessary to know how many pullets are needed in the fall. Let us assume that 100 well matured pullets is the goal. It will be necessary to buy 300 chicks or set 600 eggs. Now, that seems like a lot of chicks to buy or eggs to set to get 100 pullets in the fall. In making estimates of this kind, one must be conservative and use average figures. The figures used allow for a 50 per cent hatch, which gives 300 chicks. Out of every three chicks, one will die; one will be a cockerel or cull pullet, so from the 300 chicks, we have 100 well matured pullets to put in the laying house in the fall.

Hatch or Buy Early

When should I hatch or buy chicks?

Hatch or buy chicks early. Early hatched chicks live better, grow faster and mature quicker than the late hatched chicks. The broilers from early hatched chicks also bring a much higher price. Pullets from the early hatched chicks are more profitable, because they lay when egg prices are increasing. In buying chicks for early delivery, you should place your order now so as to be sure of getting the chicks when you want them. The dual purpose breeds such as, Plymouth Rocks, Rhode Island Reds, and Wyandottes should be hatched in March and the first two weeks in April. The light breeds, such as the Leghorns should be hatched in April and the first two weeks in May.

Early Hatched Chicks

BY HATCHING a part of the poultry flock between January 15 and February 15, so that the birds will mature in July, the poultryman takes a big step toward maintaining his late summer and early fall production, advises R. R. Hannas, poultry research specialist of the New Jersey State College of Agriculture.

Mr. Hannas points out that the price of eggs begins to climb as the summer wanes and that it is good business to have a flock of layers at this time. Ordinarily a decline in production takes place with the old fowls about July. If one-quarter to one-third of the flock is hatched between the middle of January and the middle of February the poultry keeper can offset this decrease.

The brooding of chicks early in the season has been carried on successfully for a number of years. Chicks thus produced will reach a good growth and development before hot weather comes on, thereby giving them an advantage over later hatched stock.

One precaution, to prevent leg weakness, is advised. Because bad weather is likely to make it unsafe to let the chicks out on the ground and there is a lack of green food at this time, cod liver oil and sprouted oats should be supplied. The oil is given at the rate of two per cent either of the amount of grain or of the amount of mash fed. Experience has shown that it is easier to mix it into the grain, and that however used, it is highly effective in preventing leg weakness.

Mr. Hannas also suggests that the earlier hatching enables the general farmer to get this phase of his work out of the way before the heavy rush of spring arrives.

White Leghorns in Lead

THE leading flocks for December in each of the three divisions of Pennsylvania farm poultry demonstration flocks were as follows, according to the monthly report of the Pennsylvania State College poultry extension service:

Leaders in the flocks of 100 or more pullets were Charles C. Luehm, McKeesport, 209 pullets, 18.7 eggs each; R. H. Fisher, Butler, 492 birds, 18.3 eggs; W. L. Pellam, Emporium, 167 pullets, 17.4 eggs; William Heimberger, Saltsburg, 936 birds, 17.3 eggs; W. W. Hatfield, Mansfield, 815 pullets, 16.9 eggs, and F. A. McKelvey, Atlantic, 473 birds, 16.9 eggs each. All were White Leghorns.

In Other Divisions

Leading flocks in the 50 or more hens division were those of Fred Haller, Hollidaysburg, 100 hens, 6.5 eggs each; Henry Shattuck, Erie, 219 hens, 5.1 eggs; John Davie, New Sheffield, 140 birds, 5 eggs; E. F. Goss, Lewistown, 79 hens, 4.8 eggs; Joseph J. Perry, Dallas, 185 birds, 4.6 eggs each. All were White Leghorns.

The five highest flocks of more than a hundred hens and pullets were those of J. W. Brown, Erie, 360 birds, 13.7 eggs each; A. E. Miller, Newville, 210 birds, 13 eggs; Orwell Ridge Farm, Rome, 1025 birds, 12 eggs; Harry A. Bair, Ruffsdale, 330 birds, 10.4 eggs; Mrs. I. V. Otto, Carlisle, 318 birds, 10 eggs. All but the Orwell Ridge flock were White Leghorns. That was mixed.

Mites in Brooder

LAST spring after cleaning and spraying my small brooder I supposed it ready for the chicks. The third night after putting them in I put my hand in among them to see if they were crowding and soon felt mites crawling over my hand. The heat in the brooder had brought them to life. Fearing they might kill some of the chicks before morning I gathered them into their shipping box and kept them by the kitchen fire that night.

Soapy Water and Lye

Next day I scrubbed the brooder thoroly with an old broom and a bucket of scalding soapy water into which I had dropped a half box of lye. After it was entirely dry I put the chicks back in and not another mite appeared the rest of the season. —Mrs. C. B. L., Crawford County, Pa.

To Keep Turkeys Home

A SHORT piece of light board fastened across a turkey's back will prevent the bird from flying over a fence says the United States Department of Agriculture.

Cut notches or bore holes in the board and tie with a strip of cloth to each wing. When the wings are raised they strike against the board and flying is prevented. The length of the board should be about the same as the thickness of the turkey's body from side to side.

BLACKHAWK
the SUPERIOR Spreader

"Good Equipment Makes A Good Farmer Better"

AND the best equipment is not too good—particularly for handling that valuable soil-builder, barnyard manure, the greatest of all fertilizers when properly applied. The full benefit from the use of manure is obtained only by spreading it in fine particles evenly over the surface of soil with a BLACK HAWK MANURE SPREADER.

Light Draft—Large Capacity—Short Turning

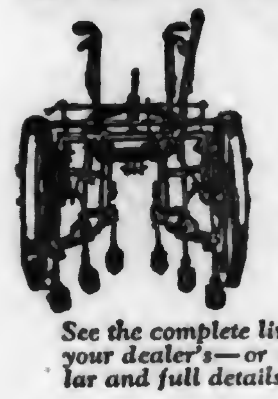
Light draft, light weight, large capacity, short turning radius, wide quantity range, complete pulverization methods and durability are the essential qualities of a perfect manure spreader. These are the outstanding qualities of the BLACK HAWK.

An inspection of this spreader will convince you of its scientific design and durability of construction. And when you see it at work on the farm you will be more than satisfied with its performance.

The BLACK HAWK has a large capacity but is easily handled by a two-horse team and is the lightest draft spreader on the market. Best of all, it does a perfect job of distribution and works equally well on hillsides and level ground.

The BLACK HAWK is a Superior product—a manure spreader of superior quality—a manure spreader of the SUPERIOR LINE. Write or mail the coupon for full details.

BUCKEYE CULTIVATORS



Cultivating with a Buckeye is the direct route to better crops and bigger profits. Buckeye cultivation means easier work and best possible results—always. These highest-quality implements are remarkable for simplicity of operation, lightness of draft, balance and flexibility. Sturdily built of finest materials, they insure long years of dependable service.

The Buckeye line is unusually complete. It includes both Riding and Walking, One and Two-Row—and horse and tractor drawn cultivators.

See the complete line of Superior farm implements at your dealer's—or check and mail coupon for circular and full details.

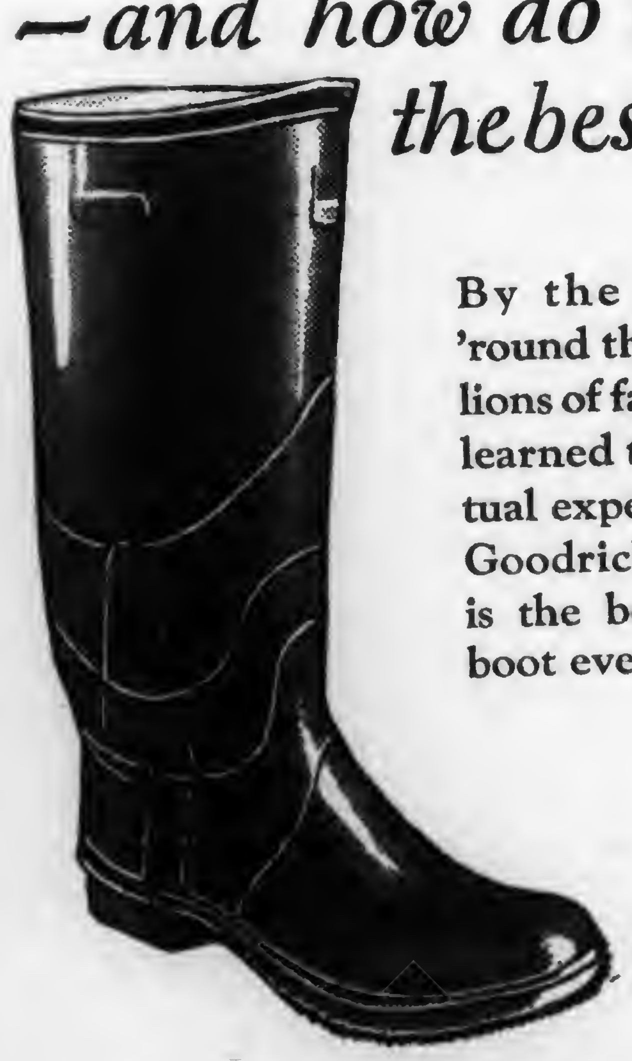
How do you keep ducks fat ?

All you wise poultry farmers know. You keep them away from water all you can, otherwise they would swim off the best part of their weight.

—and how do you tell the best Boot ?



By the Red line 'round the top. Millions of farmers have learned through actual experience that Goodrich Hi-Press is the best wearing boot ever made.

Goodrich HI-PRESS *Rubber Footwear*

THE B. F. GOODRICH RUBBER COMPANY, *Akron, Ohio*

Purebred Geese Sell Best

Many Find It a Good Plan to Raise Breeding Stock

In many sections it is possible to increase the profits in raising geese by keeping purebred stock and advertising. Compared with poultry advertisers there are few breeders that advertise geese. Here is one reason. Most of the flocks are small and there is little surplus for sale. At the same time the large number of small flocks frequently requires new ganders and this sometimes affords an excellent market for the breeder with good surplus stock.

My neighbor, who has always sold her geese for meat on the Christmas market, decided this year that they were fine enough specimens of the Toulouse breed to serve as breeding stock. She spent less than four dollars for advertising and at the present time she has sold nearly all the surplus breeders at a price higher than their market value for meat.

In many cases the buyers came to the farm after their geese. This saved the breeder the work of crating many of the birds for outside shipment. Geese are large and heavy and require careful crating. It should not be of heavy scrap material. When I have bought geese from distant breeders I have always appreciated receiving them in the light, strong, commercial crates manufactured for the shipping of breeding stock. These crates cut down the cost of express and in every case have been good enough for me to use again in shipping stock to other breeders.

Owners of geese who advertise breeding stock should know the source of their stock and not advertise purebred birds of any breed just because the predominating color of their flock is the same as that breed.

Some farmers in a neighborhood trade ganders and many flocks are crossed. These crosses often produce fine meat but the buyer of breeding stock wishes birds of one breed that will produce young true to type. If there is any doubt of the quality or breeding of a flock of geese it is best to sell the surplus for meat or to buyers in the neighborhood who accept them after inspection.

For the Convenience of Buyers

When geese are advertised it helps if the sexes can be separated before buyers arrive to look them over. Then the buyer of ganders can look over your young ganders and select the birds liked best with little confusion. The determination of the sex is rather difficult for beginners but can be learned by visiting with more experienced owners of geese.

The price to charge for purebred geese depends upon the quality and the weight of the birds. If mail inquiries to the advertisement ask about the weights, be sure to give them accurately. Geese carry a lot of plumage and breeders may overestimate their weight. A buyer does not wish to send a check for a gander and have it weigh five or six pounds less than expected. Handling the birds and weighing them is the only right way to obtain accurate information.

Many breeders price their stock too low. Fine purebred breeding stock is often sold as low as $4 each. This is often too little above the cash value for meat to pay for the trouble of making separate sales. I have paid $25 for a trio of young breeding geese and considered it a good investment because of the prospective value of the progeny.

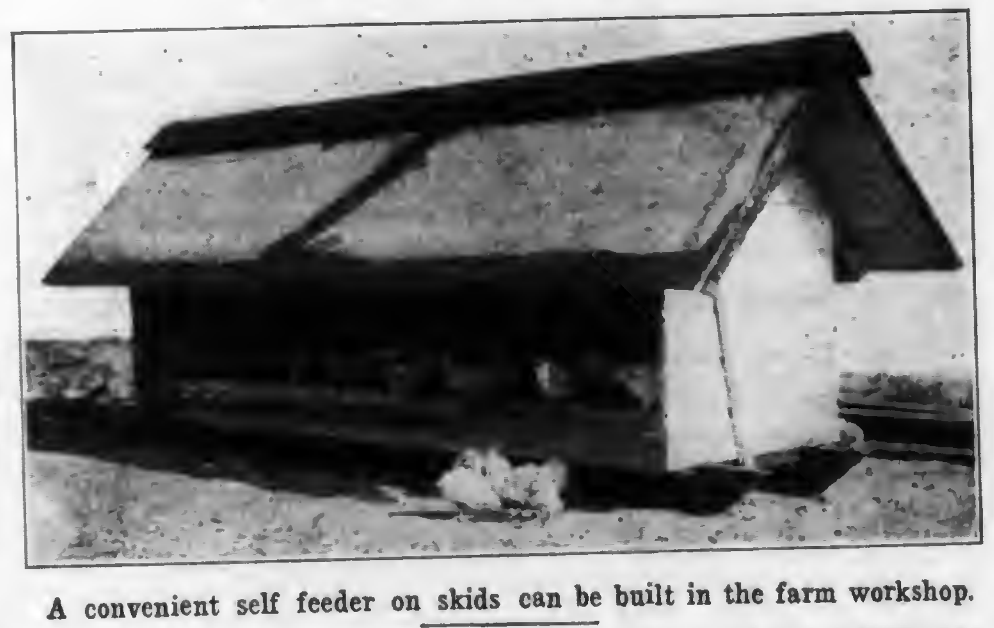
To Determine the Value of Breeders

The practical way to determine the value of the breeders is to weigh them and find the best market price per pound. Then add enough to that price to pay you for the cost of answering inquiries, visiting with individual customers and crating and shipping the birds. In nearly all cases the buyers pay the express.

Some geese lay better, grow better and have more vigor than other geese. If you have a quality flock and breed from the best possible matings you can work up a trade in breeding stock that may take care of the best of the surplus each year.

The use of the automobile is a great help to breeders of purebred geese because of the large range of territory from which customers can be drawn without making so many express shipments.—R. G. Kirby.

A Home Made Self Feeder



A convenient self feeder on skids can be built in the farm workshop.

Selecting Male Birds

The right kind of male birds with the farm poultry flock has a great influence on the vigor of the chicks and the laying ability of the pullets the succeeding fall. I always like scrappy male birds of the kind that never allow themselves to be driven around the house or on the perches. Such birds stand up for themselves and soon avoid fighting because their position in the flock is determined.

When males fight too much it may be necessary to separate them for a time. This can be done by keeping a brood coop in the poultry house and alternating the male birds. Such methods are not necessary when the cockerels are brought up together. Two male birds in a limited area may fight until one dies. When eight or ten males are with the same flock the birds interfere in each other's battles and there is less damage done.

Choose a male bird that is aggressive and of standard weight for the breed. Poultrymen are not so favorable toward a Leghornized Plymouth Rock as they were a few years ago. In mating a farm flock it pays to include a few extra males with the range flock to balance any losses that might result from sterile birds. Experiments prove that male birds are sterile quite often and this may be a reason for poor results from the hatching eggs of certain carefully selected pens of breeders.

I usually keep over some of my best cockerels and use them for breeders during the second and third year. Such birds have had a chance to show up any weaknesses that were not visible in their cockerel year. The fact that they have lived thru two winters and kept their vigor and good appearance means that they must have some vitality. The breeder has had an opportunity to test such birds thru their chicks. If the chicks have been vigorous and the pullets have proven good layers the male birds may be the type that are worthy of further multiplication.

Most poultrymen find that the per cent of fertility is usually a little better when vigorous cockerels are used in the mating. If there is any doubt as to the vigor of the cock birds only the best cockerels should be used, but cock birds of good vitality may be better than cockerels that do not show indications of any unusual quality. In other words, up to two years of age the quality of the individual birds, rather than their their age, may be the determining factor in their selection as breeders. —R. G. Kirby.

Lancaster Tobacco

The buying movement on the 1925 crop of Pennsylvania tobacco, started several weeks ago when two large manufacturers sent their buyers into all sections of Lancaster County, has gathered considerable momentum. Practically every buyer who intends packing any of the 1925 crop is in the county.

Prices have not changed from their original level of 12 cents per pound for the wrapper grades and 2 to 3 cents for fillers and offal. Some few cases have been reported where growers held out for 13 cents—and got it—when their crop was above the average in quality and condition. Crops that are damaged from rust and pole burn have been selling at 8 cents up, depending upon their condition.

Not Satisfied with Prices

A rumor that is gaining the appearance of fact is the report that started at harvest time last fall when a number of growers declared that they would cut down on their tobacco acreage or eliminate it entirely. The majority of growers are not satisfied with the prices the crop is bringing, and state that at "12 and 2" they are producing at a loss. The acreage will undoubtedly be cut this year, altho to what extent it is impossible to tell until the planting season.

It was reported last week that one large cigar manufacturing firm contemplates the manufacture of about sixty million five-cent cigars during 1926, and counts on using Pennsylvania tobacco in their manufacture. If this company puts its intentions into effect, a new outlet of some importance will be found for locally grown cigar leaf tobacco, and the Pennsylvania market should be strengthened proportionately.—Garden Spot Farmer, Feb. 4.

Too Early for Worms

I SET a hen on December 25, and on the fifteenth of January old Biddy brought off a brood of twelve fine chicks, of which she is very proud.—Mrs. J. A. Ferguson, Fayette County, Pa.

AMERICAN SPECIALTY SHOPS, Box 34 NIAGARA FALLS, N. Y.

Swiss Weather Prophet

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

Please Mention Pennsylvania Farmer When Writing to Advertisments

Look before you leap

SOME farmers think that all they need to electrify a farm, is a power line running to the house.

That is just the *first step.* To make electricity pay, the farmer must have equipment which will increase his production and lower his costs at the same time.

At Ripon, Wisc., electricity is pumping and heating water, grinding feed, milking, separating, running concrete mixers and incubators—*doing productive work* as well as being a comfort and convenience to the farmer. In seventeen states responsible men are testing electrical equipment for all farm purposes.

Don't try to get electric power or equipment before you know how to use it *profitably.* Light and power companies everywhere are ready to cooperate with groups of farmers who are in a position to electrify their farms in a sound, economical way.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Is Milk Fit to Use?

I have an eleven-year-old cow that was tested for T. B. a year ago and was found all right. At times she snores in breathing. She has a good appetite and seemingly good health. Would her milk be fit to use? Please advise me in this matter.—O. M. D., Baxter, Pa.

I see no reason why the milk from your cow would not be all right. She may have some little throat trouble that caused her to snore at times while breathing.

So long as you have had her tested for tuberculosis and have found her to be free from this disease, and her appetite and general health seem good, I would not hesitate to use the milk. It would be advisable for you to have a veterinarian examine her and see if he can detect the cause of the trouble.—A. A. Borland.

Contagious Abortion

CONTAGIOUS abortion in cattle, or more correctly Bang's bacillus disease, is one of the most serious diseases in the dairy industry today. It means great losses to the breeders and livestock owners in general; it means bankruptcy if the disease affects the majority of animals. If it is left uncontrolled in a herd, it means that after a year or two from the appearance of the first abortion every animal in the herd will be affected.

Many articles have been written on the subject suggesting different plans for the control and ultimate eradication of the disease. The plan which we found to be most effective, and in the long run most economical, is the one in which the agglutination test is used and elimination of all reactors is practiced.

Have Tried Isolation of Reactors

For a time, isolation of reactors has been tried, treating them until they will show no more discharges, hoping that they may eventually clear up. Strict sanitation was also practiced, but the results were very disappointing. A reactor cow may give birth to a living calf at maturity, but as a rule she will retain the afterbirth, become more or less feverish, the milk secretion will decrease considerably and she will be a bill of expense all the time. A reactor cow will always be such, with very few exceptions.

Many laymen, even some professional men, will condemn the blood test on animals as a means of diagnosing the disease. In our hands it gave splendid results.

The Bi-monthly Blood Test

Thru the cooperation of the Pennsylvania Bureau of Animal Industry we conducted bi-monthly blood testing on a herd of Guernseys for the last five years and we have had ample opportunity to test out the reliability of the blood test. We found the agglutination test as the most efficient method of diagnosing the disease.

The time to begin taking measures against the disease is in the beginning of the trouble, or rather before any trouble appears. Have your animals blood-tested and find out if you possess a clean herd or not. If reactors are found, beef them as soon as possible; it doesn't pay to have them around. Isolation, or Bang's system, on the average farm is not very satisfactory.

When Buying in the Future

The time is coming when a breeder, whenever he intends to purchase new animals, will demand a blood test or buy animals from herds which have been known to be free of disease.

In Jefferson County, Pennsylvania, a systematic plan has been started to clean herds on area basis. This has been made possible thru the cooperation of the Pennsylvania Bureau of Animal Industry and the Jefferson County Farm Bureau. After two annual clean tests the owner receives a certificate from the bureau testifying that his herd is clean of abortion.—C. M. Christy, Jefferson County, Pa.

A Creameryman's Viewpoint

DURING the winter, it is sometimes hard for dairymen to provide a place warm enough to keep the cans of milk from freezing over night, and where barn odors, dust, etc., will not be absorbed. Yet it is a most important point to consider, and we who have had years of experience in creamery management, would advise all patrons to see that their milk is kept down to forty or fifty degrees, thus keeping the bacteria count down, and to see particularly that the milk is not allowed to freeze.

Money Lost on Frozen Milk

We have noted, despite our warnings, how much money patrons lose on milk thus frozen, for much of it clings to the sides and bottom of the cans when we creamerymen empty them. This little loss each day all thru the cold weather makes the total loss quite large.

Barn odors have to be kept out of the milk these days. During the past years I have frequently found, when a patron was closely questioned in regard to the cause of bad smelling milk, that he, or more often a hired man, made the mistake of wetting his hands while milking. This is such a filthy method that when we find it put into practice that patron's milk is immediately refused until the fault is entirely eliminated.

Thru personal inspection of the stables we have often found that in winter when we are compelled to send a patron's milk back home on account of an offensive odor, the cause was due to not clipping the udders of the cows. So much of the barn dirt clings to the udders that they should be kept carefully clipped, and much cleaner milk will be the result.

Some of the patrons, who use milking machines, have confessed, after having been obliged to take their milk home because a bloody sediment was found in the bottom of the can, that it was caused by the teat cups being left on too long. We urge the need of intelligent persons to use the milking machines. A man cannot have an illiterate hired man and leave him in charge of such an important machine without being the loser. This is not idle talk. We are simply citing instances such as we have seen experienced under some patron's management.—L. L. B., Dimock, Pa.

THE HOME GROUNDS

Selecting the Shrubs and Trees for Planting about the Farmhouse

A FARMHOUSE, no matter how plain and unpretentious, will be greatly improved in appearance if well-arranged groups of shrubs are planted around it.

Too much variety in shrub planting should be avoided if a harmonious effect is to be obtained. It is better to stick to a few of the hardiest kinds, such as the bush honeysuckles, hydrangeas, spireas, and viburnums, and to choose one or more of each of of these than to have a miscellaneous collection of numerous varieties.

Some of the best shrubs for planting on the home grounds can be found among those growing wild in the neighborhood. For example, most of us know the sumac, elderberry, and dogwood when we see them in the woods. Not only is this native material more hardy than many other shrubs, but it is really more beautiful, particularly in the fall. Those who have observed the beautiful colors of the sumac, scarlet oak, dogwood, etc., in the fall will agree on this point.

Be Careful When You Transplant

All of the native trees and shrubs can be obtained from nurserymen who specialize in this type of material. Many of them can be transplanted from their native haunts, but in doing this, care should be taken to cut back the tops rather severely, to give the plants a chance to establish growth after having lost so much root during transplanting.

While nothing can take the place of evergreens for an effect of richness and warmth in winter, yet the fact that they are rather costly prohibits many of us from buying them. We need not depend solely on evergreens, however, for shrubs with brightly colored twigs and berries are very ornamental at this season of the year. Plants of this kind are especially needed in the foundation planting, where a cheerful touch of color adds so much.

One of the best small shrubs for this purpose is the Japanese barberry, with its showy scarlet berries that remain on the bush until spring. The graceful drooping canes of the Japanese Rose (Rosa multiflora) laden with clusters of small crimson fruit are also lovely in winter. Some examples of taller shrubs with showy red fruit are the common barberry and chokeberry and the winterberry, or black alder, so familiar to those who live near its native haunts.

Plant Near Farm Buildings, Too

Beautifying the home grounds need not stop with the planting immediately about the house, however. A few trees and a group of shrubs near the farm buildings will do much to improve their appearance and if an unpleasant view needs to be hidden from the house, or a windbreak or shelter belt is needed, trees and large shrubs, of the type of the hawthorn or tartarian maple, could be used.

Trees not only provide a setting for the house, but when placed in proper locations they will shade it from the heat of the summer sun. A few fine trees, such as the tulip poplar, the elm, the oak, or the sugar maple will serve the purpose.

When planting shade trees, it should be borne in mind that only deciduous trees (those that drop their leaves in fall) should be planted near the house, so that shade will be provided in summer, and in winter the house will receive the full benefit of the sun. Most evergreens, except the dwarf or horticultural varieties sold by the nurseries, eventually grow to be large trees so

(Continued on page 38)

Maybe you KNOW the MAN ! ··who wrote this *Letter!*

"I have fed cows (20 to 30 per year) for 33 years and I honestly believe Larro to be the best, safest and most productive feed ever offered to the American dairy farmer, and I have used almost every feed ever grown or concocted."

The name and address of the writer of this letter will be supplied on application. He may not live in the same locality as you do but it is practically certain that in your neighborhood there is a dairyman who might have written it.

For evidence that Larro increases both milk and profits from milk, go to him; look at his cows and at his balance sheet. These tell the Larro story of sustained performance better than we can tell it in words.

This typical Larro feeder, representative of many thousands of satisfied Larro users throughout the country, runs his dairy on a business-like basis. He keeps only the good, profitable cows, and keeps them at their best.

When he first bought Larro he wanted, of course, an immediate increase in milk—and he got it. But more important, since he's in the business for the "long haul", he wanted to build condition in his cows and assure regular reproduction of sturdy, healthy calves. He wanted to lengthen the producing life of his herd, and at the same time he wanted all the milk his cows were capable of producing.

He has found that Larro gets these results. He knows it is "profit over feed costs" that counts, and his records tell him that Larro increases his profit margin.

Write for our folder, "What Your Neighbors Say", which tells the experience of nearby Larro feeders. Better still—try Larro yourself and learn why Larro feeders are becoming more numerous and more enthusiastic year after year.

CRASCO STEEL RODDED SILOS

We Have Faith in Dairy Farmers

For nearly thirty years, dairy farmers have shown their faith in Harder Silos. Now, we are determined to show our faith in Eastern dairymen. In order that we may help them clear a profit under present conditions, we are making unusually liberal terms to any responsible dairyman.

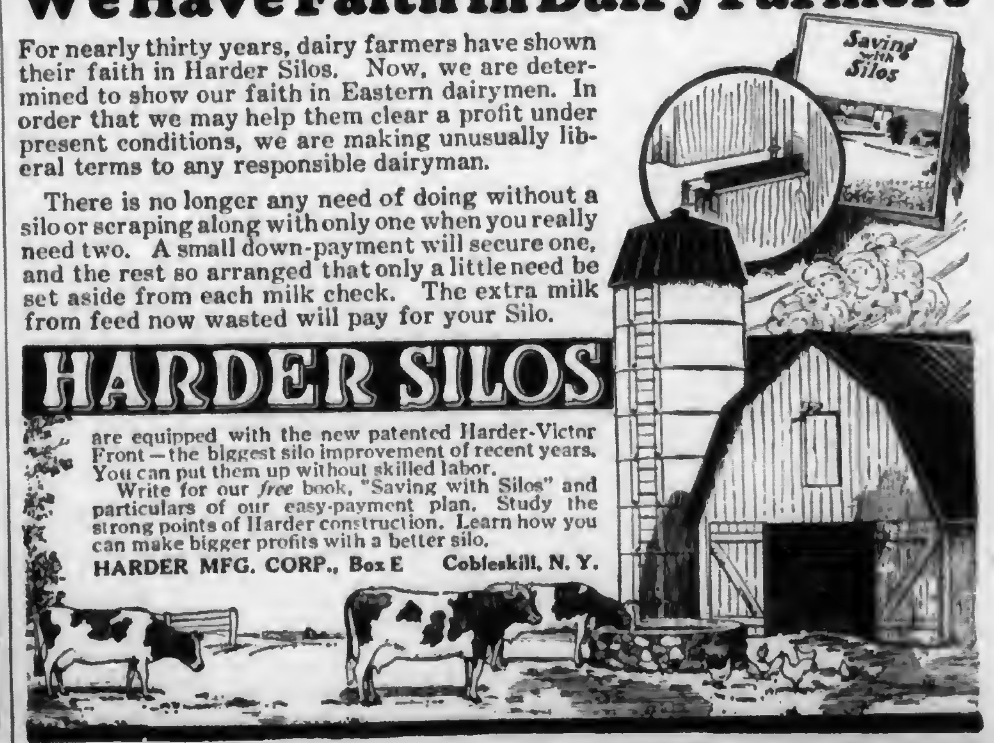
There is no longer any need of doing without a silo or scraping along with only one when you really need two. A small down-payment will secure one, and the rest so arranged that only a little need be set aside from each milk check. The extra milk from feed now wasted will pay for your Silo.

HARDER SILOS

are equipped with the new patented Harder-Victor Front—the biggest silo improvement of recent years. You can put them up without skilled labor.

Write for our *free* book, "Saving with Silos" and particulars of our easy-payment plan. Study the strong points of Harder construction. Learn how you can make bigger profits with a better silo.

HARDER MFG. CORP., Box E Cobleskill, N. Y.



Extra strength

without extra weight in the "boot with the muscles"

THE powerful worker and the winning athlete are lithe and sinewy, not heavy or clumsy. Their power and endurance come from *muscular strength.* That's the principle on which we build Top Notch Buddy Boots.

Their extra strength without added weight is due largely to the "muscles" of tough, live rubber. These ribs or muscles protect the sides, reinforce them and prevent them from cracking. In no other boot can you get the leg "muscles" which add so much to the service and comfort of Top Notch Buddy Boots.

Every other point of wear is also strongly fortified. Soles and heels are extra thick, made of the livest, most resilient rubber. There's a special rubber strip reinforcement next to the sole.

All materials that go into Top Notch Buddy Boots have special qualities for elasticity and toughness. We make each pair by hand from start to finish. The result is a boot of wonderful durability.

Rubber footwear for all the family

BOOTS, arctics, heavy and light rubbers—all styles and sizes for men, women and children. Made with unusual care to safeguard our 25 years' record for building distinctive, durable rubber footwear. Ask for Top Notch by name and look for the Top Notch Cross.

The best stores carry Top Notch Rubber Footwear or will get it at your request.

Need Eastern Dairymen Fear Western Competition?

I HAVE noticed with a great deal of interest and concern the publicity in newspapers and various farm journals with reference to the new concerns which have recently become interested in the distribution of milk in the eastern markets, particularly New York City, and the fear of western competition absorbing the market.

Several articles have emphasized the necessity for cooperation or strengthening the cooperative organization of eastern dairymen. I have also noticed a suggestion that the eastern dairymen should raise rather than buy their feed.

From my study of the situation I cannot help wondering if there is not danger of developing a panicky condition which may lead to serious error on the part of dairymen in their endeavor to meet the situation.

It seems to me that it is time for very careful sober thought to see the situation exactly as it is and put aside any factional feelings and pull together along the lines which are economically sound and right. If this is done I believe the eastern dairymen have nothing to fear.

From the standpoint of the large financial interests which have become a factor in the distribution of milk is it not reasonable to suppose that their selfish interest will prompt them to look to the market for supplies which can furnish milk at the most favorable prices and in the best condition?

A Distinct Advantage

Obviously the nearer the milk can be produced to the consuming market the better will be the condition of the milk and the risk of loss thru deterioration is minimized. From this standpoint, the eastern dairymen have a very distinct advantage over the West and I feel sure that other things being equal, a distributing concern will give preference to milk produced near the market—that is milk produced in the East.

In the articles which I have read, I notice the fact has been emphasized that milk can be shipped from Chicago to New York for 96 cents per can (this would equal $1.13 per hundred pounds). The freight rate from the two-hundred-mile zone is 38 cents per can or 44.7 cents per hundred pounds. In other words, the eastern dairyman within 200 miles of New York has an advantage of 68.3 cents per hundred pounds in the freight rate on the milk. Drawing nearer to New York this difference would be slightly increased while getting farther away would make a slight decrease.

The eastern farmer, however, must pay freight on the feed but considering the usual standard of three pounds of milk produced by one pound of feed the eastern farmer would be obliged to pay freight on thirty-three and one-third pounds of feed for each 100 pounds of milk produced.

The Problem of Freight Rates

The freight rate from Chicago in carload lots (and the same would apply whether the feed is purchased from the West direct or thru eastern manufacturers) is 28½ cents per hundred pounds or 9½ cents on one-third of 100 pounds, which is the amount required to produce 100 pounds of milk. Deducting this from the amount saved in freight on the milk, we still have a difference of 58.8 cents per hundred pounds of milk advantage in favor of the eastern dairyman.

Concerning the advice for farmers to raise their own grain I wonder if this is really the solution? There was a time when farmers did raise their own grain and any well posted dairyman knows what their cows produced under those conditions and how much more the cows produce under the present plan of raising roughage, buying concentrates and keeping more cows. . . .

Necessary to Feed Concentrates

To produce the maximum amount of milk it is necessary to feed concentrates and the nutritive value in these concentrates can be purchased for less money in by-products of different kinds of manufacturing processes (where the profit is made in the main product) and the by-product is sold for what the market will pay. . . .

The overhead expense of keeping cows is the same whether they are high or low producers, and I believe it is better business to increase the production by feeding for maximum results than to drop back to methods which would unquestionably reduce production and consequently increase the cost. In other words, apply sound business principle and operate the dairy plant to capacity which, as in any other business, lowers the unit overhead cost and makes more profit.

There is no need of dodging the issue that the eastern dairymen no longer monopolize the fluid milk market. They are in competition with dairymen farther West. This puts a definite limit on the point to which the price can be advanced but with a condition existing where it is cheaper to ship the feed than it is to ship the milk and with the quicker delivery to the city and the advantage of 58.8 cents per hundred pounds, I cannot see where there is reason for discouragement.

With this disadvantage or handicap to overcome, I would hate to be a western farmer endeavoring to compete for the market.

Cooperation Isn't Everything

The situation calls for the closest cooperation but I do not believe that cooperation alone will solve the problem. With the western supply available it is obvious that cooperation to put up the price of milk will only encourage western competition. On the other hand, the answer is not to be found in a price cutting war between the East and the West. The price should be held at a point where it gives the eastern dairymen a fair return on their product. This will be a price at which the western dairyman cannot afford to ship his milk and absorb the 55 or 60 cent per hundred pounds handicap in freights.

The western men can afford to stand this difference in freight only if they produce milk cheaper and certainly the eastern dairyman, by correct feeding, can produce milk as cheap as any section in the country. As a whole, dairymen are not producing milk as cheaply as they might.

A fair average example of the results obtainable in feeding recently came under our observation. It was a large commercial herd supposed to be producing milk as economically as they could and yet with corrected feeding a saving of 69 cents per hundred pounds in the feed and roughage cost of the milk was effected. A somewhat similar saving can be made in the cost of producing milk in a very large percentage of dairy farms in the East.

Would it not be well for the dairymen to give special attention to the subject of studying methods of feeding for increased production to lower cost? In profit, any saving would be equivalent to an increase in the price of milk.

In Order to Meet Competition

If a manufacturer has new and strong competition to meet he does not meet that situation by trying to put up his prices but he holds his trade and meets that competition by studying costs and methods of more economical production and ways of giving better service.

There is no method which will hold business whether it is handled on a small scale or running into the magnitude of the fluid milk business, and it seems to me that without any feeling of discouragement the dairy farmers should cooperate in mutual encouragement, combining effort to study ways of producing milk at lower cost and rendering better service. If this is done I believe it will be found that there will be no need to fear western competition.—A. C. Palmer.

New Buildings at State

PLANS are being made for the construction of three additional student welfare buildings on the campus of the Pennsylvania State College with money raised in the emergency building fund campaign conducted in 1923, according to R. H. Smith, college comptroller and acting secretary of the board of trustees.

The three new structures, including a hospital, a men's dormitory, and a unit of a recreation building, are to be ready for occupancy on or before September 1, 1927. Money for the construction of these buildings will come from the $1,600,000 which was pledged by 19,407 students, alumni and friends of the college in the state-wide building fund campaign conducted in 1923. Varsity Hall dormitory was the first building erected from these funds. Other buildings contemplated are a students union building, dormitories for women, and a woman's activities building.

Funds Provided by Potato Clubs

The new hospital will be erected by funds provided largely by the potato growers of the state in return for the assistance given them by the college, mainly thru the efforts of E. L. Nixon, extension plant pathologist, who organized the popular "400 Bushel Potato Clubs."

The hospital will be used as an infirmary and dispensary for the prevention and treatment of disease among the students and will replace the small frame building which has housed the college health service during the past twelve years.

The proposed men's dormitory will be similar to and face Watts Hall, forming the third side of a quadrangle which includes Varsity Hall. Funds for this building come from the Keystone agricultural interests, exclusive of the potato growers, and the state Grange which is engaged in raising money for a woman's dormitory.

The student interest is centered largely in the new recreational building which will replace the armory built thirty-five years ago for a student body of less than three hundred. The armory now furnishes inadequate facilities for athletic activities among the 3700 students enrolled at Penn State.

The first unit of the gymnasium will provide a large floor space and an amphitheatre seating five thousand. The remaining four units will be constructed as funds are available.—A. L. B.

The Whole Family Likes it!

FATHER likes the De Laval Milker because it saves so much time, produces more and cleaner milk, and makes milking cows so much more profitable.

Mother likes it because there isn't so much help to care for, and because milking doesn't require the help of the whole family.

Brother likes it because it is so much fun to milk with it, and because it enables him to take the place of a man in milking.

The hired man likes it, too, because milking is so much easier, and he and the boss "trade off" milking every other Sunday, so that one has a full day off.

And best of all, the cows like it because of its regular, stimulating and soothing action—and prove it by giving more milk.

A Field Mate for Your Tractor

THOSE precious days between plowing and seeding can be made to count most when you use a Massey-Harris Double Disc Harrow to put the finishing touches to the seed bed. It is specially built for use with light and medium tractors. Both front and rear frames are made of stiff steel, hot-riveted into truss forms which will stand the strains.

MASSEY-HARRIS No. 30 Double Disc Harrow

tills a field in one operation, placing it in ideal condition to promote rapid plant growth. Oversize center bumpers of chilled steel absorb the end pressure of the front gangs. The tractor operator controls both sets of gangs from his seat. The discs are mounted with split hardwood bearings and equipped with adjustable hoe-steel scrapers.

If you have a tractor, you need the Massey-Harris No. 30. It is built by an organization which has specialized in farm machinery for 76 years.

Write for the Massey-Harris Catalog

It describes this No. 30 Tractor Harrow, also the Massey-Harris No. 28 Disc Harrow for horses, and a complete line of Seeding, Cultivating and Harvesting Machines. You are always sure of getting repairs for any Massey-Harris Machine, however long you have used it.

Head of the Department of Animal Husbandry, Pennsylvania State College

Short Hay Supply

My hay supply is short, but I have plenty of good clean oat straw and corn stover. Can I feed this to my work horses while they are idle or doing very little work? I have plenty of oats and corn as grain feed and can buy oil meal if necessary.—R. C. J., Dauphin County, Pa.

Clean oat straw and well preserved corn stover can be used to very good advantage as roughage in place of hay while the horses are doing light work or are idle. If grain is fed in addition to the roughage the horses will come thru the winter in just as good condition as when timothy is fed and at a lower cost of maintenance.

The roughage should be fed in such amounts as the horses will clean up altho there is likely to be more waste than when hay is fed. An allowance of seven to ten pounds daily of straw and stover, respectively, for a horse of medium weight will be sufficient.

In addition to the roughage the grain allowance should consist of about four parts corn, four parts oats and one part oil meal. This should be fed daily at the rate of three-quarters to one-pound per 100 pounds of weight. The amount may be varied depending upon the condition of the horses and the amount of work which they are doing.—W. H. Tomhave.

New Pig Ration

F. B. MORRISON, with J. M. Fargo, of the Wisconsin University swine department, has developed a ration, which has given surprising results in making fall pigs grow as well as spring pigs. "This ration," Mr. Morrison says, "is simply a combination of corn, tankage, chopped alfalfa hay, and last—but not least—linseed meal. This combination has been tested on hundreds of pigs and we are certain of the results," he declares.

"The experiment brought out that pigs fed on the corn and tankage ration gained slightly less than a pound a day, while those fed the efficient combination, given above, gained 1.15 pounds, on the average.

"This difference means that the pigs fed this new ration reached the market weight of 200 pounds twenty-nine days before those fed on the ration of corn and tankage alone,—thereby saving about a month's labor in feeding and caring for the pigs.

"Still more important was the saving in feed. The pigs given only corn and tankage required 417.9 pounds of corn and 47.4 pounds of tankage for each 100 pounds gain,—while those fed the efficient combination, needed only 378 pounds of corn, 31.4 pounds of tankage, 19.6 pounds of chopped alfafa hay, and 19.6 pounds of linseed meal to make the same gain,—a saving of 16.7 pounds of feed in putting on each 100 pounds of pork.

Stock Judging Contest

MANY tie scores featured the annual stock judging contest held for agricultural freshmen at the Pennsylvania State College and re-trials may be necessary to break the deadlocks.

N. P. Sloan, Ridley Park, was high man in the judging of beef cattle. A. A. Ammarell, Reading, scored highest in the sheep classes and C. F. Schmidt, Upper Darby, won first place in judging horses. Each of these men was presented with a gold medal as the result of his excellent work in placing the animals exhibited in order of merit.

Seven freshmen turned in tie scores in the hog judging contest and five two-year men were tied for first place in the same classes.

W. W. Nicholson, Dunbar, was high man among the two-year agricultural students in horse judging while W. N. McCandless, Butler, and J. L. Williams, West Brownsville, tied for first place in the beef cattle classes. Five of the two-year contestants turned in the same number of points in the sheep classes.

The contest was held under the supervision of the Block and Bridle Club which includes all students enrolled in the animal husbandry course at the Pennsylvania State College.—A. L. B.

Market Lambs While Young

LAMBS in the farm flock should be ready for market when about four months old according to specialists of the United States Department of Agriculture. Reasons for pushing the lambs as fast as possible in order to market them at this early age are as follows:

Average market prices are higher in the spring and early summer.

Lambs will make more rapid and less expensive gains in flesh while young than when they are older.

Less labor and less pasture will be required for the flock.

Lambs marketed in the early part of the season escape the heat of the summer and the ravages of the stomach worm and other internal parasites. This is very important say the specialists, as it has been found that in most instances the weight of lambs remains practically at a standstill from mid-summer until fall. If they become infested with stomach worms as is usually the case in the farm flock they will lose weight during this period and a large number of the animals may die.

In order to produce lambs of desirable quality and weight for the market at this early age it is necessary to feed properly both the ewes and lambs. The ewes should be brought to the lambing season in good flesh so that a large milk flow is assured. It has been found that it is not essential to feed grain to ewes suckling lambs if they are on good pasture. If the pasture is short, however, or if the ewes are on dry feed the daily addition of one to two pounds of grain per head to their ration is advisable.

The lambs should be taught to eat at as early an age as possible. They will usually begin nibbling at feed when they are from ten to fifteen days old. A creep should be prepared so that they can get away from the ewes and the best quality of alfalfa or clover hay should be kept before the lambs in this creep. They should also be given a small amount of such feed as crushed corn, oats or barley with a little wheat bran and oil meal. It is important that the grain be clean and fresh and that the troughs are kept clean. After the lambs have learned to eat they should be given twice daily, as much grain as they will eat within a few minutes' time.

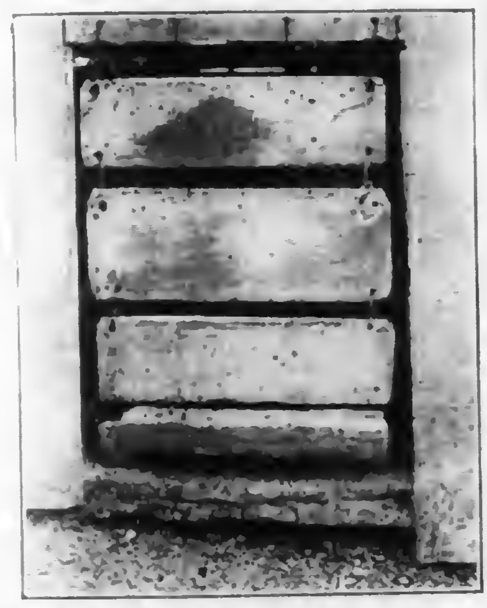
Livestock Situation

THE number of horses on farms in the United States continues to decline rapidly altho there is some indication that the decline in birth rate of colts may have stopped, at least in some areas. The ratio of colts under 2 years of age to all horses declined from 12.8 per cent on January 1, 1920, to 7.2 per cent at the same date in 1925.

It is estimated that the number of horses and colts on farms declined from 16,554,000 in 1925 to 15,778,000 in 1926, or nearly 5 per cent. The average value of horses and colts per head, $64.18 in 1925 and $65.08 in 1926, seems to have reached the lowest point of its decline in 1925.

Mules slightly increased from 5,758,000 in 1925 to 5,780,000 in 1926, but in the North there was slight decline. The average price per head increased in the North but declined in other sections enough to cause the United States average to decline from $82.24 per head to $81.30.

The number of milk cows and heifers two years old and over, including beef cows milked as well as cows of the dairy type, declined about 1 per cent during 1925, or from 22,523,000 on January 1, 1925, to 22,290,000 on January 1, 1926. Heifers between one and two years of age to be kept for milk cows during the same period declined about 9 per cent, or from 4,234,000 to 3,861,000.



This type of door will keep chickens out of the hog house.

This reduction in heifers is probably due to the unsatisfactory prices for milk and dairy products which prevailed during the spring of 1924. The ratio of milk heifers to milk cows was 18.8 per cent on January 1, 1925, and 17.3 per cent on January 1, 1926. Commercial calf slaughter in 1924 was by far the heaviest up to that time, but calf slaughter in 1925 exceeded 1924 by about 7 per cent. The number of all cattle declined from 62,150,000 in 1925 to 59,829,000 in 1926.

Number of Sheep Increase

The number of sheep increased 3.4 per cent during 1925, from 39,390,000 head to 40,748,000 head. They were the only species of meat animals that increased in number during 1925. In spite of the increase, prices increased from $12.38 to $15.21 a head.

Compared with a year ago, the total swine in the United States decreased 8.2 per cent, from 55,769,000 to 51,223,000, but the total value of swine increased from $690,328,000 to $779,348,000. This increase in value was due to an increase in the average value per head from $12.38 to $15.21. The value per head increased both because of the increased price per hundred pounds and also because of the greater average weight of hogs, mature hogs being a larger proportion in the total than at the same time last year.—U. S. Bureau of Agricultural Economics.

AMERICANS SHOULD PRODUCE THEIR OWN RUBBER . . H.S.Firestone

It was in 1831 that Cyrus H. McCormick found the "better way" to feed the world by the invention of the Reaper. In him were combined three outstanding abilities—he invented, made and sold his product; the builder who was also the leader.

Finding the Better Way

Firestone initiative has brought exceptional results in providing the "better way" to improve tire quality. Gum-Dipping—the exclusive Firestone process, is largely responsible for the thousands of extra miles Firestone Balloons deliver. This method of treating cord fabric thoroughly insulates and impregnates each fiber of every cord with rubber. It virtually eliminates destructive friction and heat. It builds into the sidewalls of Full-Size Balloon tires extra strength and flexibility, and gives added riding comfort and driving safety over rough country roads.

The high cost of crude rubber has forced up tire prices—therefore motorists should give more thought to their tire purchases, selecting tires of proved quality. They should depend more than ever upon Firestone, with its long-established and rigid policy of using only the most improved methods, highest quality of materials, and advanced tire engineering—assuring every car owner Most Miles per Dollar. The Firestone Dealer is ready to supply you, promptly and at low cost.

Deep Fire Box Sawmill Rig

This boiler has a longer and deeper fire box than any similar type. Large heating surface. Therefore easy and quick steamer. Has two fire doors. High pressure and steams on any offal found around a sawmill. Delivers a steady stream of dependable power.

Read Bulletin 424 and learn why it delivers such dependable power. Also ask about the "Slab Burner" and our standard Locomotive Rig. We also build sawmills, threshers and hay balers suitable for your present power.

A. B. FARQUHAR CO., Ltd.,
Box 446 YORK, PA.

Easy to Mix with Feed!

For chickens and fowl of all kinds—also live stock

Cures leg weakness, hastens growth, increases laying—will save the whole hatch—costs about half as much as liquid cod liver oil.

Put your hens in laying condition now

Dealers write for literature and attractive proposition. Coliverol sells on sight.

TOM OF PEACE VALLEY

By John F. Case

Copyrighted by J. B. LIPPINCOTT COMPANY

(Continued from last week)

IT WAS rally night at Banton and Coach Roberts was stirring enthusiasm for the big game now but two weeks away. "Watch Durham hold 'em," he had cried, "watch Woodson go thru 'em. You other lads put the fight into it that these fellows do and we're sure to win." Loud were the cheers but leaning close to Marvin Manning, Johnson had whispered as he gave a sly dig with an elbow, "Great player your 'Hill Billy' friend, eh? Well, he isn't going to be in the big game. Gettin' a little too much publicity. Durham and the rest of us are goin' to lay him out; you've seen Woodson play his last game."

It was but one of many taunts and goaded beyond endurance Pepper Manning drove his fist into the face leering so close to his, to follow by an attack in which he bit and clawed like a wild cat. "Take him off," howled Johnson as with the room in uproar Roberts strode down the aisle and collaring Marvin sternly demanded to know what such conduct meant. Trembling with rage and excitement, the pepper-pot blurted out, "He said they was goin' to lay Tom out so he couldn't play Denman. And they've done him 'dirt' all year," he screamed, pointing an accusing finger at "Bull" Durham. "Stole his seed corn, tried to ruin his crop in the Valley. Tom won't tell," for Woodson was shaking a head in decided negative, "but I will. And Johnson's always pickin' on me about Tom. The dirty dog, let me at 'im." Almost frothing in his anger altho tears streamed down Marvin made an ineffectual attempt to break loose and renew the battle.

"Sit down," commanded Roberts, "and shut up!" Then as the room grew suddenly silent he turned to Durham and to Tom. "These charges are serious," Roberts said, "and I know personally that one is true. But I had thought you, Bob, had become a man this summer and were done with dirty play. I sha'n't ask Woodson if his friend has lied. It's up to you, Durham, to admit or deny your guilt for well I know that you have been the leader of Tom's enemies. How about it?" There was no mercy, only justice, in the steely gaze which Roberts turned upon the "Wasp" leader who shifted uncomfortably in his seat.

WHAT proof had Manning to offer that his charge was true? None that could be substantiated. Why not brazen the thing out and make the best of it? And tho he raised his eyes to the teacher's face Durham saw mirrored now sorrow, deep and heart-breaking, that a growing confidence had been misplaced. It cut him to the quick as no sharp reproof would have done and slowly he answered, "It's all true, sir. We did steal the corn but somehow Woodson must have got it back. And we went up to cut down some of his corn but panthers drove us off."

"Panthers!" It was Marvin Manning on his feet again and with head thrown back he let out a long "Mar-r-rough," which rang thruout the room. "That was Lame Bill Kidd and the 'painters' the paper told about was Tom's dad, an' Tom an' 'Slim' Barnett an' me. Tom tore the pants off'n Johnson with a curry-comb. Get that, you big stiff? Mar-r-rough!" Tragedy was changed to comedy and teachers and students laughed until tears ran down faces as they visioned the picture of that frantic flight. But soon a sharp command came from Roberts and the room was still as again he took the platform and stood looking down. It seemed that in those few moments Roberts had changed from the care-free, happy instructor whom all knew and loved, to a man who had known grief and the weight of care. Pain was in his eyes and his voice trembled as he began to speak.

"Friends," began Roberts, "this revelation has hurt more than I care to tell. I thought that long ago factionalism had disappeared and that Bob and his friends were playing the game fair. It seems that in some way I have failed to influence you boys as a friend and teacher should. I honor Tom for his silence as he considered this his own battle and he seems to have won without my help. Nor do I blame Marvin for betraying the secret under the conditions of tonight. Bob is to be credited, too, for having told the truth but how better far it would have been if that admission had been voluntary. I shall not ask that you be expelled from school but no boy who continues dirty play in the bigger game of life can play on a football team of mine. Others of Bob's associates are on the team but he was the leader and I shall not penalize them. Durham has played his last game of any kind for Blanton so long as I am coach. Oh, Bob," and there was poignant regret in the teacher's voice, "where have I failed in helping you play the man? You are dismissed," and Roberts stood with bowed head as the students silently filed out to break into chattering groups as they discussed what penalization of Durham meant to the team. Gone were the joys of a hoped for victory and as gloom, black and bitter, came down like a pall many former admirers of Durham turned on him in reproach and contempt. "The big dumbbell, to pull a stunt like that," remarked one lad to another, "and then Woodson beat him at his own game. And to the ears of Durham and his followers as they slunk off into the night came many a "mar-r-rough" with peals of laughter. But the thing that lived with Robert Durham as he tossed in bed that night was the words of John Roberts and the look on his teacher's face.

IT WAS almost as an old man that John Roberts went slowly about the room, putting things to rights for the morrow's work. As he was turning off the lights a hesitant step sounded and Tom Woodson stood before him. Ill at ease as on that first day in school the hill lad cleared his throat and asked permission for a word before Roberts left. "I'm sorry," Tom said as he took a seat and faced his friend, "that Pep had to 'spill the beans' tonight. You know that I promised to tell you if anything happened in school but this took place in the summer and I thought it wasn't necessary to bother you. I was mighty sore I'll admit," Tom went on, "when I heard that 'Bull' and his gang aimed to ruin my corn crop but we beat 'em and had a lot of fun doing it. There hasn't been any further trouble, 'prof,' and you know we've been getting along pretty well this fall. I just wondered if I couldn't persuade you to let Durham play in the big game. We need him mighty bad, without him Denman will rip holes in our line."

"That's fine of you, Tom," Roberts replied, "for some boys would only be anxious for the punishment of an enemy. And it's true that Bob has cut out dirty play. But I won't allow a fellow of that stripe to play on a team of mine. We may lose, we probably will lose, but what I've said goes. Never while I am coach will Durham play."

The vocational agriculture teacher's lip had set in firm lines and as he rose it seemed that the interview was at an end. Slowly Tom turned towards the door. "I'm sorry," he said simply, "and I reckon you are right. But isn't there something else to think about than just Durham and me and you? Haven't you told us that we must give Old Blanton our best and aren't you knocking us out of a chance to win? Think of the school, 'prof,' and what it will mean to all of us when Denman gives us the walloping that's sure to come. Not that I'm criticising," he added hastily at Roberts' glance of awakened interest, "but that's the way it seems to me."

"Old man," replied John Roberts as he took Tom's hand in that strong clasp of his, "you've taught me a lot and few greater lessons than this just now. I was forgetting the school. Well, we'll see how Bob stands the gaff. If he gets out to the scrimmages and helps coach Parker for his place I'll put him in. But he'll never be a friend of mine until he apologizes to you like a man and proves to me that he's got the making of a man in him. I'd had hopes for him but this night has knocked 'em pretty well out. Let's be getting on home." And in silence, each busy with his own thoughts, the friends went their respective ways.

The week that followed that eventful night when Pepper Manning had disclosed the secret was the most trying in the life of Robert Durham. popular hero, he now was tasting not only the bitterness of public disapproval but the humiliation of ridicule. Wherever he went small boys "mar-r-roughed" or facetious elders inquired if he'd visited the Valley recently. The elder Durham had called him sternly to account, reminding him that there were limits to which one should go in fighting an enemy. Faint hearted followers had fallen away, fearing that association with an outcast might mean a bar from the team also. And the climax had seemingly come when on the way home from school one evening Durham had come upon George Johnson chastising Marvin Manning unmercifully.

FIGHTING like a wildcat the smaller lad had gone down under the weight of his far bigger opponent when Durham approached the scene of combat. "Tell on me, will you," Johnson was snarling as he rained blows upon the upturned face, "I'll fix you, you dirty little sneak." A few months before Durham would stood by and laughed but now he caught Johnson by the collar and pulled him off. "Cut it!" Durham commanded, "what do you mean, beating up a kid that's so much smaller than you?" With amazement and wrath on his face Johnson replied, "Fine talk from you, 'Bull.' Never did anything like that, did you?" Durham's answer had been a well directed kick which sent Johnson sprawling and enabled the smaller lad to add discretion to valor and scurry away. At a safe distance he yelled back "Mar-r-rough" while with suggestive fingers he indicated contempt. Pepper Manning wasn't taking any chances if there were outward indications of repentance. But when he reached home and told Tom his story Tom nodded in approval and to Pep's astonishment remarked that he believed "Bull" soon would be back on the team. What his rescue had to do with "Bull's" playing again the pepper-pot couldn't conceive. But Coach Roberts, too, nodded in approbation when the story was told to him.

Do Farm Animals Think?

NEARLY everyone has seen dogs, horses, cows and other farm animals perform feats that seemed to indicate intelligence and reasoning power almost human.

What is the most interesting thing you ever saw done by a farm animal or fowl?

You are invited to tell other readers about it in a letter on this subject:

The Most Intelligent Farm Animal I Ever Knew

Pennsylvania Farmer will give a prize of $5.00 for the best letter, and will pay at space rates for all others published. Letters should not be longer than 300 words, and should be in our hands by February 27th. Address them to WEEKLY CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Activities of Al Acres:—*Are You Running an Egg Plant or a Tin Mill, Al?* : : *By Leet*

MORNIN', MR NEWCOMER!
HELLO, SLIM! I STOPPED FOR THOSE TWO DOZEN EGGS AL SAID I COULD HAVE!
AL'S GONE TO TOWN AN' HE DIDN'T TELL ME 'BOUT ANY EGGS FOR NEWCOMER, WELL, I'LL GIVE HIM SOME OF AL'S TIN HEN EGGS!

"I've given up hope for Johnson," he had remarked to Tom, "for he appears to be yellow all thru. Altho he's only a close friend and not the leader he's always been playing up to Bob's desire for flattery and has been a bad influence all thru. I still believe that there is the making of considerable of a man in Durham altho I'll confess," and Roberts smiled a warm smile that betrayed the affection he had for his friend, "that I could never feel toward him just as I do toward you. He just isn't our kind. But as you've noticed Bob's coming around with his coaching and his grouch is wearing off. We'll see next Monday. Maybe your wish will be granted." In his heart Tom Woodson knew that no lad could displace him in the affections of the teacher but it was with joy for the school that he thought of what those words meant.

With even Johnson no longer disciple and friend Robert Durham was a lonely and almost pathetic figure in the school life. All illusions had been swept away and now he saw himself for what he was, a physically big but no longer important link in the chain. Debarred from practice it now was his lot to stand on the sidelines and direct another boy who ineffectually tried to fill the place of a real star. Yet with the stubborn courage which had characterized his play "Bull" stuck to his task while with keen eyes John Roberts studied the lad more than he did the play. The team had been called for special practice on Saturday afternoon and at its close the coach called Durham aside and asked him to come to his room that night. Durham had flushed but accepted and at the appointed hour he sat in the little room which Roberts called "home." There was an awkward pause and then the coach began to speak.

BOB," said Roberts with startling abruptness, "I'm going to put you back in the game. Put on your uniform Monday. No, you don't need to thank me," he added as Durham started to speak. "I'm doing it partly for the school, partly because a member of the team who has no cause to love you asked me to do it, and partly for yourself. Winning or losing this game doesn't mean a lot to Blanton. It's winning a victory over oneself that counts. Bob," and Roberts laid a friendly hand upon his visitor's knee, "I want you to become a real man. My work here will be a failure if I fail with you. And I want you to be a friend of mine. Now I'm going to tell you frankly that when I first came here I thought you only a 'dirty' player and in much of your behavior you bore that impression out. And I've a confession to make: I didn't try to be the friend to you that I should have been. But I'm learning that the big job of a teacher is to help his boys grow into real men. I've watched you this fall, Bob, and I'm sure that there's something big and fine in you if you'll just decide to try. Old man, I'm going to trust you to make good. Promise me that you are going to play the big game in school and out like you do football."

The teacher's voice was earnest and pleading. As he had listened silently a flush had mounted to the face of Young Durham and now as John Roberts took his hand, tears, big and scalding, ran down Durham's cheeks. He had expected reproaches, the tongue lashing with which Coach Roberts sometimes spurred his team for indifferent play. Instead there was only kindly interest and appeal to manhood, something that Durham never had known even from parents or friends. "I-I'll do my best, sir," Bob Durham stammered and with those unaccustomed tears many a soul stain was washed away. Long into the night the two talked while John Roberts, not preacher but sincere friend to boys, pointed the way to the paths of usefulness and trust.

"I know it was Woodson who asked you to let me play," said Durham as he rose to take his leave, "and it was mighty white of him. Please thank him for me." Roberts promised to do so but a shade of disappointment crossed his face. Until Robert Durham played the part of a man and apologized for past misdeeds his feet never would be set firmly on the pathway of clean living. Then reflecting that regeneration could not be accomplished overnight John Roberts sent his guest away with a hearty handclasp and a prediction that Denman would know she'd been in a game one week from that day. As Durham went down the street Roberts could hear him whistling strains of "Blanton Forever," the school song. And, smiling, he went off to bed.

Great was the surprise but keen the satisfaction when on Monday morning Coach Roberts announced in school that Robert Durham had been reinstated "for good behavior and the good of the school." When the team took the field for practice that afternoon it played as a team inspired; Woodson the flashing attack that knew no stopping, Durham the sure and steadying defense that put heart and courage into his mates. A practice game had been scheduled with one of the smaller county school teams for Wednesday and having heard of the suspension of Blanton's star, Moundville came confident of victory. But dismay soon struck Moundville's followers as Tom Woodson tore thru for repeated touchdowns while not even one field goal could Moundville make. With the score 35 to 0 at close of the third quarter Roberts sent in a substitute team with Pepper Manning as quarterback much to that worthy's delight. When a few moments later the pepper-pot went over the line for another touchdown, the battered and weary visitors offering little resistance, he sent out a shrill "Mar-r-rough! Mar-r-rough!" in token of victory. But altho the crowd cheered and laughed it was not in derision for Durham. Again he was a part of the school life, a vital cog in the team's machine, a name to conjure with when students talked of the hoped for win over Denman a few days hence. And in his heart Bob Durham knew that all this he owed to a lad whom he had fought unfairly in the past. Ignoring Johnson who had made friendly advances he asked permission to leave and went soberly home alone.

Came the day of the great game and all Blanton, aroused as it never had been before, flocked to the rival field, there to cheer their lads on to victory. Came, too, the folks of the Valley knowing little what it was all about but drawn by the knowledge that one of their blood was to clash with other foes. Tom's parents were there and Lame Bill Kidd, conspicuous and uncomfortable in the new suit which Tom had insisted on purchasing as reward for valiant service.

(To be concluded next week)

Old Colonial Family Homesteads

The loader shown in this picture, taken on the Lerch Estate, was the first in that section of Pennsylvania. It is still working in the same neighborhood but on another farm.

No. 35—The Lerch Estate

IN THE Paradise Valley there is a piece of land known as the Lerch Estate which has been owned by the same family for a period of 102 years. The original deed, which can be seen at the homestead, shows that this tract of 144 acres, sixty-three perch, located in Turbet Township, now in Lewis, was purchased from John Stahl, of Seneca County, New York, on April 8, 1823.

It was bought by John Lerch, great, great grandfather of the present owners, who was a native of Heidleberg Township, Berks County, Pennsylvania, and is buried there. He was succeeded by his son John, who bought it in 1832. John in turn was followed by his son Samuel, who lived there until his death in 1873.

From the spring of 1868 until his death in November, 1910, Samuel P. Lerch, son of Samuel, managed the farm. Today it is being farmed by his son, S. E. Lerch. The present owners are two brothers and four sisters.

The original house was replaced in 1852 by a large brick dwelling built in the style of the old houses found in Berks County. About fifty feet from this building there is an old schoolhouse under which flows a never-failing stream fed by a spring.—Charles S. Rovenolt.
